The volumes are printed by the same process as our regular sheet music editions. The bindings are serviceable and artistic, and the books are all in first-class condition. Catalogs giving a complete list of contents will be sent to any address on request. The price of each book in cloth is $2.00, but in order to dispose of our surplus stock we offer them while they last for $1.00 each. This price includes the cost of transportation if cash accompanies order.

CALIFORNIA MUSIC TEACHERS

If you are establishing a new address on account of the recent earthquake, forward it to THE MUSICIAN, for free insertion in the July and August issues, and accept the favor with our best wishes for the reestablishment of your professional activity.

THE MUSICIAN, 150 Tremont St., Boston, Mass.

We are informed that Dentacura Tooth Paste sells largely in England.

THE MUSIC IN THIS NUMBER

Heart Dreams. F. Ora Gamble.

The mood is one of revery, retrospection, with much sentiment, which the singer must appreciate in order to interpret successfully. Although written for high voice, preferably a tenor, there are few notes in upper register, For the most part technical difficulties are not numerous. and what there are can be overcome easily by one of fair vocal experience. The rhythm is suggestive of the waltz song, with the time not fast, with motion and expression.

The episode in B♭ major may suggest difficulty to the eye, owing to the accidentals, but the difficulties here are more apparent than real, and offer excellent practice to the pianist in sight reading. The climaxes are on pages 5 and 7.

Up Grade March. Adam Geibel.

The important point to be observed as to the general interpretation of this march is exact decisive rhythm, with a light elastic staccato. To this end a firm, flexible wrist is very essential. In such as the opening measures, both hands must be played absolutely together in the manner of a hymn tune. On page 3 the left-hand melody in F major must be given out firmly, observing the emphasis on the half notes, as indicated, with the right-hand accompaniment distinct, yet always subordinate. The latter pages of the piece are to be played similar to the first.

Clematis. Intermezzo. John Francis Gilder.

This is the Op. 76 of a well-known pianist and composer of concert and drawing-rooms pieces of the kind that never fail to please when played by a pianist of fluent technique and finished style. This is among the easier of Mr. Gilder's compositions, but is one requiring considerable study for expression and rhythm. In the first principal section the melody is mostly in the right hand; occasionally it is in the left, which passes over the right, at other times a secondary melody appears in conjunction with the first. The second section, D♭ major, should be given with a swinging motion, faster than the first section, combined with firmness and decision. The wide arpeggio chords should be played distinct, smoothly and without suggestion of effort, which results will repay careful practice and study.

La Capricieuse. Felix Borowski.

This is for pianists who have reached the fourth grade in technical proficiency. The points to be observed are rhythm and staccato with the time moderately fast, with graceful motion. Observe also that the passage work is frequently varied, single note phrases against broken chords, alternating between the hands, both possessing melodic interest. The general character often suggests the mazurka or Polish dance, that requires a fine sense of rhythm, a light, yet decisive touch, with repose and grace of manner, on the part of the pianist. Too often the mazurka is played as if one were dancing "with leaden feet." This is manifestly erroneous; a fault against which the pianist should guard himself carefully.

Dear, did You Know. Eugene Cowles.

This is one of a large number of songs by a composer who is a well-known operatic and concert basso. The character of the text is a tender, refined sentiment, the music in the rhythm of a waltz *moderato*. The singer will find this song in comfortable compass, free from awkward intervals or other technical difficulties often found in modern songs.

The pianist will find in the accompaniment frequent duplication of the voice part in the left hand, which must be distinct, yet never obtrusive. The episode on page 4 D minor, modulating through A back to the original key, is more animated, but always expressive. A characteristic portion of the song, brief, but effective, in contrast to what precedes, leading to a return of the original thought. Observe the climax of the final measures commencing *p*, gradually increasing to *f*, where there is an F *ad libitum*, to be used, however, whenever possible, by the singer.

CALIFORNIA EARTHQUAKE

Mr. P. La Villa, Professor of Singing, formerly of 546 Sutter Street, San Francisco, is located for the present at 13th Street and Broadway, Oakland, Cal., care Sherman, Clay Music Co.

NOTES

There is a possibility that Richard Strauss will visit New York next season to direct performances of his much discussed opera *Salome*, — that is, if Mr. Conried decides to produce the work.

* *

Thomas Tapper, editor of THE MUSICIAN, gave six lectures recently at the Institute of Musical Art, New York City. Some of the subjects included *Music as a Culture Study, What the Public School needs in Music*, and *Music as a Municipal Investment.*

* *

The income of the new James Loeb Scholarship Fund will be available to students of the Institute of Musical Art, New York, after October, 1906.

* *

Orton Bradley gave an interesting lecture not long ago before the London Incorporated Society of Musicians, on the subject *American Musicians*, assisted by the Arthur Payne String Quartet, Miss Grainger Kerr, Charles Ellison, and Ivor Foster.

PIANO TUNING PAYS

Our Graduates Earn $5 to $10 per Day the Year Round

THE TUNE-A-PHONE IN USE

We teach **Piano Tuning, Action Regulating, Voicing, and Fine Repairing,** all in one, practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating, and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life.**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. We fit our students to command splendid profits in the pleasantest of professions.

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos."—Joseph Gribler, Astoria, Oregon.

The Village Blacksmith

A Short Cantata by CHARLES F. NOYES

A TUNEFUL and bright yet musicianly setting of Longfellow's poem. It is for mixed chorus with piano, organ and anvil accompaniment. Numerous picturesque effects are appropriately introduced, such as the sound of the anvil, the church bells, the organ, and the voice of the smith's daughter singing in the choir. A short soprano obbligato is the only solo in the work. The chorus parts are easy to learn and grateful to sing.

This cantata is especially suitable for performance by grammar and high school choruses. The time required for performance is 15 minutes. Price, post-paid, 40 cents.

Copies sent for examination.

The orchestration in manuscript may be had on rental.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:

The two violins made by you, I have tried and have found them very beautiful. believe they are the best among new violins made.

The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.

FRITZ KREISLER.

Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

Have just finished violin for Hugo Herman, a perfect imitation of his famous Strad. Send for duplicate on trial. Write for Catalog.

King Olaf

A Dramatic Cantata
By CARL BUSCH

THE text of this cantata is taken from Longfellow's poem, which has been abbreviated where necessary, to adapt it for musical treatment. The choruses are full of variety and are brilliant and effective—now vigorous as befits the hardy Norse warriors, now delicate and tender, or mystic in the wedding choruses; or, as in the final chorus, moving with great breadth and majesty. There is important work for the three solo voices, soprano, tenor, and baritone, both in extended passages and in incidental phrases.

The writer proves himself to be a resourceful composer—richness of harmony, polyphonic treatment of voices, thematic development, and melodic eloquence are all in evidence. The work is modern in spirit and in form, being written without break except where naturally suggested by the text.

The time required for performance is one hour and twenty minutes.

Price, post-paid, $1.25

L. E. ORTH

Books for Young Pupils

Mother Goose Songs Without Words

While a playful melody always finds a ready response in the child mind, the notes that symbolize it seem frequently arbitrary. A familiar rhyme given with the music will usually make its meaning clear even to the youngest pupil.

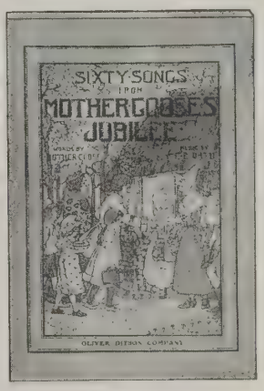
The author in this collection has chosen seventy favorites from "Mother Goose" and has provided for each a melody in the same rhythm, to which the words may be recited if desired.

The volume is beautifully printed and its title cover, in colors, is one that will delight the little ones.

Price in heavy paper, $1.00.....Boards, $1.25.....Post-paid.

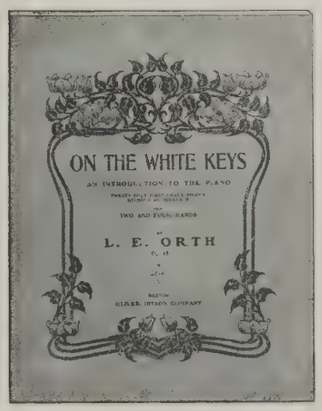
Sixty Songs from Mother Goose's Jubilee

These songs are suitable for performance in single form by children, or all sixty may be given as a complete work. The accompaniments are for piano and are not difficult. As vocal settings of "Mother Goose"—who is dear to every child heart—they possess exceptional value for teaching purposes. They are all within the range of young voices and the music is, in each case, in keeping with the character of the words.



Price, $1.00..Post-paid

On the White Keys



The feature that gives this work its value is the entire absence of accidentals, modulations being made without their use. The first twelve numbers are for two hands, and in the treble clef only. The succeeding twelve are duets, in both treble and bass clefs, the two parts being of equal difficulty. The melodies of the latter are identical with the solo pieces, so that a pupil can pass readily from one to the other. This is an easy method of teaching four-hand playing, and one sure to awaken the pupil's interest and intelligence.

Price, $1.00.....Post-paid

TRIEBERT CLARIONETS

We are the sole American agents for Chas. Triebert, Paris, reed instruments—Clarionets, Saxophones, Bassoons, and Oboes.

It is a source of much gratification to us to control the output of the most famous of European manufacturers.

Triebert was the first to apply the Boehm system of fingering to the Clarionet.

Every Triebert Clarionet possesses that priceless feature, the true Triebert tone. This, with its superior model, finish and workmanship places it far above any other French Clarionet.

Each Triebert instrument represents the best efforts of an eminent specialist, and in every sense is a work of art, while the price is very reasonable.

They are gladly sent subject to thorough trial and our usual return privilege if not fully satisfactory.

Triebert Clarionets, 13 keys, 2 rings, $15.00; 15 keys, 2 rings, $18.00; 15 keys, 4 rings, 4 roller keys, $25.00.

Triebert Art Clarionet, 15 keys, 4 rings, 4 roller keys, $36.50.

All of the above may be had in A, B♭, C, or E♭, in either high or low pitch. Order to-day.

Write for a FREE copy of Lyon & Healy's Musical Handbook, fully describing Triebert goods, and also thousands of other articles of interest to musicians. Address

LYON & HEALY 28 Adams Street CHICAGO

Early Italian Piano Music

Edited by M. ESPOSITO

IN the sixteenth century Italy was first in all the arts — in sculpture, in painting, in literature, and in music. Palestrina was called upon to reform church music, and he composed masses of a beauty that has never been equaled. Luca Marenzio composed his madrigals and Monteverde invented the opera. The example of these geniuses was followed by a host of lesser composers; schools for music were founded; the French, Belgian, and Spanish musicians, who one hundred years before had gone to Italy to teach, now came to learn and to admire. Though a great deal of the music written in Italy in the sixteenth century was vocal, instrumental composition was not neglected. At the beginning of the seventeenth century Frescobaldi produced his works for *Organo e Cembalo*, and later on Corelli and Viotti wrote for the violin.

Early Italian Piano Music includes the best instrumental works of the old Italian writers. Such composers as Frescobaldi, Alessandro and Domenico Scarlatti, Durante, Porpora, and Martini are represented.

The collection includes ten Toccatas by Alessandro Scarlatti, which have never been published before.

That the musical inspiration which arose in Italy in the sixteenth century should have been continued far into the eighteenth, shows how strong the instinct must have been, and how excellent the musical tradition. The learning of these masters of the olden time, and their knowledge of music, will astonish those who are not familiar with their compositions.

In view of the strides made by modern composers, one can hardly realize that such music was written at a time when Bach and Handel were still boys, and one hundred years before Beethoven.

JUST PUBLISHED
Ten Tone Pictures for Piano Solo
By H. L. CRAMM, *Op. 7*
Founded on poems by Eugene Field, Robert Louis Stevenson, and Mary Mapes Dodge.

1. **The Hayloft** . . . . . (1-A) .40
A rather stately movement of much grace and real melodic interest. The change of key from F to B-flat, and back again, gives additional value. It contains practically no chord work, as both hands are almost entirely in single notes.
2. **Sleep, Little Pigeon!** . . . . (1-A) .25
A lullaby in waltz time. Especially useful in helping a beginner to acquire a "singing" tone and a better sense of shading.
3. **Marching Song** . . . . . (1-A) .25
In 4-4 time. One of those simple little gems which fill the same place in the world of music that is filled in literature by the children's poems of Stevenson and Field.
4. **The Swing** . . . . . (1-B) .25
Quite characteristic in style and movement, and the composer has fully caught the spirit of Stevenson's
"How do you like to go up in a swing
Up in the air so blue?"
5. **The Dinkey Bird** . . . . . (1-B) .25
A very pleasing little movement in 6-8 rhythm.
6. **Rut-a-tut-tuts** . . . . . (1-B) .25
A rollicking little march.
7. **Pittypat and Tippytoe** . . . . (1-B) .40
A little intermezzo with clever introduction and ending. The frequent use of legato in one hand against staccato in the other adds to its usefulness.
8. **The Ride to Bumpville** . . . . (1-B) .25
Both as a recreation and as a study in rhythm, an important number.
9. **So, So, Rock-a-bye So!** . . . . (2-A) .40
Appeals strongly to the imagination of the young. A dainty, lullaby is suddenly interrupted by the minor strains of the Fumfay's dance, which in turn gives place to the lullaby.
10. **Two Little Froggies** . . . . . (2-A) .25
A musical frolic. The little tragedy of the ants and the frogs is delightfully sketched.

Complete (Edition Wood, No. 406), $1.00
The composer of the above pieces is a well-known and successful teacher, and understands the exact requirements of music for the student upon the piano. The above compositions are delightful bits of melody, and combine the essentials of good teaching material.

JOUSSE'S MUSICAL CATECHISM

Revised and Edited by
THOMAS A'BECKETT

Few works on music have shown such remarkable vitality or enjoyed such popularity as this little book. In the course of teaching, and musical progress in general, many new and valuable definitions have been evolved and consequently the Catechism has passed through many editions. In this edition the material has been carefully revised. Much that is new has been added, including a pronouncing dictionary of musical terms and Schumann's Rules for Young Musicians.

Public School Music

Northwestern University

THE SCHOOL OF MUSIC, located at Evanston-Chicago, on the shore of Lake Michigan, calls attention to its Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

P. C. LUTKIN, Dean, Evanston, Ill.

Grand Conservatory of Music

The FAELTEN SYSTEM

of Fundamental Pianoforte Instruction. This wonderfully ingenious system, which is being adopted by progressive teachers everywhere, is the subject of an interesting booklet recently published for free distribution by the Faelten Pianoforte School, 30 Huntington Ave., Boston.

The Training of Boys' Voices

By CLAUDE ELLSWORTH JOHNSON

Children's voices constitute a department of voice culture for which a special preparation is required. All children have some natural ability to use their voices aright and the majority can be taught to sing well. The artistic possibilities of boys' voices have been known for centuries.

The following subdivisions show the scope of this work: Children's Natural Voices, The Beginning of Tone Reproduction, Voice Training, Vocal Exercises, Music in Schools, Boys in Church Choirs, and the Selection of Music for Boys' Voices. The final chapter includes a carefully prepared list of sacred and secular choruses, the soprano and alto parts of which may be sung by boys.

Published in the Music Students Library.
Bound in serviceable cloth covers. Price, post-paid, 75 cents.

Copies sent for examination

THE AIM OF THE FLETCHER METHOD

FOR THE CHILD is to give the child a fundamental, systematic, and logical education in music in a way that is natural and pleasurable, and thus make it possible for music to develop the child physically, mentally, and artistically.

FOR THE TEACHER is to place in the hands of the teacher a thoroughly tested and endorsed system of teaching music which is in accordance with all the modern and psychologically correct methods of instruction.

My Dear Mrs. Copp:

My seventh year's work as a Fletcher Music Method Teacher has closed, and I wish to tell you that it has been each year an increasing success. I have found the Method to be all, and far more, that it claims to be. I have watched its working with the same pupils for four consecutive years and realize what a means of education music becomes when taught in this way. The systematic course in memorizing, or in modulating, or in ear-training, or any one subject in the Method has been worth the whole cost of the course to me alone. * * *

Sincerely yours,
EMILY A. STURGEON.

I have taught the Fletcher Music Method now for about three years, with increasing satisfaction as to results. It has helped me wonderfully, not only directly with my junior pupils, but in broadening and deepening all my work, and solving many knotty problems of teaching. There is nothing one-sided about it,—eye, ear, fingers, brain, memory, imagination, all are reached and made to contribute their share to the general musical culture. Further, it is a delight to the children, who learn easily, love their classes, and later on their practice, finding it no hardship, to the great surprise of their parents.

ROBERTA GEDDES-HARVEY, Mus. Bac.,
(Trin. College.) Organist of St. George's Church, Guelph, Ontario.

In answer to your question regarding the Fletcher System, allow me to say that it has my strongest endorsement. Every school where a course of music is pursued should adopt this Method.

Yours truly, ALBERT A. MACK,
Music Director at St. Mary's School, Raleigh, N. C.

Dr. William Mason says: New York.

The Fletcher Method seems to me well adapted to the rapid and thorough accomplishment of its purpose because of its tendency to immediately arrest attention, to arouse interest, and thus to promote a habit of mental concentration on the part of young children.

Evelyn Fletcher-Copp, the originator of the Fletcher Music Method, besides the broad musical education received in Canada and the United States, has had the benefit of five years' uninterrupted musical study abroad under such men as Dr. Hugo Riemann, Director Albert Fuchs, Wilhelm Sadony, Oscar Brückner, etc.

Since the originating of her System, Mrs. Fletcher-Copp has successfully introduced her System into London, Berlin, Leipsic, Dresden, and Brussels and goes to Europe every two years to conduct normal classes.

At home and abroad Mrs. Fletcher-Copp is constantly investigating all methods which are of psychological and musical worth, and her pupils have the advantage of being thus brought in contact with the latest European (as well as American) ideas.

They have further the advantage of the

Fletcher Musical Association established in 1898; also the

Fletcher Musical Association Bulletin

a paper edited three times a year for the benefit of the Fletcher Music Teachers; also the

Fletcher Music Bureau.

The demand for teachers has been so great that a bureau has been opened to which all teachers desiring situations, and all institutions desiring Fletcher Music Teachers, may apply. This system is not taught by correspondence.

Mrs. Fletcher-Copp will open a class for teachers in Brookline, July 1. During the past year there have been more calls for Fletcher teachers than could be filled.

E. A. FLETCHER-COPP, Home Address, Brookline, Mass. New York Address. 209 West 97th St.

Song Album No. 2. Fourteen Selected Songs.. 1.00

BECKER, R.
Op. 76. A Poet's Love. Four Songs for High or Low Voice..... .75

BREWER, J. HYATT
Op. 27. Six Songs..... .75

CHADWICK, GEORGE W.
Album of Fifteen Favorite Songs. Soprano or Tenor..... 1.00
Songs of Brittany..... .75
Seventeen Songs. Alto or Baritone..... 1.00
Lyrics from "Told in the Gate." High or Low Voice..... 1.25

FOOTE, ARTHUR
Op. 26. Eleven Songs for Medium Voice..... 1.00
Op. 40. Persian Song from the Rubaiyat..... .50
Op. 51. Four Songs. High or Low Voice..... .75

HADLEY, HENRY K.
Op. 12. Twelve Songs. Medium Voice..... 1.00

HANSCOM, E. W.
Six Songs. High or Low Voice..... .75

HILL, EDWARD B.
Op. 5. Five Children's Songs from "The Round Rabbit"..... .75

HOOD, HELEN
Op. 7. Song Etchings. A Group of Six Songs.. .75

JOHNS, CLAYTON
Songs of Love and Nature..... 1.00

LANG, MARGARET R.
Album of Ten Songs..... 1.00
Op. 15. Five Songs for Soprano or Tenor..... .75
Op. 39. Songs for Lovers of Children..... 1.00
Op. 42. Nonsense Rhymes and Pictures..... 1.00

LYNES, FRANK
A Cyclus of Fifteen Songs. Soprano or Tenor.. 1.00
Op. 19. Album of Nine Songs. High Voice... .75
Op. 19. Album of Nine Songs. Low Voice... .75

LYRIC FANCIES
A Cycle of Nineteen Songs, by American Composers, for Soprano or Tenor. Vols. 1 and 2. Each 1.00

MARSTON, GEORGE W.
Album of Fourteen Favorite Songs. Soprano or Tenor..... 1.00
Album of Fifteen Favorite Songs. Alto or Baritone..... 1.00
Six Songs, Grave and Gay. Low Voice..... .75

MACDOWELL, EDWARD
Op. 40. Six Love Songs..... .75
Op. 56. Four Songs. High or Low Voice..... .75
Op. 58. Three Songs..... .75
Op. 60. Three Songs..... .75

ORTH L. E.
Op. 27. Four and Twenty Songs for Sleepy Time..... 1.00

PARK, EDNA ROSALIND
Sprays of Heather..... .75

ROGERS, CLARA K.
Album of Fourteen Songs..... 1.00
Op. 27. Six Browning Songs. (First Series).. .75
Op. 32. Six Browning Songs. (Second Series).. .75
Op. 34. Six Folk Songs..... .75

SCHLESINGER, SEB. B.
Album of Thirteen Songs..... 1.00

SCHMIDT'S COLLECTION OF SACRED SONGS.
Twenty-one Selected Songs. High Voice..... 1.00

SCHMDT'S COLLECTION OF SACRED SONGS.
Eighteen Selected Songs. Medium Voice..... 1.00

SCHMIDT'S COLLECTION OF SACRED SONGS.
Eighteen Selected Songs. Low Voice..... 1.00

SCHMIDT'S COLLECTION OF THREE-PART SONGS FOR WOMEN'S VOICES. Vol. I..... .50

SCHMIDT'S COLLECTION OF FOUR-PART SONGS FOR WOMEN'S VOICES. Vol. I..... .50

SCHMIDT'S COLLECTION OF SACRED TRIOS AND QUARTETS. FOR WOMEN'S VOICES.
Vol. I..... .50

SHEPARD, THOMAS G.
"Me." A Cycle of Songs from "A Child's Garden of Verses"..... 1.00

SMITH, GERRIT
Op. 13. Five Songs..... .75

WILLEM MENGELBERG

EDWARD BURLINGAME HILL

A young conductor of great distinction and acknowledged European reputation is Willem Mengelberg, the conductor of the Concertgebouw Orchestra of Amsterdam, who made so strong an impression when he directed the first concert of the New York Philharmonic Society during the present season. The Concertgebouw Orchestra is not merely the leading Dutch orchestra, it is one of the most celebrated in Europe, and especially famous for its interpretations of the works of Richard Strauss. It gives three or four concerts every week in Amsterdam, subscription series in Rotterdam, the Hague, Haarlem, Arnheim, and Nijmegen, besides single concerts in smaller Dutch cities such as Leyden, Utrecht, Groningen, Leeuwarden, etc. The orchestra has also played beyond the confines of Holland, in Brussels, in Liège, by the invitation of Edward Grieg at a Norwegian musical festival, and finally, when the Richard Strauss Festival was organized at London in 1903, the Concertgebouw Orchestra was engaged not only on account of its intrinsic merit, but owing to its renown as an interpreter of Strauss.

Willem Mengelberg was born at Utrecht, Holland, March 28, 1871, and thus is barely thirty-five. His father is a well-known architect, and a distinguished authority on matters pertaining to Gothic architecture. On account of his unusual qualifications he was chosen to superintend important restorations on Cologne Cathedral, and he has performed similar services for numerous churches, museums, and municipal buildings in Holland, Germany, and even as far as Italy.

Young Mengelberg's talent must have made its appearance early, for he began to conduct a chorus at the age of seven, standing on a table! He began his first musical studies at Utrecht, later studying for six months at Berlin, but the solid foundation for his later attainments was laid at the Cologne Conservatory. Here he studied composition and conducting with Wüllner, piano playing with Isidor Seiss, theory with Jensen, singing, the organ, etc. Until entering the Conservatory Mengelberg had only led choruses; he now studied conducting an orchestra "as well as it can be studied in a conservatory" as he says in a letter to the writer. He also adds modestly, "To my teachers at the Cologne Conservatory I owe much, and if I ever become a good musician I must thank my instructors, Franz Wüllner and Isidor Seiss, unhappily both dead, who were teachers of rare ability, such as are seldom met with." Before he was twenty-one Mengelberg accepted his first position as director of the town orchestra in Lucerne, Switzerland. In 1895, when he was twenty-four, he became conductor of the Concertgebouw Orchestra, which he has thus led for more than ten years. He also conducts the chorus of a society called the "Maatschappy tot bevordering der toonkunst" (society for promotion of musical art) which numbers about six hundred voices. Every Palm Sunday this society performs the Matthew Passion music with the most celebrated Dutch soloists, and every May the *Ninth Symphony* and Beethoven's *Missa Solemnis*. Between this

WILLEM MENGELBERG

society and the orchestra Mengelberg's time is fully occupied with rehearsals, studying new scores, and constant fulfilling of concert engagements.

Mengelberg's partiality for Strauss' compositions dates from many years back. His acquaintance with the composer began in the most amusing way, as follows: "I met Richard Strauss while I was still a student at the Cologne Conservatory. He was holding a rehearsal in the Gürzenich hall for the first performance of his *Don Juan* (in Cologne). The glockenspiel player could not manage his part, and at last Strauss, turning in despair to Dr. Wüllner, called out, 'Lieber doctor, this will never do.' Dr. Wüllner motioned to me to take the part. I was ready enough, sprang on the stage and played the instrument at once. Strauss, now quite merry, called out laughingly to me, 'There, now it really goes famously.' Yes, it went, *at rehearsal.* I counted my rests scrupulously, beginning letter so and so, a hundred and so many measures, rest — and I come out all right. But in the evening at the concert, I was naturally in a state of nervous excitement to be playing under Strauss whom already I admired extravagantly, and when the evil place came, I missed it, for *I made a mistake in counting.* I was horribly ashamed of myself, and now every time I conduct the *Don Juan* I think of my solo on the glockenspiel. I made a vow then never to play in concert on an instrument without previous experience, and this promise I have kept up to now!"

Mengelberg's natural aptitude for conducting is evidenced by the clearness and rhythmic vitality of his beat, and the obvious enthusiasm with which the orchestra carry out his wishes. On the other hand, his preeminent mastery of the art of conducting is due chiefly to his capacity for hard work, to his persistent efforts to improve, and to his constant willingness to profit from experience. "Fortunately a man is never too old to *learn*," are his words on this subject. The Strauss interpretations which have made his orchestra famous are his own, without suggestion from the composer; indeed Strauss once heard the Concertgebouw Orchestra play his *Death and Transfiguration*, and after the performance he rushed excitedly to Mengelberg to discover how certain effects were produced that pleased him. He even marked these details in the score for his own future use. "Yet," said Mengelberg, "after all that is all the conductor is for, to bring out the beauty that is there." In talking of conducting he said, "There are two main elements to be considered in the interpretation of orchestral works, the intellectual and the emotional. The conductor who is merely intellectual or merely emotional fails on account of sheer one-sidedness. For artistic success a skilful, well-balanced fusion of these two different attitudes is necessary."

Mengelberg's most conspicuous musical characteristic is the comprehensive breadth of his musical tastes which are restricted neither by school or period. He says, "I love passionately all that is beautiful and big in our art, such as Bach, Haydn, Mozart, Beethoven, Brahms, and Wagner, not excepting also Mendelssohn and Schumann." He is an admirer of the modern French school, whose chief works he has played. Indeed the first performance of d'Indy's *Istar* variations was given by Mengelberg, although it is generally credited to Ysaye. He also has a distinct leaning towards the modern Russians. Of Strauss' works he says, "I love especially — each one; I also prize Gustav Mahler highly. I consider him one of the most

significant symphonists in the evolution of music. For the average public his music is somewhat obscure, but time will assuredly bring comprehension."

Mengelberg's personality has the simplicity inseparable from achievement. He is modest, unassuming, genial, and exceedingly courteous in his willingness to talk on musical matters. He is as cosmopolitan in his life as in his musical tastes. His conducting is the natural outcome of his temperament, it is quiet and restrained in gesture, intense in conviction; he carries out his effects simply, without a trace of affectation, so that they show solidity of outline, vigor of accent, and emotional eloquence. That he has a magnetic effect upon an orchestra may be inferred from the fact that after six months' vacation, with its relaxation from discipline, the Philharmonic Orchestra gave a superb performance of Strauss' *Heldenleben* after three rehearsals. His interpretations of Schumann and Brahms would attract attention anywhere, but his reproduction of the *Heldenleben* was so colossal as to place his reading in a class by itself. Under his leadership the *Heldenleben*, which under other conductors seemed a chaotic medley and a vast confusion, surprised by the logic of its construction, the coherence of its development, and its deeply poetic eloquence and human sentiment. The complicated orchestral polyphony was given with marvelous restraint of the subordinate parts, the essence of Strauss' interpretation, and a point where even able conductors fail. It is not surprising to learn that Strauss is content with the performances of his works by Mengelberg and the Concertgebouw Orchestra, to whom the *Heldenleben*, incidentally, is dedicated.

The policy of the New York Philharmonic Society in familiarizing us with the art of Safonoff, Colonne, Wood, Weingartner, and others has been most fruitful. It has enabled us to increase our knowledge of European standards of orchestral conducting, and to appreciate the extraordinary pitch to which orchestral performance has attained. But the Philharmonic may well congratulate itself in securing the services of Willem Mengelberg, for one who combines the vitality, the poetry, and eloquence of youth with the restraint, the catholicity of appreciation, and the breadth of intelligence generally associated with middle age, is rare indeed.

MUSIC AND MUSICIANS

GEORGE FREDERIC HANDEL

Learn all there is to learn and then choose your own path.

How can you expect a musician to write beautiful vocal music without beautiful words?

I should be sorry if I only entertained them. I wish to make them better.

I think I did see all heaven before me and the great God Himself (on composing the *Hallelujah Chorus*).

The Twelfth Annual South Atlantic States Music Festival was given on April 25-27 at Spartanburg, South Carolina. The engagement of the New York Symphony Orchestra, Walter Damrosch, conductor, and eleven artists, covering the fields of piano, organ, violin, violoncello, and vocal music, marked an epoch in the history of the Festival.

THE COMMONPLACES OF VOCAL ART

A Statement of the Philosophy of Singing from a Modern Viewpoint

*Third Paper**

LOUIS ARTHUR RUSSELL

Local Effort vs. Automatism

Local Effort. — Local effort, or more particularly, its avoidance, is the watchword of many theorists of the rational school of voice culture.

If one wills to lift with the right hand and arm a weight of considerable resistance, he will localize (place) the effort by direct will in the muscles of that hand and arm and lift the weight; again, if one wishes to walk across a room, he *will simply will* to go to the opposite side of the room, quickly or slowly as the impulse directs, and his legs take him there without a thought of how they move. In the first instance there is local effort in the hand clasp and the tension of the muscles of the arm, which prepare themselves for the resistance of the weight, in the second case the thought is directed to the result alone.

If one wishes to say the syllables *oo oo oo*, *e e e*, and he puckers for the *oo* and spreads his lips as in grinning for the *e*, he will localize the effort, giving direct attention to the place of vowel sounding; while, if one says in the normal colloquial way, "Do me the favor," with the mind directed upon the thought and not upon the manner of its expression at the lips, there will be no local effort, the will being directed to the result. If one desires to sing a song, and begins his singing by wilfully contracting the diaphragm, spreading the ribs, raising the shoulders and fixing his throat muscles in certain ways, this process would be through local effort; while, on the contrary, if he knows how to sing and simply thinks of his song and its musical beauty and its sentiment, he will direct his voice only toward the final result, without thought of how he reaches it; and this is the reverse of local effort.

Let these statements be carried in the mind for future reference. Briefly stated, local effort in singing wills the *manner of reaching a result* in muscular action, the true process in art is to *will the result only;* how it is done is not to be considered. *To avoid local effort is a result of advanced culture; the novice, in seeking results, must first localize his efforts.*

Automatism. — The very antithesis of local effort is automatism. *Automatism is subconscious habit in control of processes.* Conscious effort is local effort. Through the practice of specific muscular action, with the will directed to the place and the manner of action, automatism is finally induced. If the mind be occupied with the thought of how the physical conditions are being operated, the art work is defective, because of mental distraction. In art the mind should be allowed all possible freedom from restraint and distraction, that it may devote itself entirely to the expression of the thought, and this can never occur unless the physical means of expression be, so to speak, self-acting, automatic; a condition which can only obtain when subconscious control has taken the place of conscious local effort.

Automatism is the final result of physical culture toward which all voice study should tend. Without it, freedom can never exist, and the art product will be defective, stiff, awkward, and will fail to be reaching or emotionally truthful. Without correct automatic habit, everything we do displays the effort and destroys the illusion, so necessary in art, of spontaneity; the result is crude and carries the impress of uncouthness. It marks itself at once as *amateurish.*

Freedom vs. *Stiffness.* — *There is no personal expression without effort.*

It is the requirement of the artist to conceal the effort, and to give no evidence of anything but of the spirit, in free expression of its emotion. Under great emotional excitement the action of the heart is accelerated, the breath comes in quick respiration, the bosom heaves, etc., and every action appears to be the result of the emotion. The cry of fright finds its carrying power through intense muscular action, but it is all an unconscious effort on the part of the affrighted one. So all feigned or simulated emotion in artistic expression depends for its power and its expressional character upon muscular tension; but to be effective, this power of muscle must be in perfect freedom, unrestrained, else the result will feel the effects of *stiffness*, the great hindrance in all expressional art.

The uncultured singer or public speaker is never able to reach emotional climaxes in his work without ill result of some sort, because of lack of freedom. The woodsman who fells a tree without a perfectly free sweep of the arm controlling the ax, will waste much tissue in his awkward action, and realize less of force from his stroke and also less of accuracy of blow; he will soon tire, will suffer from overstrained muscles, and possibly injure himself physically through sheer awkward overtension, while his fellow-worker makes every stroke count; he relies on the ax's weight for some of the force needed; he frees himself from all restraining effort, he avoids all interfering muscular tension, and fells his tree in less time, with much less effort, and in a much more finished way than the other. This is all the result of freedom.

By freedom (in art) we mean *non-interference of unneeded muscles.*

* The first and second chapters of this series of essays appeared in the February and March numbers of THE MUSICIAN, under the titles *Primary Vocal Law* and *Sane Commonplace Vocal Physiology.*

Stiffness is due to an attempt to use muscles not required for a desired result. A muscle under tension contracts and thickens; this thickening (bunching of the tissue) of unneeded muscle interferes with the needed muscles, by pressure against them; thus the necessary muscles at the moment have not only to perform the required duty, but they also have to resist this restraining pressure of the interfering muscles. Let us consider this multiplied energy. First, there is the energy required to put the *necessary muscles* in tension. Second, there is the energy consumed by the tension of the *unnecessary muscles* (the interfering muscles are often in the greatest tension). Third, there is the additional strain upon the necessary muscles, *resisting the pressure of the interfering tissue*, against which odds the former must perform the work in hand. Fourth, there is what is called sympathetic tension, which extends sometimes throughout the muscular system. This latter class of contraction is often so extreme as entirely to stop the action of the muscles under the direction of the will, and the result is absolutely no action whatever. The needed muscles are clogged by contracting tension. This is seen in complete stage fright, or in the effort to walk a narrow pathway over some dizzy height, etc. There is no need of carrying the explanation farther; it requires no great penetration to see how the required effort is doubled or quadrupled when the muscular system is not under perfect and automatic control. Great results require great efforts, but *the effort must never exceed the requirement, and no unneeded muscle must interfere through tension, else the balance is destroyed and what we call equipoise is lacking.*

Poise, Counterpoise, and Equipoise. — *There is no artistic balance or poise without counterpoise.* To stand erect indicates a certain balance of forces. Released from all tension of muscle, inertia ensues and the body sinks to the ground; under too great a tension of muscle, the body also loses its balance, and is either deprived of all power of moving from its fixed position, or topples over one way or another.

From Inertia, through Relaxation to Buoyancy. — *The mastery of a true equipoise* is one of the final accomplishments of the singer; it is a delicate operation, and so subtle in its sensations as to mislead many theorists into the belief that it is quite a natural thing, or at worst an easy accomplishment. Buoyancy is the opposite of inertia; in art, relaxation does not mean complete release from tension, for that is inertia. By relaxation in art (referring to singers) we mean the relaxing of all extreme tension, and the *entire release of unneeded muscles* from any tension whatever. This latter condition, however, is purely elemental, for in artistic poise every muscle of the body is in more or less of sympathetic activity, always ready to respond to any call of the will, though not necessarily in constant contraction (tension). *Bodily buoyancy is the perfection of equipoise.* The healthy child has it while at play; it makes the body lithe, it causes the eyes to sparkle, it induces what we term lightheartedness; the body fairly floats in the air; the feet seem but lightly to touch the ground; we feel as if, were there but a little more of the condition, we could veritably lift ourselves into space.

There is no interfering muscular tension, yet every nerve and every muscle feels as if in activity; we "fairly tingle," as with an electric current passing through us; momentarily at least, the body, the spirit, and the mind are in perfect health, ready for any call of the will. This is equipoise, this is buoyancy, the body can move in any direction, every joint is free, every muscle firm, but elastic.

Elasticity in Firmness. — *This elastic firmness* is one of the physical paradoxes. Everything is in activity, all is tension; there is a certain sort of relaxation, but nothing approaching flaccidity; the body is in elastic muscular tension, evidencing firmness, but there is no rigidity anywhere; every part of the body is alert, ready for action. When the call comes from the will to "do," there are no undue tensions to be relieved, every muscle is quickly responsive; the chest has its position, the head is properly poised upon the neck, the neck is flexibly firm, the body is joyously expanded, buoyant, free, elastic, resting, as it were, upon the hips as lightly as if it were but an inflated balloon. The throat is open, the nostrils fairly dilate in the most free sort of respiration, the breath seems to ebb and flow as lightly as a babe's; everything waits upon the mind in absolute freedom from restraint.

These conditions are not secured by the student without culture; a close study of specific details *with local effort* is essential to bring about this buoyant sensation, which must be the automatic habit of the singer if he wishes to have free scope for the expression of his emotions in song.

Tension without Strain. — One of the most delicate thoughts regarding the physical phenomena of singing is "how shall we have tension of muscle without strain," and here follows a vital question, one which must be comprehended completely by the singer, else his work will never be spontaneous. We are often told that to sing is to "breathe easily, naturally," and to "use correct enunciation," "just open the mouth and without effort let the soul express itself." This all sounds easy, and were it true, would be a delightful condition of affairs, making it possible for the whole world to sing, for all have souls, and all can readily learn to breathe without effort and to speak their mother tongue intelligibly. But, unhappily, we cannot sing by mere breathing and opening of the mouth and letting the soul express itself; this fact appears to me to have been clearly demonstrated in the preceding paragraphs. *There is effort in singing; it is not simply a natural process*, but is the result of culture leading to *a complete control of energies.* Now the questions arise, What are the singing efforts? What muscles do the work? How can we control a proper effort? How can we prevent any interfering effort? How shall we know the amount of effort required, and how avoid overeffort, or strain? The main singing effort (physical) is that of breath control; another singing effort is correct position of body, neck, head, and of the limbs; another singing effort is that of control of the mouth and upper throat. All of these centres of control require certain physical conditions, without which the result in art is injured. Of course we know that all physical effort is by muscular tension. There is a certain amount of muscular tension which is almost functional; the balance of the body in standing, walking, or, in fact, in sitting, the poise of the neck supporting the head, every habitual position of the body or its members, the merest closing of the lips, requiring, as it does, the holding of the chin up, etc., all are due to tension of muscle; release this tension entirely and the body sinks to the floor, the chin drops, we are as if dead. This "ordinary" tension differs with individuals; some walk erect, and with elastic step, others "stoop" at the shoulders and walk in a "slipshod," laggard way. We all know which of these conditions is preferable, and which indicates vitality. The processes of art require that these normal conditions of tension shall be further vitalized, and the question at once arises, How much more of tension is required for breathing when singing than for the everyday activities of life?

The tendency, when increasing the tension for any purpose whatever, is to "overdo," to make a prodigal use of muscular force, and while in some lines of activity the purpose may be accomplished in spite of overeffort (as, for instance, one may, in lifting one hundred pounds, exert enough energy to lift two or three hundred pounds), the result is accomplished, but there is great waste of tissue. In singing, however, overtension causes not only waste of energy, which is perhaps a negative wrong, but it positively injures, and perhaps forbids, the result sought. If we contract the breathing muscles to too great a tension, a stiffness ensues which hinders the singing process; if we open the front mouth or the back of the mouth too wide, the muscular effort stiffens the entire throat and neck, and prevents the tone's proper emission and correct formation into a beautiful musical phrase. If we hold the chest *rigidly* high, the muscles are in too extreme tension and the throat is interfered with, to the detriment of its freedom, so necessary in singing. So we see that we must have vitality, tension beyond the normal, if we are to sing; we must not, however, have too much nor too little; *we must have just enough.* Too little tension is *flabbiness* through which artistic expression never can come; and on the other hand, too much tension is stiffness, strain, which also acts as a barrier through which the true voice cannot come. How then shall we know *how much of tension* is necessary and how shall we differentiate between correct and sufficient tension, and too much tension?

WHY BELLINI IS ALMOST FORGOTTEN

While it is not true that Chopin asked to be buried by the side of Bellini, it is true that the great Polish pianoforte composer greatly admired the operas of his Italian friend. Hiller relates that once at a performance of *Norma*, in which Rubini sang, he saw tears in Chopin's eyes. Why, then, has the music of Bellini passed away, while Chopin's is the most popular ever written for his instrument? Because Chopin was infinitely more of an artist than Bellini, — a master of all the secrets of music, — while Bellini wrote nothing but soft sentimental airs, and even those without much regard for their significance or poetic associations. Hence it is that his operas can be endured to-day only when sung by such consummate artists as Sembrich, Caruso, and Plançon. — *New York Evening Post.*

CLUB PROGRAMS FROM ALL NATIONS

XII. DENMARK AND SWITZERLAND

ARTHUR ELSON

In every issue of THE MUSICIAN this department will present an elaborate study of a national school. The purpose will be to give a correct chronologic summary of the school, its principal representatives, to indicate a practical club program, and to review the presentation of the subject by means of a list of queries.

Clubs planning to use this material may address correspondence concerning any feature of the work to the EDITOR OF THE MUSICIAN. Every assistance will be given to clubs, classes and private students. The editor will be glad to lend help to those desiring to secure speakers on topics relating to music.

The music of Denmark is a comparatively recent product, dating almost entirely from the nineteenth century. Yet an earlier art can be found, if diligently sought, both in the contrapuntal and the popular school. In the sixteenth century the Danish court music, like that of nearly all Europe, reflected the style of the Netherland school. Among Danish musicians of a later time we find the famous organist Buxtehude, a worthy member of the school that culminated in Bach. It was this same organist whose daughter found so little favor in Handel's eyes; for Buxtehude, when ready to retire, had made it a condition that his successor should marry his daughter, and Handel, after seeing her, declined to try for the post.

With the growth of more modern music, Denmark, like Russia, subsisted for some time on the imported article. Italian opera flourished in both countries, in spite of the nearness of Germany. From her influence on so many forms and schools of music, Italy has been called the "cradle of music," even though, according to Hanslick's caustic remark, she "remained the cradle," and did not keep abreast of the other nations. Yet many foreign influences played their part in Denmark, for she numbered among her visitors John Dowland, the English lute player, Heinrich Schütz, the pioneer of German opera, and in a later century the great reformer Gluck. The last named, who conducted for a time at Copenhagen, was succeeded there by Johann Peter Schülz, who remained until 1794. Schülz was a song composer of marked originality and influence, and many of his operas became widely popular.

One of Schülz's pupils was Christoph Weyse, who spent his life in Denmark, though born in Germany. He produced several operas in Copenhagen, and wrote a symphony, overtures, sonatas, études, and many sacred and secular cantatas. He became renowned as a teacher in the Copenhagen conservatory, where he numbered Hartmann and Gade among his pupils.

Johann Peder Emilius Hartmann, born in 1805, has been called the real father of Danish music. Of German descent, his grandfather had become one of the royal chamber musicians at Copenhagen, while his father was an organist and teacher of some note. Like many another musical genius, Hartmann was destined for the legal profession, and held a public office, even while assisting his father as organist and teaching in the conservatory. It was in the later place that Weyse noticed his ability, and encouraged him to go on in a musical career.

In 1832 he made his operatic *début* with *The Raven*, following this first success with *The Golden Horn* and *The Corsairs*. In 1836 he went to Germany for further study, producing his first symphony, dedicated to Spohr, in 1838, at Cassel. Returning to become director of the conservatory, he led a long career of activity and usefulness, lasting almost to the present. In opera, *Liden Kirsten* (Little Christine) marked the zenith of his success, in 1846, after which his star began to pale before that of Gade. Yet he did not lack triumphs in later life, such as his jubilee concert in 1874, or his honorary degree five years later. His works, the first to show any real northern coloring, include overtures, incidental music, symphonies, cantatas (including one on the death of Thorwaldsen), a violin concerto, song cycles (*Salomon and Sulamith* and *Hjortens Flugt*), and piano pieces, including the *Noveletten*. These compositions, though known in Denmark, have not yet met with the recognition they deserve in other countries.

Emil Hartmann (1836–1898) was a son of Johann, and studied with his father and Gade. At twenty-five he was a full-fledged organist, and ten years later received the royal appointment. Compelled by ill health to retire after two years he devoted himself entirely to composition. His works have been more successful than his father's in reaching foreign audiences, and Germany especially has welcomed them. They include the *Nordische Volkstänze*, for orchestra; *Lieder und Weise im Nordischen Volkston*, the well-known *Nordische Heerfahrt* overture; three symphonies, including *Aus der Ritterzeit*, Op. 34; a *Scandinavian Suite*, the choral work *Winter and Spring*, several operas and a ballet, violin concerto, another for 'cello, piano trio, chamber works, and lesser pieces, — altogether an imposing array.

But undoubtedly the most prominent of Danish composers was Niels Wilhelm Gade (1817–1890). Born at Copenhagen, the son of an instrument maker, he was

NIELS W. GADE
(Early Portrait)

brought up in his father's trade. His rather desultory instruction in piano, violin, and guitar was intended merely to aid him in his work, and his first teacher was a martinet who cared chiefly for mechanical accuracy. Yet in spite of these adverse conditions he developed such talent that it was deemed wise to let him follow a musical career, under Weyse and other lights of the conservatory.

Gade soon secured admission to the royal orchestra as violinist, and his training there shows in his later scores, which are always practical and fluent. He composed much at this time, but few of the works were preserved. At last his first great opportunity came, when the Musical Union offered a prize for an orchestral work. The *Echoes of Ossian* overture won not only the prize, but the friendship of Mendelssohn, who played it at the Gewandhaus concerts. The work is an excellent example of the romantic school, and holds its own unto the present.

This success aroused the interest of the Danish king, Christian VIII, who enabled Gade to travel abroad for further study. The composer at once went to Leipsic, where Mendelssohn aided him to bring out his first symphony, in C minor, and the Ossianic cantata *Comala*. After an Italian trip, Gade became director *pro tem.*, of the Gewandhaus orchestra, during Mendelssohn's absence. A return to Copenhagen brought him no position of any worth, so he resumed his Leipsic duties as Mendelssohn's assistant conductor, becoming chief director after the latter's death.

In 1848 Gade settled permanently in his native city, where he became in rapid succession organist, leader of the musical society and temporary director of the royal orchestra. In 1861 the death of the chief conductor left the post open for Gade, and from that time his life was spent in the happy activity of conducting, composing, and teaching in the conservatory. Gade married a daughter of the elder Hartmann, so that the music of Denmark became largely a family affair. He rarely left his native land, the two exceptions being a trip to Birmingham, in 1876, to conduct his *Zion* and *The Crusaders*, and another English voyage six years later, during which he directed his *Psyche*.

In the musical world Gade occupies a position midway between the classical and the newer romantic school. A disciple of Mendelssohn, he reflects the suave and gentle side of that master's art. The reproach of calling him "Mrs. Mendelssohn" is not entirely deserved, for Gade shows enough originality to stand on his own feet, and his use of northern folk song coloring, if less bold than that of Grieg, is still praiseworthy. His cantata, *The Erl-King's Daughter*, is almost entirely founded upon the melodies of his native land.

Of Gade's eight symphonies the first is the greatest, though the fourth, in B♭, is sometimes given in concerts today. The overture *Im Hochland* (*In the Highlands*) shows the sombre character of the earlier *Ossian*. Other overtures by Gade are *Hamlet* and *Michael Angelo*. A quintet, sextet, and octet for strings, also two violin sonatas, are the best of his chamber works, while the *Noveletten* and *Aquarellen* are but few of his many pleasing piano works. But his chief claim to renown rests upon his cantatas, *Fruhlings-Phantasie* and *Fruhlingsbotschaft*, which are perennial favorites. *The Crusaders*, with its varying scenes and pictures, shows more versatility than is usual with Gade, though it scarcely reaches the height of *Comala*. *Zion* is another strong work, and *Psyche* is attractive, but palls at times by its excessive sweetness.

Eduard Lassen (1830–1904) was known in all lands as a song-composer of rare gifts, but he has worked in the larger vocal and orchestral forms also. Born in Copenhagen, he went to Brussels with his parents, and received his musical education in the later place. The Prix de Rome, which he won in 1851, started him on his travels, which lasted for six years. They culminated in the friendship of Liszt, who aided him to produce his opera *Landgraf Ludwigs Brautfahrt* at Weimar. This success obtained him a court appointment, and from 1861 to 1895 he held the position of court Kapellmeister, succeeding Liszt. One of his triumphs as conductor was the production of Wagner's *Tristan* in 1874, soon after its first performance at Munich.

As composer, Lassen has produced other operas, among them *Frauenlob* and *The Captive*. He has written incidental music to *Faust*, *Oedipus in Colonos*, and other plays; an orchestral Te Deum; several cantatas, among them *Die Künstler*, two symphonies, and half a dozen overtures. But he is best remembered by his songs, whose consummate melodic beauty and expressive feeling have charmed two continents.

August Enna, who has won much national renown with his operas, was born at Nakskov, in 1860. Though his grandfather had been in Napoleon's army, his father was only a poor shoemaker, and he received little beyond the most ordinary education, even when the family settled in Copenhagen. With the exception of a few mediocre violin lessons, he was entirely self-taught, even in the difficult subject of orchestration.

Not being proficient enough to enter the royal orchestra, he traveled to Finland with a smaller organization. There he played several instruments, even including a bass drum, in front of a circus tent. On his return he played for dancing lessons, and taught piano for the munificent sum of twelve cents an hour. Too poor to buy much

dance music, he would often improvise the dances. In 1880 his operetta *A Village Tale* was performed, but laid aside; while the operas *Areta* and *Aglaia* were accepted, but never given. The latter, in fact, is no longer in existence, for in the days of extreme poverty the composer was forced to use the manuscript for fuel.

But better days were in store. A symphony, a suite, and several lesser works won the favor of Gade, and Enna soon received a traveling scholarship. This gave him some much-needed leisure, and resulted in the creation of his chief opera, *The Witch*. Accepted by the royal theatre, this also was laid aside, and would have remained in oblivion, but for an accidental inspection by Svendsen, who was charmed by its beauty, and spared no pains in having it produced. It met with an unparalleled success, and aroused wide-spread admiration for the boldness and skill with which the young composer handled his orchestral masses and produced his dramatic effects.

After this triumph came *Cleopatra*, which failed at first, but gained some success under better stage conditions. *Aucassin and Nicolette* followed, while *Lamia* won its meed of praise, but a new name awaited the composer in the field of fairy opera. If Humperdinck did well in setting one of Grimm's tales, certainly Enna chose wisely in selecting the works of his countryman, Hans Christian Andersen. *The Little Match-Girl* won decided appreciation, in many countries besides Denmark, for its simple pathos and appealing beauty. *Die Erbsenprinzessin* and other works of the same nature followed, and the composer is still working in this field at present. He is now the chief living composer of Denmark, and the only one widely known outside of his native land.

Victor Bendix (1851–) is another pupil and protégé of Gade. After the usual conservatory education he became leader of a choral society, and won decided notice as a violin virtuoso. He is also a pianist, and his piano compositions show remarkable merit. In the larger forms he has written three symphonies, the first entitled *Zur Höhe*, while the second is the interesting *Sommerklänge aus Südrussland*.

August Winding, of an earlier generation (1825–) is now director of the Copenhagen Conservatory. His numerous and well-known piano works include genre pictures, travel scenes, studies, preludes, waltzes, rustic pictures, and other *salon* pieces. He has produced also a concerto for piano, and one for violin; a string quartet, violin sonatas, and a number of violin fantasies.

Karl Attrup (1848–) another pupil of Gade, succeeded his master as organist. His fame as a composer rests on some valuable organ studies and songs. Otto Malling, also connected with the conservatory, receives much praise because of his excellent piano works. Joachim Andersen (1847–) won renown as a flute virtuoso in Berlin and St. Petersburg, afterwards becoming court conductor at Copenhagen. He composed many pieces for his instrument. Hans Lumbye (1810–1874) has been called the *Northern Strauss*, on account of his popular dance music, while his son, Georg, wrote an opera, *The Witch's Flute*. Johann Hornemann (1809–1870) composed short pieces of some merit, and Emil, his son, is responsible for the overtures *Aladdin* and *Heldenleben*.

August Hyllested (1858–), though born at Stockholm, was the son of Danish parents. He became a child prodigy on the violin, appearing in public at the age of five, and making a successful tour at eleven. His studies brought him to Copenhagen, where he soon became Cathedral organist. Later he became a pupil of Kiel and of Liszt, and soon afterwards came to this country and became assistant director of the Chicago Musical College. His symphonic poem with double chorus, entitled *Elizabeth*, was given in London as well as Chicago, while the composer numbers among his other works an opera, *Die Rheinnixe*, and a *Suite Romantique* for orchestra.

Even better known in America is Asgar Hamerik (Copenhagen, 1843–). Son of a preacher, who discouraged his musical tastes, he was self-taught at first, though he afterwards came under Gade, von Bülow, and others. At the first Paris Exposition he received a gold medal for his *Hymne de la Paix*, and a little later entered the operatic field. In 1871 he was appointed director of the Peabody Conservatory in Baltimore, and leader of the Peabody symphony concerts, since when he has been considered a loyal American. In 1890 he was knighted by the king of Denmark. His works include three operas, a festival cantata for the new Swedish constitution (1866), a *Trilogie Judaique*, a *Christliche Trilogie*, five symphonies, five *Nordische Suiten*, and many lesser compositions.

Another eminent Dane who has expatriated himself is Ludwig Schytté (1850–). Originally a druggist, he made music his vocation when twenty, studying with Neupert, Gade, and Liszt. He settled in Vienna, where he now resides as pianist, teacher, and composer. His works, which number beyond Op. 100, are mostly for piano. They include the *Charakterstücke*, the *Naturstimmungen*, *Pantomimes*, *Danish Melodies*, *Swedish Dances*, and many others, also a concerto and about sixty songs. In recent years the composer has won some recognition on the stage. His one-act *Hero* was well received at Copenhagen, while the burlesque *Circus-Damen*, the very successful *Atelderspuck*, and *Der Mameluck* have added to his fame. *Die Schwalbe* is his most recent operatic production.

From the work of these men it will be seen that while Danish music is not so distinctly local in flavor as that of Norway or New Russia, it is still sufficiently national in character to command respect and arouse interest. The folk music, also, partakes of the same character, being less striking than that of the other Scandinavian states, but still possessing a distinctive note and showing the charm of artless simplicity. For the collection of the best of her popular songs, Denmark is indebted to Andreas Berggreen (1801–1880), who spent his life in Copenhagen as a successful teacher.

In recent years Switzerland, too, has felt the force of the national movement, and now possesses a number of native composers, with at least one really great genius at their head. Hans Huber, the most prominent musical figure of the little republic, was born at Schönewerd in 1852. His studies brought him under Richter and Reinecke, at Leipsic. After teaching in Alsace, he was called to the music school at Basel, where he became director in 1896.

The list of his works is long and imposing. There are two operas, *Kudrun* and *Weltfrühling*, orchestral works with chorus and soloists, such as *Pandora* and the *Nordseebilder;* choral works such as *Aussöhnung* and *Meerfahrt*; three symphonies, including the *Wilhelm Tell*, No. 1; two concertos for piano, and one for violin; a *Karneval*, a *Serenade*, and other orchestral pieces; and a great quantity of chamber works, piano pieces, and songs. Huber is best known in the United States by his second, or *Böcklin*, symphony, Op. 115. This work, inspired by the noble pictures of the Swiss painter, Arnold Böcklin, is well worthy of its great subject, and shows a control of massive effects and expressive power that win it a high rank among the very few great modern symphonies.

Emile Jacques-Dalcroze (1865–) was born at Vienna, of Swiss parentage. His education, musical and otherwise, was received chiefly in Geneva, where he produced a comic opera, *La Soubrette*, at the age of seventeen. Further study in Paris resulted in an operetta, while a year in Algiers was marked by the one-act *L'Ecolier*. He then studied with Bruckner at Vienna, where he wrote another one-act piece, *Par les Bois*. After reverting to Paris and Delibes, he became professor of composition in the Geneva Conservatory. He soon brought out the cantata *La Veillée*, and the opera *Le Violon Maudit*. Other dramatic works by him are the lyric comedy *Jonie* and the four-act *Sancho*, a Wagnerian setting of a subject from *Don Quixote*. He has composed various instrumental works, among them a violin concerto, but is best known by his *chansons* and children's songs. His orchestral works show some of the modern tendency toward vagueness and dissonance.

Among many who are working to make Switzerland known, Gustave Doret, a friend of Saint-Saëns, shows much passionate strength in his *Hymne à la Beauté*. Rudolf Ganz, of Zurich (now settled in Chicago), is developing into a mature talent, while Otto Barblan is another composer who shows marked originality. Volkmar Andreae and Friedrich Klose are winning fame in Germany. Georg Haeser, of Zurich, has done some excellent choral work, while Lothar Kempter, of the same place, is not far behind. Combe, of Geneva, and Denereaz, of Lausanne, have shown skill in the smaller orchestral forms; while in chamber music and lesser works mention should be made of Niggli. Suter, Franck, Lauber, Hegar, Reymond, and many others.

From these brief reviews, it will be noted that the end of the nineteenth century was marked by a widespread movement toward nationalism in music. Wherever the folk songs of a nation showed any degree of real musical beauty, composers have arisen to fashion them into schools of well-marked character. Such has been the case in Norway, Sweden, Russia, Hungary, Bohemia, and to some extent Denmark. Those countries whose folk music showed little distinctive flavor, or belonged to the past rather than the present, have had to build anew, by encouraging broad musical education and imitating good models. Among these are Italy, France, England, the Netherlands, Switzerland, and our own heterogeneous America. Germany possesses many styles and models of her own; but there, too, we see a return to the simpler style in the fairy operas.

What will be the music of the future? It is hard to predict. The gorgeous harmonic crashes of Strauss will rule for a while. After them, what? Perhaps nothing new. Every art has its periods of growth and decline, of fruition and decay. The literature of Imperial Rome languished after the Augustan Age. Athens lost her lustre soon after the glorious Age of Pericles. Germanic poetry has reached its climaxes at intervals of six centuries. It may well be that music, too, has reached its present limits; that we shall have in the immediate future many talents, but no great geniuses. When art becomes widely known, it grows commonplace; and there is no incentive for the creative impulse. Yet there are still many beauties to be found. The modern painter does not throw aside his brush because Raphael and Rembrandt lived; and the modern composer need not despair of success if he translates emotion into tone faithfully, and according to the standards of our later day.

Questions

1. Tell what you can of the early music of Denmark.
2. Who is called the real father of Danish music and what was his chief opera?
3. Who was Emil Hartmann, and what were his chief works?
4. Who was the most prominent Danish composer, and what German composer became his model?
5. What are the chief works of Gade, and what characteristics do they show?
6. Where did Lassen pass his life, and what are his best works?
7. What is the most successful Danish opera, who wrote it, and what struggles did he have in early life?
8. In what field of music did the following work, — Bendix, Attrup, Winding, Schytté, Andersen, Berggreen?
9. Give a brief biography of Asgar Hamerik.
10. Give an account of the life and works of Hans Huber.
11. Name as many Swiss composers as you can.
12. What part does good folk music play in a national school?

Programs

I. Easy

1. Six Miniatures for Piano, Op. 5 . . . *Jacques-Dalcroze*
2. Danish Folk Songs. (*a*) Jutland Dance.
   (*b*) Unhappy Love.
3. Selection from Fleurs Exotiques, for piano . . . *Schytté*
4. Songs. (*a*) With Thy Blue Eyes . . . . . *Lassen*
   (*b*) Es War Ein Traum . . . . . *Lassen*
5. Melody, Op. 49, No. 3, for violin . . . . . *Huber*
6. Songs, from Lieder von Burns, Op. 27 . . . . . *Malling*
7. Marches for Piano, four hands . . . . . *Gade*

II. Difficult

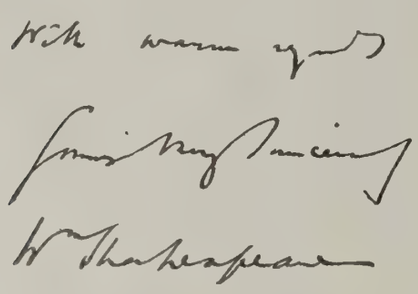
1. Night Songs, Op. 22, for piano . . . . . *Huber*
2. Songs from Engelsk Lyrik . . . . . *Malling*
3. Selection from Piano Sonata, Op. 26 . . . . . *Bendix*
4. Solo: They Softly Sleep. From "The Crusaders." . . . . . *Gade*
5. Violin Sonata in D Minor . . . . . *Gade*
6. Songs: Peregrina-Lieder, Op. 32 . . . . . *Huber*
7. Selection from "Lyric Symphony," arr. for piano . . . . . *Hamerik*

THE VOICE

Conducted by WILLIAM SHAKESPEARE

All communications regarding the Voice Department of THE MUSICIAN should be sent directly to the Editor-in-Chief. Students who follow the work which is outlined in this Department may write freely regarding any further helps and hints that they need. If there is any point in your study or teaching which you desire to have discussed here, please communicate with us about it.

In acting for a time as Editor of the Voice Department of THE MUSICIAN, *I feel that I must first express my admiration of the earnestness of purpose and high standard of this journal, in which I have read with the deepest interest many valuable articles.*



PHRASING AND SUMMARY

WILLIAM SHAKESPEARE

In former papers we have already alluded to the fulness of tone, to the absolutely unerring tuning, to the legato, to the perfection of pronunciation and to the expression (the facial freedom) of the good singer; also to the grand attack in the forte accents which in time becomes dramatic even in large halls and theatres.

Perhaps the highest characteristic of perfection in the "Art of Singing" is *the crescendo and diminuendo* always to be observed in the phrasing of the true artist.

With the rise of the melody is heard the crescendo, with the close of the phrase the diminuendo, at least if the composer understands what phrasing is and how to write for his instrument so as to adapt the melody to the sense of his words. The significant or sensitive notes of the melody are accented by the true artist who produces the greatest effect in his aria or recitative without betraying the effort by which he achieves the most forcible results.

It has been said that phrasing is a lost art. On the contrary, there are still singers who phrase, and the student must take pattern by their example as often as possible. In time we shall regain that great mastery over phrasing which still exists in the playing of all good violinists and pianists and indeed of all artists performing *classic works*. Verdi, who understood the voice as well as any one, says that in the study of the vocal art we must return to the Old Masters and study their works.

Porpora, a pupil of Scarlatti, teacher of singing and composer, born at Naples in 1686, established a school for singing, whence issued those wonderful pupils who made his name so famous. He was the greatest singing master who ever lived, and from his pupils have been handed down to us the relics of a grand style.

He, however, has left us no written account of his manner of teaching, and his solfeggi, or vocalises, differ from others of his time only in being more exclusively directed to the development of flexibility of the voice.

To a profound knowledge of the human voice and an intuitive sympathy with singers, Porpora must have united the genius of imposing his will on others. It is said of him that he kept his pupil Caffarelli to a sheet of exercises for five years, and on the pupil asking if he might not be allowed to sing an aria, the Master replied, "Go, my son, I have nothing more to teach you, you are the greatest singer in Europe." Caffarelli excelled in slow and pathetic airs as well as in the bravura style, and was unapproachable in beauty of voice and in the execution of the trill.

Porpora's pupil, Farinelli, when the Emperor Charles the Sixth expressed his regret that so consummate an artist should devote himself entirely to exhibitions of skill and bravura, struck by the truth of the criticism, resolved to appeal more to emotion, and proved adequate by becoming the most pathetic as he had been the most brilliant of singers.

Farinelli had an inimitable power of swelling a note by minute degrees to an amazing volume and afterwards diminishing in the same manner to a mere point. This singer excited such enthusiasm in his audiences that one lady ejaculated the phrase (perpetuated by the painter Hogarth in "The Rake's Progress") "One God and one Farinelli." It was Farinelli who sang a cadence in a song with a trumpet obbligato, and after finishing a long note, so that the trumpeter had to give up out of breath, extended the cadence with a further vocal passage in the same breath.

He, however, was not so fortunate when singing with a great rival, Bernacchi, for, on their meeting in public, after Farinelli had sung an air with great effect, Bernacchi repeated this with the same trills, roulades and cadenza *in such a manner* that Farinelli, who possessed the sweetest and most modest disposition, owned his defeat and entreated his conqueror to give him further instruction, which Bernacchi generously did. Farinelli thus perfected his style, and became the most remarkable singer, perhaps, who ever lived.

Pachiorotti, who, with a defective voice, possessed high intelligence and made himself a consummate artist, was followed by many great singers. Among them were Gizziello and later on Crescentini.

In the time of Mozart the singer Faustina was credited with such extraordinary powers of respiration that it was supposed she could sing while taking in as well as sending out the breath.

The roll of famous artists in modern times includes, among others, Catalani, Malibran, Grisi, Rubini, Tamburini, Lablache, Giuglini, Mario, down to Adelina Patti, Santley and Jenny Lind. The last-mentioned genius I myself heard sing Mozart's air from his opera *Il Re Pastore*, and in this she sang a trill with violin obbligato in the most perfect legato style, so that every note agreed

with the trill of the violin, — a marvelous achievement, but in addition, the feeling of the song was expressed in the most touching way.

It might be interesting to imagine what one of the old singers would find to sing if he visited again the scenes of former triumphs. In the compositions of the present day what scope would there be for his former effects? He would delight in the works of Handel, Bach, and Mozart, and he would revel in the more modern composers, Rossini, Bellini, Donizetti, and Verdi. These composers knew how to bring into play all the resources of their singers. They gave them time to breathe and collect themselves between the phrases by introducing a bar or two for the orchestra alone, in a way quite different from some later composers who give little or no opportunity for the singer to breathe.

Take as examples the incomparable recitatives, the loveliest airs, the slow, sustained notes fostering "messa di voce," or swelling notes, the invocation and triumphant phrases. For recitative, Handel's *Deeper and Deeper Still*, for sustained notes, *Waft Her Angels* and *Comfort Ye*, for vigorous passages, *Love sounds the Alarm*, for prayerful utterance, *Father of Heaven*. How many of Handel's airs commence with a phrase for the voice unaccompanied, *O Sleep* (*Semele*), *Father of Heaven* (*Judas Maccabeus*), *O Liberty* (*Judas Maccabeus*); note the *phrasing* of Handel when he interrupts the musical phrase on a single word, as in the air, *Where'er you Walk* (*Semele*).

Modern music has generally a separate syllable for every note — only forte singing is required by reason of the elaborate and powerful accompaniments.

Now the Italians and other southern nationalities who delight in singing as an instinctive pleasure seem naturally to recognize the crescendo of rising notes and certain culminating effects of force which lead spontaneously to the most dramatic points in any phrase.

The English speaking composer is generally more of an instrumentalist than a born singer, and does not seem to value the importance of these special effects which pertain solely to the voice. Even the great German masters, while producing masterpieces of beauty and grandeur, fail in the use of those vocal culminations which characterize the compositions of the Italians, though the school of music of the latter may be of an inferior order.

In concluding our remarks on phrasing, let us then study the words and music we have to sing until both are mastered mentally; the picture of the words and the phrasing of the music, the crescendo of the ascending notes of the melody and the diminuendo of the falling cadence, the accents necessary to the words and the sensitive loveliness of the accents which belong to the melody.

The effect of diminishing the power of the voice on nearing the end of a phrase is sometimes magical.

Let us avoid dragging and hurrying. The greater the artist the less he tampers with the time of the music, without due consideration.

The Old Masters prided themselves on their phrasing, on the calmness of the tempo, on the just accent, and on the *crescendo* and *diminuendo*.

The singers were so sensitive to lovely phrasing that the clarinettist, Lazarus, whom I knew intimately, on being asked, "Where did you learn your exquisite phrasing?" said, "I learnt it from the singers at the Opera, some fifty years ago." On the other hand, a great tenor, on being asked, "From whom did you learn your phrasing?" said, "I fancy I learnt more from hearing Lazarus play the clarinet than from any one else."

Nowadays the *instrumentalists* are certainly ahead of the singers in loveliness of phrasing, but formerly the contrary was the case.

The development of the orchestra has of course been carried to its highest pitch by Wagner. But, unfortunately, while he has increased the volume, the richness and complexity of the *orchestra* to an unprecedented degree, he has been unable to add *anything whatever to the volume of the human voice.*

There are still living, composers who have written music full of deep feeling, true loveliness and dramatic character, yet not well fitted for the voice, indeed sometimes almost incapable of successful performance.

As a public singer I have had to sing cantatas and other works which, though written for a tenor, were quite unsuitable, and I have heard many times artists singing music too low, or painfully laden with words on the highest notes, parts almost impossible to render with any true vocal effect.

Vocalists have asked the composer, "For what voice is this written?" He answers, "Well, I do not mean exactly any particular kind of voice; it is for a kind of baritone or mezzo soprano." What a confused idea of the capabilities of the different voices!

Some two years before his death, I begged the great Brahms to write some songs especially for a tenor voice. I told him I found his lovely songs too low. He said, "Transpose them higher, for I like them to be transposed according to the voice." "But," I said, "if I put them up, then there are notes which will be too high, for the tenor voice is only good between the two A flats. Your songs are too extensive in compass." "Ja, ja," he said, "that is what my friend Walther, the tenor, tells me." What a loss to singers it is, then, that the beautiful songs of Brahms, as well as those of other great men, were not written for some particular voice, like the music of the Italian composers.

The question suggests itself, Why do not composers study singing before writing for the voice, just as they must study the pianoforte or the violin before writing a concerto for these instruments?

In the olden times, singers were frequently composers and composers were singing-masters. Furthermore, Handel and Mozart both went to Italy and studied singing, and associated with singers.

I believe the time is fast coming when there shall spring up composers who will study singing and singers, and find the legato style of singing — the long, expressive notes, the invocation — and all the charms of a classic school as worthy of their attention as the pianoforte, violin, and other instruments.

There exist the same splendid voices now as ever, and the same poetic imagination. There are already signs everywhere that an inquiry is being made relative to singing and singers, which augurs well for the art.

All earnest masters of singing are really in agreement even if they do not always use the same terms. Why not meet more often together and bring these terms in agreement? Why not form a brotherhood for the furtherance of the vocal art?

The more the subject is discussed the better. Such discussions cannot fail to be the means of bringing together the composer, the singer, and the singing-master, and it is only by the constant association of these three elements that we shall realize the object on which the hopes of all of us are set, namely, great works of art that shall open to us new fields of beauty through the medium of the only instrument that is at once human and divine.

NOTES AND QUERIES

M. E. G., Racine, Ohio.

1. By "major" and "minor" semitone is meant the larger and smaller half step. The "larger" is the so-called diatonic half step, or the half step found in the natural (major) scale, between the 3d and 4th, and between the 7th and 8th scale tones; for instance, C to F is a larger half stop. The "smaller" is the so-called chromatic half step, and is found between any chromatic tones, like C and C♯, or C and C♭. The larger half step, you see, is represented by different letters (contiguous), the smaller half step by the *same* letter. The interval from C to D♭ is a "major semitone" (steps 7 and 8 in the key of D♭ major); whereas the interval from C to C♯ is a "minor semitone." The effect appears to be the same upon the keyboard, but that is owing to a wise little inaccuracy in tuning the piano or organ; the tones C♯ and D♭ are actually different, as I hope you know.

2. The syncopated measure in 4–4 time, which you find it difficult to count, will appear simple if you count eight eighth notes instead of four quarter notes. Count "one-and-two-and-three-and-four-and."

E. M., Clarksville, Va.

Your question, why certain intervals are called perfect, is an interesting one, and merits a careful and complete answer. First of all, disabuse your mind of the idea that "interval" *in music* means "space," and try to realize that it signifies "tone relationship." The term interval refers, actually, merely to the written notes (on the paper), or to the points of pressure, or keys (on the keyboard); it cannot possibly refer to the tones, or sounds, any more than it could to the term "cousin," or to any other word signifying relation. With this idea in your mind you will understand that a perfect interval means a perfect tone relation; that is, the term "perfect" may be, and is applied to the interval formed by associating tones which most nearly blend with each other, — not according to any person's idea of blending, but according to the scientific fact of tone affinity. This fact of tone affinity is established by comparing the velocity of vibration which generates the two respective tones. When the ratio of velocity is as 1 to 1, the interval is unison, — nothing could be more exactly similar, or blend more "perfectly"; hence the unison is called a perfect interval. When the ratio is as 1 to 2, the ratio of velocity is still sufficiently similar to produce perfect tone affinity, — the so-called perfect octave. The ratios 2 to 3, and 3 to 4 produce the fifth and fourth, still closely enough related to be classed "perfect."

The following more intricate ratios (4 to 5, 5 to 6, etc.) no longer represent these closer degrees of tone affinity, and do not produce "perfect" intervals. They might be called "imperfect" intervals; and indeed, this quality is distinctly implied by the terms "major" and "minor" that are used, — signifying that the interval is variable, may be "larger" or "smaller" without essentially altering the actual tone relationship.

A simple proof of the correctness of this reasoning is found in the old rule that "a perfect interval is one that remains perfect when inverted;" that is, C to G is a perfect 5th, and G to C is a perfect 4th; while a major interval, when inverted, becomes a minor one, — that is, C to E is a major 3d, and E to C is a minor 6th.

You are no doubt familiar with the rule that the perfect and major intervals are those which are formed by any *key-note* and the tones of *its major scale*,— those, in a word, which correspond to the scale (of the lower of the two tones).

M. M., Carberry, Manitoba, Canada.

The first position on the violin is that in which the four fingers rest upon each of the four strings at their "lowest" and — nearest the scroll. When in the first position, the fingers stop the lowest tones of the string; if one higher tone is needed, the whole hand is shifted upward, to the "second position." In the first position, on the E string, the tones F, G, A, B, are stopped; in the second position the hand moves upward to the tones G, A, B, C; in the third position it moves again upward to the tones A, B, C, D; and so on.

If the violin piece contains no higher note than B² (on the E string), it may all be played in the first position; if it contains higher notes, it will involve higher positions, but only where these higher notes occur. Higher positions may, it is true, be used at times, arbitrarily, upon the lower strings; but only for certain effects.

E. M. C., Plymouth, England.

1. In the passage which you cite: —

The first body of tones is probably not a "chord" at all, in the strict harmonic sense. This is not apparent from its *shape*, for it exactly resembles a chord of the 7th (upon B♭), and therefore might be a 7th on the first step of B♭ major, or on the 3d step of G minor, or on the 4th step of F major, or 6th step of D minor. But its non-harmonic character is apparent from the manner in which it *progresses*. None of these chords would be likely to resolve in this way, and it is therefore evident that the notes A and F are merely neighboring notes (auxiliary tones) of the following tone, G.

2. The Mozart passage should be played thus: —

X. Y. Z., Olds, Iowa.

1. The fingering 1, 2, 3, 4, 5 is termed the German or Continental, and is the one now universally adopted. The other method, x, 1, 2, 3, 4, known as the English or American fingering, has fallen into disuse.

2. Harmony study is prosecuted by correspondence by a large and steadily increasing number of students who are not able to procure personal lesson, and the results are, as a rule, very gratifying.

3. The lines to which you refer, ‖, generally indicate a terminating point. Either they mark the end of a *crescendo*, or of a *ritardando*, or of some motive or phrase.

H. C. R.

There is no other, or at least no better, way of learning to read at sight, than by *practicing* sight reading systematically and persistently. As your proficiency and alertness increase, you will naturally read more and more rapidly. Make it a rule to devote a half-hour, or hour, every day to the reading of some composition that is new to you. Practice makes perfect.

PUZZLED BY QUERIES

THE CINCINNATI FESTIVAL

H. E. KREHBIEL

The seventeenth biennial music festival of the Cincinnati Music Festival Association was held in the Springer Hall of that city in the first week of May. There were in all six concerts, — four on the evenings of Tuesday, Wednesday, Friday, and Saturday; two in the afternoons of Thursday and Saturday. The scheme followed out in a general way was similar to that which has prevailed for twenty years, though there was a reversion to an original element in the participation in one concert of a chorus of children from the public schools. The Editor of THE MUSICIAN pointed out the peculiar significance of this feature, as well as the importance of a success of the meeting in respect of the future of the institution, a month ago. The outcome has fully borne out Mr. Tapper's observations. The festival was a triumph of unusual magnitude, so marked, emphatic, so mandatory indeed, that it is scarcely magnifying the matter to say that it was a reincarnation of the original festival idea. The festival was sowed in dissension; it arose in harmony. Cincinnati never had cause to be prouder of itself, even in the early days when the festivals were the artistic and social sen sations of the Ohio Valley and made the city a Mecca for thousands of visitors from the cities, towns, and villages of Ohio, Kentucky, and Indiana. A year ago the death of Theodore Thomas and an unfortunate quarrel between the Directors of the Festival Association and the festival choir seemed to ring the knell of the meetings. The choir wanted to give a concert in memory of the dead leader; the directors wanted to wait till the festival, a year distant, and give it a memorial character. Such a difference of opinion might easily have been adjusted had it been discussed dispassionately, but the musical community of Cincinnati, I regret to say, is strongly given to factionalism, growing out of petty self-seeking, personal ambition, a policy long pursued of separating the festivals from other activities which ought to have been sought in cooperation for the advancement of culture, and other things less easily explained, and as a result the questions were not debated soberly, but acrimoniously, and in a spirit of bitterness. The choir refused to participate in the festival and one year's work of preparation was wasted. Local animosities were still further fomented by the appointment of Mr. Frank Van der Stucken as musical director, to take the place of Mr. Thomas, and when the new director returned from his annual European vacation last October he found himself in the position of a leader without an army. The choir had to be organized *ab initio*, and the stupendous task attempted of training 350 choristers, some of them absolutely inexperienced, to sing two modern oratorios, *The Apostles* and *The Dream of Gerontius*, by Sir Edward Elgar, besides Brahms's *German Requiem*, Bach's *Actus Tragicus* and the choral portion of Beethoven's Ninth Symphony, which has come to be considered essential to the festival scheme. It was a gigantic undertaking, but those who predicted the failure of the enterprise did not count on the large resources of Cincinnati in pluck, energy, determination, and skill, or on the superb qualities of Mr. Van der Stucken as a choirmaster. The popular qualities enumerated, frequently misdirected and then destructive, were enlisted in a good cause, and so wisely directed and nourished that when Sir Edward Elgar came from London a fortnight before the festival to superintend the performance of his works he found that all he needed to do was to impress his ideas of tempo and expression upon the singers and instrumentalists. Both bodies were letter perfect, much more perfect than I can remember any of the preceding choirs ever to have been, except, possibly, that of 1882. The election of Mr. Van der Stucken brought in a new element of personal equation in the matter of the orchestra. Under Mr. Thomas this had always been a foreign body, although the music lovers who were largely instrumental in promoting the festivals were at a large sacrifice also upholding the Cincinnati Symphony Orchestra, of which the new leader was the artistic head. Here, too, the death of Mr. Thomas seemed plainly to point the way to a union of two factors hitherto more or less antagonistic, and a consequent increase in magnitude of the local factors in the festival forces. The Cincinnati Orchestra was made the nucleus of the festival band, being augmented by players drawn from the Pittsburgh organization. This increased the number of rehearsals necessary to reach a high plane of artistic excellence in the instrumental department, and also added very materially to the cost of the festival; but satisfactory, if not brilliant results were attained, and the financial sacrifice was forgotten in the happiness created by the general success. The expenses were large, but the receipts were larger still by $4000 or more Thus the seventeenth festival passed through many tribulations and came out triumphant.

The first concert was set apart as a memorial to Mr. Thomas. Technically speaking, it was the most brilliant of the festival, that in which the quality of the choir was most in evidence. It was in three parts. Bach's *Actus Tragicus* was separated from *The German Requiem* by two excerpts from Wagner's *Götterdämmerung* — the death music of Siegfried and the peroration to the tragedy in the dying speech of Brünnhilde. This was sung by Madame Gadski, who was the one conspicuous singer of the festival from a popular point of view. Her opulence of voice and impassioned manner created a strong impression, in this scene, and the arias which she sang at the afternoon concerts, — it was the hackneyed list: *Ocean, Thou Mighty Monster*, *Dich theure Halle*, the finale of *Tristan und Isolde*, and the letter rondo from Mozart's *Don Giovanni;* but there was matter more admirable in the singing of Miss Janet Spencer and Mrs. Rider-Kelsey, despite the fact that they came without loud trumpeting of fame. Madame Homer had been engaged to bear the burden of the contralto work of the festival, but was incapacitated by the shock of the San Francisco catastrophe, and all her work fell upon Miss Spencer, who sang with beautiful intelligence and taste in both of Sir Edward's oratorios. But it is not my purpose to discuss the singing of individuals when there is so much else calling for attention. Let it suffice to say that there were also features which were thoroughly admirable in the singing of John Coates and D. Ffrangçon Davies, who were both particularly illuminative in the music of their countryman, but whose vocal resources were not what the occasion seemed to demand. More satisfactory, to the public at least, were the offerings of Herbert Witherspoon and Charles W. Clarke.

Neither of Sir Edward Elgar's oratorios were entirely new to all the listeners in the audience. *The Dream of Gerontius* had been heard in New York twice, in Chicago and in Boston, and had been the new feature of the Cincinnati festival two years before. *The Apostles*, which was a novelty in Cincinnati, had been brought forward in New York a year before and had a hearing in Chicago on Monday evening of festival week. The conductors who conducted these performances were both in the audience, — Dr. Frank Damrosch and Mr. Harrison Wild. Speaking for myself, I can say that the privilege of hearing the works already reasonably familiar under the direction of the composer was invaluable to an understanding of his purposes and the character of the music. Sir Edward is not a *routinier* as a conductor. He is full of nervous energy and wholly engrossed in his work, but he lacks the command of the technical devices which are essential to perfect communication of his wishes and seems singularly indifferent to elements upon which many conductors, the average good conductor indeed, rely. Rhythmical incisiveness is not of prime importance in his eyes. Instead he seems to prefer a rhapsodical style of performance as a vehicle for the mystical feeling with which the most impressive portions of his music are surcharged. He succeeded in imbuing the singers with sympathy for the spirit of his music and in persuading them to give it expression. I have heard externals which seemed to call for brilliant utterance from the printed page brought more vividly to notice, but I have never before been so near the heart of the works, as I felt myself to be this time. In the case of the older work, it seemed to me as if only the shell had been presented at the sixteenth festival. Once or twice I found myself wondering whether or not Sir Edward realized that he had a very large audience-room to fill with sound, for he seemed so intent on avoiding all crude material effects that his *pianos* and *pianissimos* became little more than whispers of sound; but they were strangely moving and awe-inspiring, and I felt that the music's real spirit lived in this sort of exalted intimacy. During his stay in Cincinnati he lived at the Country Club, and avoiding publicity as much as possible gave himself up largely to work on the orchestration of his oratorio, which is to be a continuation of the trilogy of which *The Apostles* is the beginning. What the title of the new work is to be has not been made public, and it seems likely that the composer himself has not made up his mind on the subject. Nothing in connection with the festival caused so great and general a swelling of the heart, parental, popular, and artistic, as the singing of the public school children on Friday night in Benoit's cantata *Into the World*. The little ones were familiar with every note, word, and nuance of the music; they sang from memory, and set a noteworthy example to their elders in the manner in which they watched the conductor and responded to his beat and indications of expression. The cantata stirred up tremendous enthusiasm and Mr. Walter Aiken and one of his assistants were brought forward more than once by Mr. Van der Stucken to receive their guerdon of praise. From these little ones will come the recruits for the festival choirs of the future, the contemplation of which must be as great a pleasure to the lovers of the festival now as the memories of the past.

THE TRUTH ABOUT TOLNA. Bertha Runkle, New York, The Century Co., 1906.

This is a very entertaining story by the author of *The Helmet of Navarre*. Tolna, a famous tenor, is the rage of that portion of New York society that patronizes grand opera among other pastimes. The truth about Tolna is that although he is supposed to be a Hungarian of high birth who has adopted the stage on account of his extraordinary voice, he is in reality Maurice Fordham, born in New York and musically educated by Denys Alden, who, in order to make his *protégé* win renown, circulates the story about his foreign parentage, and other statements that the passionate press agent knows well how to use, taking eagerly all things foreign. There are side episodes of a romantic nature in the way of love affairs between Denys Alden and Margery Fleming, also between Maurice Fordham and Honor Hammond, an old friend of his youth in the days before he commenced his operatic career. Naturally, all things end happily.

The author gives a few good-natured thrusts at some of the well-known weaknesses of those belonging to the smart set, and the locale of the Opera House furnishes an appropriate background for some entertaining situations and breezy dialogue.

Music lovers will find this story especially acceptable, although it is one that will help many another to pass a pleasant hour or more.

Rudolph Aronson has signed with Leoncavallo, composer of *I Pagliacci*, and the famous orchestra from La Scala, Milan, for a series of opera concerts beginning October 8, next, in the United States and Canada during a period of eight weeks. The programs will include the following works of Leoncavallo, *Pagliacci*, *Chatterton*, *Medici*, *Zaza*, *Bohème*, *Rolando di Berlino*, who is now selecting for the tour the best vocalists procurable in Italy.

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"Perhaps, if we should meet Shakspeare, we should not be conscious of any steep inferiority; no, but of a great equality, — only that he possessed a strange skill of using, of classifying his facts, which we lacked. For notwithstanding our utter incapacity to produce anything like *Hamlet* or *Othello*, see the perfect reception this wit and immense knowledge of life and liquid eloquence find in us all."

—EMERSON, *Essay on Intellect.*

PRACTICAL ACOUSTICS

Now we come to vibrations of columns of air. Every boy has taken empty bottles and blown gently across the mouth of one, producing a musical tone, then blowing smartly he has produced a tone one twelfth higher. Could he blow smartly enough with a tiny stream of breath, he would produce the seventeenth (two octaves and a third).

This is precisely the philosophy of the Stopped Diapason and Bourdon stops of the pipe organ. These are pipes with the upper end plugged up, or in other words, inverted bottles. In all "flue" organ pipes the enclosed air is the vibrating body, and the vibrations are longitudinal or lengthwise of the pipe.

In the bottle or the Stopped Diapason the vibration runs from the open end, or mouth, to the closed end, or node; then back to the mouth, giving the fundamental tone of the pipe. Then it may faintly have the alternate overtones, numbers 3, 5, 7, etc., of the series, omitting the others, as with a rod fixed at one end. The pitch of these will be the true pitch in the harmonic series. In the open pipes (Diapasons, Gambas, Principals, Melodias, etc.), constituting the bulk of the organ, there is always a node at the middle when sounding the fundamental or lowest tone, so that this tone is produced by the simultaneous lengthwise vibration of each half, the vibration running from the ends to the middle, then reversing.

It thus results that a half-length of open pipe is the ventral segment corresponding to the whole length of stopped pipe giving a tone of the same pitch. These ventral segments (half of open pipe) may be subdivided for overtones, the first overtone (octave) being given by each quarter of the pipe, the next overtone by each one sixth of the pipe, the next by each one eighth, etc. These furnish a complete set of overtones. Yet organs pipe are not rich in overtones, especially stopped pipes. Flutes, oboes, and bassoons may have full sets of overtones, while clarinets have only the alternate ones, on the principle of the Stopped Diapason.

A Diapason or other open pipe which sounds the lower C of the organ keyboard (two octaves below middle C) is about 8 ft. in length. Thus any set of pipes, the longest and consequent lowest of which sounds this C tone when the corresponding key is touched, is called an 8 ft. stop, although some sets of pipes vary from this in actual length, notably the Stopped Diapason, which is but 4 ft. long. But should the longest pipe of the set sound C one octave higher, when the lowest key is touched, it would be called a 4 ft. stop, even in case of the harmonic flute, which in consequence of its being made to sound always its first overtone instead of the fundamental, is, in actual length, 8 ft. Likewise a stop sounding two octaves higher is called a 2 ft. stop; and a 16 ft. stop if sounding one octave lower; or a 32 ft. stop if two octaves lower.

We have already referred to the peculiarity of brass instruments forming this series of open tones (without use of valves) in the exact order of what we called "nature's harmonic series." These are not, as in stringed instruments, fainter harmonic tones, but are genuine full tones, and in all cases more full and round than the lower or fundamental tone of the instrument. Orchestral music, even down to the time of Mendelssohn, was written for horns and trumpets without valves, therefore confined to these open tones before mentioned, except that any horn tones could be flatted a little by insertion of the right hand in the bell.

To-day the use of valves makes the chromatic scale available for these instruments. As tones of brass instruments, as of most others, include faintly the overtones, it follows that an instrument sounding out full any tone of its series will give therewith only the faint harmonic tones still higher in the series.

The vibrations of a bell are on this wise. When it sounds its fundamental tone, there are four nodes and four ventral segments, each segment of 90 degrees. The point struck by the clapper will be the centre of a ventral segment. This and the segment opposite will vibrate together, swelling outward while the other two draw in, thus giving an oval shape to the bell; then springing back by elasticity the two first mentioned will spring inward and the others outward, giving an oval with its long diameter at right angles to the first direction. This rapid alternation constitutes the vibration. Should the metal be pretty thin there is a strong tendency in the bell to divide into six or eight ventral segments with corresponding overtones. For clearness of tone and freedom from false harmonics it is essential to take the utmost pains in mixing the pure bell metal and in casting.

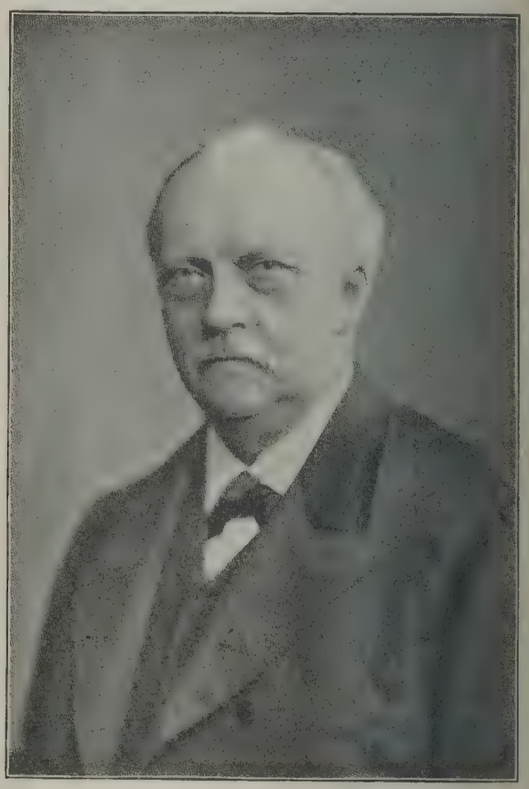
We have now sketched rapidly the main points of acoustics, the knowledge of which is essential to the musician. It remains for us to look these over a little more in detail, to add some corollaries, to draw some conclusions, and learn some practical lessons.

We noticed earlier in our investigations that the velocity of sound in air is 1090 ft. per second at the freezing-point.

This was measured and determined with the utmost care by German scientists. Now, if we take the longest rod or bar of iron we can find, suspended in such a way that it can vibrate readily, perhaps in a railing bounding some park, and place the ear near one end while another person strikes the rail with a mallet at the farther end, we shall hear the sound from the rail perceptibly before the sound reaches us through the air. The fact has been noted, too, by any one who has tried it, that in the country where there is but little confusion of tone in the air, a person who lays his ear to the iron track of a railroad can hear the approach of a train some miles away, possibly a minute before the atmosphere announces it. In fact, the velocity of sound in continuous iron is seventeen times that in air. The velocity along the fibre of pine wood is ten times that in air, and the velocity in water about four and one half times that in air.

Doubtless most people looking at a regiment of soldiers parading by have criticized them for not stepping well together, while marching to the same music which heads the procession. If the observer is at a window or platform, high enough to see at once all the ranks, it is a little disquieting to see the last companies step persistently later than the first ones. Yet the last ranks keep as perfectly with the music they hear as do the first ones. An organist, playing a rapid and complicated composition at a console placed far from the body of the instrument, or where the sound reaches the ear only after bending around obstacles, has a practical difficulty to surmount that no one would imagine until he had tried it himself. In some movements he must play a full measure ahead of what he hears. It is worse than playing a dummy, for with the latter there is no actual tone to distract, while with the organ there is the distraction of sound reaching him which has been already played.

Each vibration is an air wave, and the more rapidly these air waves succeed each other the higher the pitch of tone that we hear. Let us now stand by the railroad. The Empire State Express approaches with whistle or bell, or both, sounding. We ascertain the pitch of these tones by comparing with a tuning-fork. The train passes us at full speed and immediately the pitch of whistle or bell drops nearly a whole tone. Why is this? Certainly whistle and bell have each a normal pitch, but the rapidity with which the vibrations reach the ear of a person standing still is increased as a train approaches and lessened as it recedes. The phenomenon is decidedly intensified if the listener is on a train traveling in the opposite direction on a parallel track so that the trains approach and pass.



AUGUST VON HELMHOLTZ

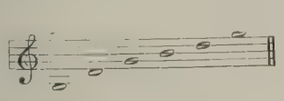
Let us now consider the matter of sympathetic vibrations. Here we encounter a simple principle in mechanics. Professor Tyndall says,* "If two clocks, with pendulums of the same period of vibration, be placed against the same wall and if one of the clocks be set going and the other not, the ticks of the moving clock transmitted through the wall will start its neighbor. The pendulum, moved by a single tick, swings through an extremely minute arc, but it returns to the limit of its swing just in time to receive another impulse. By the continuance of this process the impulses so add themselves together as finally to set the clock a-going." We have already seen that a bar of iron or an organ pipe or even a bottle has its own fundamental tone. It is also true that any tube, even a sheet of paper rolled up or a box which nearly encloses a body of air, or any room reasonably free from draperies, even a large concert hall, has its fundamental pitch, and that any musical tone played or sung at this exact pitch or at one of its overtones in such room or hall or at the open end of such tube or box will be reinforced by such inherent tone.

A tuning-fork agitated and held at the open end of a tube will scarcely be heard unless it be at the exact pitch

* *On Sound*, pp. 322–323, John Tyndall, F. R. S.

of the tube, in which event it will ring out with a large body of tone, and with a smaller tone if at an exact overtone. The fork at the tube, or the voice or instrument at the normal pitch of the room, has not simply its own series of vibrations, but has set in vibration the natural sound waves of the tube or room, thus increasing the intensity of the tone perhaps many fold.

Tune two violins together and lay one of them on a table. Then sound any open string on the other for a second or two, then stop suddenly and the tone will continue from the first. This principle was utilized in the viol d'amore, an instrument now unfortunately obsolete, having seven strings of catgut to be played with a bow, and seven wire strings stretched underneath the others and tuned in unison with them; the latter sounded in sympathy with the former, thus giving additional resonance and a novel and pleasing quality of tone. Experiments may be tried at the piano. Let G (first line of the bass staff), piano key, be quietly pressed down so as to lift its damper without musical tone; then let the following list of keys



be struck in slow succession and the keys be immediately dropped (lower G being still held). Each of their tones will be continued from the low G string as overtones. Or the entire list of these upper tones may be struck simultaneously and immediately dropped, and the entire chord will sound faintly but clearly from the one string.

In the first paper of this series a description was given of Doves' syren. Readers will do well to look again at this, for we have now to indicate the improvements made by Helmholtz. He constructed a second syren, placed above the first and inverted, with the same rod or axis carrying the two disks which must thus revolve together. The two syrens do not themselves revolve, but only their disks. Air is admitted to the upper syren from above and to the lower from below. The lower syren has for its four series of orifices respectively 8, 10, 12, 18 holes; the upper syren has 9, 12, 15, 16 holes, making eight series all told. By using together any two of these series we can thus get the ratio of vibrations for any interval we want.

But the upper syren can be itself turned by a crank handle working a toothed wheel. Thus the comparative rates from the two syrens can be made to vary a trifle or more, as wished. The tone of the upper can be made a trifle flat or sharp as compared with the lower.

Suppose now we open in each syren the series 12. The sounds flow together in unison. But suppose we make the lower sound 256 and the upper 257 vibrations per second, only once in a second will the vibrations perfectly synchronize. At other points they more or less interfere.

Naturally the tones are stronger when they are together. These periodic waves of stronger tone are quite perceptible and are called *beats*. If these vibrations are 256 and 258 per second, there will be two beats in a second, and so on. In discords the interference is extremely rapid, but a tuner bringing two piano strings or two organ pipes into unison finds the approach to unison heralded by these beats, and when they entirely vanish he has a perfect unison. The same is noticed in the octave 5th, and 4th. This wave interference, when there is the least deviation from perfect blending, is popularly known by tuners as the "wolf." In the well-tempered scale there is necessarily always a slight "wolf."

We referred elsewhere to the pure and well-tempered scales and we noted the fact that the chief objection to the latter was in the extra sharping of the major third. We call attention now to a fact which has not escaped the observation of critical observers, namely, the sharping of the "leading tone" by singers and violinists.

The seventh degree of the scale, in major or minor music alike, has a strong upward tendency into the eighth or tonic, and singers and players unconsciously approximate to this tonic before it is really due. But the *harmonic* value of this 7th degree is practically only as a third or middle tone of the dominant chord, which is thus in practice taken in accordance with the well-tempered scale by the very persons who inveigh the most strongly against it!

A COURSE IN LISTENING FOR PIANO STUDENTS

EDWARD B. HILL

The Question of Rhythm

In taking up the question of rhythm for further investigation, it will hardly be necessary to restate the essential and fundamental position it occupies among those elemental qualities which constitute music. It only remains, therefore, to call attention to those facts about rhythm with which every piano student should not only be thoroughly acquainted, but which he should use unceasingly in criticizing his own daily work.

It is well at the outset that no confusion should exist between *time-signature* and *rhythm*. The various time-signatures in common usage are merely the mechanical means by which the relative duration of the notes is indicated. Thus the idea of four-four time, three-four time or twelve-eight time gives us no real clue whatever to the character of the rhythm we may find in music written in the above time-signatures. It is through such purely mechanical features that the composer is able to suggest a rhythm. In addition, it is through the accent which we give to a rhythm or musical phrase, as well as the rate of speed or tempo at which we play it that it has a fuller interpretation. Considering the mechanical aspect of these details, the symbols of time-duration (notes and bass), variation in force with which notes are struck (accent and shading), and their comparative velocity (tempo), it would seem as if the system of musical notation presented liberal opportunities for error in grasping the composer's idea. However, with the aid of indications from the composer (sometimes vague, at others fairly precise), we can usually arrive at an approximate idea of the tempo in which a composition is to be played. The success of our interpretation is largely due to the extent to which we are possessed by the spirit of rhythm.

There are two makeshifts used in teaching rhythm in its more superficial aspect; one is counting, the other the metronome. Undoubtedly, in elementary teaching and even later, it is necessary for the pupil or the teacher to count aloud in order to establish perception of the relative values of the notes and their subdivisions (whole notes, half notes, quarter notes, etc.), as well as to maintain a uniform regularity of beat. But this should be regarded as only introductory to real perception of rhythm. With older pupils, some of them distinctly advanced, the metronome is used to "keep them up to time." The metronome is really valuable, not only as an exact indicator of tempo, but in certain cases as a corrective — occasionally — for defective rhythm, but as a regular teacher or inspirer of rhythm it can never be a success.

It is absolutely essential that every piano student should realize the importance and the nature of *beat* in music, a regularity of pulsation corresponding to the throb of an engine, or of the human heart. But these beats are only a mechanical feature of rhythm, as notes are of melody. Keeping time is merely the first stage of rhythmic perception, and while fundamentally necessary, should be regarded merely as a stepping-stone. What the student should learn is not a lifeless imitation of a rigid mechanical beat that is pitilessly devoid of variation; he should go further, and feel the sway of true rhythmic vitality. Rhythm is the inspiring and vitalizing combination of *beat*, *accent*, and *time-duration*. Thus a rhythm is dependent upon the bar division for *beat*, upon the arrangement of notes for *time-duration*, but it is owing to the incisive and vital quality of the *accent* that a rhythm obtains its charm and power to sway our minds and emotions. *Accent*, in turn, as stated earlier, is dependent upon the relative force with which the notes are struck. Thus it is through absolute and sovereign command of *accent* that we finally attain to a genuine and vital control of rhythm. That the beat, upon which this rhythm is founded, may vary in its rate, may be easily illustrated. Take again the example of the human pulse. Under the influence of excitement, anger, fear, or any other emotion the pulse varies, now advancing, now receding, but invariably returning to its normal beat. In the same way, any musical composition has a certain tempo; for some dramatic or emotional effect it may quicken or retard, but that does not affect the vitality and elasticity of its rhythm. In other words, the beat should not be rigid or inelastic, it should have its ebb and flow, not according to the whim of the player, but out of the inherent qualities of the music itself. Also rhythm, to make its complete appeal, must also consult the expressive character of the music itself, while subject in a certain degree to the despotic rule of *beat*.

The piano student, who is desirous of getting the most from self-criticism, should attack first the problem of listening to his own rhythm, for a correct reproducing of the rhythm is the first element in interpretation. He must observe whether his rhythm is mechanical in its observance of beat, or whether it is surcharged with ill-controlled accent. If his rhythm is too academic, he should try to render it more vital by subtle differentiation of accent. He must penetrate more deeply into the spirit of the music, to make its emotion more real, to give its inner vitality a chance to stimulate his own defective sense of rhythm. If, on the other hand, he is already too prone to vary the beat unduly, if his rhythm is forceless and unstable, if his fingers run away with him in rapid tempi, he must learn once for all the lesson of rhythmic control through command of accent, and a delicate adjustment of accented and unaccented beats. While he may gain much by listening carefully to his own playing to see whether his mental image of the music corresponds to that which his fingers produce, he must also study deeper and deeper into the sentiment and emotion which animate the music itself. For music and rhythm are one; the sentiment of music, which is its heart, is kept alive by rhythm, which is its pulse.

We may appreciate the rhythm of the orchestra, of a concert pianist, rhythm in the abstract, but when we listen to our own rhythm in the concrete, criticize the effects we make, and *improve* upon them, we are on the road to rhythmic control, the first essential in vital interpretation.

PIANO ROUND TABLE

HENRI W. J. RUIFROK

A great many teachers, and especially those new to teaching, believe that the business of a teacher is to correct. This may in part be so, but the real aim of a teacher should be to direct.

A teacher's real duty is to teach others to help themselves. I want to call attention to some bad faults. In the first place a great many players move their arms as a rooster flaps his wings — that is unnecessary; sit still. Then a great many keep on pushing a key after it has been struck; now, this shows that neither the pupil nor the teacher knows how the instrument is made. Be sure how you strike a key, but after the key is struck no pushing or pulling it will have any effect upon the tone; for the hammer is not on the string and the player is merely wasting that much energy on dead ivory or wood. Look into your piano and see how the hammer acts; it flies back immediately after striking the string, even if you hold the key down.

Another fault is that so many players strike the left hand before the right. This is what I call the amateur touch, for politeness sake. In truth it ought to be called the lazy player touch, for it is laziness not to listen what you are doing that keeps you doing it. Listen to what you are doing at all times, be it merely a five-finger exercise. I would rather have you practice five minutes listening to what you are doing than an hour without it. It is not the time you spend at your work but how you work that brings results. Whenever you have a difficult part to learn, begin with the smallest part of it, if it only consists of two notes, and then add a note to it by and by. Teach your pupils all the expression marks as well as the notes. Fold a piece of paper in three columns. Write the expression marks in the first and let them translate it in the second, now fold the first column back and retranslate the second column as it is on the first, in the third column.

That reminds me of a story Mr. John Rehmann told me. He was teaching a pupil a slow piece of music when all at

once she started off as a messenger boy ought to go. "What do you do that for?" he asked. The pupil looked at him and put a finger on a certain word — and then he read *Con express.*

Oh, that pedal! For pity's sake, don't think that you are riding a bicycle and that you ought to keep your feet on the pedal all the time. I know a great many cyclists don't do it, but a cyclist with common sense knows he ought to do it. For pedal practice take an old German choral (they are usually written in half or whole notes), play your first chord, say a chord made of half notes, put your pedal down and repeat the same chord on the second quarter of your chord an octave higher and let go the moment you strike your next half note chord so that that one will come clear without any blurring of the first chord and listen to what you are doing.

LESSONS IN MODULATION

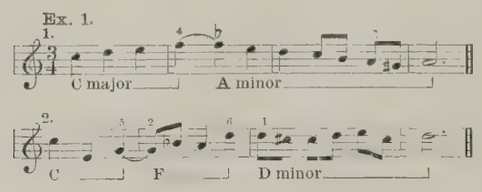
PERCY GOETSCHIUS, MUS. DOC.

LESSON I

Modulation, in music, is the act of passing from one key or mode into another. This act shifts the key-note, and consequently alters the relative quality of the tones, as determined by their location in the scale (as scale steps). Fundamentally, this simple exchange of one scale step for another constitutes the modulation, and necessarily underlies the process of exchanging keys, in all its many different phases.

Its operation is clearly illustrated in single melodic lines, without reference to the chords that may be used in harmonizing them. For instance: —

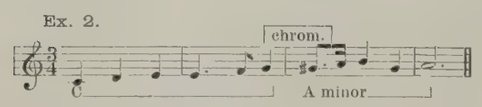
Ex. 1.



In the first of these phrases, the melody begins in C major, and pursues the line of that scale until it reaches the tone F, the 4th scale step; this tone F is then transformed mentally into the 6th scale step of A minor, in which new key the melody continues its movement to the end. In the second phrase, the third tone (G), as 5th scale step of C major, is transformed into the 2d scale step of F major; three beats later, the tone D, as 6th scale step of F, is transformed into the key-note of D minor, in which the phrase continues to its end. In each of these cases, the melody is simply "switched" from one scale line to the other, through a tone which is common to both.

To this elementary rule there is but one notable exception (apparently), which occurs when the change of key is made *chromatically*, at the very tone which distinguishes the one key from the other, — that is, at a tone which is not common to both scales. For instance, the modulation from C major into A minor may also be made as follows: —

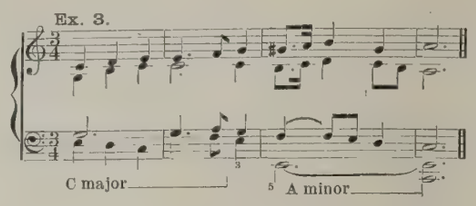
Ex. 2.



The change of key is made at G, the 5th scale step of C major. But this tone does not occur in the correct (harmonic) scale of A minor, and therefore the entrance into that key is affected by bending the G into G♯. This melody actually "leaps" from one scale track over to the other, instead of "switching" at a point of contact.

But even this is only an apparent exception, which concerns this particular melody line only. For the simple (so-called *diatonic*) exchange of one scale step for another is certain to take place, at the same time, in one or more of the voices which accompany the chromatic melody, — that is, when the necessary chords are added to it. For instance, if the melody of Ex. 2 were harmonized thus: —

Ex. 3.



the chromatic progression is seen to be limited to the uppermost (soprano) part. In the lowermost (bass) part, the change of key is made through the tone E, which is the 3d scale step of C major, and becomes the 5th step of A minor; and in the alto part the transition occurs at the tone C, which is the key-note of C major and the 3d step of A minor.

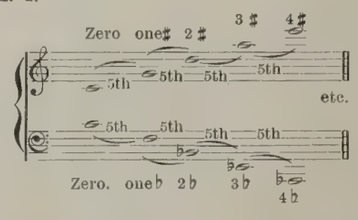
From all of these illustrations the student will, at all events, draw the very significant inference that his most vital requirement is *thorough familiarity with the scale of every key and mode.* If he has not yet acquired this knowledge of the scales, if he cannot readily name every key and mode to which each single tone belongs (all the scales, for example, which contain the tone C), if he cannot instantly detect the points of contact between the different scales, he should first overcome this deficiency by devoting some time each day to the earnest study *and comparison* of the scale lines.

Another very important requirement for the student of modulation is thorough familiarity with the *signatures* of all the keys and modes; for by far the greater number of modulatory movements are determined by signature, rather than by key-note. This information is involved in the knowledge of the scale lines themselves, and the study of one necessarily includes the study of the other. At the same time, the course of discipline we shall adopt in these lessons in modulation is designed to promote this familiarity with the scales and their respective signatures.

About the scales nothing further can be said here; unless the student already knows the formation of every major and minor key (at least, as far as five sharps and five flats), and has some working knowledge of the principal chords of every key, he must defer the study of these lessons until he has acquired at least a good general grasp of this material.

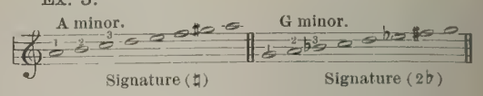
About the signatures, a few details may be added, which will facilitate the student's task. The sharp signatures are found, one after another, by proceeding from the tone C (the major key-note of the "natural" scale) *upward* in successive perfect fifths. That is, the first perfect fifth above C, — the tone G, — is the major key-note of "one sharp"; the next perfect fifth, above G, — the tone D, — is the major key-note of "two sharps"; and so on. The key-notes of the successive sharp signatures are a perfect fifth apart. Inversely, the successive flat signatures are found by proceeding *downward* from C, in perfect fifths. Consequently, the flat signatures represent degrees below zero (the key of C major), and the sharp signatures represent degrees above zero; the "degree" being a perfect fifth from key-note to key-note. Thus: —

Ex. 4.



These are the *major* key-notes of the signatures. The signature of every *minor* scale is taken from its *third scale step*, not from its key-note as is the case in major. For example, the third scale step of A minor is the tone C; the signature of this tone C (zero, or the "natural") is therefore the one that is employed for A minor. The signature of G minor is two flats, because the two-flat key-note (the tone B♭) is the third scale step of G minor.

Ex. 5.



The relative location of the signatures and their key-notes may be illustrated thus: —

Ex. 6.

B♭ maj.	F maj.	C maj.	G maj.	D maj.
2♭	♭	♮	♯	2♯
G min.	D min.	A min.	E min.	B min.

The succession continues to the right and left, to six sharps and six flats, — or beyond, if necessary. The right hand direction indicates *ascending* modulatory movement (degrees above zero); the left hand direction indicates *descending* movement.

Keys, whether major or minor, whose signatures are nearest alike, are called "next related." Thus, G major and D major are next-related keys, because their signatures (one sharp and two sharps) are only one degree apart; D major is only one degree above G major. The same is true of G major and B minor; of E minor and B minor; and of E minor and D major, — because of the close resemblance of their signatures. The same is true (to the left) of G major and C major; of G major and A minor, etc.

EXERCISE. — Complete Ex. 6, continuing the line of key-notes and signatures to the right as far as six sharps, and to the left as far as six flats.

Make very thorough mental application of this table, by defining the key-notes (major and minor) of the *next higher and next lower* signature, from different starting-points.

Name all the keys, major and minor, which contain the tone C; name all the keys that possess C♯; D♭; D♯; F; G♭; G; G♯ A; B; E.

Write a number of phrase melodies (either 4 or 8 measures in length), with changes of key, according to the principle shown in Ex. 1, — by transforming scale steps. *None but next-related keys* are to be connected, in the same phrase.

OLD-TIME PIANO PLAYING

In these infant days of the twentieth century the pianist stands next to the singer among the princes of the musical world. But it was not always so. The singer was the first to mount the public throne and reign with the sceptre of sweetened sound. Next came the violinist, and after him the virtuosi of wind instruments. Early concert programs show the names of singers, and flute, horn and oboe players, but not of manipulators of the keyboard.

The concert pianist of to-day, sweeping the keyboard of his grand and the heartstrings of his hearers with sinewy hands, emerged slowly from the humble state of a poor dependent, creeping with anxious offerings to the door of his princely patron. It was not till almost the middle of the eighteenth century that the performance of solo feats on the harpsichord began to attract public attention and to form the substance of concerts. — W. J. HENDERSON in the *Atlantic.*

CORRESPONDENCE

M. L. R., Savannah, Ga., writes, "If there is hardly any space between the hyoid bone and the thyroid cartilage, will it have any effect on the singing or speaking voice? If so, in what respect, and can you suggest any remedy?

"Will massage or electrical treatment strengthen the vocal organs, if weak through straining or wrong use?"

Any cramping of the throat is wrong, singing with the throat open and unconstrained is the only remedy.

Rest and then a better method of singing may restore the voice.

THE ARTIST'S PHILOSOPHY

EDITH L. WINN

The artist was an old man who had seen much of professional life. He took his pipe out of his mouth as I came into the studio, pushed back his silk skull cap from his bald head, gave a satisfactory shrug of his shoulders, ejaculated "Umph," and pointed to a chair.

He was neither cordial nor uncordial, polished nor unpolished, — just a fine soul in the rough, unchanged by the perplexities and troubles of professional life. I looked at his wrinkled face and saw two kindly eyes, keen, critical, and honest, under his bushy gray eyebrows. He was *genuine*, and that is a rare virtue nowadays. Pardon the pessimism.

"Herr Professor Blanck," I began.

"Too long in America for that," he said, as he stood looking at me quizzically.

I laughed. One might have known that he would call himself plain *Mr.*

"I have come," I began again timidly, "to ask you a few questions about art life at home and abroad. Your views are broad and —"

He squared himself around, shot an almost fierce glance at me, and exclaimed, "You are an interviewer — I know — I have nothing to say. They get it all wrong — they pervert my words and —"

"You are mistaken, sir," I retorted, now thoroughly aroused; "I am a plain music teacher who is something of a philanthropist."

"Philanthropy, is it?" he said, a large smile suddenly beaming upon his face. I had touched his vulnerable point.

"Yes," I answered courageously, "and if you will tell me some of your philosophy, I will promise not to cry your name from the housetops."

"Well, well," he said good-humoredly, "let us sit down and talk about things. No, I will play and talk. Thoughts come more quickly when one plays to them."

He seated himself at the piano and began to improvise. After a few moments he looked up and said: —

"I began music study very early, — too early, in fact, for it was my first form of drudgery. My good German parents believed in stiff-necked pedagogical training, and I got it with rattan interspersed. At the age of twelve I was a full-fledged '*wunderkind*.' I was praised, petted, spoiled. But I had a good father who did not believe in a one-sided education, or at least in too much musical cramming, and so from the age of fourteen to seventeen I had to study like other boys, and was only kept from the gymnasium by a small wolf at our door, and five young mouths for my father to feed. At twenty, I played with much success in German cities, and I believe that my friends thought that a concert career of remarkable promise was my lot."

He stopped suddenly and began to play. It was a long time before he spoke again. When he did the lines in his face were softer.

"At twenty-three," he said, slowly and simply, "a dream faded out of my life. I was left with a little boy to bring up just as his mother would have wished him to be reared."

Poor man! The shadow of a great grief had never faded.

"I have never played the same," he said, "never, never. I did not even care for art for a time, but the needs of the boy drove me into teaching, and there is where I learned the philosophy of life."

"I think you have given more to the world in this work than one can do in concert work alone," I ventured.

"Possibly," he answered; "but all work requires heart and brain. I have talked too much of myself. I only wished to tell you that we are led to do our best work by some great crisis in our lives."

"I believe that," I answered gently.

"Too many people aspire to become what they can never be by gifts, training, nor circumstances," said he. "Not every one can become the *first*. Not every one is born great, and great people are often the most unpleasant persons in the world to live with.

"Persons in small communities overpraise their bright and promising musicians. They mistake mediocre ability for genius. The larger world values one only as one deserves great applause and consideration. There is too much flocking to large cities with a purpose of creating a great impression there.

"The artist must be a very original being. There are plenty of people of imitative talent; left by themselves, such musicians cannot stand alone. Few have originality, temperament, and fine intellectual power. The successful musician in a large centre must be above the ordinary in these respects.

"Training is often too narrow for real success. A man of one idea, who is not manly through and through, cannot succeed to-day — we need healthful, not morbid, virtuosity. The men of to-day must be well rounded.

"Conceit, heartlessness, self-adulation, self-indulgence, jealousy, sacrifice of the higher attributes of honor, — all spoil character, and no man is a great artist through and through unless he is strong in character.

"A public life, such as the concert artist follows, causes him to be away from the peace and tranquillity of his home. It takes some of the tenderness out of him and, on return, he is often irritated by the very monotony of home life with its petty cares and considerations. A true man is above that, though.

"A public career for the woman artist has many good points, but she cannot fail to lose something of the gentleness that belongs to a quiet home life. The professional woman invariably loses some of the finer touches of femininity.

"A concert career often makes a man skeptical. It is not all full of joy. He does not always give satisfaction to his public nor to his manager.

"Not every one is born to follow an artistic career as a concert virtuoso. There is too much restlessness in America. Many musicians are not willing to fit into a worthy place, but they are always aspiring to a better position which they imagine that some one else fills — that some one else being no better equipped than they are. If they would only seek their own level!"

There was a pause. I felt that I had perhaps remained too long. Some other day the artist might care to talk again.

He sensed my purpose.

"You must go?" he asked. "Well, another day we will talk. I see that you are interested in these things. What a wonderful thing it is to live!"

The sunshine fell across the floor just where he stood. Then a *beam* crept to me. I went out all aglow!

WANTED, A NATIONAL SONG

It appears about as difficult to produce a new national song and secure its adoption by the people as it is to get up an enthusiasm for Esperanto or stir the popular heart to a yearning for the metric system.

Secretary Bonaparte has made the not strictly original discoveries that *The Star Spangled Banner* cannot be correctly sung by more than one voice in a hundred, and that the music of *America* is taken from a foreign source and therefore not appropriate for a United States anthem. Hence there is a movement to invite new offerings of words and music and to give a prize to the product, provided one is yielded that shall seem to meet the requirements of a popular and meritorious national song.

This is an old story. The scheme was tried during the war for the Union, over forty years ago, and failed. If memory serves, none of the compositions offered came up to the standard. At any rate, if a prize was awarded, everybody has forgotten who the winner was, and the song is now unknown. A later competition was invited, five or six years ago, by the Rhode Island Society of the Cincinnati, for new music to *America*. Yet who has heard the "stirring and dignified" air by Arthur Edward Johnstone which won the prize?

The fact that a prize was awarded never came very prominently before the public. That the successful composition is practically unknown casts no reflection whatever upon the composer's talent and scholarship. Perhaps the work was "over the heads" of the people. At any rate, it has never entered into the *répertoires* of bands, glee clubs, and vocalists to such an extent as to make itself familiar to the popular ear.

The truth is that committees of examination and award are powerless in such matters. The acceptance of a national song is an accident of association or caprice. It is not premeditated. It merely "happens," and the thing is done without design or visible cause. When we get an original national anthem or song, it will be by a process of "natural selection." A "made-to-order" product, of however high quality, can never be sure of "touching the right spot" in the heart of the people. — *Exchange.*

The recent auction sale of the autograph collection of the late Alexander Meyer Cohn, in Berlin, brought to light a number of exceedingly interesting musical documents. A letter from Beethoven, addressed to Zelter, dated March 25, 1823, in which the composer of the *Missa Solemnis* offers this work to the director of the Berlin Singakademie, brought $150. Another letter of Beethoven brought $200. A letter of Bizet was sold for $40, and a similar price was paid for three missives by Berlioz.

Two letters from Brahms brought $26 and $50, respectively, and a collection of thirty-three letters of Hans von Buelow was sold for $50. A letter of three pages, written by Chopin to Breitkopf & Haertel, with a number of musical annotations, brought $250. A missive by Gluck, addressed to Prince Kaunitz, brought $1000, and Haydn's letter, addressed to "Mlle. Leonore," brought about $428.

Other composers did not fare so well, for a letter by Humperdinck was knocked down for $5. Two letters by Felix Mendelssohn-Bartholdy brought $55 and $75, respectively. A letter from Mozart, in which he asks for the loan of one or two thousand gulden for one or two years, brought $275, and two letters of Richard Wagner, dated 1859, brought $70, and one of 1873 $60.

San Francisco and Its Music

THE MUSICAL INTERESTS OF THE CITY TEMPORARILY DESTROYED

W. FRANCIS GATES

San Francisco was the New York of the Pacific coast. As the last notes sounded at the presentation of *Carmen* by the Metropolitan Opera Company on the night of April 17, there was an intermission of but a few hours before the earth rocked and shook in such a way as never before known in any populated district in America. But a few hours until the most musical city west of Chicago was cracked and sundered from roof to cellar, and but a day until the best portion of the city was destroyed in the flames.

San Francisco was the metropolis of the West, being the centre of commercial and artistic activities, though in the latter feature of late years Los Angeles has been a strong rival. The fact that San Francisco could support neither a permanent chorus of any size or a symphony orchestra militated strongly against her claims of being more intense in her musical likings than Los Angeles, as the latter city has both.

San Francisco had in the neighborhood of 400,000 population; consequently there was a host of minor musical activities even though these did not crystallize in choral society or orchestra. There were a number of small singing societies and a few string quartets. The city was well provided with church organs of good size, the largest being that at St. Ignatius Catholic Church, which was the largest west of the Chicago Auditorium.

Among the notable instruments destroyed were the St. Ignatius, Grace Church, St. Mary's Cathedral, Catholic, the First Congregational Church organ, and St. Luke's. Not far away was the notable instrument at Stanford University chapel, recently built at Los Angeles. This leaves the city bereft of its large organs, and naturally they will be slow of replacement, as the more necessary things must first be provided.

In a musical sense, San Francisco's strong point was its interest in opera. Last season the receipts of the Metropolitan engagement were approximately $125,000 for only two weeks, and this year the sale amounted to $90,000 up to the third concert. Had the Conried management offered its full quota of stars and kept the prices within reasonable limits, the advance sale would have been much larger.

Better than this, San Francisco has supported another opera company steadily at the Tivoli Opera House, in which, save for a few great names, the company and the properties, as well as the orchestra, is the equal of that which Mr. Conried brings West. At the time of the earthquake, there was on foot a plan to erect a Temple of Music which would be an adequate home for grand opera and which would contain a large concert hall. Also, there was recently announced a scheme to organize an opera company to be headed by Mme. Gadski — which perhaps never would have been realized, but it shows the tendency of the city to do large things.

San Francisco was the base of supply for the music trades of a large section of country, perhaps a thousand miles north and south, and five hundred miles east and west. As the fire covered almost the whole retail and wholesale district of the city, the great music houses are destroyed, including Sherman, Clay & Co., Kohler & Chase, Benj. Curtaz & Sons, Byron Mauzy, Wylie B. Allen, D. H. Baldwin, and others. The Sherman Clay Company carried the largest stock of sheet music in the West and the Kohler & Chase firm are credited with the same standing in the matter of pianos, the destroyed stock of the latter possibly amounting to $250,000.

These houses held the coast agencies for the leading pianos, but shipments were made direct to Los Angeles, Portland, Seattle and other places from the East, a portion of the profits going to San Francisco, whether the pianos did or not. The surrounding country will now for a time look to Chicago and other eastern cities.

In speaking of the musical activities of San Francisco, one cannot omit mention of those of its Athenian suburb, Berkeley. There the damage was slight. President Wheeler, of the University at Berkeley, recently outlined a plan for adding a $10,000 organ to the Greek theatre, in which the symphony concerts are now given, a permanent auditorium with a $25,000 organ and a school of music with an endowment of $100,000. Surely Professor Wolle has the right kind of backing in President Wheeler.

Some years ago Fritz Scheel conducted a symphony orchestra in San Francisco, but after he left for Philadelphia the only orchestra in the field was one directed by Giulio Minetti, the concertmeister of the Berkeley Symphony Orchestra. This was composed of about seventy-five professionals and amateurs. The theatre orchestras of the city were better than in many places, as San Francisco gave strong support to its many theatres, all of which are now destroyed.

In the *Musical Review*, edited by Alfred Metzger, San Francisco had an unusually independent musical publication, though its outside criticism was of the usual ladylike variety. It is possible it may be issued from Los Angeles until San Francisco recovers.

Among the many music teachers of San Francisco one finds several names of national fame, such as H. J. Steward, formerly organist at Trinity, later at St. Dominie's, and for a time at Trinity, Boston, and a well-known composer, Louis Eaton, a prominent organist. Paul Steindorff, director, Hugo Mansfeldt and E. S. Bonelli, pianists, Walter H. Thorley, Paolo La Villa, Frederick Zech, Mrs. Marriner Campbell, Mme. Abbie Carrington, "Sir" Henry Heyman, Mme. Inez Fabri-Muller, Mrs. Carl Formes, and others too numerous to mention. The two leading music schools were the Von Myerinck and the San Francisco Conservatory, both good but not of commanding importance, in fact, there being no such school of music on the coast, as the West apparently stands for individualism in music as in other matters.

MISSION DOLORES, SAN FRANCISCO

The most of the artists and teachers mentioned above are without studios, many without homes. Some lost everything they had. And who could expect music pupils among 200,000 homeless people? It is probable that 200 music teachers suffered such a loss. There are those who never will recover their clientele and many will migrate to the other large cities on the coast, already overcrowded. Those who go to the smaller cities probably will be the most successful.

There is one musical organization that must be mentioned in writing of San Francisco, as it stood at the head of such societies in the West, and that is the Loring Club of male voices, a club of long standing and at present under the leadership of William Stadtfeld. The San Francisco Musical Club was instrumental in bringing out prominent artists, a matter in which various women's clubs assisted.

Five years from now San Francisco will be another Paris for beauty and artistic enterprises. Laid out and rebuilt on Architect Burnham's plans, the city will be a thing of beauty—till the next earthquake, and long may that day be postponed. Meanwhile the artistic centre of the Pacific coast will be Los Angeles.

San Francisco will be rebuilt in such a manner as to be excelled in this country in beauty only by Washington. It will remain the largest city of the West, and when it is rebuilt, if public spirit arrives at the point of supporting symphony orchestra and chorus as well as opera, it will keep an unassailable supremacy. Meanwhile, its musical fraternity has suffered such a blow as comes to a country only once in a century, and is deserving of the sympathy and aid of all musical America.

In San Francisco centred the personification of the spirit this country has come to know as "Western"—a synonym for enterprise, push, business sagacity, tireless energy. An instance of it was seen in the man who burned his hands in erecting his new house, because the bricks were yet hot from the conflagration. The dominant feature of the West is commercial enterprise. This must precede art. The money must be gathered before it can be expended in artistic matters.

San Francisco had its day of materialism and was just emerging into a realization of the existence of such a thing as esthetics. Its art collections were growing daily; its love for music was greater every year. Now there must be another period of building, but in half a decade, without further cataclysm of nature, there will be at the Golden Gate a city and a people that will make the East look to its artistic laurels.

TO THE BOYS OF AMERICA

Of course what we have a right to expect from the American boy is that he shall turn out to be a good American man. Now, the chances are strong that he won't be much of a man unless he is a good deal of a boy. He must not be a coward or a weakling, a bully, a shirk, or a prig. He must work hard and play hard. He must be clean minded and clean lived, and able to hold his own under all circumstances and against all comers. It is only on these conditions that he will grow into the kind of a man of whom America can really be proud. In life as in a football game the principle to follow is: Hit the line hard; don't foul and don't shirk, but hit the line hard.

—THEODORE ROOSEVELT.

MUSIC TEACHERS' NATIONAL ASSOCIATION

TWENTY-EIGHTH ANNUAL MEETING — OBERLIN, OHIO, JUNE 26–29, 1906.

OUTLINE SKETCH OF PROGRAM

Tuesday, 26 — Informal Social Gathering at 8 P.M. at the Conservatory of Music, which will be the headquarters of the Convention.

Wednesday, 27 — Formal Opening — Greetings from Pres. H. C. King, on behalf of Oberlin College — at 9.30.
9.45 Lecture (illustrated): *An Opera of the Seventeenth Century* — Cesti's *Il Pomo d'oro* — by Albert A. Stanley, Michigan University.
10.45 Paper: *European Musical Association* — by O. G. Sonneck, Musical Librarian, Library of Congress.
11.30 Business Meeting.
2.15 Vocal Recital — see special program.
3.00 Discussion: *The Study of Music in the College* — by H. Dike Sleeper, Smith College, Albert A. Stanley, University of Michigan, and Abram Fay Tyler, Beloit College.
4.00 Discussion of Round Table: *The Curriculum of Piano Study* — opened by August Geiger, Gainesville, Ga.
8.00 Organ Recital — see special program.

Thursday, 28 — 9.30 Discussion: *Music in the Secondary School. The College and the Secondary School* — by Leonard B. McWhood, Columbia University. *Credits for Individual Study at Applied Branches* — by Ralph L. Baldwin, Hartford, Conn. *What may the Secondary School demand from Below* — by speaker to be announced.
11.00 Paper: *Unification in the Educational System* — by George C. Gow, Vassar College.
2.15 Piano Recital — see special program.
3.00 Discussion: *The Beautiful in Music* — by T. de Laguna, University of Michigan, John C. Griggs, Vassar College, and P. C. Lutkin, Northwestern University.
8.00 Recital of Recent Music — by the Faculty of the Oberlin Conservatory — see special program.

Friday, 29 — 9.30 Discussion: *The Conservatory of Music, Its Aims and Possibilities* — by Frank Damrosch, Institute of Musical Art, Willard Kimball, University of Nebraska, and a speaker to be announced.
11.00 Paper: *Historical Study* — by Edward Dickinson, Oberlin Conservatory.
2.00 Chamber Music Recital — see special program.
2.45 Paper: *Culture Courses* — by Thomas W. Surette, New York City.
3.15 Paper: *New Aspects of Teaching* — by speaker to be announced.
4.00 Adjournment.

The Official Announcement and Program — a handsome octave pamphlet — is in press. Copies will be forwarded by the Secretary, Prof. George W. Andrews, Oberlin, Ohio.

Membership certificates are now ready. Annual members, $1.00, if a member in 1905, otherwise $2.00 (including initial enrollment fee). Delegates members, representing an institution or association, $2.00. Address the Treasurer, Walter Spry, Fine Arts Bldg., Chicago, Ill.

Excellent accommodations at Oberlin, at $1.00, $1.50, or $2.00 per day. Address the Chairman of the Executive Committee, Prof. Charles W. Morrison, Oberlin, Ohio.

* *

The Trustees of the Institute of Musical Art, New York City, have selected as a motto for the Institute the Greek words "Prothumeometha Ta Kala," meaning, in English, "Let us devote ourselves (with eager striving and enthusiasm) to noble and beautiful works." The well-known sculptor Gutzon Borglum is now at work on the seal.

CITY HALL, SAN FRANCISCO

The Musician

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY
OLIVER DITSON COMPANY, Boston, Mass., U. S. A.
VINCENT MUSIC COMPANY, Ltd., 60 Berners St., London, W. England

STEPHEN HELLER

A committee has been organized in Paris for the purpose of collecting a sufficient fund for the erection of a monument to Stephen Heller. This committee, the members of which are named below, have issued a circular, which says, in part: —

"There lived, almost to the present day, a great musician, a genius, who was, in the words of Fétis, "a true poet of the piano."

"Stephen Heller (born in Buda Pesth, May 15, 1814; died in Paris, Jan. 13, 1888), all of whose works, elevated in character and purely individual in style, seem orchestral in conception, never wrote except for the piano, which instrument he played as a veritable artist, but wholly without any effort to appear the virtuoso.

"His life was that of a scholar, a philosopher of the contemplative order, of a deep thinker, one modest and solitary, kind to the young artist, without personal ambition beyond pursuing art for art's sake, creating works of art for the simple sake of creating them, writing even from the dictate of conscience, and without any thought of present or future gain. What life could be more nobly dedicated?

"His many works are thoroughly original, virile, and without pretense, and of a depth of thought attained by few composers. His idiom, his mode of thought, have exerted an immense influence in the art of piano composition. . . .

"This great artist, however, lived too completely in the ideal to take care of material interests. The last years of his life were clouded by blindness and poverty.

"Moved by the condition of affairs, truly unworthy of the memory of so great an artist as Stephen Heller, his faithful admirer and friend, M. A. Schmoll had the idea to assemble a committee for the restoration of the resting-place and of erecting a monument which shall truly perpetuate the memory of this great artist."

The members of the committee are: M. Massenet, Th. Dubois, G. Fauré, M. Ashdown, Gabriel Baille, M. Bayoud, E. M. Delaborde, L. Diémer, A. Duvernoy, L. Fontayne, Le Dr. B. Frischauer, J. Ghymers, Arthur de Greef, G. de Hervesy, M. Koszul, A. Lavignac, H. Lemoine, A. Mangeot, A. Marmontel, M. Mayon, Cl. Wouters, G. Meyer, Navay de Foldeak, G. Pfeiffer, I. Philipp, Francis Planté, Emile Ratez, A. Schmoll, E. Tinel, H. Weingartner, Ch. Widor.

THE CHICAGO MADRIGAL CLUB'S ANNUAL PRIZE COMPETITION

The Chicago Madrigal Club announces its Fourth Annual Prize Competition for the best musical setting of the poem, *A Wet Sheet and a Flowing Sea*, as it appears herewith.

Recognizing the value of these competitions to American music, the W. W. Kimball Company, of Chicago, in 1905 endowed the Chicago Madrigal Club with an annual prize of $100 to be given to the successful competitor.

Three competitions have been held. The first resulted in the award of the club's prize to Mr. Arthur Dunham, of Chicago, for his brilliant setting of Bret Harte's *What the Chimney Sang*. This prize composition was first produced by the club at its concert in March, 1904. The second competition resulted in the award of the club's prize to Mr. Carl Busch, of Kansas City, Mo., for his fine musical setting of Charles Swain's *When the Heart is Young*, which was sung in March, 1905. The third competition resulted in the award to Mr. John Hyatt Brewer, of New York, for an exceedingly worthy musical setting of Bayard Taylor's *Bedouin Love Song*, first presented by the club at its concert in March, 1906.

CONDITIONS OF THE COMPETITION

1. The composer must be a resident of the United States of America.

2. The setting must be for a chorus of mixed voices, to be done unaccompanied. Parts may be doubled at pleasure. It should be remembered, first of all, that the composition must sing well. It should also be kept within a reasonable vocal compass.

3. Each composition must bear a fictitious name, and the composer must enclose with his composition a sealed envelope, bearing upon the outside the fictitious name, and having inside his real name and address. These envelopes will not be opened until after the award has been made.

4. Each composition must be sent to the director of the club, Mr. D. A. Clippinger, 410 Kimball Building, Chicago, and must be in his hands on or before Oct. 1, 1906.

5. All compositions will be returned to their authors after examination. The composition receiving the prize will remain the property of its author, who must agree that it shall not be published or sung in public until after it has been produced by The Chicago Madrigal Club. When published it must bear the statement: "This composition received the W. W. Kimball Company prize awarded by The Chicago Madrigal Club in 1906."

6. The prize composition will be produced by The Chicago Madrigal Club at its second concert of the season of 1906–1907.

7. In the event of no worthy composition being submitted The Chicago Madrigal Club reserves the right to withhold the award.

8. The award will be made by a jury composed of Mr. Walter Spry, Mr. Francis Hemington, and Mr. D. A. Clippinger. No member of the jury shall enter the competition.

9. All communications must be addressed to Mr. D. A. Clippinger, 410 Kimball Building, Chicago, Ill.

A WET SHEET AND A FLOWING SEA

ALLAN CUNNINGHAM
1784–1842

A wet sheet and a flowing sea,
A wind that follows fast,
And fills the white and rustling sail,
And bends the gallant mast —
And bends the gallant mast, my boys,
While, like the eagle free,
Away the good ship flies, and leaves
The land upon the lee.

Oh, for a soft and gentle wind!
I heard a fair one cry;
But give to me the snoring breeze,
And white waves heaving high —
And white waves heaving high, my boys,
The good ship tight and free;
The world of waters is our home,
And merry sailors we.

There's tempest in yon horned moon,
And lightning in yon cloud;
And, hark the music, mariners!
The wind is piping loud —
The wind is piping loud, my boys,
The lightning flashing free;
While the hollow oak our palace is,
Our heritage the sea.

CORRESPONDENCE

Editor of THE MUSICIAN: —

Dear Sir: In the March MUSICIAN I read an interesting letter from a sixteen-year-old boy desiring an education.

I should like to tell him how a gifted pupil of mine has been entirely supporting himself and paying all of his expenses in his musical studies ever since he was seventeen years old. I believe he can solve the problem also if he is made of the right stuff, and if you see fit to do so you may send him my address and I will gladly do what I can to help him if he wishes to correspond with me on the subject.

Very truly,
M. W. C.

Editor of THE MUSICIAN: —

Dear Sir: I am a devoted reader of your very interesting and helpful magazine, THE MUSICIAN.

I was interested in the letter from M. D. in the last MUSICIAN. If he is talented and in earnest, I should be very glad to give him lessons in Piano, Theory, and Harmony for a while free of charge. I should like to know more about him. I love to teach, and nothing gives me more pleasure than to help a deserving pupil in his or her musical career, regardless of money compensation. I am not a well-known teacher, as I have not lived in Boston very long, but I have had good training and eight years' experience.

I am using your course of Studies this year and it fills a long-felt want in my teaching, for I thoroughly believe in carrying the theoretical work along with the technical and musical. Have you a list of pieces to be used in connection with the Studies and Supplementary Book of Pieces, Grades I, II, III, IV, and V?

Hoping that you may find an inclination to send me a reply by mail,

I am very sincerely yours,
H. B. K.

To the Editor of THE MUSICIAN: —

With a view of insuring as perfect a list as possible of American operas, — or rather, of operas composed by American musicians,— I recently went to the trouble and expense of compiling, printing, and publishing an "American Section," from my forthcoming *Dictionary of Operas*. Of this compilation, three hundred copies were sent out to leading musicians, up and down the country. An urgent request accompanied them that "for the honor of America," they might be returned to me, somewhat, at least, corrected and revised, just as soon as convenient. It will hardly be believed, but it is a fact, nevertheless, that only eleven of said three hundred have, thus far, "come home to roost." In other words, two hundred and eighty-nine American musicians do not, evidently, worry themselves very much about the "honor of America," — so far, anyhow, as a Dictionary of Operas is concerned. *Chacun à son goût.* I am not kicking. I merely wish the musical public to know that if the American list is more imperfect than the rest of the book, the fault is hardly mine. To the thousands of letters of inquiry which, during the past thirteen years, I have written, only a very few answers have been vouchsafed. This does not say much, either for the business tact, the patriotism, or the common courtesy of some professional musicians, who, of course, must needs here be nameless.

JOHN TOWERS.

OUTDOOR MUSIC IN JUNE

LOUISE KARR

Music in June should have its body in the house and its soul in the open air; which is but a poetical, if not a far-fetched way of saying, that the performers should be in the house and the listeners be allowed to stray about on lawn or piazza, enjoying the freedom that comes with the summer months. Charming musical parties may be given in the month of roses, while Nature rejoices in the freshness and vigor of early summer, with as yet no hint of the lassitude that comes with the later season.

* * * * * *

The ideal house for a lawn-party musicale is set within well-arranged grounds, and has a piazza looking towards the setting sun. The grounds need not be so extensive, but they should either be surrounded by a hedge, or so placed in relation to the street as to give an air of privacy. The English idea of seclusion behind hedges or high fences has a wonderful charm the moment one begins to consider using those same grounds for practical purposes of living. The halls in this house are wide and cool, and the long French windows open directly on the lawn and on the piazzas. Many a home in the country or country city possesses enough of these characteristics, to make an afternoon of music a success. Afternoon it should be, late afternoon, from four to seven, or five to eight; evening parties in summer are a barbarity, but the guests may linger late as they will on the Japanese lanterned piazzas, if there is no feeling of restraint about the entertaining.

* * * * * *

The key-note to success in a musicale of this kind is informality. The drawing and music rooms have their summer fittings of linen-covered furniture and bamboo chairs and settees; all is subdued as to light, and the odor of honeysuckle wafts in at the open windows, where the grand piano is drawn up. Small tables with lemonade or punch-bowls are set on the piazzas and under the trees, with seats grouped around them. The earlier guests are received inside, however, and if the rooms look cool and inviting, some will find seats there. I believe that if all the details of comfort and grace are considered, the music itself will be better appreciated, and if it is amateur music, inevitable deficiencies will count for very little.

* * * * * *

It is wise to begin the program promptly, as a concession to those who come on the hour. It justifies them in their endeavors and saves the awkwardness of waiting. Early comers are of two kinds: those who come early on principle and mean to see the whole thing out, and those who plan to leave early and get something else in. They are both a joy and a trial to the hostess; a joy, because the percentage of prompt arrivals indicates the success of her party, and a trial, because naturally, she wishes the best part of her program to be given when the largest number is present. It is best, as said, to be all ready for these people, and give them something on the start. Those who are going away will go in a good mood, and will tell everybody they meet what a nice party is going on at ——'s; while those who come early on principle, will be at once occupied and therefore disarmed of criticism. I don't know why early comers by habit should be of a critical temperament, but I have observed it to be a fact.

* * * * * *

It is a thankless task to open a program. Almost everybody when asked to play or sing says, "Yes, I will, but don't ask me to begin." There are two ways out of this dilemma. One is, to have an obliging friend, who will consent to open the ball as a very special favor to the hostess. This person should be remembered later in the program, and given a full opportunity to show what he or she can do. Playing early is really very trying, on account of the buzzing of arrivals, and the general distrait condition of people's minds. If the obliging friend is not present, or does not happen to exist, there is another expedient; that is, to have some one competent player promise to do a large part of the program; some one who has a large *répertoire* and who does not mind playing a good many times. It is asking less of a favor to get such a one to begin, and on the whole, I think it is the best way.

* * * * * *

As the afternoon advances, and people begin to come fast, the hostess will do well to take her stand just outside the door, and let them group themselves under the trees or wherever they wish. The intervals between the selections should be rather longer than at a winter musicale, and I think myself that printed programs are out of place. Still, performers of high or low degree like a printed program — from the humblest amateur to the grand opera singer this prejudice exists; so if this prejudice is conceded to, piles of programs should be lying about at convenient distances.

* * * * * *

As far as possible, get variety in the instruments for an outdoor musicale. The entire piano or song recital is for a different time and mood. It is more of a study than a recreation to listen to a program historically arranged, or arranged with a view to showing the capabilities of an instrument, or the accomplishments of a particular performer. These are very well indeed in their place, but they are not in place in the pleasant social atmosphere of a time like this. A good violinist or 'cellist should be given several numbers, and a flute or cornet is a very great addition. I would suggest for all the instruments a succession of short pieces, rather than long, unbroken compositions.

* * * * * *

Flute duets with piano, or flute obbligatos are very attractive in the open air. The soft, penetrating tones of the flute, particularly, have a great fascination when heard from a distance; the little mistakes and roughnesses are not so noticeable under such circumstances. Summer is a good time to practice on these instruments; most men have more time then, and they are more willing to play for others. It is rather surprising that the flute is not more played than it is in our country. There is much good music written for it, and it is always liked on a program; of course, it could not make the whole program, but it is one of the loveliest varying elements possible. Flute playing is much more general abroad than it is with us, but there is no reason why any one here, with a correct ear should not make fair proficiency on it. The intonations are not difficult, and it has one great advantage, its tone is of necessity soft and mistakes in practicing are not so irritating to the listener.

* * * * * *

The refreshments at a lawn party may, of course, be of the most simple nature. Sandwiches, coffee, light cakes, and punch are perfectly satisfactory, and a hostess need not apologize even to herself if she offers nothing more. However, if she does feel moved to present a more formal repast, probably no one will quarrel with her, and I have a suggestion to offer in this case. This plan I am about to outline was a very successful one once, at one of my own musicales, and I therefore recommend it from experience. People will have been sitting in the same groups during the music, and at supper time they may be judiciously mixed, by the following expedient. Have the supper tables accommodate four each, and have them brought into the open air. Then have ready a lot of musical quotations divided into four parts each. Have each slip numbered as follows, I Shakespeare, II Shakespeare, III Shakespeare, IV Shakespeare, so that read consecutively they would make sense. Then take the odd ones in one bowl, the even ones in another, and let the gentlemen and ladies each have a bowl to take from. The four getting a complete quotation will sit at the same table. After supper, some one who reads well may read the whole set to the assembled company. It is needless to say that a copy should be kept for this purpose. Also the quotations if taken from the particular work of a poet might be named for that work, as for example, *Merchant of Venice*, I, etc. This will be found a very interesting expedient, and the preparatory work of selecting the quotations will be both amusing and instructive.

In order to show more clearly my meaning about these quotations, I subjoin the following.

But here is the finger of God, a flash of the will
that can.

(I, Browning, *Abt Vogler.*)

Existent behind all laws, that made them, and lo, they are

(II, Browning, *Abt Vogler.*)

And I know not if, save in this, such gift be allowed to man.

(III, Browning, *Abt Vogler.*)

That out of three sounds he frame, not a fourth sound, but a star.

(IV, Browning, *Abt Vogler.*)

POR. — Music! Hark!

NER. — It is your music, Madam, of the house.

(I, Shakespeare, *Merchant of Venice.*)

POR. —Nothing is good, I see, without respect.
Methinks it sounds much sweeter than by day.

(II, Shakespeare, *Merchant of Venice.*)

NER. — Silence bestows that virtue on it, Madam.

(III, Shakespeare, *Merchant of Venice.*)

POR. — The crow doth sing as sweetly as the lark,
When neither is attended: and I think
The nightingale, if she should sing by day,
When every goose is cackling, would be thought
No better a musician than the wren.

(IV, Shakespeare, *Merchant of Venice.*)

Whate'er her theme, the maiden sang
As if her song could know no ending.

(I, Wordsworth, *Solitary Reaper.*)

I saw her singing at her work
And o'er her sickle bending.

(II, Wordsworth, *Solitary Reaper.*)

I listened, motionless and still:
And, as I mounted up the hill,

(III, Wordsworth, *Solitary Reaper.*)

The music in my heart I bore
Long after it was heard no more.

(IV, Wordsworth, *Solitary Reaper.*)

I sing as in the greenwood bush.

(I, Goethe.)

The careless wild bird carols.

(II, Goethe.)

The tones that from the full heart gush.

(III, Goethe.)

Themselves are gold and laurels.

(IV, Goethe.)

Lap me in soft Lydian airs,
Married to immortal verse.

(I, Milton, *L'Allegro.*)

Such as the meeting soul may pierce
In notes with many a winding bout
Of linkéd sweetness long drawn out
With wanton heed and giddy cunning
The melting voice through mazes running.

(II, Milton, *L'Allegro.*)

Untwisting all the chains that tie
The hidden soul of harmony.

(III, Milton, *L'Allegro.*)

That Orpheus' self may heave his head
From golden slumber on a bed
Of heaped Elysian flowers and hear
Such strains as would have won the ear
Of Pluto, to have quite set free
His half-regained Eurydice.

(IV, Milton, *L'Allegro.*)

In selecting a program for a musicale like the one I have been describing, it is well to have in mind pieces that will carry long, full tones, and slow effects rather than things with difficult technique. I add a program that would be attractive.

Prelude (Piano) ..... *Rachmaninoff*
Ave Maria (Song, Contralto) ..... *Luzzi*
Lullaby (Violin) ..... *Svendsen*
Impromptu, Op. 90, No. 3 (Piano) ..... *Schubert*
Im Rosenduft, Op. 16 (Flute) .. *Henri Steckmest*
Ave Maria (Violin, Voice, Piano) .... *Bach-Gounod*
Nocturne (Piano) ..... *Field*
Von Meinem Bergle muss i scheiden (Flute) ..
..... *Henri Steckmest*
Love the Peddler (Song, Sop. or Con.) . *Ed. German*
Nymphs and Shepherds (Song) ..... *Purcell*
Calm as the Night (Song) ..... *Bohm*
Shepherd Song — Norwegian, Reimen Coll.
(Song.) Very pretty, with Shepherd's pipe in accompaniment ..... *Folk Songs*
Palms (Cornet) ..... *Faure*
Largo (Cornet) ..... *Handel*

AN INDIAN'S RITUAL PRAYER FOR A LITTLE CHILD

The life of the infant is pictured as about to travel a rugged road, stretching over four hills, marking the stages of infancy, youth, manhood, and old age. On the eighth day after the birth of a child the parents, through certain prescribed forms, send for the Medicine Man. In due time he comes, clad in his priestly garb, and stands at the door of the tent wherein the child lies. Raising his right hand to the sky he calls: —

Ho! Ye Sun, Moon, Stars, all ye that move in the heavens;
I bid ye hear me!
Into your midst has come a new life.
Consent ye, I implore!
Make its path smooth, that it may reach the brow of the first hill!

Ho! Ye Winds, Clouds, Rain, Mist, all ye that move in the air;
I bid ye hear me!
Into your midst has come a new life.
Consent ye, I implore!
Make its path smooth, that it may reach the brow of the second hill!

Ho! Ye Hills! Valleys, Rivers, Lakes, Trees, Grasses, all ye of the earth;
I bid ye hear me!
Into your midst has come a new life.
Consent ye, I implore!
Make its path smooth, that it may reach the brow of the third hill!

Ho! Ye Birds, great and small, that fly in the air;
Ho! Ye animals, great and small, that dwell in the forest;
Ho! Ye insects, that creep among the grasses and burrow in the ground;
I bid ye hear me!
Into your midst has come a new life.
Consent ye, I implore!
Make its path smooth, that it may reach the brow of the fourth hill!

Ho! All ye of the heavens; all ye of the air; all ye of the earth;
I bid ye all to hear me!
Into your midst has come a new life.
Consent ye, consent ye all, I implore!
Make its path smooth, then shall it travel beyond the four hills!

HER PIANO

A little girl at a recent Christmas entertainment in one of the college settlements talked grandly to visitors about "our piano." Pieces played on the piano to amuse the children evidently brought the subject to her mind.

One very practical woman who contributes much to the support of the settlement heard the child's remarks.

"It seems to me," she said, rather censoriously to the head worker, "that a child whose family owns a piano isn't really suffering for need of help. There are plenty who are really in need, and I don't think it right to exclude them in favor of one who owns a piano."

Seeking out the child, the head worker questioned her closely.

"Did you say you had a piano at your house?" she asked.

"Yes, indeed," responded the child, cheerfully.

"Is it yours or your mother's?"

"It's mine; Santa Claus brought it to me last year."

Light began to dawn on the settlement worker's brain.

"And how large is your piano — as big as that?" pointing to the upright in the room.

"Oh, no, mine is a teenty weenty bit of a one, just about so high," and the little girl leaned down and measured a distance of twelve or fifteen inches from the floor.

It turned out to be a child's piano, presented by the settlement itself a year previously. — *New York Sun.*

AN ACCIDENTAL MEETING

RACHEL FRANCES SHARPLESS

At the of an autumn day, as a bird started to *tr*.... its evening song, a hunter, about *f* years of age, who carried a { of birds, halted to — on a ♭ stone by the roadside. A ♯ piece of iron had twisted his foot, which was beginning to . The hunter hallooed to a boy in a cornfield, who seemed to . This encouraged the man to his call. The boy came on a and, not stopping to let down the but only to  the fence, he approached the hunter, who directed him to a handkerchief tightly about the injured foot, and to cut a stick to serve for a . Then the hunter rewarded the boy, who showed a ♮ delight. "It's the first I ever owned." "Is that so," replied the hunter, cordially — "Well, one good ~ deserves another, you know" — and he limped down the darkening road.

Michael Kelly, the singer, kept a music shop many years ago, in Pall Mall, and to the sale of crotchets and quavers he added that of wine. On asking Sheridan what would be the best thing to paint over his shop door, the wag replied: "Kelly, importer of music and composer of wine," alluding to Kelly's well-known fondness for passing off the compositions of others as his own. Kelly was a great favorite with the Prince of Wales and used to dine frequently at Carlton House with the celebrated wits of the day. On one occasion the subject of conversation turned on music, when the Prince, after paying Kelly many left-handed compliments, observed "that the musical public were more indebted to him than they were aware of; for, supposing all the musical compositions in Europe were to be destroyed, excepting those by Kelly, specimens of the works of every master might be found in them." The Prince, with his characteristic generosity, allowed Kelly a pension of two hundred a year until he died in 1826, aged 64. — *Musical Repository.*

CONSERVATORIES AND THEIR WORK

THE THOMAS NORMAL TRAINING SCHOOL

One of the best-known institutions of its kind in the West is the Thomas Normal Training School of Detroit, Mich., founded in 1888 by Mrs. Emma A. Thomas, a native of that city, and who has been actively identified with public school music for a number of years. The school is located at 550 Woodward Avenue, one of the finest situations in the city, and its appointments are unsurpassed by any institution of its kind. The subjects taught include Music, Drawing, Physical Training, Domestic Science, Manual Training, and Penmanship, and is the only school of its kind in the country devoted exclusively to these special subjects.

JENNIE LOUISE THOMAS
Director

The faculty of the school consists of Jennie Louise Thomas, director and teacher of methods; Ida Stone Newman, in charge of the departments for Sight-reading and Ear Training; Mary Gregg Evarts, instructor in Drawing; Marian E. Newman, instructor in Musical Theory and Physical Education; Harriette Irving Robson, department of Domestic Science; Albert C. Armstrong, department of Manual Training; Alice H. Ropes, who is in charge of the Piano, Harmony, and History of Music departments; Wm. F. Lyon, instructor in Penmanship; Joseph Sill, M.D., instructor in Chemistry and Bacteriology; and Eva E. Hardcastle, in charge of the classes in Physics. Besides these, are Louise Andrews, assistant in the departments of Manual Training and Drawing; Hermine Lorch, librarian; and Louis A. Thomas, secretary and general charge of the institution.

The various courses at the Thomas Normal Training School are each of one year in length. Terms begin in September and January, although applicants may enter at other times. Certificates are issued at the completion of each course, provided a satisfactory examination has been passed, and diplomas (accepted by most States in lieu of a teacher's examination) are granted after one year's successful teaching. The school, besides the advantages in its special courses, offers many others of great value. Detroit is an enjoyable city for residence; living expenses are moderate, and first-class accommodations can be secured very near the school. There is a large and well selected library; the reading room possesses files of the leading papers and magazines; and the reference library is especially valuable for students in the history of music.

Besides these, there is the large Public Library of Detroit, easy of access. The city is active musically with many local attractions, and the annual visitation of many eminent artists gives *éclat* to every musical season.

Thus it will be seen that the Thomas Normal Training School offers many and unique advantages to those who contemplate a career devoted to normal training work and public school music education. There are graduates of this school actively engaged in teaching in every State of the Union. A magazine entitled *The Chronicle* is published, together with a catalog containing full information, which will be sent to any address upon application to the secretary, Louis A. Thomas, 550 Woodward Avenue, Detroit, Mich.

FAELTEN PIANOFORTE SCHOOL

Faelten Pianoforte School, Carl Faelten, Director, 30 Huntington Avenue, Boston, was established in 1897, and is probably the largest pianoforte school in the world.

Average weekly attendance this season has been 700 students, representing New England states and California, Colorado, Connecticut, Georgia, Idaho, Indiana, Iowa, Maine, Minnesota, Montana, New Hampshire, New York, Ohio, Pennsylvania, South Carolina, Texas, Vermont, District of Columbia, and Canada.

Faculty: Carl Faelten, Reinhold Faelten, Mrs. Reinhold Faelten, Benjamin Guckenberger, Minna G. del Castillo, Annie F. Hardy, Wilson P. Price, Margaret Twomey, and Frank H. Luker. H. Frank Spurr, Secretary.

The school has a large children's department in which pupils are taught from the beginning. The adult students are either following music as an accomplishment or for becoming professional pianists and teachers.

The full course for graduation is most comprehensive and thorough and is accessible only for a limited number of students. The graduating class this season comprises nine members of the full course.

Public recitals this season will number sixty-one, some of which have been given in outside cities.

THE NEW ENGLAND CONSERVATORY

Probably every one conversant in musical matters knows about the New England Conservatory of Music, an institution founded in Boston, Mass., nearly fifty-three years ago. Since that time some 70,000 students have been enrolled; and the present year will prove the most prosperous in its history, with over 2300 students.

The commencement exercises will be held at Jordan Hall in the Conservatory building, on which occasion a class of 62 will graduate.

GEORGE W. CHADWICK

The present magnificent edifice was built three years ago, and is without doubt the best equipped institution of its kind in the world. It contains ninety class rooms, thirteen pipe organs, a large library, and two auditoriums. The larger of these, Jordan Hall, contains a large pipe organ and has a seating capacity of 1019. This hall, together with the organ valued at $20,000, were the gift of Eben D. Jordan of Boston. The smaller, known as Recital Hall, seats 450, and is used for various lectures and recitals.

The Conservatory possess a large and complete orchestra, with a chorus of 500. A large number of concerts are given throughout each season by members of the faculty, chorus, orchestra, and advanced students.

NEW ENGLAND CONSERVATORY OF MUSIC, BOSTON, MASS.

PARIS LETTERS—I

I. PHILIPP

A new opera by M. Camille Erlanger was given its first presentation at the Opéra-Comique, March 27, and was well received.

After employing Christian legends in *Saint Julien l'Hospitalier* and in *Le Fils de l'Etoile*, those from Hebrew sources, using a Breton tale for his *Kermaria*, as well as a powerful musical adaptation of the well-known *Juif Polonais*, he now presents a work upon an ancient subject, M. Pierre Loreys' *Aphrodite*.

It was a bold undertaking to adapt for operatic purposes this remarkable romance of an age of sensuality and freedom in morals, — a period of which M. Loreys has well said in his preface in these words, "Divine love, from whence we were created, was without contamination, shame, or sin."

In M. de Grammont's clever libretto one must not seek to discover all the scenes and incidents of this celebrated romance, which more perhaps than its high artistic sense, contribute to the fashion concerning a public to which the sense of classic beauty is always preserved.

Here is a brief outline of the story of *Aphrodite*. Chryseis, a well-known and beautiful courtesan of Alexandria is beloved of the sculptor Demetrius, who has set up a marvelously beautiful statue of Aphrodite in a temple consecrated to the goddess of love. Chryseis promises Demetrius that she will give herself to him when he gives her the three great objects of her desire, — the comb of the high-priestess Touni, the mirror of the courtesan Bacchis, also the necklace of seven rows of pearls that graces the statue of Aphrodite.

Demetrius secures the comb by putting Touni to death, then steals the mirror and the necklace. But when the passionate Chryseis comes to fulfil her promise, Demetrius refuses on his part and repulses her. Seeing that she has set her heart on possessing the spoils, the sculptor commands her to show herself before the people wearing the stolen ornaments, which she does. For this act she is arrested, condemned to death by drinking hemlock poison, and Demetrius witnessed her death unmoved. But soon after he, in returning to the prison, discovers the beautiful corpse of Chryseis, and this so impresses him that he immortalizes her death by a masterpiece of the sculptor's art.

In his libretto M. de Grammont has preserved the essentials of the original story with only two important changes His version portrays Demetrius as singing a love duet with Chryseis before he refuses her, also on seeing her in death he utters a loud cry of grief, without taking up his sculptor's chisel. Certain scenes, as the orgies of Bacchus and the appearance of two young flute players, suggest characters and episodes of the original romance.

M. Erlanger's opera is on an extended scale, requiring more than four hours for performance, and two scenes with a dance were omitted, owing to the insufficient size of the stage at the Opéra-Comique. But in it he shows his usual technical skill and evident sincerity of purpose.

At this time only the leading features can be mentioned, which include the preludes to the several acts, especially the first. There are pages that are symphonic in character, with exquisite tonal coloring. The temple scene, where the courtesans offer gifts to Aphrodite, with the orgies to Bacchus, are moments of surpassing power and originality, if perhaps somewhat brutal in its realism; the love duo, in which certain passages from the *Cantique des Cantiques* have been utilized by M. Erlanger with exceptional cleverness, the prison scene, and the intensely poetic character of the final scene. The instrumentation is gorgeous in the extreme, and according to his usual manner M. Erlanger has shown especial ingenuity in his scoring for brass, producing striking effects, as, for example, the use of a muted trumpet in the cemetery scene, away from the stage.

Mendelssohn is no longer the fashion. However, those who decry his works should have heard his *Reformation* symphony as played recently by the Conservatory orchestra, and perhaps they would have regretted their previous unjust opinions. What an admirable society this is! In my opinion where could one have heard a more finished or artistic accompaniment to Beethoven's Eb concerto which the pianist Delaborde whose interpretation was vigorous, brilliant, yet imbued with the true classic spirit. There was a well-merited ovation. And how well the orchestra interpreted excerpts from old French music and the Renaissance! Everything was so well given that there was tlelit to choose from, those by Costeley and Clement Jannequin, *Le Moys de Mai, Au Joly Jeu, Mignonne allons voir Quand ma Maitresse rit*, or *Je n'yrai plus*, proving especially enjoyable.

And lastly came an excellent interpretation of Schumann's *Manfred* overture with other excerpts from this work directed by Georges Marty.

At a recent Colonne concert, Strauss' *Sinfonia Domestica* was produced under the composer's direction. It is a stupendous work, which demands a very large orchestra for its proper interpretation, "tonitruating," as Dickens said in his *Christmas Stories*. However, the work is in the Homeric style, and is remarkable for its clearness, emotion, vigor, and dignity of manner. The scoring is strong, yet free, with a fugue that appears a miracle, not only as to orchestration, but as to its contrapuntal clearness and mastery. The themes are not especially inspired, but nevertheless they portray the general ideas of the work as indicated in the program.

Such thoughts as are unquestionably in the sphere of music are marvelously well expressed, and while one may not remember the exact measure the composer used to express the phrase *Ganz der papa*, he will quickly experience where tender playfulness and domestic love are expressed.

It is difficult to say as to the form of this colossal work; it is suggestive of vigor, even to robustness, but lack of space prevents an analysis of these pages, which are so much in the impressionist vein as to preclude a state of mind necessary for reflection. The orchestration is extraordinary. The impression is that some of the themes lose by much overelaboration in counterpoint, and also that these same contrapuntal effects are obscured by use of so much wood wind and brass. Also it seems to me that such massing of instruments cannot exceed a certain amount of volume of tone without becoming noise by the clash of so much discordant harmony, and also that such results prevent the clear understanding of the music, as such.

This refers to certain portions of the work, and while the genius of Strauss may permit him to employ such orchestral effects, these would become unbearable if employed by those of lesser ability. It is a symphony which, despite many obscure pages, is one of great clearness and ingenuity.

M. Elman played the Beethoven violin concerto with perfect intonation and rhythm, as well as with admirable artistry. With added maturity M. Elman is destined to become one of the greatest among living violinists.

M. Colonne directed also at this concert Saint-Saëns' second symphony, a perfect little masterpiece in form, as well as simplicity in thought, followed by another of his admirable works the *Suite Arlesienne*.

Ferruccio Busoni is not only an eminent representative of modern pianistic art, but also one of the most versatile and scholarly. His program included works by Chopin and Liszt, the performance of which proved a brilliant exhibition of the pianist's individuality.

If one is not always in sympathy with M. Busoni's interpretations, he is nevertheless to be admired for his musicianship, as well as for strength and breadth of conception and beauty in outline. In the Chopin numbers, I mention particularly the *Polonaise Fantasie*, and the *Etudes*, the latter being played with such technical mastery as to create unbounded enthusiasm, even among those familiar with such displays of virtuosity. I have never heard the C major study played with such incomparable legato and velocity. It was repeated, and the effect was suggestive of the rustle of leaves blown about by the wind.

But where Busoni appeared at his greatest was in the Liszt numbers, in which romance, mysticism, power, and fantasy were incomparably expressed. Such music seldom is expressive of tenderness, and feeling is often of the ironical sort, but nevertheless exerts a strange fascination. In all these numbers the power and versatility of M. Busoni's talent was always in evidence. Among those that deserve especial mention were the *Harmonies du Soir*, *Feux Follets*, and *Mazeppa*, also the transcription of the *March Nuptiale* and *Rondo des Sylphes* from Mendelssohn's *Midsummer Night's Dream*, in which the orchestral character was fully maintained.

Of other pianists, Sauer from Vienna was among the best. He is a remarkable virtuoso. Loyonnet, a young pianist, from my class at the Conservatory, is a "coming man." His technique and artistic abilities are of a high order. While but fifteen years old he gave one of the most interesting recitals of the season. Ysaye gave two concerts; he is still a giant among violinists. At his last chamber concert in Brussels, he played Gabriel Fauré's new quintet with the composer at the piano. It is a work of great beauty of thought, fresh and vigorous, and it made a great and well-deserved success.

NOTES

There will be sixteen Wagner Festival performances at the Prinz Regenten Theater, Munich from August 13 to September 7, divided into five performances of *Die Meistersinger*, three of *Tannhäuser*, and two of the *Ring*. There will also be six Mozart Festival Performances in the Residenztheater from the 2d to the 12th of August.

* *

Hegedüs, who will make his first appearance in American and Canadian cities under the management of Rudolph Aronson next autumn, gave two recitals at Bechstein Hall, London, England, on May 8 and 14. At the former he was assisted by the Italian dramatic soprano, Maria Colleredo, who is also engaged by Mr. Aronson for an American tour.

* *

The following program was recently given by the American Violin School (Joseph Vilim, director) at Kimball Hall, Chicago.

Ensemble Violin Solo: Humoreske ..... *Dvorak*
Mazurek ..... *Dvorak*
Concerto, Op. 64 ..... *Mendelssohn*
Fantasie Caprice ..... *Vieuxtemps*
Concerto in D ..... *Paganini-Wilhelmj*
Ensemble Violin Solo: Moto Perpetuo ..... *Paganini*

* *

There is a large number of people who play upon the violin, cornet, piano, flute, and other instruments by ear. These auricular performers derive a certain amount of amusement from this kind of musical endeavor, but they are obliged to confine their efforts to a simple form of melodic music which, after many endeavors, has been committed to memory. Should their playing of popular tunes, songs, and bits of easy waltzes and operatic airs be compared with the composer's music, it is quite probable that with few exceptions, nearly every piece would be found to be more or less erroneously given.

At the same time, we must admit that many who perform music of even a simple construction, fail to interpret it correctly with regard to rhythm and other essential qualities.

Most of those who can learn quickly to perform a simple melody by ear upon the piano, or any other instrument, have the capacity to learn how to perform from music.

Vocalists who sing by ear would derive a great benefit from sufficient knowledge to enable them to read the music of their songs. — *Violin World.*

PROFESSOR J. K. PAINE

(FROM THE BOSTON TRANSCRIPT)

J. K. Paine, who for forty years was pronounced one of the most noted music composers in America, died suddenly of pneumonia April 25 at his home on Hawthorne Street, Cambridge. Since Sunday he had been struggling with a heavy cold, but only yesterday did it become the swift disease that caused his death. By a pathetic coincidence, on his piano this morning stood the score of the symphonic poem, *Lincoln*, on which he had been working steadily for many months, and which was near completion.

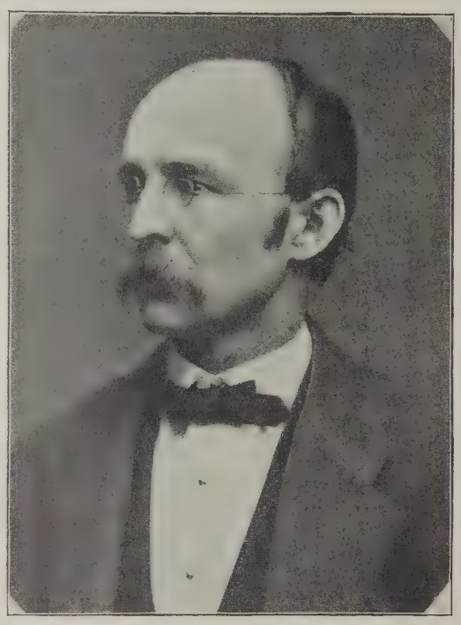
Professor Paine had been in rather feeble health for a number of years and since his resignation last May he has been quite infirm. Because of his feebleness he was unable to withstand the ravages of the disease, although the end came with comparative suddenness.

John Knowles Paine

John Knowles Paine, the composer, was born in Portland, Me., Jan. 9, 1839. He made his first appearance in public as an organist and composer in 1857. In 1858 he went to Berlin, Germany, where he remained nearly three years, studying the organ, composition, singing, and instrumentation with eminent masters. He gave several organ concerts in Berlin, and returned to the United States in 1861. In 1862 he was appointed instructor in music at Harvard University, and having gradually built up the department of music, he received in 1875 the title of professor of music, being the first occupant of such a chair in any American University. "His influence as a teacher has been very great, and for many years he has been an inspiration to the men who have been under his instruction, while his example has been of incalculable benefit to American music" (Professor Stanley). Professor Paine's pioneer work in establishing music as a university branch of study has been imitated in all the leading American institutions of learning. Among the long list of his pupils may be mentioned the composers and teachers: Foote, Burdett, Thompson, Converse, Atkinson, Coerne, Atherton, Henry, Hill, Surette, Johns, Spalding, and the critics, Finck, Apthorp, Goepp, Aldrich, and Gardner.

In 1867 he directed his mass at the Sing-academie in Berlin, on which occasion he was honored with the presence of the then Crown Princess Victoria, the royal mother of the present German emperor. His first important composition produced in his native land, was the oratorio, *St. Peter*, performed under his direction in Portland, Me., in June, 1873, and repeated in the following year by the Handel and Haydn Society of Boston. The oratorio was highly praised, and Mr. Paine was acknowledged as the leading American composer. A notable triumph was the production of his first symphony, in C minor, by Theodore Thomas's orchestra in Boston, January, 1876. He composed the Centennial Hymn, to the words of Whittier, which was sung at the opening of the exhibition in Philadelphia, 1876. Then followed his overture to *As You Like It* (1876), Symphonic Poem to Shakespeare's *Tempest* (1877), Duo Concertante for violin and 'cello with orchestra (1878), and Spring Symphony (1880). These orchestral works have been favorites in the concert room for years; especially the Spring Symphony, which has won a high place among modern works in the leading musical cities of Germany and America.

One of his most remarkable works is the music to the *Œdipus Tyrannus* of Sophocles, as performed in Greek at the Sanders Theatre, Cambridge, in May, 1881. No attempt was made to reproduce, in an antiquarian spirit, the crude music of the ancient Greeks, about which very little is really known; but the most complete resources of modern chorus and orchestra were brought to bear upon the task of summoning the peculiar and subtle religious



JOHN K. PAINE (AN EARLY PORTRAIT)

sentiment of the Greek tragic drama. The result is a work of power and imagination.

Among his subsequent compositions may especially be noticed the cantata *Phœbus, Arise*, words by Drummond of Hawthornden (1882); Keats's *Realm of Fancy*, for chorus, quartet, and orchestra (1882); Milton's *Nativity* for chorus, solos, and orchestra, composed for the Handel and Haydn Festival in Boston (1883), and considered one of his highest achievements; Symphonic Poem, *An Island Fantasy* (1887); *Song of Promise*, a cantata composed for the Cincinnati festival, May, 1888; *Columbus March and Hymn*, composed by official invitation for the opening ceremonies of the World's Columbian Exposition (1892); a Harvard Hymn and a National Hymn, *Freedom, Our Queen*, the prelude to *The Birds of Aristophanes*, and a *Hymn to the West* for the St. Louis Fair. The list of Professor Paine's works also includes songs, part songs, motets, piano and organ compositions, and chamber music.

Undoubtedly Professor Paine's most important work is the opera *Azara*, in three acts, on a provençal subject, the libretto of which was written by the composer. This has been published (1901) by Breitkopf and Härtel of Leipsic. The Moorish dances of *Azara* have won wide-spread popularity, through repeated performances by the Boston Symphony Orchestra and the late Theodore Thomas. Other selections from *Azara* have found equal favor in the concert room. Steps are now being taken to produce *Azara* on the dramatic stage in the near future; musicians look forward to this as a noteworthy event in American musical art. His last published works are the music of the *Final Scenes to the Birds of Aristophanes*, composed for the representation given by the Harvard Classical Club in May, 1901, and performed with brilliant success in Cambridge, Boston, and at the University of California; and the official *Hymn of the West*, composed for the opening of the St. Louis Exposition in 1904, and given by the Handel and Haydn Society of Boston February, 1905, with great enthusiasm. Professor Paine was the official delegate of Harvard University to the Wagner festival in Berlin, October, 1903, on which occasion he was introduced to Prince Eitel at the unveiling of the monument of Wagner. He also received a gold medal, and his *Prelude to Œdipus* won a triumph at the international concert.

Professor Paine's mature works are stamped with strong individuality and are thoroughly modern. His symphonic poems, Shakespeare's *Tempest and Island Fantasy*, his *Song of Promise*, *Birds of Aristophanes* and *Azara*, prove him to be an innovator in form, harmony, and instrumentation. "As a master of orchestration he has few living equals" (Finck). He is justly ranked among the foremost composers of the present time.

At the end of the academic year of 1905, Professor Paine resigned his professorship, though he was in the full vigor of his powers. For that very reason he wished to free himself from academic routine and devote himself, untaxed and unfatigued, to composition. His first work was practically to write anew his sonata for pianoforte and violin, which in the fresh version Mr. Hess's quartet played a few weeks ago in Cambridge. Within the past year he had worked steadily at a symphonic poem that the figure of Abraham Lincoln, which had long touched his imagination deeply, had suggested to him, and other compositions were stirring in his mind. Meanwhile, too, he had hopes that his opera, *Azara*, in which he believed he had written his best music, would at last find its way to the stage.

The moment of his sudden death in the midst of all his work and hope of the future is one in which to repeat what the *Transcript* said of him at his retirement:—

"From the first Professor Paine designed the bulk of his life work to be expounding to the young country the history, the theory and science, and the composition of music. It was a work that has first to be done before there could be among us a sense cultivated to the appreciation of musical literature even when at last we had the opportunity to hear it. It was a laying of the corner stone under the building that has come to be.

"In these endeavors Professor Paine has performed his great service. There have come from his hands compositions that in bulk and variety and worth leave him yet in preeminent position among American composers. There have come from his classrooms a score of pupils who have become noted composers themselves, and are ample testimony to his excellence and force as a teacher.

But Professor Paine has done what no other man, and what he himself in his other activities, has never equaled, when for nearly forty years he opened his door to multitudes of young men of the land who came to him not to profess, but humbly to learn of music, and who have gone forth to love it and to dispense their love. This has not made a showy achievement. The man who has so quietly helped along so many generations of us in art, in which we long were lamentably backward, will never be sufficiently thanked. But if ever America should come to take that lead in the world's music which is now being predicted, no person will have contributed to that state a more thankless, but a more necessary and honorable part than John K. Paine.

"Professor Paine may have saddened himself temporarily by the deliberate closing of a portion of his career. But he cannot long remain depressed in a life so blessed with memories of achievement. Let him remember what he has done, if he would cheer himself. Let him take account of the orchestras we have at present, the colleges of music, our many composers, and the large number of us who understand music, and then go back twenty years to a time when there were none of these things, when he was here alone but highly appreciated, the hard-working pioneer who then did more than any other to bring about these orchestras and give us this pleasure in the art. That ought to be a comfortable recollection.

"Professor Paine was the first teacher of music in America to teach it as an art and not as a trade. Harvard gave him his opportunity when it established a musical department forty years ago and called him to it. Then it left him to shape his teaching as he chose. Little by little he developed and enlarged his courses, and at each advance more and fitter students came to them. In the end, he was teaching the art of musical composition in its higher and subtler aspects, as well as in the fundamental knowledge that must underlie it. Side by side with this, he taught those who could only be listeners or amateurs the understanding and the appreciation of music. He gave them the spur of intellectual comprehension that heightened their emotional pleasure in the music that they heard. His teaching wove for them a background of knowledge.

"In the audience at almost any serious concert in any city in America there have been for years those that owe some of their pleasure to his teaching. He has trained, in the beginnings that count, some of the younger and most promising of American composers. As many of the younger American writers about music owe their standards to him. From his courses went other teachers to other colleges to continue his work in his spirit. In the intervals of college vacations and Sabbatical years, and on the occasions that some academic festival offered him, he composed for himself; but it was music that was little academic. The warmth of life, the vigor of imagination, the quickness of spirit that were in the man passed into his music. No routine of teaching could dull him. He would come as freshly to his opera, for example, as though it were his only concern. Now, when in the leisure of the honorable retirement that the college granted him, there was promise of some of his best work, death has stayed his hand. And it was in the music of his advancing years that he seemed to write with the ardor of youth."

SYMPHONIES IN A GREEK THEATRE

Last September Dr. J. Fred Wolle, creator of the great Bach Festivals at Bethlehem, Penn., was called to Berkeley by the University of California to fill its newly established chair of Music. Professor Wolle at once organized a University chorus of three hundred student singers, and set to work on a year's preparation for a fit rendition of Handel's *Messiah*. He organized a student orchestra, and he offered courses in Harmony and Composition, to which regular students of the University flocked by the score. All these things had been brought to pass before in more than one American University, but the next undertaking upon which the University of California entered represented an absolutely new departure in academic life. This was the establishment of a great university orchestra of professional musicians, to be conducted by the Professor of Music, and to provide for the community a fit rendition of music of the noblest sort.

For many years past San Francisco has had a series of symphony concerts every season, with varying degrees of artistic and popular success. Always the undertaking has been a difficult struggle, and never before has there seemed any prospect of permanency.

As Dr. Wolle's *concertmeister*, the University appointed Mr. Giulio Minetti, who had served Fritz Scheel and the conductors of other seasons in San Francisco in a similar capacity. Into its orchestra the University gathered together absolutely the best professional musicians in San Francisco, including a large number of men who are themselves directors of orchestras, and the best soloists and players of chamber music in San Francisco. Among the number are many who have played with the chief American Symphony Orchestras.

For the opening concert of the series, at the Greek theatre, February 15, more people came from San Francisco to Berkeley than had ever listened to a symphony concert in San Francisco. For the second symphony concert, on March 1, three times as many people gathered in the Greek theatre as had ever heard a symphony concert in California.

There is an inexpressible delight in hearing the master works of orchestral music under such surroundings as those in which the University Orchestra plays. In the rising tiers of the vast Greek theatre are assembled thousands upon thousands of eager listeners. The orchestra is ranged upon the immense stage of the Greek theatre, and for a background is a stately Doric-columned temple front, overhead the blue sky of California midwinter, and all about a great forest of eucalyptus and cypress trees, with a glimpse between the branches of the green Berkeley hills, rising steeply behind the theatre. There is nothing to intrude on the entrancing music, no sound but murmurs now and again from the high treetops, or the call of a bird as it wings its way above the theatre.

This first series of symphonies at the University of California will consist of but six concerts. While the musicians devote but a share of their time to the service of the Symphony Orchestra, and for the most part play nightly in San Francisco orchestras, yet there is the greatest artistic promise in the work of the organization. There are four rehearsals each week, that is, eight rehearsals for each of the symphony concerts. For the very reason that the musicians are not required to play in the Symphony Orchestra alone, it is possible for the University to command the services of the best professional musicians in a city of half a million population. These men are for the most part German or Italian by birth, well trained, long experienced, and highly skilled, possessing unusual versatility, responsiveness, and temperament. All the more because membership in the Symphony Orchestra is not their one occupation, they come to its work with the enthusiasm and delight inhering in the fact that this is a longed-for opportunity to express in the highest degree their hopes, their ambitions, and their artistic ideals.

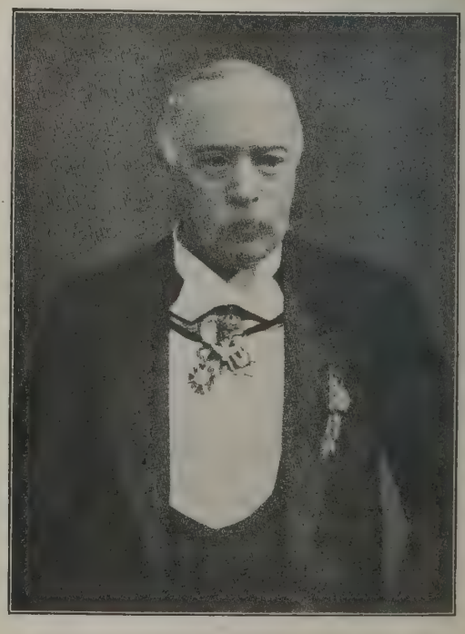
E. DALCROZE



EDUARD LASSEN

BOOK REVIEW

THE STORY OF ORGAN MUSIC *

EDMONDSTOUNE DUNCAN

Organ music is of different value and importance according to the country and epoch to which we turn. If we credit Saint Cecilia with the invention of the instrument we at least do no violence to a tradition which is well within datal probability. The music which grew up in the shadow of the Church during the tenth to the thirteenth centuries — that period when Harmony was struggling into light — was of that crude, formless kind, which survives in the old polyphonic records of France, Italy, and England. The early composers were both builders and players of organs, and the building seems to have been the most valued gift of the three. Thus we meet with Zuchetti, a fourteenth-century artist, the scene of whose labors was at St. Mark's, Venice. For this imperishable monument of human devotion Zuchetti supplied the organ, which he afterwards played. Nor did his duties end there, for he further composed all special music, and trained the St. Mark's choir, which became the wonder of the time. The test for the selection of organist in 1389 may be recommended for perusal to the Royal College of Organists, or any other examining body in search of severities.

1. The book of the chapel is to be opened at random, and the commencement of a Kyrie or Motet to be copied out. The candidate has to play a properly constructed Fantasia on it, in which the parts must be kept clear, as if four singers were performing.

2. The book of Plain-song is to be opened at random, and a canto fermo, or Introit, or something else, is to be copied out and sent to the candidate, who has to add three parts to it, placing the canto fermo in the bass, tenor, alto, and soprano, using fugal work, and not merely accompaniment.

3. The singers must sing one verse of a little-known composition, the style of which the organist must imitate in the same and other keys.

Among the successful candidates of the St. Mark's examination was Adrian Willært, the famous Netherlander, who founded Italy's first School of Organ Playing.

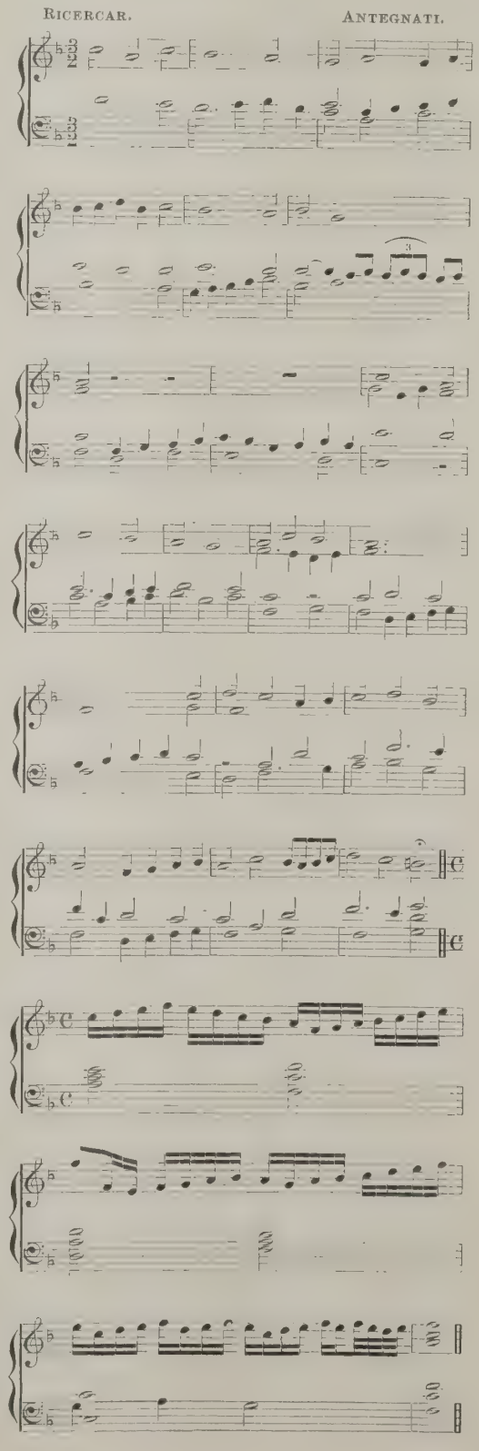
Passing lightly over many of the early pioneers of organ music, the name of Antegnati arrests attention. The head of the family was born at Brescia in 1557, and in due time became builder and player of the cathedral organ. He was an industriously prolific writer of books and music. Amongst the former is an account of the 135 instruments built by the Antegnati family. Here is a specification of one of his instruments — namely, that at Brescia, where he was organist. The twelve stops governed a single row of keys and a pedal-board.

1.	Principal (Open Diapason)	16 ft.
2.	Principal Spezzato (divided between Manual and Pedal)	32 "
3.	Ottava (Open Diapason)	8 "
4.	Quinta decima	4 "
5.	Quinta nona	2⅔ "
6.	Vigesima seconda	2 "
7.	Vigesima sesta	1⅓ "
8.	Vigesima nona	1 "
9.	Trigesima terza	⅔ "
10.	Vigesima seconda, No. 2	2 "
11.	Flauto in quinta decima	4 "
12.	Flauto in ottavo	"

*C. F. Abdy Williams, M. A. (The Walter Scott Publishing Co.— Charles Scribner's Sons.)

Having given a specification of one of Antegnati's instruments, it will be not uninteresting to peruse one of his compositions. The *Ricercar* ("sought out") may be rendered as *study*, a piece which set forth the best qualities of the music of the day. From the example, a modest little piece of harmony (with clever imitations) is seen, followed by a flourish which might have been signed Czerny.

RICERCAR. ANTEGNATI.



At the period of the publication of this *Ricercar* (1608) the music of Italy was awakening to a new and important era. Peri, Monteverde, and others had given to music a new form — namely that of opera — which was henceforth to be the only one which the country afterward favored. In tracing the future history of organ music, Germany now takes the lead, and never relinquishes it until such time as the dominating master of all music — John Sebastian Bach — carries it to such perfection that all subsequent development is trifling by the side of the grand achievements of his single genius.

No separate instrument has ever had the dominating character of the organ. It grew up with harmony itself. And the whole harmonic structure has at one time or another been tested, so to speak, in the organic crucible. Its influence has not always been for good. The development of rhythm (and the thousand and one dependent subtleties) it positively retarded. Not, of course, in the hands of the master just mentioned, but certainly through the influence of the bulk of the Capellmeisters before, during, and after his time. It is to the credit of modern music that it has broken away from the trammels with which such schoolmen would surround it.

Mr. Abdy Williams has told his story well. It was quite fitting that he should follow up his earlier work on the *Story of the Organ* with an account of the music belonging to that instrument. He possesses sound historical knowledge and the ability to impart it in a clear and attractive style. All the schools of organ music are separately discussed, and their chief representatives critically considered. He who is interested in early English organ music, for example, will find well-written accounts of such musicians as Blow, Purcell, Croft, Greene, Stanley, old Sam Wesley, Dr. Crotch, Adams, and S. S. Wesley. Names and references are given in the text or appendices, so that the principal works of each composer may be traced. In spite of the daily increase of reprints, organists will doubtless as yet find a difficulty in procuring copies of a large number of these old but *playable* works.* A book such as we have been considering can lend only limited help in this particular. There are, however, numerous facsimiles and musical examples, some of which cannot be seen outside the British Museum, and every organist who reads this little survey of the literature of his instrument cannot fail of being the better for it. For the consolation of those who believe the beginning of wisdom to be with the moderns, I hasten to add that Max Reger is admitted to Mr. Abdy Williams' temple of fame.

*Perhaps I may usefully mention that pieces by Purcell, Plow, Sam. Wesley, and Russell, edited by myself, will be found in the Vincent Music Co.'s *Octavo Organ Book*, Nos. 6, 7, and 8. The text refers only to Augener and Novello, whose excellent series are well known.

THE BUCCANEER. A Song Story. Text by Alden Charles Noble, Music by Adolf Weidig. Op. 31. Chicago, Clayton F. Summy Co.

The text, German and English, is a tale of a seventeenth century buccaneer who, while pillaging a city of the Spanish Main, fell in love with a beautiful lady, whom he married. The next day the lady was killed in attempting to save her husband from death at the hands of an angry parent.

The poem is to be sung with occasional verses for recitation only. The composer, who is well known in Chicago and the West, has made a generally effective setting which is in six sections. No. 3 (the wooing) has many imaginative moments, and the ecclesiastical effects portraying the cathedral marriage (Section 4) are very characteristic.

The voice part is in medium compass. The score will be found somewhat difficult for the average amateur to sing well, and the accompaniment requires a pianist with a good technical ability, as well as a knowledge of creating an artistic background for the singer. The Buccaneer will prove interesting to vocalists seeking a novelty for the concert or musicale.

THE FOREIGN MAGAZINES

ARTHUR ELSON

In a recent issue of the *Journal of the International Musical Society* there appears an article on the History of the Suite, by Tobias Norlind.

In dealing with the old suite, the author divides its existence into five periods which overlap each other somewhat. In its earliest stages the suite appears as a two-movement affair, — a simple contrast between slow and fast, between even and triple rhythm. The usual sequence was a Pavane followed by a Gaillarde.

The second period brought in a more extended form, beginning with the Allemande and Courante. The so-called Paris school, or third period, went still farther in this direction, sometimes employing three or four Courantes, a Sarabande, and a Bourrée. The fourth period marks the highest development of the old form, and includes nearly every dance form of any importance. The fifth and last period marks the transition to the sonata form.

The dances themselves came from many different countries, and formed an interesting array. There was the Sarabande, originally a Spanish religious dance; stately and dignified in character, and always in triple rhythm. The Courante, also in triple rhythm, was named from the French word "courir," to run, and displayed a rapid, running style. The Passacaglia was a rather bombastic affair, said to be derived from the words "passo gallo," or rooster-step. It was in triple rhythm, usually in the minor mode. The Chaconne was another slow dance, chiefly in triple rhythm, but usually major.

The Minuet comes from the Latin "minimus," or smallest, hence was danced with small, dainty steps. Its slow triple rhythm has become familiar in the early sonatas and many modern concert pieces, and has led to the existence of a definite minuet form with trio.

Among the dances in even rhythm the Gavotte was genial and lively in character. It began on the third beat of the measure, producing a mild syncopation. It sometimes contained a Musette, or drone-bass effect imitating the bagpipe. The Bourrée resembled the Gavotte, but was quicker and heartier, forming a lively *finale* when so used. The Pavane was slow and stately, much like a Sarabande in quadruple rhythm. The Rigaudon, sometimes in 2–4 time, was invented by Rigaud, a dancing master at the court of Louis XIII. It was sometimes sung as well as played. The Allemande was cheerful in character, like an *allegretto*. It is not certain that the Allemande was an actual dance, but it formed an excellent introduction to the Suite. The Gigue, again in triple rhythm, formed a rollicking *finale*. The terms Prelude, Air, and Burlesca explain themselves.

The older Italian sonatas were simple pieces, and the real development of the form, by C. P. E. Bach and others, is based on contrasts similar to those of the Suite. Such a succession as Allemande, Courante, Sarabande, and Gigue would pass readily into the *allegro*, *scherzo*, *andante*, and *finale* of the classical sonata or symphony. The modern orchestral suite, as treated by Grieg or Bizet, is altogether freer in form.

A review of the works of Hugo Kaun* should be of especial interest to American readers, because of his long sojourn in Milwaukee. Born at Berlin in 1863, he studied under the renowned Kiel, and came to the United States in 1887. He founded the Milwaukee Männerchor, which gave concerts with the Thomas Orchestra, and he composed many excellent works in the larger forms. Kaun numbers among his compositions two operas, *Der Pietist* and *Der Maler von Antwerpen*. A great Festival March, dedicated to the American people, was performed at Chicago, as also the virile and powerful symphony, *An Mein Vaterland*.

The cantata *Normannenabschied* was well received, while the interesting *Carnival* suite won a decided success at Milwaukee. *Vineta* is an early symphonic poem, while *Hiawatha* and *Minnehaha* are companion works in this form. The last named aroused decided interest in the Boston Symphony concerts, being clean cut, tasteful, and decidedly effective. Kaun is not a radical, and does not demand a dozen new instruments and a hundred old ones for performance, but his works are admirable examples of musical discretion and sanity. In 1902 he returned to Germany, where he has won decided attention by old and new works. In 1904 his *Maria Magdalena* was given by the Meiningen orchestra. His excellent chamber music, such as the string quartets (Op. 40 and 41) have won decided success. Another attractive work is the piano quintet, often played by the Bohemian Quartet and Vera Maurina. Kaun is now at work upon a second symphony and a septet.

The question of program music, discussed also by "Caligula,"* is by no means a new one. In ancient Athens a harpist once played an imitation of a storm, whereupon the wit Dorian remarked, "I have often heard a better tempest in a pot of boiling water." From this comes our phrase, "A tempest in a teapot." In the Middle Ages, while the Troubadours were struggling with tenson and sonnet, their trains of jongleurs became proficient in imitating bird calls and the cries of animals. Even in the midst of the strict contrapuntal schools, we find program music playing its part.

Pure music, according to most definitions, is music that tells no story, but appeals to the emotions by its own intrinsic beauty. Yet even here the program idea may creep in. Richard Strauss, in a brief colloquy with the present writer, repeated his well-known assertion that all music was really program music, — that no composer could write without definite program ideas in his mind, — that Beethoven, for instance, must have intended a definite meaning in all his symphonies, not merely the Pastoral or the Ninth.

This idea certainly seems too radical, and many of the composers really did indulge in "art for art's sake," without telling any story. Where is the program in Bach's glorious fugues? Their richly woven musical tracery commands our implicit admiration without the need of having any melodrama attached. Where is the story in Mozart's G minor Symphony, or the familiar D major work of Haydn? Beethoven explained the first figure in his Fifth Symphony, but it remained impressive without his explanation. Schubert sang his inspired melodies with no thought for anything but their undying beauty. Mendelssohn, the "grand paysagiste," painted moods rather than objects; yet that is one kind of program music. Schumann, however, needed no title for his gorgeous chord-edifices, a "Spring" symphony that charms us at all seasons, a "Cologne" symphony that by any other name would smell as sweet. Brahms, too, proved himself a noble apostle of purity in music, and the "sweet reasonableness" of his well-wrought measures is a most valuable lesson to-day.

It is too easy to write program music. Wagner did it, but he had a right to do it as he did, in opera and music drama. His glorious tone pictures, and the orchestral painting of Liszt and Berlioz, have led us astray. Strauss may succeed grandly in some of his titanic experiments, but he cannot abolish what has gone before. Beauty is still its own excuse for being; tonal ugliness cannot stand without an explanation. Mahler's Fifth Symphony seemed to prove this, — a strongly dramatic work, but often unattractive and obscure for lack of an explanation. We cannot have Schuberts and Brahmses for the asking; but we can hope that the spread of the program idea in recent years will not make us unmindful of the beauties of the pure school. "Lest we forget" should still be our watchword.

* From a recent article by Wilhelm Altmann.

* In the *Neuzeitschrift für Musik*.

Mr. Frank Morse will conduct a Summer Normal School at Steinert Hall from June 27 to July 14.

* *

Pupils of the Faelten Pianoforte School gave a recital at Mt. St. Mary's Academy, Manchester, N. H., recently. The program presented was received with much appreciation by the students and teachers of the convent and a large number of invited guests.

* *

The S. M. T. A. will hold its sixth annual convention at Brenan College, Gainsville, Ga., on June 12, 13, 14. Programs of a practical value to the teachers are being prepared.

TEACHING THE DEAF

MODERN METHOD BY WHICH THE HEARING IS CULTIVATED

I placed her (the deaf pupil's) chair two feet from mine, drilled on A, B, C, etc. In one year's time (including three months' vacation with no drill) her father stated that her hearing had improved 100 per cent during the year. She could then hear exceedingly well.

We also used the piano as a means. On March 30, 1905, I found that she could hear "C'' above the staff. That is the twenty-second note from the right limit of a piano at eight and one quarter octaves. On this day I began using the instrument to which she refers for about fifteen minutes, then tried the same "C'' without the instrument, and all the notes until the next higher "C'' was reached. She could hear perfectly even that. From day to day we worked on tones until we were five or six notes from the highest.

Here we remained for over a week. My pupil declared she could hear the thumping of the note, but not any tone. I had doubts of her own self-confidence, so one day I started with two notes higher than she had ever heard and descended to the troublesome note. All were heard perfectly. It was a matter of what she had expected to hear. I had usually started drill four or five notes lower than her limit and worked up to the new tones, but on this occasion I reversed the operation, and she, believing all would go on as usual, was expecting to hear whatever note I first struck. She now hears every note on the keyboard, even the highest, and the others indefinitely beyond. She can enjoy a musical play fully as well as most normal people (of course she does not hear the words; do you?). She hears whistling three feet away, which was previously out of the question, no matter how near she was to the sound, and she is constantly improving in hearing, even when not being drilled. — MRS. J. SCOTT ANDERSON *before the Convention of Instructors of the Deaf*.

A MASTER OF PROSE

Mr. Arthur Symons is one of the best prose writers living, and in *Spiritual Adventures* (Constable, 7*s*. 6*d*. net) he does not depart from his high standard. The volume mainly consists of studies of temperament, full of subtle suggestion and atmosphere. Mr. Symons is not exactly a story-teller, but he has fine qualities which too many story-tellers lack. Here is an interesting personal passage:—

"The reading of *Lavengro* did many things for me. It absorbed me from the first page, with a curiously personal appeal, as of some one akin to me, and when I came to the place where Lavengro learns Welsh in a fortnight, I laid down the book with a feeling of fierce emulation. I had often thought of learning Italian. I immediately bought an Italian Bible, and a grammar; I worked all day long, not taking up *Lavengro* again, until, at the end of the fortnight which I had given myself, I could read Italian. Then I finished *Lavengro*."

This would have delighted George Borrow.

CONSUMING SMOKE

You may learn to consume your own smoke. The atmosphere is darkened by the murmurings and whimperings of men and women over the non-essentials, the trifles that are inevitably incident to the hurly-burly of the day's routine. Things cannot always go your way. Learn to accept in silence the minor aggravations, cultivate the gift of taciturnity, and consume your own smoke with an extra drought of hard work, so that those about you may not be annoyed with the dust and soot of your complaints. — DR. WILLIAM OSLER.

The Georgia M. T. A., will hold its second annual convention at the same place on June 13.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

THE MAGIC PEDAL, THE SOUL OF THE PIANOFORTE

PEDAL EFFECTS OBTAINED WITH THE FINGERS

Mutual Dependence of Fingers and Pedal

The fingers and the pedal are interdependent. Previous examples have shown that there are many effects which can be accomplished only when the damper pedal is applied to connect or to sustain tone. The reverse is also true: many fine and indispensable effects of sustained tone would be impossible were it not for a clever and silent pressure of the fingers upon keys previously struck, so as to cause an uninterrupted continuance of the tones previously sustained by the damper pedal alone. Such effects of tone sustained by the fingers instead of by the pedal might well be called pedal effects obtained by the fingers: for this phrase, at first somewhat strange sounding, helps to recall to the student's mind the fact that while the pedal is a lever by means of which all the dampers are raised collectively from the strings and lowered upon them, each key also is a lever which raises and lowers a single one of these dampers in the same manner as the damper pedal does them all. In other words, each key is a partial damper pedal operated by the finger instead of by the foot.

The Key a Partial Damper Pedal

A downward pressure of the pedal raises all the dampers from all the strings: a downward pressure of any one key raises one damper from the one, two or three unison strings upon which it lies. This is equally the case whether the pressure has been sufficiently strong to force the hammer to strike the strings so as to produce tone, or whether the pressure has been so gently and gradually exerted that the hammer falls back from the string after barely touching it, and therefore without eliciting any tone from the contact. In the photogravure of the model of the piano action previously shown, the highest hammer and the damper in the background illustrate what takes place in the mechanism when a key is soundlessly pressed down.

Well Thought Out Fingering Obligatory

A judicious fingering has much to do with a correct use of the pedal. It frequently happens that bass and inner harmonic voices should be sustained; yet that the purity of the melodic tones should not be marred by the great number of overtones which form in continually increasing numbers from the moment when a tone is held by the pedal, until the pedal pressure is released. In cantabile passages, it is often best to hold these accompanying tones with the fingers until the moment when these are obliged to release the keys; by this way of playing the use of the pedal may be advantageously delayed.

Chopin-Liszt — *Meine Freuden*

Shifting of Fingers upon a Key

In this passionate orchestral passage from Liszt's transcription of one of Chopin's songs, it is necessary to sustain the tones of the broken chords in the left hand and also to use the pedal afresh with each tone of the melody in the right hand. There is but one way of securing not only an unblurred melody but also a sustained bass tone and accompanying full harmony. This is to combine the pedal effect of sustained tone obtained by means of the foot with the pedal effect of sustained tone obtained by means of the fingers. The fifth finger should be rapidly substituted for the thumb on the second and fourth keys (upper bass) struck with the left hand so as to sustain these tones longer by means of the fingers. In the second measure, the fourth finger is similarly shifted upon the second and fourth keys struck so as to take the place of the thumb before it has allowed the key to rise.

Tones sustained by Fingers

Such substitution of one finger for another is a very useful device continually and almost involuntarily applied by good players to sustain tone and at the same time prepare the fingers to produce other tones. It also has the admirable result of inducing the player to listen to his own performance and to appreciate the progression of the voices through the harmonies. In connecting solid chords and under many other circumstances this shifting of the fingers sometimes takes place simultaneously in several voices. For the musical comprehension of a composition, it is highly desirable that as many as possible of the tones sustained by the pedal should at the same time be sustained by the fingers. The Mendelssohn Song in E♭, given in the fourth example, can only be played by a substitution of one finger for another and much pedal effect by the fingers.

Substitution of One Hand for Another, without Releasing Tone

A valuable expedient is the substitution of a finger of one hand for a finger of the other hand, in order to sustain tone.

Gorno — *Part II, No. 42*

In this exercise, the melody tones, D♭ and G♭, can only be held for their indicated duration of a measure and a half by the substitution of the fifth finger of the right hand for the second finger of the left hand, as indicated by the fingering and by the abbreviations *m.s.*, (left hand) and *m.d.* (right hand). This example is in the nature of a preparatory study for such passages as the closing measures of Chopin's F major Nocturne.,

Chopin — *Nocturne in F major, Op. 15*

which should be played in a similar manner in order to sustain the melodic G into the next measure until F is produced, while at the same time sustaining the bass and all the other arpeggiated tones of the harmony. The tone G should be produced by the second finger of the left hand, and sustained by the fifth finger of the right hand as indicated by the letters *m.s.* and *m.d.*

THE MEANING OF "SENZA SORDINO"

Beethoven's Use of "Senza Sordino"

While considering the uses of the damper pedal and the various methods of notation employed at different times and by various composers to designate the raising and lowering of the dampers, it is both interesting and useful to note the meaning of the terms *con sordino* and *senza sordino as used by Beethoven* so often in his earlier compositions and especially in his first three concertos, as can be seen in those old editions which are in accordance with the original manuscripts and in the Franz Kullak edition published by Steingraber. *Sordino* is a word which is very often misunderstood, as it has two meanings. The *sordino* for the violinist is the

mute, but in piano music the word *sordino* means damper. Consequently, *con sordino* means "with dampers," that is, "without pedal"; *senza sordino* means "without dampers," that is, "with pedal." Beethoven adopted this manner of expressing himself to indicate the use of the dampers because at the time of composing these concertos (1795-1800) the pedal was of comparatively recent invention (1783), and the dampers in most pianos were raised by means of a knee pedal (*genouilliere*). In the C minor Concerto, the words *con sordino* and *senza sordino* are frequently used, and give a very clear idea of the composer's desires regarding the use of the dampers and the effects deriving from their use. Throughout the Largo these terms are used very often (see the first example), referring sometimes to passages and sometimes to one note only, and show that Beethoven used the pedal intuitively and according to the best modern usage.

Czerny's Remarks on Beethoven's Pedal Notation

The *London Musical Times* of Sept. 1, 1895, contains an unsigned article on the meaning of the word *sordino*. This paper is written in refutation of a previous one which stated that the *sordini* of the piano were that apparatus of felt or leather which muffles the tone when inserted between the hammers and strings, the effect being similar to that produced by the soft pedal of our modern square pianos. The author says: "Carl Czerny, who was a pupil of Beethoven, said in his *Pianoforte School*, Vol. 4, that he studied many of Beethoven's works under the master's own guidance and enjoyed his friendly and instructive intercourse, and had been asked to treat, in the school, of the performance of Beethoven's works. The volume is made up chiefly of suggestions on the proper performance of all Beethoven's works for piano solo, including very full instruction for the use of the pedal, as he calls it,—*in any case*, the damper, loud or right-foot pedal. One sentence says that Beethoven employed the pedal much more frequently than we find it indicated in his compositions. In his remarks on Op. 26, Var. 5, Czerny says: 'The last fifteen bars, *senza sordino*,' that is, with the pedal, as it was indicated at the period when this sonata appeared. To the Sonata in C♯ minor, Op. 27, he gives the direction *sempre sordino*, explaining this by 'the prescribed pedal must be employed with each note of the bass.' Further, he directs where the pianissimo pedal is to be used and where it is not to be used in conjunction with the *senza sordino* or damper pedal in the way he prescribes. In the third movement, *presto agitato*, he says that with the fortissimo quaver chords, at the end of bar two of this movement, and whenever they occur, the pedal must always be used. In the suggestion as to the playing of the Rondo, Op. 53, he says: 'This Rondo, of a pastoral character, is entirely calculated for the use of the pedal which is here actually expressed'; and in a footnote to this same sentence he adds: 'The indication *senza sordino* was only continued as long as the pedal was pressed with the knee.' Czerny never speaks of a pianissimo pedal (leather and felt, interposed between hammers and strings) called *sordino*. He does say that there were pedals other than the two now used, but that they were soon discarded, all others being acknowledged as unworthy of the true artist. His pianissimo pedal is the shifting pedal. *Senza sordino*, with him, is a pedal pressed by the knee, by which the dampers are raised, and is an earlier indication for producing the effect later on and now obtained by means of pedal. *Con sordino* is the opposite of this, and equals *. Czerny is sure of the correctness of his remarks, and claims, in a concluding paragraph to the solo sonatas, that his remarks are correct. If he is any authority in pianoforte matters and Beethoven in particular, the above should be of value."

Beethoven's Works in Original Editions

We mention here what Czerny has said of the matter because, as he was a pupil of Beethoven and studied the master's pianoforte works with the composer himself, he undoubtedly acquired a correct idea of Beethoven's desires regarding the use of both soft and damper pedals, and clearly understood what the composer meant by his manner of indicating the use of the *sordini* (dampers) of the piano as well as of the *una corda* pedal. But even without the above statement of Czerny's the same conclusions are reached by looking over the earlier compositions of Beethoven in old editions, in which he has employed the expressions *con sordino* and *senza sordino*. Beethoven certainly meant "with pedal" by the term *senza sordino*, as this marking is found in forte and in fortissimo passages; with the muffling pedal, which diminished the tone, a fortissimo is impossible.

Beethoven's Orchestral Coloring by Means of Pedals

Liszt also interprets *senza sordino* as equivalent to the raising of the pedal, as is shown in his edition of the first three concertos of Beethoven; and it is noteworthy that he has not found it necessary to change any of the pedal marks, although he makes some additional ones, indicating them with a small *p*, while the original signs are written in the usual way. The pedal was undoubtedly used by Beethoven to produce the effects of increasing the intensity of tone, of sustaining many tones that could not be sustained by the fingers, and all other effects which for musical reasons are produced by the modern pianist. Schindler speaks of "Beethoven's manner of holding down particular tones with the fingers." Of course Beethoven was also desirous of obtaining color by means of the pedals, in order that the passage might express his meaning, and not merely for the sake of tone-coloring as it might be applied in piano music that is more brilliant and well sounding than deep in thought and feeling. That he was very particular in regard to all orchestral colorings is clearly expressed in one of his letters in which he complains that the musicians do not produce sufficient contrast of these effects. He writes: "All my *pp's*, *cresc.*, *decresc.*, and all *f's* and *ff's* may as well be struck out of my Opera, for no attention whatever is paid to them. I shall lose all pleasure if I am to hear it given thus."

The Soft Pedal

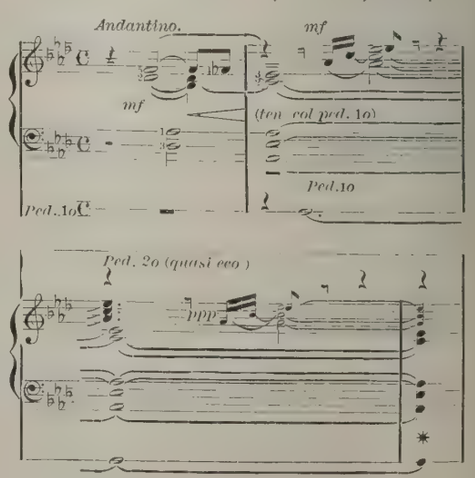
Mechanism and Action of Soft Pedal

The functions of the second and third pedals should be discussed before completing the outline of some of the manifold uses of the damper pedal. In the beginning of this paper the term "loud" pedal was shown to be inadequate to suggest the various functions of the important piece of mechanism frequently so miscalled. The term "soft pedal" is also somewhat of a misnomer, for this pedal on the modern grand and upright pianos may be used to modify the tone-coloring, when playing loud passages. Still, this is the name customarily applied to it. The mechanism of this pedal varies with the form of piano to which it is attached. In the now almost disused square piano, the soft pedal muffles the strings by inserting a piece of felt between them and the hammers. The action of the second pedal in the upright piano consists in moving the hammers closer to the strings so that the blow is shortened. In the grand piano, pressure upon the soft pedal shifts the hammers and keyboard slightly to one side, so that the number of unison strings which receive the blow of each hammer is diminished by one, although the unstruck string vibrates sympathetically, enriching, while slightly changing, the tonal quality. Of this the modern pianist takes advantage in order to produce the greatest possible change of tone qualities. The pressure exerted on the soft pedal should usually be sufficient to force it quickly down to its utmost limit, for a metallic sound, seldom desired, is often otherwise heard, when the strings receive the blow from the sides of the grooves made by them in the felt of the hammers. An extremely slight pressure of the soft pedal allows the strings to strike the top of the ridges between the grooves, and makes possible the softest quality of sound, as this part of the hammer, rarely used, is softer than the ruts in the felt which have become hardened by the frequent impact of the strings.

Echo Effect

The soft pedal is employed alone and in combination with the other pedals to gain variety of tone-coloring. Used by itself, it serves in the production of echo-like effects in repeating a phrase which has been previously played rather loud.

Gorno — *Pedal Studies, Part II*, No. 4

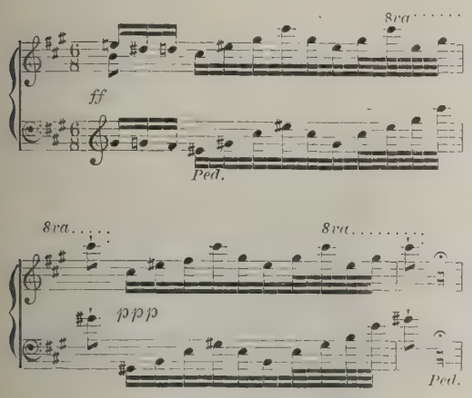


When this pedal is employed in connection with the damper pedal, the echo seems mysteriously veiled, as though coming through a haze from a distance. In this study, the full harmony is sustained in the second, third, and fourth measures by the damper pedal (Ped. 1°); in the third measure, the soft pedal (Ped. 2°) is used with the repeated notes, *quasi eco* (like an echo). This combination of the two pedals greatly assists in obtaining echo-effect and fine coloring.

Hans Schmitt's Record of Liszt's Pedaling

Hans Schmitt says in his fine work that the great pedalist Franz Liszt used the soft pedal felicitously to heighten the beauty of the four arpeggios in C♯ major and in D minor which are found in his *Spinning Song*, transcribed from the *Flying Dutchman*.

Wagner-Liszt — *Spinning Song*



Liszt first played the arpeggio fortissimo and sustained the tones by means of the damper pedal; then, without raising the foot from the pedal, and using also the soft pedal, he repeated the arpeggio pianissimo, and somewhat more slowly. This gives the repeated arpeggio the entrancing effect of floating through nebulous sound.

Schumann often designates the use of the soft pedal by the German words *Mit Verschiebung* (with soft pedal) and *Ohne Verschiebung* (without soft pedal).

Una Corda Pedal

In the time of Beethoven it was possible, by means of pedals, to make the hammers strike either one, two, or three of the strings, which were tuned in unison for each tone of the pianoforte, with the exception of the lowest tones (which, as now, were obtained from single strings), and Beethoven took advantage of this. In the slow movement of the great G major Concerto (composed in 1805) Beethoven indicates the use of the damper pedal in the usual modern way. But to obtain the expression which this wonderful piece of music requires, the soft pedal, as well as the damper pedal, must be employed, according to the composer's own directions as expressed in the following French words at the beginning of the Largo: *Dans tout ces Andante on tient levé la Pedale qui ne fait sonner qu'un corde. Au signe Ped. on lève outre cela les etouffoirs.* (All through this Andante use the pedal which makes only one string sound. At the sign Ped., raise the dampers besides.) After having directed the use of the *una corda pedal* (one string pedal) to diminish the tone towards the end of the piece, he uses the following expression: *2 et puis 3 cordes*, meaning, "employ first two strings and then three strings." He demands at the same time, *Crescendo sino al fortissimo* (increasing to fortissimo), and after a few measures of fortissimo, he adds: *2 et puis I corde* (two and then one string), in combination with *dim sino al pianissimo* (diminuendo to pianissimo).

Beethoven prescribed the use of the pedals minutely and accurately in some of his most important works. In the slow movement of his great sonata in B♭, Op. 106, he calls for the pedal effects of *una corda* (one string), *due corde* (two strings), and *tre corde* (three strings), with continued alernation throughout the composition, and sometimes he also makes use of the expression *poco a poco tutte le cordes*, meaning for the performer to pass gradually from the use of one string to the use of all the strings, by means of the pedals.

(*To be continued*)

POISE IN KEY FITTING AND HAND LEADING

ELEANOR P. SHERWOOD

The same principles in poise, and leading of the hand across the keyboard, are in order, as belong to equilibrium in pose and carriage of the human body. A lop-sided position and slouching gait are generally to be avoided as not only ugly in the extreme, but detrimental to health as well; and even the most awkward are not given to walking on the side of their toes!

Yet there are many who wander over the keyboard with some such absurd and decrepit use of the fourth and fifth fingers.

It is obviously worth while to poise the hand in a manner to secure for each finger-tip, or cushion, a direct aim to the centre of its key. The thumb alone, from the peculiar nature of its attachment, does, by right, touch its key somewhat on one side of the cushion.

It is essential to "form the hand" with regard to stability in the upper arm, and in the large, supporting finger knuckles, together with lightness, elasticity, and flexibility in the wrist, and strength and pliability in the fingers.

As a means to this end, hold elbow well towards the body; wrist outward, from the same; lower wrist at thumb joint, inclining it inward, somewhat over the keyboard. In this way it becomes possible to adjust the large knuckle of the fifth finger to a high position, that of the second finger to a level, — neither elevated nor depressed, — while the thumb should stand out at a respectful distance from the body of the hand.

The object of this "Normal Position" is to equalize forces by nature unequal. By means of it, the weaker fingers gain support and directness of aim; the fifth overcomes its propensity to behave like an invertibrate jelly-fish; the fourth receives compensation for its limited range in lifting; the second and thumb cease to interfere with each other, and their very obtrusive tendencies are held under restraint.

Of course it takes practice to *retain* this knuckle shaping during various kinds of action of wrist, hand, or fingers, particularly during any and every acrobatic manœuvre required by ever shifting key positions. However, once gained, proper poise is the means of making all things technical the more adaptable to expression.

Before attempting to lead from one group of keys to another, it facilitates matters to examine each group separately, shaping the fingers — at least in "close" position — to the intervals of each key pattern as though it were a mold.

Each separate *key* position is a definite locality, and when we speak of a "change of position" it should mean, *not* to upset the technical balance in *hand* position, but, on the contrary, to take every care to preserve this poise in the act of passing from one *key* position to another. In short, to "change position" should denote merely to *relocate* the *same hand poise* relative to the next group of keys. Words of double meaning too often cause confusion. Teaching would be far simpler if language were less ambiguous. The present problem is to maintain equilibrium during changes of location, whether in legato, staccato, or for purposes of phrasing.

The vehicle of transit is sideward progression of the forearm, with steady elbow and knuckles. This requires the nicest regulation. Any change of level in wrist or knuckles, *at the instant of crossing*, will upset the balance. As applied to legato passages, the fingers and thumb must resist their dead weight tendency to fall prematurely, by the way, and must remain *up* until relocated. Otherwise the tone lacks control.

Also, each finger, after leaving its key, instead of remaining over *that* key, should move sideward toward the next to be played, in the direction in which the forearm is leading.

Description refers only to right hand from bar 1 to first note of bar 3.

Left hand is entirely independent in the *cut* of its interval pattern; although, of course, on same principle of progression. However, the leading of forearm is more strongly *felt* in descending left and ascending right hand, than in the reverse.

In this way, the side progression, through being continuous and gradual, both in forearm and fingers, is the less subject to hitching and jerking, at the critical moment of transfer across the thumb. Here, especially, must be exact calculation as to

extent and instant of forearm swing from the key group before to that after the thumb.

The *distance* from one key to the next must determine whether a finger should leave its key by gliding or lifting.

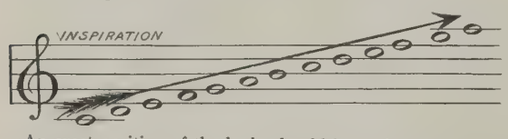
In the case of wide intervals to glide is necessary. This is a matter of *un*curving the fingers between supporting knuckle and tip, in order to pass from the key without the break caused by lifting, and equally in order to insure lift, aim, and curve to finger next about to play.

While hand or wrist staccato, and use of wrist in punctuating, present their own difficulties, in detail, the mere act of transit, by means of side progression of forearm, is the same as above described. However, with hand or wrist *action* the fingers about to play next would be aimed *downward* in fixed position. In these cases *hand* or *wrist* would remain *lifted* during transfer of poise. Throughout the entire path there is a continuous alternation of down, up (or gliding), and side movement, ever with reference to key distances and rhythmic and tonal considerations.

BREATHING IN ITS RELATION TO PIANOFORTE PLAYING

F. H. MORTON

In the last article we saw the necessity of some compensation for the demands modern piano performance makes on players. Whenever any effort, physical or mental, is made, involving the expenditure of force, whether we know it or not, our breathing is *correspondingly increased* to enable the heart to send an extra supply of oxygenized blood to restore exhausted nerve cells. Now to come to piano performance. In scale work, if an inspiration be taken while the scale ascends, harmonious conditions will be established, because as the vibrations of the tones increase in number, so does the depression of the diaphragm increase. There is a correlation of impressions that is satisfactory, which would not be the case if an inspiration were taken with a descending passage. Breath must be taken slowly and evenly to correspond with the length of the ascending figure, so that when the top note is reached the lungs are at their full comfortable capacity; not surcharged and strained, but *comfortably filled*. If breath be taken too quickly, the lungs will be full before the ascent is finished, and if there is not an uncomfortable suspense awaiting the arrival of the top note (as we await some vocalists' "high effects"), there will be an expiration, which, reversing best conditions, is *negative* in character; whereas the *in*spiration is felt to be *positive* or beneficial. This, then, is the simplest application of breathing in its relation to performance.



An erect position of the body should be maintained and shoulders kept straight, to favor the free use of the lungs.

The same rule of breath management applies to all ascending passages, even if the ascent be broken by short descents. So long as each repetition of sequence form is of higher pitch than those preceding, the climax is reached by the highest note. This may be illustrated by Chopin's Polonaise, Op. 26: —

The passage goes at a sufficient speed to enable one to draw the breath whilst reaching the climax at C. But here a deeper factor enters: Shall we continue the inspiration slowly and evenly, oblivious of the increasing power and heavy throb of the *rhythm?* Or shall we on the other hand permit the rhythm to influence our respiration as it should? There is no doubt that rhythmical respiration is best. Then, in the example before us, let us take in a short breath at each of the notes marked with the positive symbol +. At the semi-quavers, the downward trend being evident, the breath may be held, or even slightly expelled (the negative sign — denotes this). But each inspiration must be greater than the one before, as the harmonic tension increases, till we have a full breath at C. At G♯, second measure, let the breath escape in good volume, taking a half breath *gently* during the ascending passage following, as the climax has passed, and then on the last note of the phrase quietly relax.

It is important to bear in mind that the gentle expiration is gained by relaxation, as in preparation for still further accomplishment — not by muscular force. That would defeat its own end, and lead to a palpitating, panting style of breathing, just the reverse of what is really wanted.

Sympathetic respiration is what is required, and when this is established it will be a marvelous aid to expressive playing, steadying to excited nerves, and refreshing to a tired body. It may be taken for granted that steady breathing will conduce to steady playing, and short, uneven breathing will favor nervous and erratic performance.

Of course in quiet music, where passion is subdued, fast and very full breathing would disturb the tranquil mental poise necessary to its proper interpretation; but here, as elsewhere, the respiration should be rhythmic and sympathetic. The *meno mosso* from the above polonaise will admirably illustrate this idea.

The breath has presumably been exhaled during the last measure of the previous movement, and now, at the beginning of a new period, what is more natural than to take a fresh breath with the first note of this beautiful *meno mosso*, especially as it is a comparatively long and restful tone? Chopin's direction is *con anima*, literally, "with soul"; with all the expressive intensity of our higher, nobler inner self. Let us then draw a heartfelt inspiration here, — an inspiration that will in its course bring abounding life and love to the soul that Chopin voices through his immortal music.

If we were to say that one's indrawn breath here is really the preparation of a *sigh*, it would be correct, for indeed this lovely theme seems but a sigh of tender, regretful longing, as his beloved country, once mighty Poland, now drifts in vanquished grandeur through Chopin's pensive revery!

After the first measure, we have another note of repose, with a breathless little passage before the third beat. On this note (A♭) the relaxing expiration should follow (—), but only to be caught again by the tremulous, thrilling melody of the third beat (C). Having taken a short but heavy inspiration on this note (for the melody is full of intensity), we reach another reposeful note, so may again relax, till the ascending triplet carries our inspiration on to the last beat (measure 3), for in the fourth measure we quickly reach G♭ from the semiquaver previous. This causes an expiration, and then on the second pulse in this fourth measure, the throb of the underlying rhythm, coming on another note of repose (F), calls for an extra "whief" of expiration.

This is not to be taken as the only manner in which one may "aspirate" such a passage of music. Yet it seems consistent and helpful, and so merits consideration. Our next theme will be the secondary advantages and additional illustrations of the subject.

MUSIC WHEN A TAP IS TURNED

DEVICE TO SEND THE VIBRATIONS ALL OVER A CITY

The telharmonium has arrived. It is an invention for producing music by electricity without strings, reeds, or pipes — nothing but an ordinary telephone wire. The idea is that you can turn on music hereafter in your house just as you turn on an incandescent electric light. The music is transmitted over a wire in electric waves from a central station. It is produced, not reproduced, at each telephone. You don't have to put the receiver to your ear to hear it. You let the waves into a paper cone and the sound that rolls out will fill a great auditorium. The inventor says the music can be produced a thousand miles from the place where the performer is depressing the piano keys that set the currents going, and the performer has to have one of the cones in the room with him to see if he is playing the music right.

The inventor is Dr. Cahill, whose work-shop is in Holyoke, Mass., where he has assembled a machine weighing 200 tons and costing $200,000 after many years of work.

THE SUMMER MUSICIAN

The *Electrical World* of this week tells the details of the construction of the apparatus and the results obtained. The plan is to set up a central station and supply each large city with music waves built up into harmonies and the imitation of the most delicate of all musical instruments in any kind of musical composition to amusement halls, stores, auditoriums or private houses for all those who can pay for it. It is not to be like the phonograph in any way, because the tones come hot off the wire in their original form.

CARICATURES BY CARUSO

Signor Caruso, who has made himself famous as a tenor, discloses another side of his nature, and, with *The Caruso Book* (Robert Grier Cooke, Incorporated,) will show himself to be a caricaturist as good as many a man who gets "big pay" from a newspaper for his cartoons. The new book will contain nearly two hundred hand-colored caricatures of people in and of the Metropolitan Opera House — a rich field for fun, which Signor Caruso, as one of the cultivators, has been able to exploit to his heart's content. Each copy is autographed by the artist.

UNDER THE CHESTNUT TREE

Appreciation

"Why do you encourage him to tell jokes?" asks the first intimate friend of the second one.

"I enjoy it."

"You do? Why, you know he always tells some old chestnut and then takes ten or fifteen minutes to explain it."

"I know. The stories he tells are never funny, but you come to appreciate the rich humor in his explanations."

* *

Different

"Mr. Stoxen Bonds kept time to the music with his feet all during the concert last night. I didn't know he was so fond of classical music."

"He isn't; it made him so nervous he couldn't keep still." — *Detroit Free Press.*

* *

Winnipeg *Town Topics* suggests that when an amateur singer announces that she will sing a certain song "by request," she should give the name of the one requesting it so that the audience will know whom to blame.

* *

"And you call this a patriotic song?" snorted the music publisher, handing back the manuscript.

"Why, isn't it a patriotic song?" demanded the author.

"My dear sir, you don't rhyme 'soldier boy' and 'mother's joy' in it anywhere." — *Philadelphia Press.*

* *

They are telling another story about John Philip Sousa. A society woman, of the newly rich kind, in Chicago, had invited the band leader to dinner and the invitation had been declined. Not dismayed by this refusal, the woman had penned another note reading: "If only we could have your company for a little while, if not for dinner, then at least for the concert."

In reply she received the following note, but Sousa did not carry out the threat it contained.

"Dear Madam: I note with pleasure your desire for my company. I have so far asked fifty of them, and they are delighted at the prospect of being with you. I shall ask the rest of the company during the intermission at the concert. There are sixty of them altogether. With thanks, my dear madam, obediently yours,

"John Philip Sousa."

* *

Mr. Kaller. — "Taking music lessons, are you, Willie? Well, do you know what a flat is?"

Willie Hariumm. — "Yes, sir; three rooms and a bath."

* *

"Miss Blank must have an angelic disposition; she's sung in the same choir for six years."

"That's no sign! When they quarrel, the others are always the ones to leave." — *Detroit Free Press.*

* *

Being asked the name of the world's greatest composer, a smart university young man said: "Chloroform."

* *

American Perils

China might regret that she sent those commissioners over here if they conclude to introduce English comic opera and American breakfast food into China. — *Baltimore Sun.*

Agreed

Mrs. Nexdore. — "I bought a new piece of music for my daughter to play and I guess she'll master it soon. She was trying all afternoon."

Miss Pepprey. — "Indeed, she was; very!" — *Philadelphia Press.*

* *

Two Objects

Stella. — "Did she go abroad to cultivate her voice?"

Bella. — "Yes, and her father went to cultivate his silence."

* *

A Musical Treat

Cleveland is to have a new music hall, to cost $1,000,000, and John D. Rockefeller, it is said, has pledged the money. Assuming that the report is true, the following program, to be rendered at the hall's dedication, is reverently submitted: —

Overture: Babes in Oil Land.....*Herbert*
March: Petroleum Cadets (new).....*Sousa*
Waltz: Jolly Robbers.....*Strauss*
Aria: Hair Oil Duet from "The Barber of Seville".....*Rossini*
"*Ten cent da quarta*"
Solo for Oboe: — Jewel Song from "Faust"....*Gounod*
Medley of Popular Songs: (*a*) If Mr. Boston Lawson had His Way.....*Cohan*
(*b*) My Money never gives Out.....*Rockefeller*
(*c*) Silver Threads among the Gold.....*Shaw*
(*d*) I am a Sunday-school Scholar, lar, lar,.....*Anon*

[Note. — It will be observed that the program is made up of works by none but STANDARD composers.] — *Life*

* *

Musical

"Papa says he likes to hear me play your accompaniments. He usually sits in the next room, you know."

"Then he admires music?"

"In a way. He says I always play so loud that it drowns your voice." — *The Tatler.*

* *

Mark Twain recently sent the following letter to Andrew Carnegie: —

"My dear Mr. Carnegie: I see by the papers that you are very prosperous. I want to get a hymn book. It costs six shillings. I will bless you, God will bless you, and it will do a great deal of good.

"Yours truly,

"Mark Twain.

"P. S. — Don't send me the hymn book; send me the six shillings." — *New York Times.*

* *

"High" Art

"That Miss Newcome next door to you plays the piano a great deal, doesn't she?"

"Yes, indeed."

"Is it good music?"

"It must be, for I can't make head or tail of it." — *Philadelphia Press.*

The Retort Courteous

"Crescendo," of the "Star," tells a good story of the Roland that a prima-donna of one of the smaller German capitals gave to the Oliver of a pompous nobleman of the Court. Both bear the same surname, and, when the lady's engagement was announced, the nobleman inserted a "personal" in the local Press to the effect that "His Excellency Major-General von —— wishes to have it known that Fraulein von ——, recently engaged at the Court Opera House, is in no way related to him." On the following day another advertisement appeared: "Fraulein von ——, of the Court Opera, is anxious to acquaint all whom it may concern with the fact that she is not related to Baron von ——, who was recently condemned to a term of penal servitude for embezzlement and offences against morality." The sting of this lies in the fact that the protesting Major-General and the convicted Baron are nearly related.

* *

The Boy's Idea

The Mother. — "Yes, my son, in the days of ancient Rome all the fighting was done in the arena."

The Boy. — "And didn't they allow any fighting in the choir, ma?" — *Yonkers Statesman.*

* *

Discord

It was at the opera.

"Her voice is rather thin," commented the gilded row.

"Made so by constant efforts to get in a note edgewise," growled the parquet. — *Philadelphia Bulletin.*

* *

"Now, this opus," explained the musical sharp, "was written while the great composer was under the influence of Wagner."

"I'm glad to know that," responded McRobinson. "Otherwise I should have entertained the idea that it was written while he was under the influence of something much stronger." — *Louisville Courier-Journal.*

* *

Childish

Young Mother. — "Our new organist reminds me of baby."

Young Father. — "Why so, my dear?"

Young Mother. — "He plays with his feet."

The Music Lesson

Pupil's Mother. — "Will my daughter ever become a good musician, professor?"

Professor. — "I can't zay. She may. She tell me zat she gome of a long-lived family."

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

NEW ORGAN STOPS

R. D. — "During my last vacation I visited England and heard a number of modern organs. I was particularly interested in the improved system of scales and voicing, which supplants the mixture and mutation method of augmenting the power. I can only say that I was quite pleased with the results and with the fine workmanship. I found the Tibia Plena a full-toned Flute, excellent as a solo stop and quite remarkable in its combination effects with other stops. The Contra Tibia Clausa is a 16 ft. Closed Flute which produces a solemn effect when combined with the 8 ft. stops, giving a dignified tone as if in a Cathedral. The Diaphonic Horn is a very useful stop. It has the smoothness and volume of a pedal reed stop without the reedy effect. I can only liken it to the subdued sonority of the now obsolete Ophicleide which my father used to play in the church orchestra and village band. When I was a boy I learned to play this instrument with its many keys, it being really a bass bugle. It was a very difficult instrument on which to obtain an even quality of tone, and it required a special embouchure, or lip pressure, for every tone, as the tones did not draw into fifths and thirds as with a brass Tuba or Cornet, on account of so many large keyholes. The tone was smooth, without much resonance. I could never see why a reed organ stop should be named after this instrument, as there was nothing of a reedlike nature in the timbre. The brass Tuba was so much superior in body of tone that on its introduction the Ophicleide was banished as a relic."

OVERPOWERING ORGAN ACCOMPANIMENTS

R. B. — "I should like to say a word of protest in regard to the drawing of the voices of choirs by too loud organ accompaniments, a fault of many organists who preside at large organs. In every case in choir singing where a pure vocal tone is desirable, the organ should always be subservient to the voices. Heavy accompaniments lead the singers to force their voices beyond their normal quality. The quality of organ tone should always blend with the voices without leading, of sufficient power to keep the voices in pitch. I think that even in choir rehearsals a very light accompaniment is best, in order to bring out the voices and make the singers self-reliant. Some organists are so assertive in their playing that it seems as if they were constantly aiming to show every stop in the organ. There is always opportunity for strength of tone in accompanying full congregational singing when a heavy organ accompaniment is always appropriate where the singing is hearty. But for artistic choir accompaniment, the organist who persists in keeping the organ in such subjection that the listener commends the music as properly balanced, receives the highest compliments from those who possess refined musical tastes. Don't ruin the choir music for the sake of having the biggest organ in town."

SWELL MIXTURES

C. R. O. — "In an organ which I have been playing for the past five years, there is a Swell Mixture of two ranks, with no 2 ft. stop. In such a case, would it not have been better to have had each of these ranks in a separate stop, so as to give a 2 ft. stop independent of the twelfth? This leads me to suggest that instead of having compound stops draw collectively with one knob, that they be divided into separate stops, with an individual voicing, so that they can be used to advantage in various combinations. When they are to be used collectively it is only in the Full Organ when they are drawn on by the Forte Composition Pedal."

Comments. — Your suggestion is a good one. Separate stops are better than collective providing, as you remark, that the voicing is appropriate. The attitude of this department in opposing Mixtures is chiefly based upon their use as in the past with improper voicing and prominence, on account of which it is better to eliminate them entirely rather than add such discordance to the *ensemble* organ timbre. When the harmonic overtures, or suggestions of them, are voiced in their proper acoustic relations, so as to blend with the foundation tones and add to the variety of combination effects without being heard as discordant, *which can be done*, the objections raised in these columns will have served their purpose.

CONCAVE AND RADIATING PEDALS

O. S. C. — "I am glad to see an interest awakened in the matter of improved pedal boards, a subject which should be considered without prejudice. I have used a concave and radiating pedal board for two years with such comfort and facility, that nothing would tempt me to go back to the old style. The only objection I find to it is that when I am obliged to play on the straight board, the exertion and position wearies me and causes the pedaling to be exceedingly clumsy in comparison. Nearly all new large organs are using this improved pedal board as the most natural system, and they are a luxury to the organist who becomes accustomed to them.

"Concerning the greater ease in touching the G♯ pedal, I was interested in noting the recommending of one organist of having a heel projection for that note. Another organist suggests that where the three sharp pedal keys are grouped, that the middle one, G♯, shall project forward three eighths of an inch, so that the toes will readily find the position. This projection would be no obstruction. I have noticed that some builders raise the remote ends of the sharp keys so that they slant downward toward the player, which tends to give a feeling of security in the pedal touch. No player who has accustomed himself to the concave and radiating pedals will ever have the desire to substitute the old straight board for them."

ADEQUATE PEDAL ORGANS

L. M. R. — "I am glad that in our modern organs, builders and organists are waking up to a sense of a larger proportion of pedal stops. Many organs of two manuals built forty or fifty years ago had only one pedal stop, and that a roaring, booming, 16 ft. Open Diapason, played chiefly in the lower octave. Grand as these sub-thunder tones are, their grandeur becomes oppressive when continuously used. Yet this is an essential stop and should form the fundamental of every organ. But there should be a variety of pedal stops to modify and balance all manual combinations, and draw on automatically with the combinations

"What a fine thing it would be if the bass of each manual stop could be continued down an octave lower on the pedal chests, in addition to the regular pedal fundamental stops! The very fact that our pedal organs are so inadequate proves that the organ has not yet reached its climax of structure. For our largest organs there is no practical need of more than sixty speaking stops, of which one third should be in the pedal organ. This same proportion should be carried out as a standard. Thus in a small organ of eighteen speaking stops, six of them should be in the pedal. Of course the cost of the organs would be increased, but it is a philosophical law that all improvement must have an advanced value. More adequate pedal organs would be an incentive for better pedal playing on the part of students."

"PREPARED FOR" STOPS

F. B. — "I wish to utter my protest against the aggravating custom of having organs built with blank slides, introduced with the illusion that at some future time the stops will be inserted, and I hope that organ builders will refuse to build organs in such an unfinished way. Not once in a hundred times is a stop thus inserted in future years. It is a misleading fallacy to print a specification with numerous asterisks signifying that no such stops are actually in the organ. The greatest interest in any special new instrument exists in the mind of the organist who first plays it, who has had a voice in preparing the specification, and who takes a pride in calling it his instrument. On account of a lack of funds he is obliged to curtail the actual capacity, but prevails upon the builder to include several blank slides with the stop action finished and the name engraved on the knob, but with the action firmly screwed so that the knob cannot be drawn. After a year or two, when it is thought to be a wise economy to reduce the musical expenses, another organist with less enthusiasm takes the position, and the position deteriorates, and these blanks are never supplied. I would like to hear from organists who are playing such organs and learn in how many cases after ten or twenty years of blankness the intended stops are ever inserted? When expenses are cut down and cheaper organists are inaugurated, is it likely that money can be raised to supply such stops unless the organist pays for them?"

SUPER AND SUB MANUAL COUPLERS

E. J. L. —"I do not approve of the many octave and sub-octave manual couplers which I observe are being introduced in large organs. If I were to have a very large organ built, I would employ only unison couplers between all the manuals, and not rely upon mechanism to attempt to do what should be done by legitimate pipes. I am utterly opposed to the system of "borrowing," by making one stop answer for two. Yet I approve of an augmented pedal organ, where each 32 ft. and 16 ft. stops shall have 42 pipes and the mechanism so arranged that out of these a stop an octave higher may be obtained at will without giving the effect of the old pedal octave coupler. I know that some claim that with manual octave couplers there are additional means of obtaining an endless variety of beautiful effects with the softer stops, but I would prefer to obtain this variety by having a number of softer stops with even greater variety of tone. Take, for instance, an 8 ft. Dulciana; by having a 4 ft. Dolce as its octave complement with smaller scale and softer intonation, a much better effect would be produced than with an octave coupler, and so with other stops. In this sense and comparison the octave complex is a cheaper way of attempting to produce power. When true art is considered, the economic cheapness should have no voice, for art is not to be considered from a financial point of view."

MULTIPLICITY OF MANUALS AND PEDAL NOTES

D. M. — "While I do not think the effusions of a fault-finder are welcomed, yet there are a few points in modern organ construction which are carried to extremes. I notice that in recent instruments of large size, a fifth manual has been introduced, which with improved mechanism in tubular and electric action is entirely unnecessary, as the same effects may be obtained without adding to the discomfort of the player. Having had a four-manual organ to play, I am convinced that only three manuals are essential for all that is required in organ music, with our improved action. The Solo and Echo organs can be switched into any manual at will. It is almost impossible to execute well in pedal movements while playing with both hands in a fourth manual, as I know from much experience.

"I do not approve of extending the compass of the pedals up to 32 notes. Thirty notes are enough. There is no more reason for including the high G, because such a note may have been found in one or two of Bach's ancient compositions, than for extending the compass downward to B B B, because this note is found in one of his organ fugues, to keep up the symmetry of the figure. I very much doubt if the German pedals of the era of Bach ever extended to G. The modern German pedals have a greater distance from the centre of the naturals than English and American pedals, which would bring the high G out of the reach of the player. I sincerely hope that American builders will not adopt the 32 pedal keys as a standard."

A DICTIONARY OF ORGAN STOPS

CHARLES W. PEARCE

The Vincent Music Company has recently supplied the organ world with a book of reference which for many years past it had sorely needed; viz., a Dictionary of Stops. Every treatise on Organ Construction has endeavored in a small way to meet this want by giving a "vocabulary," "glossary," or some other variously named list; but obviously, such descriptions — necessarily limited to a few sentences, lines, or even words — were ignominously inadequate to meet the requirements of modern students and organ lovers. It was reserved for Mr. James Ingall Wedgwood (a worthy descendant of the great potter of that name) to give the organ world what it really wanted, and few experts can be said to possess better qualifications for the task than this talented young writer. For some years past the correspondence columns of *The Organist and Choirmaster* (to say nothing of ordinary musical papers not exclusively devoted to organ masters) have been filled with letters bearing his signature, dealing with all sorts of questions relating to "tonal design' (a new term which the inventions of the last decade or so seem to have called into existence); so that the name of Wedgwood having become famous in connection with "stop-nomenclature" past, present, and future, it was really only natural in the ordinary sequence of things to expect this well-known name to appear on the title-page of the first Stop Dictionary (worthy to be so-called) as author.

Dictionary-making would almost seem to be an hereditary accomplishment, when we recall the fact that the author's grandfather, Hensleigh Wedgwood, M. A. (sometime Fellow of Christ's College, Cambridge), produced a *Dictionary of Etymology*, based upon the notion that the formation of words is mainly to be attributed to a process of onomatopœia — that the radical basis of articulate sound is mainly imitative of natural sound. This notion may perhaps explain why medieval stop nomenclature draws so largely upon what is commonly called "dog-Latin." The Stop Dictionary before us has been carefully planned, and is the result of wide reading, if we may judge from the exhaustive list of treatises, etc., on organ building cited by the author in his introductory pages. Very wisely, he employs three varieties of type for the stop names, — large dark type for those in common use, light capitals for those of less importance, small type for those which are either obsolete or of merely antiquarian interest. Many of the descriptions of stops are "articles" of considerable length, extending over several pages; amongst such are Acoustic Bass, Beard, Bourdon, Clarinet, Cornet, Diapason, Diaphone, Mixture, Quintaton, Reed, Rohrflöte, Swell Box, Tremulant, Tuba, Viol d'Orchestra, Voix Céleste, Vox Humana. It may be as well to examine each of these briefly. The *Acoustic Bass*, which seems to have been introduced into the organ by the Abbé Vogler as a practical application of the "resultant tones" discovered by Tartini and Sorge, is well described as a "sorry substitute" for the real 32 ft. tone, being in fact nothing but an acoustical *illusion*. The natural phenomenon by which resultant tones make their appearance is both clearly and cleverly explained by Mr. Wedgwood, who also exhaustively discusses its somewhat doubtful utility in organ building, giving notable examples of the use made of it in typical instruments by various builders in Europe and America. Very few organ students know much about the mechanical aids which are attached to the mouths of small-scaled flue pipes *to assist their speech*. They will find ample information under the heading BEARD, which is the generic term for a host of such contrivances; bridge, bar, roller, *freni harmonique*, etc. The term "Bourdon" (p. 14) is objected to in its ordinary application as the name of the *first* closed 16 ft. stop on the pedal. Mr. Wedgwood thinks it would be better to reserve the name for a *manual* stop of this pitch, and to designate a pedal stop of this kind "sub-bass." The faults and tonal peculiarities of the "common or garden" Bourdon are discussed in a very interesting manner. A recommendation to plant the pipes so as to speak against a reflecting surface seems both reasonable and good. We are glad to see *Clarinet* spelt without the very unnecessary "o," since the word is manifestly derived from the Italian *Clarino*, a small trumpet. The absurd name "Cremona" which used to be applied to this stop in old organs is manifestly a corruption of *Krumm-Horn*, and obviously has nothing whatever to do with violins (Cremona or otherwise). The peculiar hollow tone of the Clarinet stop is due to the same acoustical conditions as those which affect the quality of its orchestral prototype; the cylindrically formed reed tubes having the property of strongly enforcing the odd-numbered partial tones. It is to be regretted that the Double Clarinet is a stop rarely, if ever, made nowadays. Mr. Wedgwood's article on the Cornet stop deserves a warm word of praise. He regrets that the cornet has fallen into disuse, since its *ensemble* (instead of suggesting screaming 5th and 3rd) is extraordinarily bell-like in cohesion of tone.

In many respects the article "Diapason" is the most important in the book, and is certainly the one most open to criticism. Whilst laying down the law that Diapason tone is peculiar to the organ, having no counterpart in the orchestra, the author disclaims the notion that there is but *one* pattern stop worthy the name, on the ground that it is as impossible to "standardize" organ tone as cookery! He ridicules the idea that Diapason making is a lost art, and asserts that modern voicers — did they so desire — could faithfully reproduce the old style of Diapason. [What a thousand pities they do not desire to do so!] Mr. Wedgwood thinks that the Diapason work of such artists as Smith, Harris, Snetzler, and Green would not adequately satisfy the practical requirements of present-day *great* organs. So much the worse then for modern "requirements." The *primary* use of the church organ is to accompany the human voice, which may be assumed to be the same kind of thing it was a couple of centuries ago. What *was* an admirable accompaniment *then*, ought, logically speaking, to be an equally good accompaniment *now*. Whatever may be the modern "practical requirements" of a *concert* organ intended primarily for solo playing, it cannot be denied that the requirements of a *church* organ must always be the same as in the days of Smith and Harris. Mr. Wedgwood's sketch of the development of modern Diapason tone is exceedingly good. He makes fun of the myth that the tone of organ pipes mellows with age; asserting that Father Smith's characteristic tone could be produced from his pipes when they were *brand-new*.

Perhaps no previous writer has explained as clearly as Mr. Wedgwood the advantage to be gained by *leathering the lips* of Diapason pipes. This is a means for producing a quality of tone both full and weighty, refined and smooth, effective in combination, and though possessed of great "carrying power" is in no sense wearisome to the ear. Leathered lips free the tone production from that "spit" which is so often objectionably prominent in Diapasons of the old type when heard at close quarters. Particularly essential are leathered lips to the general effectiveness of a *Swell* Diapason. "Spotted metal" is spoken very unfavorably of for Diapason work, and zinc is said to be quite useless. "It was not until Mr. Hope-Jones came forward with his 'Diapason Phonon' and 'Tibia Clausa'" writes Mr. Wedgwood, "that the reed-work of Willis received its complementary flue work."

The "Diaphone" receives adequate description for the first time in a book of this kind, and the article thereon is profusely illustrated by cleverly drawn wood-cuts. The origin of the Diaphone seems to have been the "fluttering pallet" of an ordinary Diapason pipe. This was found to be capable of generating tones of considerable power, when provided with a resonator of suitable size, etc. Mr. Hope-Jones is the inventor of several varieties of Diaphone, all of which embody the tremulant or motor-bellows principle. The tone production is also various, ranging from the quality of a marine fog-horn to that of a bad Diapason. Mr. Wedgwood himself confesses that the quality and power of Diaphone tone can be controlled "within limits" by the shape and size of the resonators, the tension of the springs, etc. Seldom have we seen the origin and development of the Mixture stop more ably treated than in this book. He traces the *necessity* for mixture work to the demands made upon the accompanimental power of the organ by the lusty Congregational singing in the Lutheran Chorale; but he thinks that this merely mechanical and extremely artificial contrivance only tended to divert the true course of tonal development, which in his opinion should have taken the direction of augmenting the foundation or sustaining stratum of organ tone. Very truly does he point out that a Mixture stop — like any other stop — *requires tuning*, and his condemnation of those builders who plant Mixture stops in places where it is next to impossible to get at the pipes for tuning is very richly deserved. Some very interesting remarks are made concerning the tone quality of the "Quintaton" and its connection with the archaic *organum* of our forefathers. Reed pipes — their construction and careful treatment — are very capitally described by Mr. Wedgwood, who wisely remarks that "dust is as liable to enter at the *foot* of an organ pipe as at the top." Here again the illustrative wood-cuts are exceedingly good, and help in a large measure to make everything plain and straightforward to the student-reader. The investigations of Dr. R. Gehrhardt with respect to the influence of the "chimney" of a Rohrflöte pipe will be read with great interest by every one to whom they are new.

It is refreshing to find an organ enthusiast such as Mr. Wedgwood undoubtedly is, honest and consistent enough to face the disadvantages of the present mania for overdoing the use of the Swell-box. He says that no "stops can be enclosed in a Swell without suffering some deterioration of tone. The box acts as a kind of *wet blanket* on the tone of the pipes it encloses . . . the *fresh tone* of the unenclosed Great organ should always dominate the instrument." Swell shutters influence the upper partials of pipe tone to a marked extent. In speaking of the introduction of the *modern* tremulant into English organs Mr. Wedgwood overlooks the earliest recorded case, that of the fine Jordan organ at St. Luke's, Old St., London, where in 1844 Mr. Henry Smart (the well-known organ composer) himself regulated the tremulant. When I became organist of St. Luke's in 1874 that tremulant was still in excellent working order — the finest of its kind which has ever come under my observation, and it remained so until Henry Willis rebuilt the organ in 1883. The entire family of Tuba Stops will be found amply described and illustrated, as well as the Viol d'Orchestre, Vox Celeste, and Vox Humana. The "Hope-Jones specialties" but too often — for easily ascertained reasons — undeservedly ridiculed by organists and organ builders of an ultra-conservative turn of mind, here find their proper level. Mr. Wedgwood is not far from the real truth of the matter when he writes concerning the work of this remarkable man: "Briefly, there is a great deal which is simply magnificent; there is also that which I cannot but regard as rather exaggerated and overdone." This last quotation will perhaps show (better than any other) the spirit of Mr. Wedgwood's criticisms. I can honestly describe this Dictionary, not only as a book which is in every sentence thoroughly "up to date"; it is all this, and yet it is written with a reverent regard for everything great which has been produced in the past. A book so clearly written and illustrated, so impersonal, and so *thoroughly reliable*, ought to be in the hands of every organist and organ builder.

NOTES

The opera, *The King of the Mountains*, by the pianist Robert Fischer, has been given with much success in Graz, Austria. The libretto is taken from the Norwegian legend used as the theme for Grieg's *Peer Gynt* suite.

* *

Sarrona, an opera in two acts and a prologue by Le Grand Howland, the American musician resident in Italy, was recently given for the first time in Florence, but without success, save for the artists participating in it. The leading soprano rôle was sung by Miss Josephine Schaefer, last year a member of the Metropolitan Opera House opera school, and whose beautiful voice was heard to advantage then in several small rôles, especially in that of the Priestess in *Aïda*.

Another new opera recently produced at Parma is Angelo Tubi's *Benvenuto Cellini*, which, however, met with great success. The music is in the antique style, and is said to show much talent and ability.

* *

A decided novelty is the announced engagement by the management of one of the Dresden theatres of a young and talented woman violinist, Miss Gertrude Steiner, as director of the theatre orchestra.

* *

Another opera by a young composer which has met with much success in Italy was *Raffaello*, the music by Cisberto De Lunghi, a pupil of Martucci. This work was produced in Perugia. The libretto, by Carlo Locatelli, deals with three periods in the life of Perugino's famous pupil. The first act is laid at Trastevere, the second in the artist's studio, and the third in Raphael's Stanze, in the Vatican. The libretto was pronounced good, not only from a poetic but also from a dramatic standpoint, and the music was praised in spite of some defects due to the inexperience of the young composer.

* *

There is a well-developed rumor at the Metropolitan Opera House that the *pièce de resistance* of next season's opera will be Strauss's *Salome*, with the composer in the conductor's chair. All information concerning this decided innovation was refused at the Metropolitan, but it is known that when Mr. Conried goes to Europe in May he will be present at a performance of the opera. If New York hears and sees *Salome* there will be enough discussion among music lovers to last for some time to come, for abroad the newspapers are still filled with letters and opinions *pro* and *con* concerning Strauss's opera.

* *

A generating apparatus of alternators of different frequencies is provided. The performer presses a key and produces what is called the ground tone. Other harmonics are added to the ground tone, and thus by a building up process of tones the human voice, brass instruments, the violin, the 'cello, the flute, clarinet, and other tones are produced so accurately, it is said, that they seem to have been made by the real instruments. A correspondent of the *Electrical World* has been up to Holyoke to see how the machine works. He writes: —

"The system of mixing with the ground tone one or many harmonics, with any strength desired, opens up a new field of timbre control. The wood-wind, brass, and string tones of the orchestra are easily produced by mixing harmonics in the required proportions. A musician in Dr. Cahill's laboratory showed our staff correspondent that a mere ground tone produces a clear, pure flute note, a ground tone with the third or fourth harmonics, of suitable strength, produces the sound of a clarinet, while to imitate the violin all the harmonics up to the eighth were necessary. Another combination of harmonics, in which the seventh and eighth are strong, gives the characteristic blare of brass. In addition to reproducing the leading orchestral tone a skilled performer can mix the harmonics so as to produce musical timbres unknown heretofore. These qualities are a striking feature of the electrical music."

It is declared that the intonation is remarkably fine and that the most delicate diminuendos and powerful crescendos are produced. The Central plant in Holyoke has 145 directly coupled inductor alternators in use. These are arranged in eight sections, each inductor mounted on an 11-inch steel shaft. The bed plate of the machine is built up on 18-inch steel girders, on brick piers, and is more than 60 feet long. The switchboards are in ten sections and contain nearly two thousand switches controlled by electromagnetic action from a keyboard. One of these machines is declared to be in active operation in Holyoke and another is building. One will be put in operation in this city in the coming summer.

The *Electrical World* reassures musicians in this way:—

"No matter how much we may industrialize and commercialize any product, there will, of course, always be a demand for the original, individual, separate, and exclusive work of an artist."

A PIPE OF MANY PEOPLES

English Ladies and Indian Lovers Pined to Play the Flageolet

The flageolet is of peculiar interest to Americans, says the *American Inventor*, as from time immemorial it has been the medium through which the Indian youths courted their sweethearts at a distance, when they were so unfortunate as to be unable to gain a personal audience.

The love or courting flute of the Apache is made of a round stick of cedar about twenty-four inches long, split lengthwise and hollowed to form an air chamber. A hole is made on each side of this diaphragm and a shallow air passage cut from one hole to the other.

Above it a cap of wood is placed for the purpose of covering the upper hole and the air channel. The lip is made of a thin sheet of lead, and the whole bound together with a slender thong. In the tube part or body of the instrument are placed six finger holes, a condition that points unmistakably to the influence of contact with the white man.

The flageolet, as ordinarily understood, may be described as a whistle-headed flute. In the seventeenth century English ladies often played on it. Sometimes two or three flageolet tubes were constructed with one head for the purpose of introducing notes in harmony. These were called double or triple flageolets, and a patent was taken out for this instrument by one Bainbridge.

An old English diary of 1667 contains this quaint reference to the double flageolet: "To Dumbleby's the pipemaker, there to advise about the making of a flageolet to go low and soft, and he do show me a way which to do, and also a fashion of having two pipes of the same note fastened together, so as I can play on one and then echo it upon the other, which is mighty pretty."

THACKERAY ANECDOTE

One night Thackeray refused to be one of a party on the ground that he had to work. At a late hour his friends decided to go and rout him out. A light was in his window, and he came down and let them in. Going upstairs, Mr. Hunt says: "There was the writing-pad, with some sheets of note paper on the table, and the upper sheet had about twelve lines of his neatest small writing, with a blank space at the bottom. I held it up before Thackeray. 'Tell me,' I said, 'is this all that you have written this blessed evening?' He admitted that it was. One of the men going out said: 'Now, do you call that a genius?'"

A SONG TO DRUDGERY

There is no sweeter music than the human voice lifted up in song as an accompaniment to labor, and it is seldom heard. We do not sing at our tasks, but pucker up our brows with bitter thoughts and do as little as we can. "There are only 365 days in the year," remarked a cheerful woman one day, "and they are such beautiful days in a dear old world that we ought to love to do whatever comes to hand." She has been, and still is, a great invalid, and she makes me ashamed of my occasional slips in the path of cheerfulness. — *Minneapolis Tribune.*

MUSIC FROM STONES

About seventeen years ago Alonzo R. Gilman of South Berwick, while driving, passed a stone wall. He stopped, got out, and tested the tones of several rocks by tapping them with his penknife. He later confided to his wife an idea that had been suggesting itself to him for a long time. He wished to collect thirteen rocks of the right tones to make a scale of one octave, semitones included. He could play upon them with mallets, he thought, like a xylophone. The result of days of searching, testing, carting, and clipping now lies in the "rockophone room" of Mr. Gilman's home, the only rockophone in this country and probably in the world. Fifty-two rocks, or four octaves, are placed in a case resembling a square piano case in height and shape, about 12 feet long and 3½ feet wide. The rocks vary in size from 6 inches to 3 feet, the general shape is oblong, the average thickness about an inch. Mr. Gilman and his sons, Wesley and Charles, aged sixteen and eleven years, stand at the instrument and play upon it with mallets. The heads of these are of boxwood, one edge tipped with rubber for pianissimo effects. The tone of the rockophone is unlike that of any other instrument; there is not the metallic ring of the metalophone, nor the hollow sound of the wooden xylophone. There is a rippling, natural tone quality. It has been recently tested by a professional tuner and declared to be in perfect tune. After being especially arranged by Mr. Gilman any music in any key can be played upon it. Mr. Gilman still devotes his spare time to the perfecting of his unique instrument, adding to and changing the rocks.— *Lewiston (Me.) Journal.*

BIRD NOTES

With the west wind blowing and the honey bees jostling in and out of the crocuses' dazzling cups, the blackbird again has heart to sing, and the leading trio of spring's chorus is complete.

To most the song thrush seems most eloquent, with endless surprises of new sweet phrases in his varied song. Some few like best the missel thrush, because his bold melody of two bars only seems by iteration to dominate the wind-swept landscape with confidence of spring, as though some unseen friend were calling across the fields in silver tones that the cold must pass and summer come again.

But when the blackbird's fluty notes fall upon your ear the song thrush sounds a little less musical, and the refrain of the missel thrush seems to lose some quality of voice. Yet each always keeps its own charm of memory, the song thrush filling grove and shrubbery with the pulsing hopes of spring, the missel thrush proclaiming faith unshaken by the changing winds, and the blackbird warbling with content of early, sunny days. — *London Mail.*

ECHOES AND ARCHITECTS

"It is possible to make echoes," said an architect. "It is, indeed, easier to make than to destroy them.

"In the past men built their great temples and cathedrals with no thought of acoustics. Hence, when the preacher preached echoes rolled freely amid the groinings of the roof, down the rows of sculptured columns, and round and round the nave.

"With wires strung here and with tapestries spread there, many of the echoes of the Old World buildings have been obliterated. There are echo experts — builders, acquainted with the science of acoustics, — whose specialty is echoes' destruction. Sometimes their tasks are hard.

"To-day an architect takes thought of the echo. His building is constructed so as to exclude this intruder. And knowing how to exclude it, he knows how to welcome it also. I have frequently, in landscape work, put up cellar houses and arranged rocks so as to create an echo there."—*Exchange.*

LONDON LETTER

ORTON BRADLEY

Of all the forthcoming events the summer and autumn festivals are by far the most interesting, and the programs of the three principal musical centres for this year will prove unusually attractive, if one may judge by the information already to hand. The Leeds Festival will take place on the four days beginning October 9. Sir Charles Stanford will write a symphony-cantata, *Stabat Mater*, for the occasion, and the program for the four days will include Mozart's *Requiem*, the Beethoven Choral Symphony, an excerpt from Handel's *Israel in Egypt*, and a Bach work. The choruses will be trained by Mr. Fricker, the municipal organist. The Leeds Philharmonic Society has decided to perform Berlioz' *Requiem* March 20, 1907, and has already engaged Sir Charles Stanford to direct the work.

The Birmingham Festival, which also takes place in October, will be conducted by Richter, who will have the support of his Manchester "Hallé" Orchestra, which might surely change its name without injury.

Among the new works to be produced at this festival is the third part — which is to be also the completion — of Elgar's *Apostles*. Richter is about to return to London from Hungary, where he has been taking a vacation and celebrating his sixty-third birthday. He is due for the rehearsals of the *Ring* performances at the Covent Garden Opera House. On three of the works for the Birmingham Festival little Mischa Elman will appear as soloist, — the Beethoven concerto, the Tschaïkowsky concerts, and the *Benedictus* in Beethoven's Mass. The lad has become completely the rage and is probably the greatest "card" at present before the public. In the immediate future Birmingham will have a very attractive series of promenade concerts under the direction of Landon Ronald, at which a number of new works will be produced. Among these will be the three preludes to *Les Naufrageurs*, the opera by Ethel Smyth, which is to be performed next September at Leipsic, a suite for orchestra by Herbert Bedford, and an orchestral prelude by Liza Lehmann.

The festival at Lincoln is to be June 20 and 21. The conductors are Sir Hubert Parry and Dr. Cowen and the organist of the Cathedral, Dr. George J. Bennett. The programs include Dvoràk's *Festival Te Deum*, Parry's *Voces Clamantium*, Strauss' *Tod und Verklärung*, and Brahms' *Requiem*.

In all probability the northern cities of England will have an opportunity of hearing Wagner's *Ring* in English next year. The services of Henry J. Wood and the Queen's Hall Orchestra have already been provisionally secured, and the following artists will most likely be engaged for the work: Agnes Nicholls, Marie Brema, and Kirby Lunn, John Coates, David Bispham, and Andrew Black. In the meantime the two cycles in German are almost due at Covent Garden under Richter, and many are looking forward to the production of such "novelties" as *Eugen Onegin* by Tschaïkowsky and Cornelius' *Barber of Bagdad*, which has only been heard in London at a students' performance in 1891. The former was given by Lago some years ago during one season, but it is better known to the public than to the exclusive Covent Garden audiences, because the Moody-Manners company is giving the work in English and is now at the London suburban theatres.

Of our English opera singers none meets with better or more merited success than Kirkby Lunn, who has been appearing at the Royal Opera at Budapesth and will sing at Covent Garden during the present season. The new English opera *Greysteel*, by Nicholas Gatty, which has been so successfully produced by the Moody-Manners company at Sheffield, will probably soon be brought to the neighborhood of London by the same organization.

Opera is in the air. Victor Maurel is about to read a paper during this present week on *The Question of a National Opera House*, and his next recital program is to consist mainly of extracts from operas. He is in London now, established as a teacher of singing. Some of his pupils go to him to study English diction. It seems to be almost a case of "physician heal thyself."

There are to be four extra concerts of the London Symphony Orchestra during May and June. Safonoff is to conduct the first, Dr. Cowen the second, and the two in June, on the 9th and 25th, are to be directed by Arthur Nikisch.

A new dramatic cantata by Coleridge-Taylor, entitled *Kubla Khan*, is now being rehearsed by the London Handel Society, of which body he is the permanent conductor, and another new work is being prepared by the London Choral Society. It is by Signor Bossi, director of the Liceo Musicale at Bologna, and the Italian libretto, which was adapted from Milton's *Paradise Lost*, has been reconstructed into English by Miss G. A. Parsons.

English lovers of Bach are all greatly interested in the object of the New Bach Society of Germany, which is raising a sum of money for the purchase of the house at Eisenach and the creating of a Bach museum. A concert has been organized here in aid of this scheme, and one item of the program is to be the performance of Bach's *Chaconne*, by Mrs. Edgar Speyer, who has been rarely heard in public since her marriage. It would appear that the German Society has been unable to arouse the necessary enthusiasm among their compatriots to complete the purchase of the house, although the Singakademie of Berlin headed the subscription list with 8000 marks.

Festivals are also being held this spring and summer at many continental cities. Of these, one will take place during the month of May, at Mainz. The Mainz Festival is a Handel Festival, and the principal works to be performed are *Judas Maccabæus* and *Saul*. A second festival will be held at Bonn later in the month, to commemorate the fiftieth anniversary of the death of Schumann, and the program of three days' music is chosen entirely from that composer's works. Dr. Joachim is the principal conductor, and among the works to be given are the symphonies in B♭ and E♭, selections from *Faust*, the concertos for piano and for four horns and orchestra, and the *Mignon Requiem*.

On the 3d of June the Lower Rhine Festival will begin at Aix la Chapelle. It is a triennial festival of three days' length, which is held at Aachen, Düsseldorf, or Cöln; and this year an English pianist, Miss Katharine Goodson, is to play Beethoven's E♭ Concerto. Among others that are to be held, no one will be likely to forget the Mozart and Wagner Festival at Munich or the Bayreuth Festival, which both take place this summer. Among the artists who are to appear at Munich, the best-known names are Schumann-Heink, Geraldine Farrar, Thila Plaichinger, Burrian, Ernest Kraus, and Van Rooy, under Mottl as principal conductor.

At the Paris Opera the revival of Wagner's *Maîtres Chanteurs* has not succeeded in arresting the interest in *Armide*, which is played to crowded houses at every performance. Bréval, who plays Armide absolutely perfectly, is far from being an ideal Eva. At the Comique *Aphrodite*, the latest production by Camille Erlanger, is at present a great attraction.

Paris will not soon forget the recent visit of Weingartner, who has been conducting with indescribable success a series of six Beethoven and Berlioz concerts with the Colonne Orchestra and the oratorio chorus of Amsterdam. Hardly less interest was shown in Richard Strauss on the occasion of his visit, but at least Weingartner did not suffer in the same way as Strauss did at the hands of the printer. In one of our contemporaries appeared the following sentence "la première audition en France de la *Symphonia dominica* de M. Richard Strauss."

The new departure of music in connection with the Salon is admitted to be a great success and the new musical works will be heard every Wednesday and Friday afternoon while the Salon remains open. Paris is always a city for novelties, and it seems unlikely that Americans in Paris would be behindhand in cultivating the same taste. The latest example is a three days' operatic festival at the Theatre Sarah Bernhardt, in which all the soloists are American singers. The three operas are Mozart's *Don Giovanni*, Gluck's *Orfeo*, and Donizetti's *La Favorita*. The singers are Regina Arta (of Pittsburg), Miss Brooks, Esther Taylor (of Detroit), Mrs. Cleaver (of Michigan), Miss Ruth Martin (of Tennessee), Miss McEvily (of Montana), Miss Cordon, Mr. Raoul de Valmar, and Mr. Dudley S. Marens.

THE ILLINOIS MUSIC TEACHERS' ASSOCIATION

The Illinois Music Teachers' Association, which is to hold its eighteenth convention in Peoria, June 12, 13, 14, and 15, is an organization which has for its purpose strictly pedagogic and educational aims. It is also for the promotion of fraternal and social amenity among the music teachers of Illinois. These objects are sufficiently commendable to enlist the sympathy and cooperation of all — teachers, music students, and the general public — who are interested in the promulgation and progress of this noble, elevating, and refining art among us. The association has thus far done its work well, and therefore commends itself to every one who places a proper estimate upon any and every educational effort and force which has to do with the betterment of the individual and the public.

The convention last year was held in Peoria, and the success was so pronounced that a most cordial invitation from the citizens and press was extended to "come again in 1906." The association voted unanimously to accept of the invitation. While the musical programs — recitals and concerts — last year were of a high order as to quality, the program committee is arranging for one step higher this year. There will be a fine array of first-class artists which, with the literary and pedagogic exercises, will more than repay the teacher and music student for the time and expense to attend. Further information can be obtained of Secretary H. S. Perkins, 26 Van Buren St., Chicago.

PIANO PLAYERS
AND PIANO TEACHERS

Do you realize the important part a perfect action plays in the production of the tone and touch of your piano?

It is the mechanism through which you transfer your thoughts and feelings to the strings, and thus interpret the great masters.
To accomplish this, your action must be perfect in touch, perfect in repetition, perfect in power.

If your piano contains a

Strauch Bros. Piano Action

it is **perfect in these essentials,** as this **action is found only** in pianos of **quality and merit.**

WILLIAM R. CHAPMAN

W. R. Chapman, the organizer, promoter, and director-in-chief of the Maine Festivals, has done much to revive music, and stimulate the musical education of the present generation in Maine. For his remarkable work there he has received wide recognition. During the last ten years his choruses have grown and improved, and their influence has become general.

The Festivals are annual events of importance; the greatest artists participate; works in large forms are sung; an orchestra composed in part of Maine musicians is an interesting feature. The programs are well arranged and carefully studied. They include compositions to please all tastes, classical and popular. These Festivals rank with the great annual Festivals of the world, and best of all, they are self-supporting, a most unusual thing with such an expensive musical venture. This financial success is in a large measure due to the careful organization of the many choruses throughout the State. The Festivals do not depend for their support upon the music lovers of the cities in which they are given, but the choruses throughout the State arouse local interest and the attendance is thereby greatly increased. Mr. Chapman's work as a young man in New York attracted attention some years ago. He has marked power and control with chorus and orchestra.

Mr. Chapman has a chorus of nearly three thousand singers at work in the State of Maine, under the various local conductors. They rehearse through the entire year, and are visited occasionally by Mr. Chapman, who gives them any necessary help and drills them in the interpretation of the score. They come together at the time of the Festival, and are obliged to sing the difficult programs with one rehearsal of the combined orchestral and choral forces. Among the principal works that have been rendered during the past nine years are (Oratorios), *Elijah*, *Messiah*, *Creation*, *Redemption*, *Stabat Mater*, *Requiem* (Verdi), *Hymn of Praise*, *St. Matthew's Passion*, *Tower of Babel*, *Fair Ellen*, and many shorter miscellaneous numbers by Elgar, Fanning, Garrett, Grieg, Tschaikowsky, Rheinberger, and Mascagni.

The operas of *Carmen*, *Faust*, and *Lohengrin* have been given in concert form, and selections from *Trovatore*, *Lucia*, *Aïda*, *Tannhäuser*, and others.

The growth and attainment of such a chorus is phenomenal. It is to-day the largest chorus in America, if not in the world. It is impossible to give the State Festival under one roof, for no stage could hold the singers, hence it is divided into sections: the Eastern Division holding its Festivals in Bangor, The Western Division in Portland. A large and commodious auditorium seating over three thousand was built for Mr. Chapman by the enterprising citizens of Bangor. The same artists and orchestra appear and the same programs are given with the different choruses in each city. Madame Emma Eames was the soloist at the last Festival. Nordica, Sembrich, Gadski, Schumann-Heink, Blauvelt, Ffrangçon-Davies, Campanari, Bispham, and many other great soloists have participated in these Festivals. Mr. Chapman conducts the Rubinstein and Apollo Clubs in New York and the Philharmonic Chorus. During the past season he furnished the Chorus for the great performance of the Ninth Symphony by Beethoven, given under Felix Weingartner, and the chorus for Liszt's *Faust*, as conducted by Gustav Kogel.

WILLIAM R. CHAPMAN

SAID BY MASSENET

Music has not a sense of her own, a distinct signification, and, having freed herself from the fetters which made her the servant of other arts, is becoming more and more the language to which one can express all that deserves to impassion humanity.

And the day in which art and nature speak to you, makes you an artist, an adept.

ANSWERS TO QUERIES

E. S., St. Mary's, Ind.

1. When thoroughly learned, the B♭ minor Scherzo of Chopin should be played at a metronome speed of from ♩. 108 to 116 for the principal sections, and ♩. 88 to 92 for the *sostenuto* section.

2. There can be no objection, from a critical standpoint, to the association of melodies from two different operas of the same composer, or the same school or nationality, in an eight-hand arrangement, or any other form of transcription, as long as the melodies are sufficiently kindred in character to form a consistent union.

A. L., Des Moines, Iowa.

The very common habit, not only among beginners, but even among advanced piano students, of striking the keys with the left hand a little before the right hand, is due partly to carelessness, no doubt; but also very largely to an instinctive physical inclination, — as if the hands followed the tendency of the feet in walking to act alternately. The habit, from whatever cause it arises, should of course be overcome, for it is necessary for the beginner to strike all the tones that belong to the same beat with clock-work precision. This can be done by appealing to his sense of rhythm, and cultivating absolute regularity of beat, in *both* hands. Give him a passage, either a simple melody or a succession of chords, for one hand, and let him play it simultaneously with both hands (an octave apart), insisting on absolute precision of stroke. Do not permit him to relax his attention to the beat for an instant; each slightest deviation from the uniform stroke must be corrected at once; make him return to the beginning of the phrase (or page) for every lapse of attention until his *mind has become bent upon the result required.* Incidentally, his rhythmic perception is being developed and established in every direction.

BARGAINS IN USED WEBER PIANOS

The operatic artists of the great Conried Metropolitan Opera Company returned a number of Weber Upright Pianos to Lyon & Healy; also the recent moving period in Chicago resulted in a number of rented Weber Uprights being returned; in addition to this all of the Weber Uprights taken in exchange for several months past have recently been overhauled in Lyon & Healy's factory and sent to the Warerooms for sale.

The result of these three sources of supply is that Lyon & Healy are now holding a great Weber sale.

Every one knows that the Weber is one of the finest pianos in the world, by many it is preferred to any other. So this Weber sale affords to music lovers a chance to secure a magnificent piano at about the price usually paid for an ordinary instrument. Any one who is interested in a fine piano should not hesitate to write to Lyon & Healy about these Webers. A great many different styles are included in this offering.

Easy monthly payments will be accepted from responsible persons who do not care to pay all cash.

Write to-day to Lyon & Healy for their price list of Weber and other pianos slightly used, that figure in their special thirty-day offer, 10 Adams Street, Chicago.

WHAT SHOULD THE TEACHER READ IN VACATION?

HENRY SABIN

Honestly, not much of anything, until body and soul are rested from the toil and trouble and worry of nine months' work in the school.

Take the first month to "loaf." That is the only word which conveys my meaning; for a few weeks' existence is a duty, but it is a dreamy, listless, restful existence, when you are conscious of no exertion; you are conscientiously lazy, climb mountains, fish in pond or brook, but take no books along. Swing in the hammock, ride the horse or in the automobile. However, I prefer the carriage, especially if my companion can drive. I like to have my hands free, but a book in such a case is a hindrance. But "what shall I read?" was the question you asked me to answer. If you will read, then let it be your favorite authors. Read what you really want to read, not what you feel you must read. Compulsory reading is hard enough in term time; don't let us have any of it in vacation.

Professional reading should be ignored during vacation. "It sartainly should." Fiction of the gentler kind has its place here. You remember what pleasure a story gave you when you read it years ago. Hunt it up and read it again, and the old refreshing glow will come while the sympathetic flush will mantle the cheek, and you will grow young in heart and strong in hope. I suppose it is a necessary evil, but it seems to me almost sorrowful that the teacher must spend the hours and days of her summer vacation at the university, or in the summer school, poring over frigid mathematics, or musty old Latin or Greek authors and all the time she drifts away from Nature, into the realm of "Books — Books and only Books." All I can say here is, don't read or study in vacation if you can possibly avoid it. Loosen the string — unbend the bow and it will carry further, and shoot straighter, when you use it again in September.

LIFE OF THE JAPANESE WORKMAN

The average monthly income of the Japanese workman is now something less than $8. And this is a high average. On this a Japanese of the laboring class can keep a family of five or six in comfort and cleanliness and enjoy all the simple pleasures dear to the Japanese heart. These pleasures do not consist of feasting and drinking to excess and going to places of amusement, but are the pleasures afforded to a peculiar and complete love of nature in all her moods. "Flower-gazing" is the Japanese expression, and "flower-gazing" costs nothing to the family that is willing to tramp any number of miles to reach some spot particularly beautified by a luxuriant display of one of the season's flowers which, in their turn, fill every month from the New Year to the New Year. On these expeditions, which we would call picnics, the family takes its allowance of rice and tea, of fish and small pickled vegetables, and its feast is only such as it usually enjoys at home. The Japanese laborer works on an average twenty-six days each month, and his hours are ordinarily from sun to sun. He doesn't work as hard as his brother in the West, he doesn't accomplish as much in a given time, not by any means; but he does his work thoroughly, he is efficient, as a rule, and his pay has always been sufficient for his needs.

He lives in a neat little house of two rooms, spotlessly clean and simple to absolute bareness. For this he pays something like $1 a month and, thanks to the kindly climate of his land, he knows nearly nothing about the expense of fuel. A little charcoal for a tiny hibachi is all he needs, and his cooking can be done on this or on a less ornamental one in a wee bit of an additional room, called the kitchen. His charcoal and light together cost him less than $1.25 a month, and for this he has all the fuel and light he finds necessary. He knows nothing about the sting of rigid economy. Rice costs him more than anything else. He has to pay about $3 for enough of this commodity to keep his family a month, and his only hardship really is that his income is not sufficient to provide for him the little luxuries of diet that his more fortunate brothers enjoy. And he has his fish and vegetables, too, each costing him a little less than $1 a month; and after everything is paid for, he still has enough left for a small supply of sake for tobacco, hair cutting and shaving, for the hair-dressing of the women of his family, and for the daily hot bath in a neighboring public bath house that is so necessary to the well-being of every Japanese. Considering all this, it is easy to see how much can be done with the funds so generously subscribed by Americans in answer to the appeal recently made by our President. While their demands are so simple, surely the big, rich world will not allow these little people to suffer from actual hunger. — ELEANOR FRANKLIN, *in Leslie's Weekly.*

DON'T BE AFRAID TO SING

Encouragement is offered by a high medical authority in a recent work to those people who have singing souls but "no voice," and who therefore hesitate to sing lest they disturb the tuneful equanimity of their friends.

This scientific man says by all means sing, when you want to particularly, and acquire the habit of singing some every day, whether or not you are musically inclined.

The reason for this recommendation is that singing develops and holds pervious the various passages and chambers of the respiratory tract from brow to diaphragm, and trains and practices in deep, full breathing. Entirely apart, therefore, from all idea of making vocalists, singing should be taught and practiced in the family circle by all, be the voices good, bad, or indifferent.

F. L. YORK

(Director of the Detroit Conservatory, a large and popular school, which graduates a large class this month)

SAID BY VERDI

I have lived and worked through half a century in which the battle of the schools has been fought with ardor, zeal, and not without bitterness, and I have come to this conclusion, that melody is the one factor in music which ages least.

I have never thought of writing my memoirs and never shall.

It does not always do to trust to a lucky star.

A STUDENT ABROAD

ETHEL COLGATE

I

To study abroad is the ambition of almost every musical student, and yet how little we know what that really means. Traveling and seeing the wonders and beauties of Europe, and being thrown upon your own resources are in part responsible for our better and broader musical knowledge. Those only who have had the experience will understand my feelings when I saw my native land and loved ones fading away in the distance as the good ship "Hamburg" bore me from its shores. The eight or ten days aboard ship, among boon companions, passes all too quickly. When you arrive off the coast of England and see the beautiful white cliffs and wonderful forts in the cozy little bays you begin to realize that you are in a different hemisphere. We lay in the harbor of Cherbourgh all night, and the bustle and confusion of landing passengers on the tender and exchanging of mails was interesting and exciting. I shall never forget the beauties of the sunrise next morning and the exquisite coloring of the water, so calm and quiet after our rough passage. In the afternoon we got little glimpses of Holland, and as we sailed into Cuxhaven we saw about thirty German war vessels. After a tiresome wait we boarded a train for Hamburg. The ride from Cuxhaven to Hamburg was quite novel to one not accustomed to foreign travel. The train is made up of coupés and you enter from the side. You then travel through a section of German country life very picturesque to an American with its low houses with thatched roofs and many windmills, much like Holland.

II

Hamburg has many beautiful streets and squares, or parks, the beauties of which are much enhanced by the "Outer and Inner Alster," two beautiful lakes formed by the expansion of a tributary of the Elbe. These sheets of water are spanned by the Lombard's Bridge. The city appears to be rich in monuments. An enormous statue to Kaiser Wilhelm I is in front of the Town Hall, and a fine one of Schiller near the Art Museum. One of the most important things to be seen in Hamburg is the *Rathaus* (Town Hall) — a most beautiful structure, from which one may have a superb view of the city and its environs. The interior is magnificently arranged, the Phœnix Saal, the Kaiser's Saal, and the Haupt Saal being the most beautiful. Behind the Town House is the *Börse*, the business exchange in Germany. Each day at 1.30 P.M. this *Börse* is filled with some six thousand people, all speaking in, to me, a foreign tongue, which struck me as another Babylon. A visit to the Art Museum is one of the sights not to be omitted, as it contains works of some of the greatest masters, — *Velasques, Poussin, Guido, Reni,* and a number of old Dutch masters, as Backhuigen and Jan Steen. One could spend a long time sight-seeing in Hamburg without monotony.

The *Tiergarten* is the largest and most extensive park near the town, extending from Brandenburg Gate to Charlottenburg, and covers about 360 acres. The *Sieges-Allee* and the roads skirting the *Tiergarten* are the fashionable promenades. On the south side is a monument to Lessing, to the north a statue of Frederick William III, and farther on a marble monument to Richard Wagner, showing the figure seated on a pedestal adorned with scenes from his operas. Almost every part of Berlin offers a pleasing picture; the streets are a model of cleanliness and most of the newer houses have balconies which are gay with foliage and flowers. The squares are embellished with gardens, fountains, and bridges, all beautified by artistic sculpture. The handsomest and busiest part of Berlin, and also the most historical, is the street extending from Brandenburg Tör to the Royal Palace. The Brandenburg Tör from the Linden forms the entrance to the town from the Tiergarten. It was erected in 1783 in imitation of the Propylæa at Athens, and has five different entrances separated by Doric columns, surmounted by a *Quadriga of Victory* in copper. Along the Linden are magnificent hotels, cafés, and stores. One should not fail to visit the Royal Palace, the Old and New Museums, and the Dome, also the National Art Gallery. In the Opera House opposite the Royal Library may be seen an admirable group in zinc,

by *Rietschel:* the centre the muse of Music; the right the tragic and comic muses, and the dramatic poet; on the left a dancing group with the Three Graces.

The Old Museum is a handsome structure in Greek style, with an Ionic portico of eighteen columns, approached by a wide flight of steps. The raised central part is adorned with colossal groups in bronze, and in the vestibule are statues of German artists and connoisseurs. The Dome, or Rotunda, contains the Gallery of Antique Sculptures, chiefly indebted to Frederick the Great. A staircase leads from the Hall of Heroes to a passage connecting the Old and New Museums. The massive statue Siegessäule is approached by eight granite steps. The base of the column is surrounded by an open colonnade and embellished with Venetian mosaics, illustrating the war of 1875, and the restoration of the German Empire. Above are three rows of captured Danish, Austrian, and French cannon. From the top of this capitol, 151 feet high, a magnificent view of the city may be obtained.

The Seiges-Allee contains thirty-two statues of Prussian rulers, each in a hemicircle of marble adorned in the prevailing style of his reign.

III

The journey from Hamburg to Hanover, thence on to Cassel, takes you through the old northwestern part of Deutschland, a beautiful and picturesque country. Cassel is situated high among the mountains, and presents a most artistic appearance. It is the seat of government in the province of Hesse-Nassau. The town is devoted to art, and possesses a number of interesting collections. Cassel has many beautiful buildings and holds third place among the German art centres. The art gallery was the most interesting to me. It contains works by Rembrandt and Hals; also works by Dutch, Flemish, and Italian masters. As I passed from room to room I noticed in almost every room some artists at work making copies of the old masters. This seems an ideal place to study art; the very atmosphere is full of it. I made a short tour of the older part of Cassel and could but notice the ancient structures, each story protruded over the one below until it seemed as if the roofs would come together, giving them the appearance of toppling over. Without spending a day at Wilhelmshöhe when the "waters" play, your visit to Cassel is incomplete. The ride there through the avenue of lime trees is very beautiful. The wonderful Herculean Statue is always in sight. Arriving at the castle, one should go through it, as I found it to be one of the finest I visited while in Germany. It contains a splendid collection of art, and the grounds and gardens are picturesque in the extreme. From the centre entrance to the Palace you have a magnificent view of the cascades. Beyond the gardens is the Fountain of Neptune, which is the foot of the waterfall, then tier on tier of stone steps and you come to the water puzzle. This is a cave so arranged that when you step inside the water springs up on all sides. Then you climb more steps and come to the Risenschloss, where you can go up into the colossal statue of Hercules, inside whose club several people may stand. This is the highest point obtainable, and presents a fine view of the surrounding country. From Neptune's basin to the statue is 756 steps. There are yet four other waterfalls but little less beautiful. After seeing Berlin, Cassel presents a fine contrast, the former being a model modern city, while the latter is a quaint old place with all the beauties of nature artificially enhanced.

The Royal Palace and the Mausoleum in Charlottenburg are well worthy a visit. Then, after a very interesting ride through the forests (*Grunwold*) district, one arrives at Potsdam. A visit to Potsdam should not be missed, both on account of its natural beauties and its historical associations. Its spacious parks, its rivers and fountains, and its palaces with their well-preserved interiors and decorations present us with a better picture of the royal residence of the eighteenth century than any other place.

I left Berlin with many regrets and immediately began to wonder what I should find in Vienna. But here in Vienna I find everything so entirely different. In another letter I may give you some of my experience in this city of the old masters in music.

THE DUNNING SYSTEM

OF

IMPROVED MUSIC STUDY FOR BEGINNERS

It matters not as to which musical system was originated first, but rather which is the best. The Dunning System is the only one endorsed by the world-renowned masters of music in both America and Europe, and its superiority is acknowledged by all who know of the marvelous results shown by the teachers now using it.

The Summer Normal Training Class for Teachers will open July 5, '06

Send for booklet with written endorsement of Leschetizky, Scharwenka, de Pachman, Busoni, and others. Address:

Mrs. CARRIE L. DUNNING, 225 Highland Ave., Buffalo, N. Y.

This system is not taught by correspondence, as it is a musical education in itself.

Established New York, 1851 St. Louis, 1873

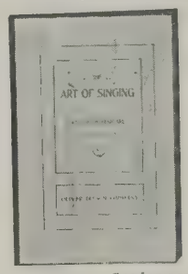
The Art of Singing

By WILLIAM SHAKESPEARE



This work is a modern exposition of the principles which were practiced and perfected by the Italian masters before the influence of instrumental music caused the study of the voice on its own account to be neglected. Breath control and the production of the voice and registers are dealt with in a thorough and scientific manner and their application illustrated by photographs and exercises.

Published in three volumes.

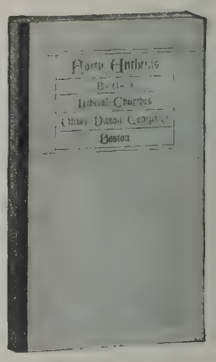
Forty Anthems

for use in Liberal Churches



THIS volume contains anthems by twenty-eight composers, among whom are Buck, Barnby, Gounod, Sullivan, King Hall, Foster, Tours, and Mendelssohn; Frederic Field Bullard, Frederick M. Stevenson, Herbert Walter Wareing, John E. West, and J. Varley Roberts are also represented. Four of the numbers are for Christmas and several for Easter and other occasions.

The collection was compiled by a committee appointed by the American Unitarian Association for the improvement of church music. The selection of the music was entrusted to Benjamin F. Whelpley, F. W. Wodell, and Arthur Foote. The words, were carefully scrutinized by several clergymen under the direction of Rev. Samuel A. Eliot, D.D.

The book comprises two hundred and twenty-seven pages and is bound in serviceable board covers with cloth back. **Price $1.00, post-paid.** *Copies sent for examination.*

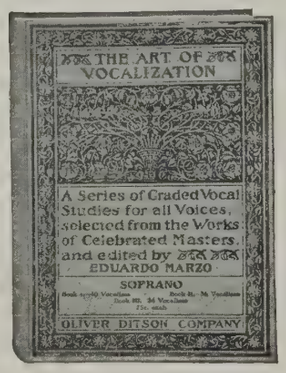
THE ART OF VOCALIZATION

A GRADED COURSE OF VOCALISES FOR SOPRANO

Compiled and Edited by EDUARDO MARZO



The purpose of this Course is to place in progressive and systematic order before the teacher and pupil the best vocalises by the best masters. It covers the entire range of vocalization. While not intended for beginners, it contains all that is required for the complete study of the vocal art.

The vocalises have been selected from the works of Alary, Aprile, Brambilla, Bordogni, Concone, Crescentini, Lablache, Lamperti, Marchesi, Nava, Paer, Panofka, Panseron, Savinelli, Sieber, and others. Each number has been chosen not only for its intrinsic merit, but also because of its pedagogical value.

Each set of vocalises covering a special difficulty is preceded by a page of the exercise which they illustrate. Special instructions are given for practicing scales, arpeggios, grace notes, the mordent, detached notes, syncopation, trills, etc. None of the vocalises are transpositions. Each is in its original key, and was written especially for the soprano voice. The order of progression has been carefully arranged so that the vocalises may be taken up consecutively.

The Course does not pretend to teach singing without the aid of a teacher. It merely places in view all the best material that can be gathered for the study of vocalization.

BOOK I. 40 VOCALISES
BOOK II. 36 VOCALISES

A New and Monumental Work

The Art OF Organ Building

By GEORGE ASHDOWN AUDSLEY

AUTHOR OF

"Keramic Arts of Japan," "The Practical Decorator," etc.

The largest and most complete treatise on the science and art of organ building in the English language, in many important directions surpassing every treatise heretofore published in any language, and adding much entirely new matter to the literature of the organ. The work is the result of a thirty years' study of the subject of organ construction in England, France, Belgium, Holland, Germany, and the United States, and in addition the author has been directly assisted by all the leading organ builders in the world. It will be better and more fully illustrated in all the important branches of the art than any work on the organ in existence. The illustrations are drawn in the most accurate manner by the author and are in all cases true to scale. They will be reproduced by photo-engraving and inserted in the text for easy reference.

REGULAR EDITION

2vols., 4to, numerous illustrations, cloth, limited to 1,000 sets, special net, $20.00

EDITION DE LUXE

Limited to 250 copies, each copy to be numbered and signed by the author, special net, $35.00

Dodd, Mead & Company, 372 FIFTH AVE. NEW YORK CITY

PUBLISHED BY

G. Schirmer, New York

Selections from Favorite Operas

FOR THE PIANO

Published in small 4to. Each number about 50 pages
Price, 50 cents each, in paper

To be had in Cloth Bindings (Three Volumes in One)
Nos. 1-3, Nos. 4-6, Nos. 7-9, etc.
Price, $2.50 each volume

Bizet	Carmen	*Bellini*	La Sonnambula
Gounod	Faust	*Weber*	Der Freischütz
Gounod	Romeo and Juliet	*Mozart*	Le Nozze di Figaro
Wagner	Tannhäuser	*Beethoven*	Fidelio
Wagner	Lohengrin	*Bellini*	Norma
Wagner	Tristan and Isolde	*Mozart*	Die Zauberflöte
Verdi	Aida	*Wagner*	Der Fliegende Holländer
Verdi	Rigoletto	*Rossini*	Guillaume Tell
Verdi	Il Trovatore	*Gluck*	Orphée
Verdi	La Traviata	*Ponchielli*	Gioconda
Rossini	Barber of Seville	*Wagner*	Parsifal
Donizetti	Lucia di Lammermoor	*Wagner*	The Mastersingers
Flotow	Martha	*Wagner*	Das Rheingold
Mozart	Don Giovanni	*Wagner*	Die Walküre
Meyerbeer	Les Huguenots	*Wagner*	Siegfried
Mascagni	Cavalleria Rusticana	*Wagner*	Götterdämmerung
Thomas	Mignon	*Strauss*	Die Fledermaus
Balfe	The Bohemian Girl	*Goldmark*	The Queen of Sheba

In each case these selections lead through the entire opera, taking in every air and melody of importance, and representing in reality a condensed edition of the Piano Score rather than merely a selection. The arrangements are only **moderately difficult,** without being rendered thin and insipid by undue harmonic compression.

Choir and Choral Magazine

A monthly publication devoted to the music of the church

The important place occupied by church music today makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make the CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each issue contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

Published Monthly

Subscription price, 50 cents per year. Single copy, 10 cents

FOLK-SONGS
and Other Songs
FOR CHILDREN

Edited by
JANE BYRD RADCLIFFE-WHITEHEAD

TO a musical child there is nothing that will give greater delight than this beautiful collection. It originated in the idea of acquainting children of the new world with some of the songs which, in the old world, have kept their hold on the affection of the people for a long time; folk-songs chiefly, which, because of their simplicity and naïvete, must appeal particularly to the young. In some cases the words of foreign songs have been replaced by simple English ones, but the melodies have been kept intact.

Out of this fragrant, old-time garden the editor has gathered this volume, including at the same time, a few simple melodies and child-songs not out of keeping with the plan of offering to mothers, teachers, and lovers of children, music that is simple and child-like in its appeal.

The book contains one hundred and forty-one songs, comprising two hundred and twenty-six pages of music, is printed on paper of the best quality, and is bound in attractive and serviceable covers.

THE GENIUS

By MARGARET POTTER
Author of "The House of de Mailly," Etc.

¶ A novel of stirring plot, and yet a striking presentation of the artistic temperament in its most interesting phases. The story is based upon the life of a famous Russian composer, the sensitive, gifted son of a powerful, iron-handed government official. His career is a strange and deeply moving tale of shifting fortunes, dramatic episodes, and final artistic triumphs.

AMERICA'S MUSICAL STRING HOUSE

Cosmopolitan School of Music and Dramatic Art

AUDITORIUM BUILDING, CHICAGO

Students Enrolled at Any Time

Special Summer Session of Five Weeks Begins June 25th, Fall Term Opens September 10th

Piano Department, Victor Hienze, Jeannette Durno-Collins, Howard Wells, Mrs. Bruno Steindel, Mrs. Howard Wells, Dr. N. J. Elsenheimer, Daisy Waller, Lillian Dawes, Isaac Levine, Vivian Scott, Edith Laver, Grace Sloan, Laura Smith, and Olive E. Atwood. Vocal Department—Minnie Fish-Griffin, L. A. Torrens, Mrs. Willard S. Bracken, Charles Sindlinger, William Beard, Hanna Butler, Mrs. L. A. Torrens, Jennie Thatcher Beach, and Marion Green. Harmony, Composition, and Lectures—Dr. N. J. Elsenheimer. Violin—Leopold Kramer, Franz Esser, and Fritz Itte. 'Cello—Bruno Steindel. Harp—Enrico Tramonti. Organ—Clarence Dickinson. Chamber Music—Franz Esser. Public School Music—Margaret M. Salisbury. Foreign Languages—Ernest Sicard and Mina Pfirshing. Donald Robertson, Director of Dramatic Art Department; Eloise B. MacMinn, Assistant.

Donald Robertson, the eminent actor and producer of plays, will be the director of the new and permanent theatre, called the "Players' Theatre," an organization devoted to educational influences of dramatic art, the promotion and welfare of players and the maintenance of high standards in the profession. This theatre will open in August.

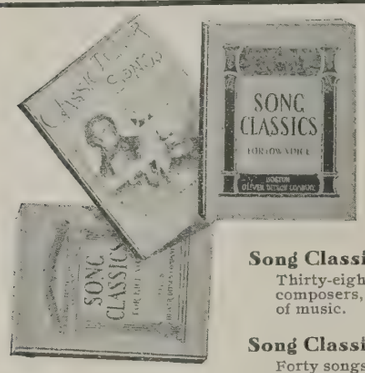
As the school controls its own recital hall the pupils will be afforded the opportunity of hearing numerous concerts, recitals, and lectures, including six chamber music concerts, three by the Steindel Trio, composed of Mr. and Mrs. Bruno Steindel and Fritz Itte; and three by the Chicago String Quartet, composed of Leopold Kramer, first concertmaster; Ludwig Becker, second concertmaster; Franz Esser, first viola, and Bruno Steindel, first 'cellist, of the Theodore Thomas Orchestra.

The artist teachers in this school will be available for concerts and recitals under the direction of the Dunstan Collins Musical Agency. This agency will also assist pupils of the school in securing professional engagements and positions free of charge.

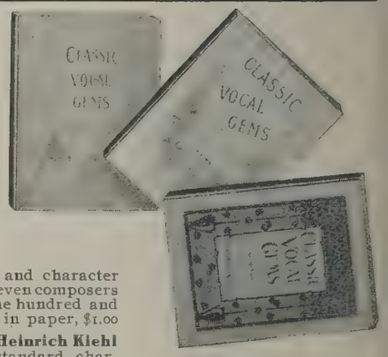
For Particulars and Catalog Address

DUNSTAN COLLINS, Auditorium Building, Chicago, Ill.

SMITH & NIXON PIANO USED EXCLUSIVELY



Vocal Collections



Song Classics for High Voice Vol. I

Forty-seven songs for soprano or tenor, by twenty-six composers, comprising one hundred and fifty-one pages of music. Price, in paper, $1.00

Secular Songs

HIGH VOICE

GOLDMARK, RUBIN — PRICE
The Passionate Shepherd to His Love. [G] [d to *a*].. 75
A brilliant song of some length, animated and impassioned.

PASMORE, HENRY BICKFORD
A Northern Romance. [F♯ min.] [c to *g*]..... 60
In folk-song style, with touches of Northern color in harmony. Singable and impressive.

RICH, MARIE
Wistaria. [B♭] [c to *g*]..... 50
A light and fanciful song in graceful mood.

SOBESKI, CARL
Wake, Love! [D♭] [d to F or *a*♭]..... 60
Impassioned lyric of the serenade type; melodious, vocal, and straightforward.

VOLPE, A. D.
Shadows (Wo ich bin). [G min.] [d to *a*♭]..... 50
A song in serious vein of great beauty and dignity.

MEDIUM VOICE

COWLES, EUGENE
Dear, did You Know? [A♭] [c or E♭ to F or *a*♭]..... 50
Melodious and singable, in simple style and useful for teaching.

DODD, WILLIAM G. — PRICE
Awake, Beloved! (Serenade.) [F] [c to F or *a*]..... 60
Flowing rhythm and brilliant effects characterize this delightful song.

PAGE, N. CLIFFORD
A Girl in Every Port. [C] [c to F]..... 60
A rollicking, cheery sailor's song, spirited, breezy, and well made.

LOEDER, MARK
Belinda. [B♭] [d to F♯]..... 50
A negro serenade, with lilting melody and infectious refrain.

LOW VOICE

GOLDMARK, RUBIN
The Passionate Shepherd to His Love. [E♭] [b♭ to F].. 75
(See above.)

Piano Solo

BENNETT, MILAN F.
Good Luck March. [G] [III]..... 60
A stirring two-step march in 6-8 rhythm, with very attractive trio.

OCTAVO EDITION

(PLEASE ORDER BY NUMBER)

Sacred Part-songs for Men's Voices

BUSCH, CARL
No. 11,530. **Memorial Ode**..... 10
Noble music voicing a noble poem. Free part-writing and strong harmony enhance the beauty of the thought.

LEWIS, LEO R.
No. 11,520. **Memorial Hymn** (For All Thy Saints).. 08
Straightforward and simple setting, in stanza form, of a well-known hymn.

Part-songs for Women's Voices

GOLDMARK, RUBIN — PRICE
No. 11,507. **The Message**..... 16
Fluent and graceful number, with rippling piano part.

MANNEY, CHARLES FONTEYN
No. 11,506. **When Love is Done**..... 10
Sensitive and expressive setting; melodious and free part-writing, singable and effective. Without accompaniment.

Part-song for Mixed Voices

GILCHRIST, W. W.
No. 11,524. **What is More Gentle?**..... 12
Well-written, clearly harmonized number, with melodiously moving parts. Without accompaniment.

An Easy Mass in Gregorian Style

CUSTANCE, ARTHUR F. M.
Missa Immaculatæ Conceptionis. (Soli, Chorus, and Organ)..... 50
The vocal parts largely in unison with richly harmonized organ part. The numbers are all short and concise.

ESTEY PIPE ORGANS

THE ORGAN *for* ORGANISTS

WHY?

1 **Touch and Action**

Light, elastic, rapid. Not made sluggish by couplers.

2 **Stop Control**

Of all systems and positions, the Haskell Pneumatic Stop-Key Action is supreme for ease and certainty of manipulation.

The right hand of player is just bringing on three sets of pipes: Note convenience of access.

AN ESTEY CONSOLE

The player can bring any stops on and off at the same time, with either hand.

3 **Safety and Stability**

Freedom from cyphers is assured under this System. This is not only because the Estey *action* is pneumatic but the *chest* is also—a very different matter. Each stop has its own individual chest. Each pipe has its own separate valve.

PUBLISHERS' NOTES

HOME SONGS — *Home Songs* is the title of a new collection which will appear about September 1. The book will be a companion volume to the new and enlarged edition of *College Songs*. It will contain about one hundred forty numbers, including twenty hymns, sixteen rounds, the six most popular patriotic songs and four of Foster's famous *Melodies*. There will also be several Scotch and Irish songs, German folk songs and songs by Balfe, Abt, Hatton, Mendelssohn, and Schubert, every one of which is eminently suitable for the home and fireside. Each number will be arranged in four parts for mixed voices. If desired, however, the songs may be sung as solos with piano accompaniment or as unison, two, or three part choruses.

The price of the book will be 50 cents, but until publication we offer copies for 25 cents each. This price includes postage if cash accompanies orders.

MENDELSSOHN'S SONGS WITHOUT WORDS — Mendelssohn's *Songs without Words* will be an early addition to the Ditson Edition. The volume will be edited by Dr. Percy Goetschius.

In this edition the details of form will be carefully marked because they are peculiarly essential to the intelligent study and rendering of these compositions. The conscientious study of the structure of the forty-eight *Songs without Words* is in itself an education in the fundamental principles of music form. The editing, however, will not encroach upon the teacher's domain, but will simply record for his and the pupils' convenience the pedagogic details with which the latter should be made familiar.

The names given by Stephen Heller, which have become identified with these songs in the popular mind, will be found in this edition. There will be an introduction by Dr. Goetschius in which are outlined the various forms in the *Songs without Words*. There will also be a biographical preface by Daniel Gregory Mason.

The price of the book will be $1.00, but in advance of publication we offer copies for 40 cents, which includes the cost of transportation if cash accompanies order.

Probably few musical works of so high a grade of quality, depending for their effect so little upon facile and superficial appeal, so much upon traits of real artistic excellence, have been so widely popular. They are the people's classics, and they have earned their place by their intrinsic qualities of form and expression.

THE ART OF VOCALIZATION — The true old Italian method, as demonstrated in *The Art of Vocalization* by Eduardo Marzo, consists principally in training the voice so that changing from one register to the other is not perceptible. This perhaps applies more to the mezzo soprano voice than to either the soprano or the contralto voices, as it has a good share of all three registers. The mezzo soprano, with its peculiar fulness, mellowness, and roundness of its tone quality, is of great value in operatic music.

Vocal teachers who are not familiar with Mr. Marzo's work are urged to send for copies of the soprano edition for examination. The three books for mezzo soprano will be the next to appear. Book I will contain forty vocalises, Book II will contain thirty-six vocalises, and Book III twenty-four vocalises.

The price of each book when published will be 75 cents, but in advance of publication copies are offered for 40 cents each, which includes postage if cash accompanies order.

THE FIRST SIX MONTHS ON THE ORGAN — There is no instrument which offers so wide a scope for originality as the organ. In the use of stops on the pipe organ, however, there is sometimes danger of employing combinations which do not blend well.

The First Six Months on the Organ by George E. Whiting contains practical instruction on registration. The exercises in this work are suitable for two or three manual organs. The pedal parts are not difficult. All necessary directions are given for the use of the pedals. Exercises are included for playing church music when arranged on four staves. There are original preludes, postludes, and voluntaries which may be played for the church service or as recital numbers.

This work will serve as an introduction to the instrument for students who are already familiar with the piano. It may be followed by the works of Bach, Rheinberger, Saint-Saëns, Batiste, Guilmant, etc.

A new edition of *The First Six Months on the Organ*, revised by the author, is now in preparation. The price will be $1.50. In advance of publication, however, copies are offered for 60 cents, which includes postage if cash accompanies order.

REED ORGAN SELECTIONS FOR CHURCH USE — When, as is frequently the case, a church is provided with only a reed organ, the selecting a sufficient variety of attractive and appropriate solos is not easy of accomplishment. Piano music is commonly used for such purposes. Even pieces for the reed organ are frequently arranged so as to be adaptable to the piano on the one hand or the pipe organ on the other.

Reed Organ Selections for Church Use, compiled and edited by Hans Lichter, will contain thirty pieces by nineteen composers. These are intended especially and only for the reed organ. A copy should be in the possession of the organist of every small church and every reed organ teacher.

The book will be one of the Half-Dollar Music Series. Until publication copies are offered at 25 cents each, which includes postage if cash accompanies order.

THE MATHEW'S SCHOOL OF THE PIANO PEDAL — The pedals of the pianoforte are a vital part of the tone controlling mechanism, since they add to the tonal effect elements which cannot be put there from the keyboard. Composers since Chopin have not written the notes in all instances as they are meant to sound, but as the hands have to play them. The remainder is left to the uncertain indication of an occasional "ped" here and there in the music.

Artistic pedaling, therefore, is not only a question of making the playing sound better, but often of bringing out an idea which, but for the pedal, would not be heard at all. Pedaling is an art requiring as careful and systematic study as scale-work, arpeggios, or any element of the technique. Fine playing is impossible without the pedals.

The School of the Piano Pedal by W. S. B. Mathews contains complete explanations of the best usage of the pedal. The work is fully illustrated by many original studies and by numerous selections from Bach, Beethoven, Heller, Liszt, Tchaikovsky, Schumann, and Chopin. The studies range in difficulty from the second to the fifth grades. The work is particularly rich in easy pieces of fine quality. Mrs. Blanche Dingley-Mathews' valuable cooperation has made the work especially practical for use with children.

The School of the Piano Pedal has been in preparation for nearly a year. It is now almost ready for the press and will appear at an early date. The price will be $1.25, but in advance of publication copies are offered for 60 cents, which includes postage if cash accompanies order.

STUDIES FOR THE DEVELOPMENT OF RHYTHM AND EXPRESSION, BY CARL PREYER — Teachers in search of material to be used in conjunction with or in place of Heller's *Studies in Phrasing* will be interested in Carl A. Preyer's *Studies for the Development of Rhythm and Expression*. These studies are modern both in melody and harmony, and they include an interesting variety of styles of composition. The importance of the pedal as a factor in expression is amply demonstrated.

The studies will be published in two books, each containing eight studies. They will be Nos. 110 and 111 of the Ditson Edition. The price of each book will be 75 cents, but in advance of publication we offer copies for 30 cents. The two books are offered for 50 cents. These prices include the cost of postage if cash accompanies order.

THE MAGIC ORGAN

A man in Germany advertised that he had an organ that would play any tune out of an enumerated set at the command of any one of the audience. This made a great noise at the time and puzzled all the conjurors and philosophers of the place. The organ was placed on a table with its back against the wall, the company were invited to examine it, then ask for a tune, which was immediately played; and if any one desired it to stop, it was instantly silent. This went on for a long time and the ingenious inventor was making a rapid fortune, and the secret would have been buried with him had he not behaved most inharmoniously towards his loving wife one day, just before the performance was about to commence. The room was crowded as usual and a tune was called for, but not a note was heard. The owner became uneasy and said in a soothing, coaxing tone, "Do blay, my coot organs." Still not a sound was heard. He got out of patience and threatened to smash the instrument to pieces, when a hoarse female voice was heard to growl out: "Aye, do you, tyvel, preak de organs as you proke my head dis morning." This was too much for the choleric German. He took a chair and gave the instrument such a whack that drove it through a paper partition in the wall, carrying with it another organ which had been placed at the back of the sham one, at which sat the obstinate grinder — his wife. — *In Geoffry Shortbow or the Country Amateur in London*, 1833.

Hoftheater-Intendant von Speidel has informed the city magistrate of Munich that the Prince Regent has accepted the offer of the City Council to appropriate the sum of $15,250 yearly for the festival performances in the Prinzregenten-theatre, beginning this year. The intendant and the city magistrate will hold an annual conference to discuss festival plans, which are to be arranged with equal consideration for art and the city interests. One condition is that several performances of *Der Ring des Nibelungen* shall continue to be a regular feature of the festivals. The desire is expressed that *Tristan und Isolde* will also be accorded a permanent place.

NOTES

The public advertisement for players to fill twelve vacancies that occurred recently in the orchestra of the Stadttheater, Hamburg, throws an interesting light on the remuneration that may be hoped for by aspiring young students of orchestral instruments.

The highest salary offered is $550 yearly for an oboe soloist. Viola, 'cello, and clarinet soloists receive $500 each, and positions for ordinary players of the violin, viola, 'cello, bassoon, and horn are worth $450. Applicants from other places must journey to Hamburg for a trial hearing first at their own expense; but if they are eventually engaged, they are reimbursed.

And for these salaries, according to the announcement, "only artists of the first rank with a thorough opera routine need apply." Moreover, in comparison with the salaries paid in many other German cities these are remarkably good.

* *

The programs of the first Swedish Musical Festival, which was held at Stockholm recently, were drawn from the works of Swedish composers exclusively, from Berwald up to the present time. The chorus consisted of about five hundred voices and the orchestra of ninety players, under the direction of Tor Aulin, Nordquist, and Henneberg, besides several of the composers whose works were performed. All forms of vocal and instrumental music were represented.

* *

The third Musical Festival of the cities of Coblenz Trier, and Saarbrücken-St. Johann was held in the latter place on June 3, 4, and 5. Special features were Beethoven's Ninth Symphony and Brahms's *Rhapsodie* for alto solo and chorus. Fritz Steinbach was the principal conductor, and among the soloists were Madame Gadski, New York; Frau von Kraus-Osborne, Leipsic; Ludwig Hess, Berlin; Max Reger and Felix Berber.

* *

It is announced that the Lockwood scholarships for members of the department of music at Yale have been won by George M. Sneath of New Haven, George I. Tompkins of Waterbury, Conn., and Henry Thomas Moore of St. Joseph, Mo. These scholarships are cash prizes from the income of $12,000, and are divided among the three students of highest standing each year.

* *

Mrs. Carl Formes, widow of the well-known musician of that name, writes from Oakland, Cal., that she is anxious to find her pupil and friend, Cecilia Weil, formerly of New York City, and more recently of San Francisco, Miss Weil occupied the flat above that of Mrs. Formes in Leavenworth St., San Francisco, and Mrs. Formes saw her last on April 18, as she was leaving the flat with some friends for Golden Gate Park to seek refuge from the on-coming fire. Mrs. Formes has not seen her since, but has heard that she left for Washington Territory a few days later.

If this announcement should catch the eye of Miss Weil, or any of her friends knowing her whereabouts, Mrs. Formes will be very grateful for news communicated to her at No. 1468 Grove St., Oakland, Cal.

* *

Dr. Hans Richter, who directs the Wagner performances at Covent Garden Opera House, conducted recently his four thousandth public performance, which was that of *Die Walkure*. His record includes some 12,000 full rehearsals, and 25,000 to 35,000 piano rehearsals. Dr. Richter, who is sixty-three, first visited England twenty-seven years ago.

War Songs

NEW EDITION FOR MIXED VOICES

THE influence of the war song during the Civil War can hardly be overestimated. To every veteran there are songs which have been hallowed by association; songs which recall the campfire, the battlefield, departed comrades, and days of languishing in rebel prisons. How many times has the war song given courage to "rally 'round the flag" when the day seemed all but lost. How often has the thought of freedom "beneath the starry flag" given hope to the long weary days of inactivity and suffering.

This collection contains forty-nine songs, seventeen of which are appropriate for Memorial services. There are seven songs of the Nation, four songs of the Flag, five songs of Patriotism, thirteen songs of the Camp, fourteen songs of home and Sentiment, and eight songs of battle.

During those dark days when the very life of the Nation was at stake the war song had its mission to perform. The war song still has a mission—to teach valor to the rising generation and to inspire that patriotism on which depends the future welfare of the Republic.

SPECIAL OFFER

A new edition of "War Songs" is in preparation. The refrain of each song will be arranged for mixed voices, although, if desired, the songs may be sung throughout by a solo voice. Until the 1st of August copies are offered for **25 cents,** post-paid, for cash with order. The regular price will be 50 cents.

Mollenhauer FLUTES and PICCOLOS

NOT THE CHEAPEST BUT THE BEST

¶ Mollenhauer flutes and piccolos have long been played in nearly every symphony orchestra in Europe, but only recently have sought a market in America. ¶ One need only mention the Mollenhauer goods to a European artist to evoke a flood of favorable comment. ¶ At the St. Louis Exposition where they were shown, they were the center of interest for musicians from all sections of the country, and were awarded the gold medal for superiority of tone and workmanship. ¶ The Mollenhauer tone is something to marvel at — so soft and rich is its character, while in ease and precision of emission they lead the world. ¶ All parts are hand-forged from flawless material, and so tempered that breaking or bending of the keys is impossible.

MOLLENHAUER (MEYER SYSTEM) PICCOLOS, IVORY HEAD, $18.00	MOLLENHAUER (BOEHM SYSTEM) PICCOLOS, $65.00 With Pure Silver Keys and Trimmings, $75.00
MOLLENHAUER (MEYER SYSTEM) FLUTES, $15.00 to $65.00	MOLLENHAUER (BOEHM SYSTEM) FLUTES, $100.00 to $165.00

Flutes and Piccolos may be had either in high or low pitch. Order one to-day! Sold for cash or instalments. Write for a FREE copy of Lyon & Healy's Musical Handbook fully describing the Mollenhauer goods; also thousands of other articles of interest to musicians. Address

LYON & HEALY, 28 Adams Street, CHICAGO

Early Italian Piano Music

Edited by M. ESPOSITO

IN the sixteenth century Italy was first in all the arts — in sculpture, in painting, in literature, and in music. Palestrina was called upon to reform church music, and he composed masses of a beauty that has never been equaled. Luca Marenzio composed his madrigals and Monteverde invented the opera. The example of these geniuses was followed by a host of lesser composers; schools for music were founded; the French, Belgian, and Spanish musicians, who one hundred years before had gone to Italy to teach, now came to learn and to admire. Though a great deal of the music written in Italy in the sixteenth century was vocal, instrumental composition was not neglected. At the beginning of the seventeenth century Frescobaldi produced his works for *Organo e Cembalo*, and later on Corelli and Viotti wrote for the violin.

Early Italian Piano Music includes the best instrumental works of the old Italian writers. Such composers as Frescobaldi, Alessandro and Domenico Scarlatti, Durante, Porpora, and Martini are represented.

The collection includes ten Toccatas by Alessandro Scarlatti, which have never been published before.

That the musical inspiration which arose in Italy in the sixteenth century should have been continued far into the eighteenth, shows how strong the instinct must have been, and how excellent the musical tradition. The learning of these masters of the olden time, and their knowledge of music, will astonish those who are not familiar with their compositions.

In view of the strides made by modern composers, one can hardly realize that such music was written at a time when Bach and Handel were still boys, and one hundred years before Beethoven.

Modern Method *for the* Pianoforte
By ARNOLDO SARTORIO
In four volumes 75 cents each

**See Note at the foot*

BASED upon this noted European teacher's long experience, this most important work has been laid out in a thoroughly progressive manner. The high value which the publishers placed upon the work when they first examined the manuscript, has been more than confirmed by the many unsolicited expressions of entire satisfaction and pleasure in its use, which have come from prominent teachers throughout the country.

VOL. I. (Edition Wood No. 100)
Finger work, simple phrasing, and preliminary scale work; explanations of wrist motion, staccato, triplets, syncopation, etc.

VOL. II. (Edition Wood No. 101)
Treats exhaustively of scale and arpeggio work, and simple embellishments.

VOL. III. (Edition Wood No. 102)
More extended arpeggios, broken chords, light staccato, double notes, with attractive and melodious illustrations.

VOL. IV. (Edition Wood No. 103)
Clearest explanation yet published of "two against three;" also octave playing and a general review of the entire work. A valuable dictionary of musical terms is appended.

** Either volume will be sent to any address upon receipt of one-half of the marked price and five cents for postage.*

MANUAL FOR
SUNDAY KINDERGARTENS AND INFANT CLASSES

By *Mrs. A. G. LEWIS*

With music Composed and Selected by CARYL B. RICH

This Manual is a blending of the Sunday-school and Kindergarten Methods and is a result of the author's experience of many years in teaching children. It consists of exercises for general use and special occasions, and songs, marches, and games that will delight the little ones.

The book is intended not only for Sunday and day school teachers, but for mothers as well, and should be found in the home of every Kindergarten child.

Price, 25 cents, post-paid. Copies sent for examination.

JOUSSE'S MUSICAL CATECHISM

Revised and Edited by
THOMAS A'BECKETT

Few works on music have shown such remarkable vitality or enjoyed such popularity as this little book.

In the course of teaching, and musical progress in general, many new and valuable definitions have been evolved and consequently the Catechism has passed through many editions. In this edition the material has been carefully revised. Much that is new has been added, including a pronouncing dictionary of musical terms and Schumann's Rules for Young Musicians.

Price in paper, 20 cts.; in boards, 30 cts., post-paid

Books for Young Pupils

Mother Goose Songs Without Words

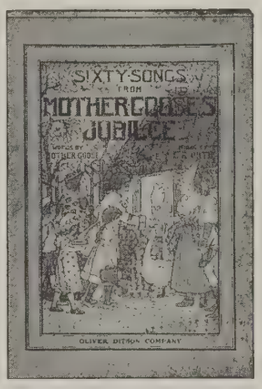
While a playful melody always finds a ready response in the child mind, the notes that symbolize it seem frequently arbitrary. A familiar rhyme given with the music will usually make its meaning clear even to the youngest pupil.
The author in this collection has chosen seventy favorites from "Mother Goose" and has provided for each a melody in the same rhythm, to which the words may be recited if desired.
The volume is beautifully printed and its title cover, in colors, is one that will delight the little ones.

Price in heavy paper, $1.00.....Boards, $1.25.....Post-paid.

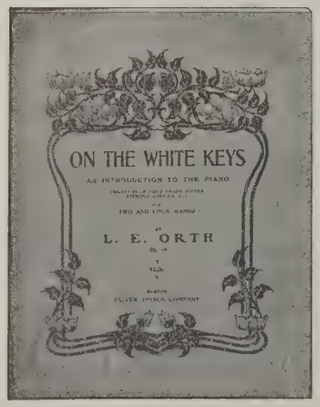
Sixty Songs from Mother Goose's Jubilee

These songs are suitable for performance in single form by children, or all sixty may be given as a complete work. The accompaniments are for piano and are not difficult. As vocal settings of "Mother Goose"—who is dear to every child heart—they possess exceptional value for teaching purposes. They are all within the range of young voices and the music is, in each case, in keeping with the character of the words.

Price, $1.00 . . Post-paid



On the White Keys



The feature that gives this work its value is the entire absence of accidentals, modulations being made without their use. The first twelve numbers are for two hands, and in the treble clef only. The succeeding twelve are duets, in both treble and bass clefs, the two parts being of equal difficulty. The melodies of the latter are identical with the solo pieces, so that a pupil can pass readily from one to the other. This is an easy method of teaching four-hand playing, and one sure to awaken the pupil's interest and intelligence.

Price, $1.00.....Post-paid

Public School Music

Northwestern University

THE SCHOOL OF MUSIC, located at Evanston-Chicago, on the shore of Lake Michigan, calls attention to its Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

P. C. LUTKIN, Dean, Evanston, Ill.

Supervisors or Special Teachers

A SPECIAL TEACHER to successfully carry on her work must have *Special Training*. The only School in the country devoted exclusively to the subjects of Music, Drawing, Physical Training, Penmanship, Domestic Science and Art, and Manual Training, as taught in Public and Normal Schools, is the claim of this School. Students wishing to take up this line of work, address the Secretary for catalog, copy of School Magazine, and full information.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

THESE FOUR PICTURES IN COLORS FREE

Do not confuse these with cheap pictures. They sell at Art Stores for 50 cents each.

TO every reader of this periodical who loves nature and animals and outdoor life, we will send without charge four beautiful pictures, which sell at retail for 50 cents each. These pictures are wonderful examples of the art of color photography, being printed on heavy plate paper by the most improved process. Framed at moderate cost they will make splendid decorations for den or cozy corner, or they can be used just as they are in any room of the house. The subjects represented are such as will appeal to nature lovers generally. Exact size of pictures, 10½ x 7½ inches.

Why We Make This Offer

The object of this offer is to acquaint you with our new "Library of Natural History" which has recently been published, after years of labor and at an enormous expense. It is the only work of its kind in existence illustrated from actual photographs, of which it contains over 2,000, besides many full-page plates showing birds and animals in their natural colors. Every living creature on the earth—animal and man—is described and pictured in this Library. In many cases special expeditions armed with cameras and dry plates had to be sent to foreign lands to secure the photographs from which the illustrations were made. The work is not technical or dry, but teems with the most interesting and instructive stories of animal life, told by famous naturalists and explorers. Over 2,000,000 copies have already been sold in Germany and England.

No Obligation

Your application for the pictures imposes no obligation to purchase the library. We will forward the pictures, together with a description of the books, by mail postpaid. You will not be bothered by agents or canvassers; this Society transacts all its business by correspondence.

As an evidence of good faith, enclose 10 cents (stamps or silver) for postage and wrapping. This will be refunded if you request it after examining the pictures. Mail the accompanying coupon promptly, as the supply of pictures is limited, and this advertisement will not appear again.

The University Society, 78 Fifth Avenue, NEW YORK CITY

CUT THIS OUT

The UNIVERSITY SOCIETY, New York

Please send me, postpaid, the four pictures you offer, together with a description of the "Library of Natural History." I enclose 10 cents for postage and wrapping, which you agree to refund if I am not perfectly satisfied. It is understood that the sending of this coupon does not in any way bind me to buy anything. Choir and Choral Magazine

A monthly publication devoted to the music of the church.

The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

OLIVER DITSON COMPANY, BOSTON

THE

Faelten System

of

Fundamental Pianoforte Instruction

by

Carl and Reinhold Faelten

BOOKS I, II, III, IV

Price, each, $1.25

A New Version of their Fundamental Training Course

The complete course is given with full explanations of all details and in progressive order, making it possible for every intelligent teacher to study and apply the course independently. Moreover, a number of new and valuable features have been added, which greatly increases the effectiveness of the course. The single features of each part are:

1. Explanations and definitions.
2. Writing exercises and oral exercises for work in the lesson and at home.
3. Ear-training exercises and ear tests.
4. Exercises for development of technique.
5. Pieces and studies.

One of the striking advantages of this system is that it is equally effective and practical for pupils of different ages, and that even very young children can be taught to show definite results at an early stage. In the experience of the authors it takes the average student from five to six lessons only to reach the pieces by Arthur Foote in Part II, and to play them in any major or minor key, and there is no reason why similar results cannot be attained by any teacher who carefully follows the directions of this course.

NEW SONGS

J. W. BISCHOFF

Five Little White Heads. D (b-e)	$0.50
Love, sings the Lark. B♭ (d-g)	.60
Two Hearts. 2 keys	.50
The Rose I give You. 2 keys	.50
Open to Me the Gates. (Sacred Song.) 2 keys	.50

New songs by Prof. Bischoff that are fully up to the high standard of all his compositions, and are characterized by the gracefulness, melodiousness, and artistic charm which have been the invariable attributes of their predecessors from the same pen, and have gained for them their enviable popularity. The composer's long and successful experience as a vocal teacher enables him to write in a manner peculiarly grateful to the singer; and these five songs are in his happiest vein. As usual in his songs, also, the accompaniments are admirably effective.

"Five Little White Heads" has a graceful rhythm and a piquant dash that are quite delightful. "Love, sings the Lark," with its beautiful words, fervid opening theme, and tender refrain, is an ideal love song. "Two Hearts" and "The Rose I give You" are excellent example of the best ballad style, and "Open to Me the Gates" is an elaborate sacred song in the oratorio manner. All five are well adapted for public performance, and none of them have any special difficulties.

"COBWEBS" and other Songs

By GERRIT SMITH

Op. 24

No. 1.	Cobwebs. A♭ (d-f♯)	$0.50
No. 2.	Billy and His Drum. B♭ (d-g)	.50
No. 3.	Dandelion. D (d-g)	.50
No. 4.	The Candy Lion. D (d-e)	.30
No. 5.	The Swing. F (d-g)	.30
No. 6.	Slumber Song. A (c♯-f♯)	.50
No. 7.	Learning to Play. G (d-g)	.50

A notable contribution to the lyrics of child-life are the six new songs by Dr. Smith. They are not juvenile jingles, intended for nursery performances, but are mature songs on subjects relating to childhood, and attractive alike to young and old. The words are selected from the charming poems of Abbie Farwell Brown, James Whitcomb Riley, and Robert Louis Stevenson.

The songs are all lightly fanciful, delicate, dainty, melodious, thoroughly vocable, and pervaded by a flavor of the musical humor. They contain no special technical difficulties and all are within a very moderate vocal compass. The accompaniments are finely and ingeniously conceived.

A set of altogether charming musical settings of very characteristic children's poems. They are to be sung to children rather than by them, although adults will find just as much genuine enjoyment in them.

A group of them would make an effective recital number. GOOD MUSIC.

"Thank you very much for the songs you sent me. They are beautiful and I shall take pleasure in teaching them to my pupils." OSCAR SAENGER.

"I have always admired your versatility in composition, and it seems to me that in these sketches you are especially happy in adapting a pure art style to the demand for "short sketch songs" which seem so popular with singers to-day. I shall call the attention of some of the leading singers of Columbus to this last series, for they are surely worthy of success"

J. B. FRANCIS McDOWELL,
McDowell's Musical Institute.

JOHN W. METCALF

Composer of "ABSENT"

Defend Us, O Lord! D (c-e)	$0.50
To My Heart. G (e-e)	.50
Leave-taking. D♭ (d♭-d♭)	.50
In the Land where the Dreams come True. A♭ (c-d♭)	.50
A Song of Gold. D (d-d or e)	.50

Modern Harmony

ARTHUR FOOTE, A. M.
and
WALTER R. SPALDING, A. M.

Price, $1.50

ENDORSEMENTS

"It is admirably clear, rational, and practical. The modernity of the illustrations and the freedom from pedantry in the pedagogical point of view make it an oasis in the land of harmony text-books."

DANIEL G. MASON.
New York, N. Y.

"After a careful examination of the 'Harmony' I have decided that it is just what I want, and I shall introduce and use the work in the University."

OLIVER R. SKINNER,
Bloomington, Ill. Wesleyan University of Music.

"It is the very thing I am looking for, and as you will receive through our college office a large order, you may see by it that I have adopted it as my text-book in preference to many others."

AUGUST GEIGER,
Gainesville, Ga. Brenan College.

"I shall use the book in my courses next year."

PROF. L. R. LEWIS,
Dept. of Music, Tufts College.
Tufts College, Mass.

"It ingeniously gets down to practical application and to results for which usually two or three books are required."

PROF. CARL V. LACHMUND,
Lachmund Conservatory of Music.
New York, N. Y.

"It is comprehensive, practical, easily understood, and thoroughly up-to-date. With your most able associate you have succeeded admirably in presenting that which ordinarily seems a dry study problem, in agreeable form."

EMIL LIEBLING.
Chicago, Ill.

"I received the advanced sheets of the Foote-Spalding 'Harmony' and would say that I am very much pleased with it, and have decided to adopt it in my classes."

N. J. COREY,
Detroit, Mich. Michigan Conservatory of Music.

"I always expect my students to study reference books which I recommend. Yours and Mr. Spalding's will from now on be mentioned first."

ADOLF WEIDIG.
Chicago, Ill.

LORENZO PEROSI AND HIS SACRED MUSIC

RAFFAELE SIMBOLI

On the 13th of December there was witnessed an unusual spectacle in Rome. From the Vatican emerged carriages drawn by white mules. What was about to occur was not at first understood, since nothing similar had been seen since 1870; then suddenly the news spread from mouth to mouth: Maestro Lorenzo Perosi was to direct the first performance of his *Resurrection of Christ*, his latest oratorio, and Pope Leo XIII not being able to be present in person, because of the old tradition of the "prisoner of the Vatican," was sending in solemn state the Cardinals Rampolla and Parrocchi to represent him. Other cardinals were present in large numbers, and although not summoned to the Church of the Holy Apostles, the flower of Catholic Rome, both political and intellectual, repaired thither.

Among the notables were: Mascagni, Sgambati, Mugnone, Marchetti, artists, literary lights, and critics of all nations. The ancient and aristocratic church was transformed into a small, elegant theatre, there were bursts of hearty applause, and more than 20,000 francs were collected for the poor of Rome. Perosi, pale and trembling, rose many times to bow his thanks. After this great success, Leo XIII, who had already repeatedly showed his liking for him, made him director of the Sistine Chapel, to assist the old master, Mustafa, and conferred upon him the gold medal *Pro Ecclesia et Pontifica*.

The rapid advancement of Perosi was the cause of much dissension and many polemics in the papers. He was very young, and had the pale, phlegmatic face of a young student. Many could not forgive him for having entered the priesthood, declaring that this habit would end by suffocating all the artistic aspirations of the talented composer, confining his faculties to a too limited field. Yet Perosi's music can hardly be called always sacred, for it is often full of dramatic passion. How would he be able to reconcile the exigencies of artistic life with those of the priestly calling? During the rehearsal of his oratorio there was always a crowd of charming young women, some quite fascinated by the young artist, who gave advice like the kind father of a family, but his position was somewhat embarrassing, and one of the most authoritative critics ended an article on Perosi with this suggestion: "Abbot Perosi, marry!"

The Catholics, on the other hand, asserted that no calling like that of the priest afforded the requisite calm necessary to compose sacred music, and that Perosi would never seek the easy successes of the theatre. Naturally the matter was not settled, and if to-morrow Perosi were to have an opera produced under another name, and after its success reveal his identity, only the Vatican would protest.

Lorenzo Perosi was ordained a priest in 1894, when he was but twenty-two years old, and celebrated his first mass in the Santa Casa di Lorento. There was a strain of religious mysticism in the family; two of his brothers were priests, and his father *maestro di capella* in the Cathedral of Tortona, his native city. This father, a fine organist, instructed little Lorenzo in his art, and the son soon surpassed his teacher. One Christmas eve, in the historical Abbey of Montecassino, Perosi was playing the organ, his music before him.

LORENZO PEROSI

Suddenly he threw the music away, and in a moment of happy inspiration, original melodies pealed forth, charming all the brothers present. For more than a year he taught music at Montecassino to the seminary students. He then traveled to complete his education. He was at Milan, at Ratisbon, where Dr. Haberl taught him counterpoint; then he lived for a long time in Venice, as director of music in the Basilica of San Marco. In May, 1897, his first composition was performed, and the critics were very kind. In the same year, on the 2d of December, his oratorio, *The Passion of Christ*, was heard. It was this work that revealed the gifted composer.

In March, 1898, his *Transfiguration* was performed in the presence of the present Pope, then Patriarch of Venice. In the same year, at the Fenice theatre, Venice, was heard *The Resurrection of Lazarus*, which was such a triumph that Perosi was recalled to the platform twenty times, although many declared that they had no faith in him.

After these works came the *Resurrection of Christ*, the *Massacre of the Innocents*, and finally the *Universal Judgment* and *Moses*.

His extraordinary fertility impresses one; he hardly understands pruning and rewriting, and confessed the same to a friend, Cameroni.

"With me, rapidity of composition is a necessity for my impulsive temperament. I must produce without interruption, spontaneously, always in a new field, and under the impulse of a fresh inspiration. I rebel at the tiresome task of revising and correcting. I might keep my works in a box for nine years, or even longer, but they would appear then without a change or correction, so much do I feel the necessity for giving vent to new ideas and new inspirations which come to my mind. All the more do I correct the instrumentation when it comes to a performance, but the work itself remains as it is.

Although the history of music is full of examples of wonderful compositions written without corrections, yet Perosi makes a great mistake in not correcting his, since often he could easily improve them.

A few words as to the form of his oratorios may be of interest. He chooses a subject, sacred and important, which lends itself to dramatic action, and which inspires him with themes. He uses the Latin text of the Gospels without changes or additions, only here and there a hymn, or sacred verses of the Church. Then he develops his theme with all the means at his disposal. On the back of the platform, when these works are produced, he masses his chorus, men and women dressed in black, in front of them the soloists, also in black. When they sing they stand; there are duets and solos. The orchestra, almost always directed by Perosi, has music assigned to it as accompaniment which is full of sentiment. Perosi's oratorios are quite different from the classic ones consisting of a narration recited or sung without relief; here, instead, is an actual dialogue, highly effective, and with many long cantabile passages.

The Germans consider it audacious and irreverent to represent sacred personages musically, hence they have a decided antipathy for Perosi. Pius X, however, loves the young composer, so much so that when he was elected Pope he wished that the first performance of Perosi's latest and unfinished work should be before him, and succeeded

in overcoming all the difficulties of old etiquette, which would have prevented him from hearing such music. The *Sala Regia* was chosen, the tenor Marconi sang, and the Pope was most content, and said so frankly.

On April 8, 1904, Perosi directed his *Universal Judgment* in the Costanzi theatre, Rome, which was crowded with representatives of the two aristocracies, the white and the black. Perosi was warmly applauded, rose and bowed his thanks several times, and finally the singers dragged him on the stage. Meanwhile a man and two women were seen weeping with emotion in the parquet. Naturally all eyes were upon them. They were the father and sisters of Perosi. The family are enthusiastic over their "good Lorenzo," but the Italian public expects still more of him. He is but thirty-four years old, and will doubtless produce even finer works.

THE MUSIC OF JAPAN

W. FRANCIS GATES

Every American has periods of self-congratulation over the advancement his country has made in the last century; yet Japan has made much of the same progress in a quarter of the time. Japan to-day makes use of all the methods and plans and inventions of the civilized world, and adapts them to herself and herself to them with more facility than does America. While the lower classes of Japan are still ignorant burden bearers, the educated upper class is the most progressive in the world. This is no idle statement; recent events and investigations prove it. Lord Roseberry has stated that if England acquires down-to-date efficiency, she must give diligent study to Japanese methods.

In religion and art Japan holds to her own, yet she is willing to learn what other peoples have to offer. Her religions are extra-insular; much of her culture is imported; so it is not too much to expect that Occidental art will be grafted on the Oriental stem in the course of years.

Already schools have been established to teach the music of the Western nations, and the teachers report that the Japanese youth are quick to learn the technique of civilized instruments. While the Japanese do not give a very warm welcome to Western residents, they do to Western learning, and the day may come when one will look to the Hermit nation, no longer Hermit, for the newest things in music and the latest fad in harmonic progressions, as we have been accustomed to look to the Russian school in recent decades. Perhaps the day will come when another Wagner may appear in that quarter of the globe.

The first division of Japanese music to feel the modification of European influences was that of military music. Doubtless the connecting link was the drum, which forty years ago was much more prominent in the military band than at present, both in Europe and in this country. The drum corps of the Civil War days is almost a thing of the past. But the Japanese easily adopted the military drum as it was similar to instruments of percussion used by all Asiatic peoples, and the military band music of civilization came to have a place in Japanese public ceremonials.

The most prominent division of the music of the Hermit nation, as it once was called, is that devoted to religious purposes. Music is a feature of the worship of the Buddhist and Shintu temples, where the tonal part of the services somewhat resemble those of the Catholic faith. The chants are impressive, but are conducted with a liberty as to tones entirely unusual in Occidental services.

Music forms a part of the curriculum of every well-educated woman, and she is expected to become proficient on the stringed instruments and to sing well. But among the men musical ability is not held in high esteem, owing to the fact that it is most prominent among the wandering minstrels, the troubadours of Japan. In this will be seen parallels with Western history — where musical artists once were nomadic and where musical education is left largely to the women.

The vocal music is largely of a plaintive, melodic style. The Japanese care little for the harmonic element and the people generally are still in the stage where an endless succession of consecutive fifths is held beautiful. Europe passed through that stage a thousand years ago. At every secular function the company is entertained with their tinkling instruments of the guitar and mandolin families and with descriptive or amatory songs.

Japan has paid much attention to her prose and especially to her poetry. The literature of the country is highly developed and the poetical spirit of the people has long been remarked. But the science and history of the music of this people has been much neglected and the Japanese are less ready to take up this branch of civilized art than they are other forms of Western progress. With the development of the national military feeling, shown in the recent combat with Russia, and with the remarkable preparedness for war, based on an appropriation of everything European and American that could be of use in forwarding the success of the Mikado, there has come a readiness to appropriate the music of the military bands of musical countries, and in this *répertoire* there is found much of the best that has been written, for nearly everything from a Bach fugue to a Wagner opera is arranged for this combination of instruments.

In the homes of the European residents, especially at Tokyo, are found pianos, and many instructors in the colleges have been imported from Europe and America and these have their own instruments, as also do the missionary schools. Japan is hearing civilized music, and though it takes to it at first about as readily as a boy does to green persimmons, it is ready and greedy to adopt whatever is European, bitter though it may be.

In fact, so great an anxiety has been prevalent to modify the Japanese culture and civilization to that of European models, that there is a strong party whose slogan is "Japan for the Japanese," and who decry the putting away of the historic customs of Japan for the "new-fangled" things of the West. Now that the court dress is European, the court music European, the army drill and ceremonials European, the implements of war European, the instruments of science and the implements of agriculture American and European — at this rate the metamorphosis is so great that a Japanese of only a quarter of a century ago would consider that his country had gone to the dogs.

The imitative ability of this people is so great that they soon will be making all they require in these lines without coming to us, save for models. As soon as they take up the piano more generally they will begin to manufacture their own instruments, and with their quick adaptiveness and manual skill they will play it well, too.

Now that Western system of music has something of a hold on the schools in which the young generation is being educated, we may expect it will not be long until the elders are importuned to buy a piano — they will not have to go through the cabinet organ stage that America did. Many Japanese young women are getting their education in missionary schools where the piano and organ are daily heard, many of them are practicing on these instruments, and, as said at first, American teachers are on the ground to establish music schools and are finding a ready response. Who can say that Japan may not furnish the great artists and the great composers of fifty years hence, as the Teutonic and Slav divisions have for the last century?

ABOUT THE QUARTET CHOIR

Considerable discussion has been aroused in local musical circles by the paper recently read by Dr. Albert Ham, organist of St. James' Cathedral, Toronto, before the Ministerial Association of that city. In his address the speaker declared, "The quartet choir is a pernicious institution," and otherwise took exception to modern methods in church music.

The question as to whether a choir should be voluntary or paid, the speaker said, was a serious one, which he would not argue, but he would content himself with a quotation from Canon Farrar: "The spirit of professionalism in a choir is the ruin of the spirit of devotion in a congregation."

"Is there not too commercial a spirit existing among us to-day?" asked Dr. Ham. "I have heard recently," he went on, "of cases of actual bribes being offered to young singers to forsake their own church for another. Surely this system is all wrong; it is not honorable, and it is part of the duty of ministers and choirmasters to discourage and discountenance such a state of things.

"The taste for the dramatic, or perhaps I should call it the theatrical in music," continued the speaker, "is much too prevalent, and is, I think, leading to a great deal of mischief. Nowadays church organ accompaniments describe everything, 'the lions roaring after their prey,' 'the mountains skipping like lambs,' and the 'waves raging horribly.'

"All of this sort of thing is meretricious and out of place in public worship, and organists or choirmasters who encourage such childish antics are unworthy to hold a position in the Church."

FRANZ PETER SCHUBERT AND THE GERMAN SONG FORMS

EDITH STERLING NICHOLS

On the thirty-first day of January, in the year 1797, there came into the world, in a suburb of Vienna, one of our immortal composers, Franz Peter Schubert. He was the thirteenth of fourteen children, born to a poor schoolmaster, who was the son of a peasant. To this boy, born in poverty, possessing no physical attractiveness, and having ordinary environment, was granted the rich heritage of divine musical genius.

Destined to mark an epoch in the realm of song, to leave to the world a priceless wealth of music most prodigious in amount for the short duration of his life, and apparently to exert an unending influence upon the music of all time, this lad grew up, advancing in a short time beyond his father's instruction, with whom he acquired a knowledge of violin playing and the rudiments of music, and arousing the wonderment of the parish choirmaster, Michael Holzer, with whom he was placed for general musical instruction, including violin, piano, singing, organ, and thorough-bass. At eleven, Franz was first soprano in the Lichtenthal choir, singing with beauty of voice and expression, and, when occasion offered, playing violin solos in the service. All this meant progress, and a little before his twelfth birthday he was admitted to the Imperial Convict School, one in which boys were trained for the court chapel, in addition to being taught the usual branches of education.

Although the physical life of the boys at the school was sadly lacking in comforts, the practice room being unusually cold in winter, and eight hours and a half elapsing between the only two meals of the day — "a poor dinner and a wretched supper," as Schubert expressed it in a letter to his brother Ferdinand in 1812 — one can readily imagine the real stimulus and inspiration which must have come to the boy in the musical atmosphere of the life of this school, with its constant preparations for church services, working at motets, masses, and choruses by the best composers; with the daily rehearsals of the boys' orchestra, in which Franz did so well that in time he became first violin, taking the leader's place when he was absent; and with the companionship of musical boys. The leader of this juvenile orchestra, named Spaun, took a great interest in the little boy. One day Franz confided to him, blushing and confused, that he had already composed much — in fact, he couldn't help it — and should do it every day if he could only get the music paper. Spaun, whose sympathies were aroused, appreciated the situation, and was generous in supplying the necessary paper from time to time.

In 1813 change of voice took place with Franz, and though he might have remained at the school a little longer, he decided to prepare for teaching in his father's school. There he taught until the end of 1816, three years of drudgery, for teaching was not to his taste. However, the musician in him was thoroughly alive and active. In 1814 he composed a mass, pronounced by a trustworthy critic to be the most remarkable first mass ever produced except Beethoven's in C; a light opera in three acts, entitled *Des Teufels Lustschloss;* three string quartets; a number of instrumental compositions in shorter forms; and seventeen songs, among them *Am Meer* and *Gretchen am Spinnrade.* The year 1814 is to be noted as the time of his meeting the poet Mayerhofer, fifty-four of whose poems he set to music, and whose friendship, formed at that time, existed throughout his life.

The year following proved extremely prolific in compositions, including two symphonies, a *Stabat Mater,* two masses, a large number of instrumental works, several operettas, and one hundred and thirty-seven songs. Among the latter were *Erlkönig, Haidenröslein, Schafer's Klägelied* and *Rastlose Liebe.*

Teaching became intolerable to him. Toward the end of 1816 he ended his vocation as a teacher. This was possible through the help of Franz von Schober, a young man of good birth and slight means. He recognized Schubert's genius and discovered the uncongenial surroundings of his life as a poorly paid school teacher, whose duties afforded him small time for composition. This young admirer of Schubert persuaded his father to allow Franz to live with him at his lodgings, thus enabling the composer to give himself freely to his music. The life of this period was one of pleasant Bohemianism with congenial comrades. The circle comprised young men of varied abilities. When a stranger was introduced, Schubert immediately questioned: "Kann er was?" ("Can he do anything?") and was therefore nicknamed "Canevas." Schubert had a true genius for Bohemianism, and

FRANZ PETER SCHUBERT

though the circle was not strictly a musical one, Schubert was the centre of it, and the meetings went by the name of "The Schubertiads." Occasionally ladies were invited, and Schubert would sit at the piano with delight, improvising waltzes and other dances for the company. This unfettered life afforded him ample time for composition, and the years were overbrimming with musical activity.

The summer of 1818 was spent in Hungary, as music teacher in the family of Count John Esterhazy, to whom Schubert had been warmly recommended. This was of benefit to his art and to his health. Here he came in touch with Hungarian music; here he received the healthful influence of out-of-door country life. But he was homesick for Vienna and the congenial friends there. Biographers — some at least — have represented that Schubert's heart held a romantic and hopeless passion for Caroline, the elder of the Count's two daughters, who, at that time, was but twelve years old. The story is improbable. That which comes nearest to suggesting it is the anecdote told by Kreissle that the Countess (Caroline) once asked Schubert, jokingly and with reproach, why he had never dedicated anything to her, to which question he replied: "Why should I? Is not everything I write dedicated to you?" Even if there were proof of this incident, and there is not, such a remark might easily slip out with nothing behind it. More to the point is the confession from Schubert himself to Hüttenbrenner, when the latter asked him if he had ever been in love. Schubert replied yes, he had dearly loved one girl and had hoped for three years to marry her, but that lack of a regular salaried position had prevented it. This girl was the daughter of a school teacher.

For a few years (1819 to 1821 inclusive) Schubert roomed with his poet-friend, Mayerhofer. But, whoever his closest friends might be, and however near to him, there was one companion faithful to Schubert from birth to death, and undoubtedly the spur to additional work, — Poverty. Unlike Mendelssohn, who received careful and continuous musical culture, and whose life was ever a tranquil one of ease and comfort; unlike Schumann, to whom was granted the inspiration and happiness of a woman's love and tenderness; debarred from nearly everything considered indispensable to happiness, Franz Schubert lived, struggled, and died, giving a priceless legacy to the world in return for its then indifferent regard. But his nature was not an unhappy one; it was simple, full of the merry light-heartedness peculiar to the Viennese; and while he was poor and hard pressed, his wants were few.

Sir George Grove writes: "Schubert was neither selfish, sensual, nor immoral. What he was in his inner man we have the abundant evidence of his music to assure us. Whatever the music of other composers may do, no one ever rose from hearing a piece by Schubert without being benefited by it. Of his good nature to those who took the bread out of his mouth we have already spoken. Of his modesty we may be allowed to say that he was one of the very few musicians who ever lived who did not behave as if he thought himself the greatest man in the world. And these things are all intrinsic parts of his character and genius."

Publishers held back. For years they refused to have anything to do with his songs, however much enthusiasm had been aroused in private circles, and later on — indeed to the end of his life — they always found his price too much, and refused to give him more than a pittance. In the last year of his life he sent the manuscripts of six of the immortal *Winterreise* songs to a publisher, and received for each only a florin (twenty cents). Three weeks before his death Schubert received a letter from Schott's Sons, saying that certain of his pieces had been found "too difficult for such trifles," being the Impromptus, the progenitors of the short forms characteristic of the romantic school. But one cannot blame the publishers too much. All innovations and advances along any line are forced to break through a wall of indifference, timidity, and devotion to the customary and the accepted on the part of people in general. And Schubert was an innovator, in that he was the pioneer and real founder of the German *lied* — the *Kunstlied* or art song.

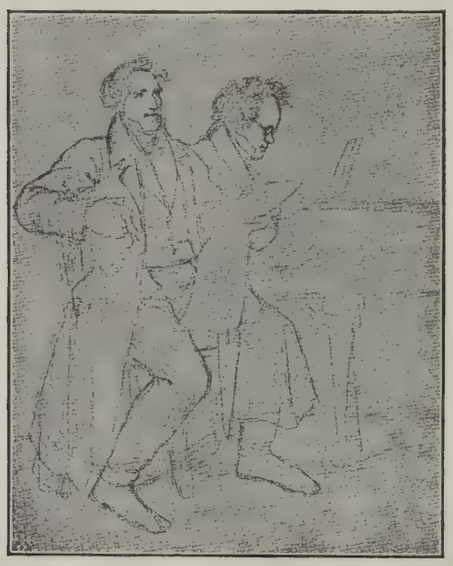
Bach, Handel, Haydn, Gluck, Mozart, and Beethoven had attained marvelous and imperishable results of artistic beauty in the different forms of music, and though all composed songs, to a more or less extent, none are considered by posterity as famous in song writing. Yet in the songs and the operas of almost all these composers there were divine and potent touches from which Schubert's mind undoubtedly drew inspiration for his work in song, notwithstanding his supreme spontaneity.

It may be of interest briefly to speak of the principal characteristics of the German song forms. The Kunstlied, or art song, of which Schubert was creator, differs from the Volkslied, or folk song, chiefly in that it is *durchcomponirt,* or through composed, the melody and the accompaniment following the changing moods and varying feelings expressed in the several verses of the text, instead of being repeated in each successive verse, as is done in strophe form. The Volkslied was originally conceived as a mere melody, to which an accompaniment was often added. The history of the Volkslied is in itself a subjec

full of interest, tracing back to the Mastersingers, and still further to the Minnesingers, nobles by birth, whose inspirations were full of poetry, sentiment, and charm. These sang of love and of the beauties of nature, lived far back in the thirteenth century, and were contemporaries of the Troubadours in France.

As a rule, the harmonies of the Volkslied are simple. The melody usually consists of two short parts, similar to each other, the first leading from the tonic to the dominant, and the second *vice versa*. Primarily the vocal expression of the hearts of the people, the folk songs have in them the genuine ring and the truth of utterance which have been, and will be, for all ages the germ and the spring of truth and beauty in all forms of music, particularly vocal. The form and modulation of the folk song are extremely simple, while the art song, even when composed in strophic form, as it occasionally is when there is small change of sentiment and no call for variation of color, shows more expanse and richer modulation. In the art song the accompaniment, forming, with the melody, a setting to the poem, makes itself felt independently; and it is along this line that Schumann advanced the art song, so developing and perfecting this part of the song as to make it often more prominent in beauty and force than the melody.

The term Ballad has been, and is, very loosely and diversely used. At the present time a ballad in music usually signifies a sentimental composition, simple, unpretentious, and having two or more stanzas, the music often



SCHUBERT AND VOGL

being alike for each of them; such are English, Irish, and Scotch ballads. But this is not the Ballade, or art ballad, of the Germans. Far beyond these in musical development is found the art ballad. It is epic — full of action, dramatic vigor, and imaginative force.

Just as the art song was differentiated from the folk song in its becoming *durchcomponirt*, so the art ballad became a distinct thing from the old-fashioned setting of the popular ballad. In some of the art ballads the dramatic predominates, in others the narrative, but invariably both are to be found.

The Romance lies between the art song and the art ballad, having the lyric qualities of the former, combined with the narrative descriptions of the latter, with more of the subjective and less of the deeply impassioned and dramatic.

Schubert was master of song in strophe form and of song *durchcomponirt*, including both art song and art ballad.

One must not lose sight, however, of the fact that he was not exclusively a song-writer, for in the short space of seventeen years he wrote six operas, nine symphonies, masses, quartets, trios, sonatas, polonaises, impromptus, etc., as well as over six hundred songs.

His unfinished Symphony is well known, so is the No. 9 in C major. For over forty years the former was unknown; until it was produced under Herbeck's direction at Vienna, Dec. 17, 1865. Its first performance in England was in 1867 at the Crystal Palace, London.

Schubert's chamber music is known and esteemed, as well as his songs. Whether it be a symphony, quartet, or song which charms, his spirit is always present; it thoroughly permeates every bit of his music; every tone is a breath from his soul, every melody a message of beauty to the hearers.

Franz Schubert died Nov. 19, 1828. He was confined to his bed just five days, though he was in poor health for some time previous. He was able to sit up a little during these last five days, and even corrected the proofs of the second part of the *Winterreise*. But all was dreary, lonely, and against him. Poverty pressed closely, and weakness and disease encompassed him. Delirium came, with fever, and he imagined himself in a strange place. His loving brother Ferdinand assured him that he was at home. "No, no," said Schubert, the hand of death upon him, "that's not true, Beethoven is not here." Soon he breathed his last. He was buried near Beethoven, as was his wish, and on the monument now standing at the back of his grave is this inscription: —

"Music has here entombed a rich treasure,
But still fairer hopes.
FRANZ SCHUBERT lies here.
Born January 31, 1797.
Died November 19, 1828.
31 years old."

Entombed, yet not entombed, for his music had within it the springs of immortal life, and the "fairer hopes" have not been unfulfilled.

ABOUT THAT "MATTER OF EQUAL TEMPERAMENT"

To the Editor of THE MUSICIAN: —

Dear Sir: Referring to a letter in THE MUSICIAN of December, 1905, under the heading of *The Matter of Equal Temperament*, will say that having made a scientific study of tone relations, and being a professional tuner, it may not be out of place for me to offer something in answer to the letter referred to. The writer says: "Mr. Maitland claims that Joachim does not play in the tempered scale," and continues with the query whether or not the violinist shall use the tempered or untempered scale. He thinks it inconceivable that Joachim or any violinist could play untempered or perfect intervals with a piano or other instrument tuned in tempered intervals. He also mentions that Helmholtz in his acoustical work on *Sensations of Tone* says that in quartet work violinists use perfect or just intonation in chord effects. The writer again says that there is authority for believing that Spohr played in equal temperament, or the tempered scale. The writer has found much contradictory evidence, which, as he says, makes this a complicated and puzzling subject. And it is not strange, considering that no system of teaching tone relations has been introduced into the study of music, consequently a good deal of confusion seems to have existed on the subject.

After much scientific study and investigation of intonation, I would answer the writer's questions briefly by saying that the violinist must first become master of the intonations of all intervals both tempered and untempered. For this training he must look to his teacher as well as to study the matter himself. When this is accomplished, he must develop his musical judgment and taste in order to apply his ability to good advantage.

Among eminent artists, it is found that their intonation varies according to the passage performed, and also to the instrument they are playing with. If, with the piano the violin has a sustained note on a unison or a close interval, then he must temper the note with the piano or it will surely be a discord, but if the harmony is more or less broken, the violin can in many places play in just intonation more effectively.

Again, the violinist is seldom fortunate enough to play with a piano in perfect tune, and even then the same tuner may not tune two instruments exactly the same. He may not set the two temperaments alike, and what is more, the piano may have been tuned yesterday and to-day found to have changed slightly. So the violinist has a new problem to solve every time he plays with any tempered instrument. Hence the necessity of becoming master of intonation if he would always play well.

The writer says, "A first-rate piano tuner tells me the differences between equal temperament and just intonation are too minute to be heard," and continues, "My own experience does not coincide with this."

The writer is correct. To be sure there is but little difference between the tempered and untempered fourths or fifths, but in the thirds and sixths there is a very decided difference. The major third has nine times more dissonance than the fourth and twelve times more than the fifth. By changing a tempered to a perfect third the other intervals will be quite imperfect. As illustrated by the writer, the sixth open D with B on the A string when made perfect gives a bad fourth, from the same B to the open E string. And to play a perfect fourth from B to E the finger must be moved up on the string until the perfect fourth is reached, which is a difference between the two B's of about one sixth of a half tone.

In the chords mentioned by the writer of G♯–B–E and G–D–B to play both chords in perfect intonation, the B must be changed as mentioned above.

There may be passages where this B might be tempered somewhat, or even all of this dissonance put into the interval effectively. Mr. Kneisel often effectively plays his intervals in this manner in his quartet work.

In regard to the violinist testing his intonation by the piano, he can do this only in the tempered scale and then only when the piano is in good tune. The violinist tunes perfect fifths, while the fifths on the piano are tempered, so the instruments are not perfectly together in the beginning.

As a result, violin intonation resolves itself into a question of musicianship and a knowledge of tone relations sufficient to adapt a performance to existing conditions. In practicing the violin, the player should know what kind of intonation he is using. A special study and test should be made of all intervals and the ear trained to distinguish these fine differences. The ear can be most wonderfully improved in this respect by systematic training. All well-known artists are much indebted to the mastery of intonation.

LESTER C. SINGER.

AMONG THE WELL BRED

Miss M. Carey Thomas, dean of Bryn Mawr, says in the *Pittsburg Press:* A habit which, like bathing, has nothing to do with expense, and yet which constitutes a great social difference, is the habit of washing your face and dressing your hair and changing your gown for dinner. This you are expected to do in the best society out in the world, so why not here? A large body of experience proves to us that people are not agreeable to each other or to themselves in the evening unless they have gone through this necessary form. Everybody can make some kind of a change and especially those of you fortunate enough to own two gowns owe it to yourselves to form the habit now, while you are in college, of putting on a different gown for dinner.

You do not wish to separate yourselves from well-bred people by your personal carelessness in little things. I do not wish to encourage you to buy more than you can afford, or encourage rivalry in dress among you here or elsewhere. But there need be none. Just simply wear the best you have brought from home with you, and in leaving home for college bring your best. Let us wear our best and look our best and act our best for each other. This will not interfere with your studies at all. It is as easy to put on one dress as another, and in looking our best we feel our best, and make ourselves and all those about us happier than if we sat down to dinner, and afterward spend the evening in the same gown we have worn during school hours or taken our evening stroll in.

THE PIANO

Special articles on the Literature and Pedagogy of the Piano will constitute this Department. Methods or devices used successfully by teachers will be explained here. Correspondence with teachers and students of the Piano about matters of general interest is solicited. Address the Editor of THE MUSICIAN.

THE MAGIC PEDAL, THE SOUL OF THE PIANOFORTE

(*Continued*)

MARY VENABLE

The Sostenuto Pedal

Placed between the soft pedal and the damper pedal is the sostenuto pedal. Its *proper* function is to sustain one tone or a single chord to the exclusion of all others. There are, however, two kinds of pedals called sostenuto, one of which is of little value as it acts like the damper pedal, save that it removes the dampers from the strings of the lower octaves only, while the damper pedal removes them from all the strings excepting those above E♭ *in alt*, which need none as the tone produced by them is evanescent and not powerful. The so-called sostenuto pedal just referred to (which is in reality a partial damper pedal) is unsatisfactory, for while any string struck in the lower octaves may be made free of the dampers by means of this pedal, so that the tone elicited from it continues to sound, so also are all the dampers of the lower range of the piano, thus allowing all the strings of the entire division controlled by the third pedal to vibrate in sympathy with each other and also with all the other strings whose dampers are raised with the fingers in the upper and middle parts of the piano, thus producing an effect of blurring nearly as bad as when the principal damper pedal — the first — is in use.

But the employment of the true sostenuto pedal produces no such effect of blurring, as it is not a partial damper, not even in the sense in which each key is; for this real sostenuto has no power to *raise* the dampers; it merely *keeps raised* such as are acted upon at the moment this pedal is put down. As long as the foot maintains its pressure on the third pedal the tone of the sounding string, whose damper is kept raised by pressure on the third pedal, will continue until it dies away of itself; but it may be renewed by a fresh finger stroke. When the pedal pressure is removed, the damper falls upon the string, stops its vibration, and the sound ceases. This variety of third pedal has no effect on tones produced *after* it is put down, as it holds up only the dampers raised at the moment it is pressed down. No tone can be sustained by the third pedal, which is sounded after it is pressed down.

This kind of pedal is considered a very ingenious and artistically valuable piece of mechanism by modern players and musical thinkers, who have weighed the many advantages which can be derived from its use. The invention of one Debain, a Frenchman, the sostenuto pedal was at first called *Debain's prolongement;* and, bought and improved by Steinway, it was applied to his piano in 1874. Strange to say, although the patent on this pedal has expired, and many American piano makers are now using it, with success varying in proportion to the sonority of the instrument to which it is applied, the sostenuto pedal is still but little known in Europe; yet so great was Liszt's delight in it that he wrote to Steinway, "I can only sit and admire the wonderful results in tone, strength, and completeness of this new instrument. That you may have an example of what can now be done with the piano since your wonderful sostenuto pedal permits the longer sustaining of tones, I send you two examples: one the *Dance of Sylphs* of Berlioz and the other No. 3, of my *Consolation.*

Liszt — *Consolation, No.* 3

"To-day I wrote the opening measures of these arrangements as they can now be played since you have added this pedal to the piano. If you wish it, I will with pleasure rewrite the whole transcription, with special view to this wonderful addition to the piano." The measures chosen illustrate how, by means of the third pedal, the bass tone can be sustained, while the fingers produce, connect, and sustain tone, with a perfection of purity and a clearness which would be impossible were the damper pedal employed to sustain the bass tone D♭. The damper pedal may be freely used in addition, to deepen the richness of the tone, without blurring it.

The two pieces of which Liszt wrote were composed by him for the piano, as an illustration of the use of the third pedal; but in many other compositions we find passages, both long and short, which apparently have been written with its use in view. Such is the case in many measures of the Introduction to the Chopin Rondo in E♭, where the C♭ in octave should be sustained as a pedal point with the third pedal, while in the middle and upper parts of the piano the hands play passages comprising many different tones which do not belong to one harmony. In order to sustain the tone C♭, the composer himself, and many editors of this work, mark the damper pedal as held down continually. But by employing the sostenuto pedal to raise the two dampers from the strings sounding C♭, and from these strings only, the tone of the two C flats can be sustained according to the composer's intention, without blurring the harmonies; then, later, the first pedal can also be employed to advantage for the general effect.

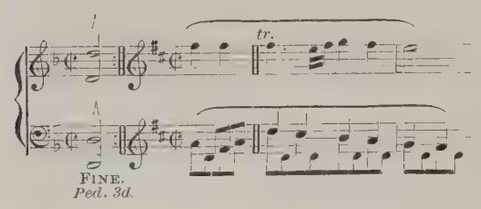
Busoni, the eminent pianist and Bach specialist, in his edition of the *Well-tempered Clavichord* shows some of the advantages of this pedal. He says of the twenty-eighth measure of the Prelude in C minor in the first part of that work, "The artist must know, among other things, how to husband his strength. This consideration makes the addition of a hold 𝄐 over G in the left hand appear justifiable; it should lend to the bass a certain organ-like ponderousness, and throw the presto —'bearing down all barriers' with its irresistible flood — into a yet stronger relief; the point of rest thus gained before this quasi cadenza will enable the player to recover the necessary lightness and elasticity which are apt to suffer from twenty-four measures of an obstinately monotonous movement. Finally, this same left-hand G may be transformed, by adding the lower octave and employing Steinway's third pedal (*pedale de prolongement,* or sustaining pedal), into an effective six-measure organ point."

Similar passages, where the third pedal is an effective aid, occur in Bach's *Organ-Fantasie* in C minor, Saint-Saens' G minor Concerto, Chopin's Prelude in A♭ and F♯ minor Nocturne, also in innumerable other compositions. In many cases, all three pedals can be used together advantageously. Often, as in Liszt's *Venezia e Napoli,* this is almost a necessity, in order to obtain the best color effect. While the fingers on the keys aid the right foot to correctly connect and sustain tone, the left, if of sufficient breadth and strength, should press simultaneously the soft pedal and the sostenuto pedal. For the unfortunate pianist who cannot do this, there remains but the hope that some enterprising piano builder will soon make it possible to lock the soft pedal down, as can be done with the practice stop sometimes found in cheap pianos, or, in some other way, to make it possible and easy for the performer to use all pedals simultaneously.

Venino, in his *Pedal Method,* says of the Gavotte and Musette in D minor in the English Suite of that key, that "the trio (played *una corda* and *pianissimo*) is another example where the damper pedal can be used from beginning to end without change. Instead of detracting from the piece, the pedal thus applied rather heightens the effect. The entire part rests upon the organ point D in the bass, and is in imitation of a bagpipe (musette)." However, this effect of drone-bass is better produced both in this and in the Musette from the G minor English Suite, by employing the third pedal. In the D minor Gavotte, the sostenuto pedal should

be used immediately after the closing double octave in D, first releasing the highest D with the fingers so as to sustain only the three lowest tones as bass and upper basses, throughout the following Musette.

Bach — *Musette in D minor*



Regarding this desirable sounding of certain tones over their apparent duration as indicated by the notes, Bülow says of the measures 19–22 of the second part of the second movement of the Sonata, Op. 101,

Beethoven — *Sonata, Op.* 101

"The composer's direction to make the organ point D♭ sound on audibly through four measures has the disadvantage, it is true, of confusing the effect of the parts in canon; but here, as often elsewhere, secondary considerations must be sacrificed to essentials, — the latter being the sensuous tonal effect." The conservative Reinecke agrees with him on this point, and says, "These bars will sound somewhat indistinct and vague, as Beethoven requires the raising of the dampers through all four bars, in order that the low D♭ may continue sounding as a pedal point. This confusion of sound can be somewhat lessened, if, during the first two bars, one plays the two upper parts with one hand (provided that the stretching capacity of the right hand admits of it), and holds down the D♭ (on the other hand) uninterruptedly with a finger of the left hand, and now lets the dampers fall again more often." Comparatively few hands are capable of the extreme extension required in following Reinecke's suggested manner of performance; but it is an easy matter to play these measures so as to sustain the pedal point without blurring the imitations, if, instead of using the damper pedal as indicated by Beethoven, with the signs "Ped." and star, the third pedal be employed as indicated in parenthesis in the above example. In addition, the damper pedal may be used as much as the player desires, for color.

Silent Repressure of Key to Sustain Tone

Beauty of tone is dependent not only upon the manner of attack and release of the keys, but also upon the way in which the damper pedal is used; its attack, release or partial release, the frequency of its application, and upon the number of pedals used. It is interesting to observe what a variety of tints may be obtained in even a single tone *after* it is produced. Let the pedal sustain a tone while the finger leaves the key; then silently replace the finger on the key and release the pedal; finally, press the pedal frequently, at the same time allowing the key to rise several times, but halfway, only to be again depressed; then modify the tone still more by means of the soft pedal. All this, which takes so long to state, should be rapidly done, and there will be heard a pleasing diversity of tone coloring, the purity of which depends upon the instrument even more than upon the player. If, before the tone has ceased, the soft pedal be used so as to make the strings strike against the sides of the grooves in the hammers, the tone becomes very plaintive — the slight twang of the string is almost like a cry; but there is always danger in such attempted use of the soft pedal, that the tone will be harsh, metallic, and unpleasant. An intimate knowledge of the individual instrument played is necessary when such nicety of touch is desired.

In a similar manner (though more slowly) by the alternate use of fingers and pedal, purity of melodic tone may be maintained even though both hands are used to accompany the melody with different harmonies. The melodic vibrations are not only sustained but are also renewed and strengthened each time the pedal frees the strings from the dampers. In the following example the upper staff represents the effect of sustained melody in thirds, and two lower staves contain the notes to be played, and show how this effect of sustained tone can be attained. The composer has devised the sign [____] as an indication that the hand, which has been removed from the keys producing the melody in order to play an accompanying chord, should return to its former place, and, with convenient fingers, silently press the same keys again, so as to keep the dampers raised from the strings after the pedal pressure is removed, thus obtaining sustained and unbroken tone, and not renewing the attack of the hammer upon the string. In this way, the unblurred melody can be played legato, while the accompaniment can be played staccato.

Gorno — *Pedal Studies, Part II, No.* 54

The only way in which these effects can all be obtained in this, and in other passages similar (such as are constantly occurring in piano music), is to make use of this silent [____] pressure of finger upon key, in combination with the use of the damper pedal.

Grieg — *In the Spring*

The closing measures of Grieg's lyric piece *In the Spring*, Op. 43, can be correctly played only by means of silent repressure of the fingers upon the octave B, which the left hand was obliged to quit in order to play the melodic F♯ on the highest staff. Grieg's own notation for the left hand consists of the octave B written in the customary manner, as a dotted whole note; but for the purpose of clearly demonstrating the means by which bass, melody, and inner voices can be connected to those in the succeeding measure without blurring the tones of the dotted half notes D♯ and D♮, the bass octave in B is here so written that the silent replacing of the hand upon these keys on the second beat can be indicated by the sign [____]. The hand must be used in this manner, and the pedal employed twice in the first measure, so as to sustain D♯ and connect it to D♮, without blurring either of these tones, while the bass is continuously sustained, for the dampers of the bass B strings are kept raised by the alternate use of fingers and of pedal. This is the only way of playing so as to interpret Grieg's conception of legato in all the parts in this orchestral close, and a distinct progression of the tones of the interesting fourth voice, D♯, D♮, C♯.

Gorno — *Part II, No.* 51

The silent pressure of the fingers may be used to make an effective close to an arpeggio. After it is played, and while it is being sustained by the pedal, silently replace the fingers on certain selected keys and then release the pedal, as shown in the third measure. The chosen tones, corresponding with the keys pressed, will continue to sound while others, released both by pedal and fingers, have ceased, and the richness of these sustained tones may be increased by again pressing the pedal, as indicated in the fourth measure, on the pedal line.

DO YOU REST PROPERLY?

Remember that the most complete and the most natural rest should come at night when, the day's bustle and worry over, the tired brain and body is given an opportunity to throw off the strain of work from nervous tension. Not one person in ten knows the benefit to be derived from real rest, because she does not know what real rest is, says the *New York Mail.*

Lying with stiffened spinal muscles, constrained chest and head bolstered up on large pillows, often the hands clinched and face drawn into grotesque shapes — that is not real rest.

So much wasted energy when life is so short and so much energy is needed for necessary work and so much more for necessary enjoyment!

It is not easy to learn relaxation, but it can and must be mastered before one can in any wise get that full measure of life and health which is his rightful inheritance. Relaxation cannot be taught; it only comes with intuition and becomes easy with practice, just as one forms the habit of waking at a certain hour in the morning.

NOTES

The thirteenth annual May Festival of the University of Michigan took place May 10, 11, and 12, at the University Hall, Ann Arbor. The Choral Union, the Thomas Orchestra, and the following soloists participated during the three days' festivities: Lillian French Read, Grace Munson, Charlotte Maconda, Isabelle Bouton, Frances Caspari, Glenn Hall, Herbert Witherspoon, Giuseppi Campanari, Ellison van Hoose, Gwilym Miles, William Howland, Fred Killeen, vocalists; Brahm Van den Berg, pianist; August Schmidt, organist, and Frederick A. Stock and Albert A. Stanley, conductors.

The choral works included *Stabat Mater*, Op. 58 (Dvorák); *A Psalm of Victory*, Op. 8 (A. A. Stanley), and *Aïda* (Verdi). A large share of the success of the festival, musically, is due to the work of Director Stock and his men.

Owing to the failure of the citizens of Ann Arbor to support the festival, a rumor is credited to the effect that there may be a suspension of the regular May Festival series of concerts next season.

* *

R. G. Weigester, formerly organist and choirmaster of the First Baptist Church, Elmira, N. Y., has been appointed to a similar position at the New York Avenue Church, Brooklyn, N. Y.

* *

Jessie Ayers Wilson presented an attractive program at her recent organ recital in the Euclid Avenue M. E. Church, Toledo, O. She was assisted by Mrs. Warren S. Herron, soprano. Among Miss Wilson's offerings were Guilmant's First Sonata, Op. 42, Moskowski's *Serenade*, Bach's Fugue in G minor, Buck's *Variations on a Scotch Air*, and Brewer's *Springtime Sketch.*

* *

An interesting program was presented on May 9 by the choir of the Church of the Nativity, of Brooklyn. Those who participated were, Alice Kunkel, soprano, Dr. Charles Nathan, basso, William James, tenor, and Edward Henry Zitzman, cornetist. John William Cresswell, conducted.

* *

Carrie Burpee Shaw, of Rockland, Me., is now the organist of the Methodist Church at Thomaston, Me., where a new Carnegie organ has been installed.

* *

Warren A. Locke gave a special evensong service at St. Paul's Church, Boston, Mass., on April 29. It suggested strongly of a memorial service in character. Among the numbers were excerpts from Mendelssohn's *St. Paul*, *Magnificat* and *Nunc Dimittis* in E♭ by H. J. Storer, with the same composer's familiar setting to Hymn 404.

* *

John de Heck has been appointed organist at St. James' Episcopal Church in Cleveland, O.

THE VAGRANT PHILOSOPHER

WILSON G. SMITH

My friend Vagrant entered my studio in the midst of a rather heated session. The *pros* and *cons* were flying about like snowballs in a school yard after the first fall of snow. There was no doubt about it, the discussion was assuming cyclonic proportions, and the argumentative missiles were hitting right and left. Some hit the mark, and others flew wide in the wordy *mêlée.* It was at my suggestion that a truce was declared, and I called upon Vagrant to act as arbiter. The mooted question was: "Whether or no an exact knowledge of anatomy was necessary to piano teaching or the acquiring of piano technique?" After the dove of silence had returned to our tempest (of words) -tossed ark, Vagrant spoke.

"Gentlemen," said he, "in answer to your bone of contention, I will relate a little fable. Once upon a time, so the legend goes, there was a bright and ambitious young man who aspired to become a skilled swimmer. He first consulted a practical expert, who advised him to jump into the water, and by using certain movements of his arms and legs, paddle till he could keep his head above the surface. That having been accomplished, there was nothing more to do, except practice, which would beget confidence and develop his muscles.

But, alas, on a fatal day he met a theoretic professor of swimming, who informed him, with much dignity and an air of erudition, that the mysterious science of swimming involved such a complication of muscular action that it would be necessary for him to attend his lectures on *Anatomy and the Physiological Aspects of the Natatory Art*, which, if he did, he assured him, he could master the science without the unnecessary trouble of going near the water.

The youth at once enrolled himself as one of the professor's pupils, and proceeded forthwith to attend the celebrated lectures, making a special study of all the muscular complications involved in keeping afloat in the aqueous element. Day and night the problems of action (with diagrams galore) occupied his time and undivided attention. He became familiar with the anatomical constituents of his body, so much so that he could designate them by their scientific names, and diagnose their special functions. He even became so intimate with them that he could name them backwards, and they responded to his volition like tried and trusted servants.

"Time passed on apace, and our young man graduated at the head of his class, crowned with high honors — *cum summa plaude* — as being the most scientifically equipped natatory artist of his time. The campus reverberated with his praise, and even poets embalmed his glory in poetic panegyrics. In dreams he had encompassed seas and oceans with his brawny arms. In the eye of science he had become an amphibian, and theoretically both air and water had become his native elements.

"Armed with his diploma, he felt the pride of conquest swell his bosom, and his admiring friends saw in him the Alexander of Aquatorial Conquests. Full of confidence and science, he essayed to give an exhibition of his prowess before an admiring multitude gathered at the river side. With a bold plunge — amid wild huzzas — he dashed into the water and disappeared beneath the surface. A few bubbles arose to evidence the fact that his scientific attainments had culminated in — wind. His body was duly recovered, and natatory journals sounded his posthumous glory, as to the remarkable physical development and perfect condition he had attained through his scientific studies. As a plunger and swimmer on land he had been a prodigy, but, alas, when it came to the water it had been quite another proposition. *Haec fabula docet.*

"This fable teaches that you can play the piano as well as our deceased friend could swim, if you elect to do so by purely anatomical and scientific (*sic*) methods. The birds of the air sing and fly, but it is instinct rather than scientific knowledge that accomplishes the acts. Likewise there be many great pianists — past and present — whose technique was attained without the use of scalpel or a scientific analysis of their hand anatomy. Beware of patent methods and analytic systems. Technique is an all-essential, but attack it in the concrete rather than the abstract. I have met, in my time, many ex-pounders of the piano, and they were generally the loudest in their proclamations of the scientific method. Pianists who play, usually have a faculty of imparting the secret of technique without any side lights on anatomy, or kindred complications."

It is needless to add that Vagrant's story made its impression upon the recently warring factions, and, personally speaking, I for one fully agreed with him.

EDUCATION AND IGNORANCE IN JAPAN

Thomas F. Millard, who controverts almost all of the accepted ideas of Japan and the Japanese in his book, *The New Far East*, which the Scribners have just published. says: "Japan is at present and will be for many years to come ruled by an oligarchy, which while animated by a more intelligent and progressive spirit than that which governs Russia, differs from it in no essential aspect. The masses of the Japanese people have no better knowledge of public and foreign affairs than do the masses of people in Russia, or than did the peasantry of Europe in the time when it spilled its blood upon battle-fields in obedience to the whims of kings. Under the ruling oligarchy, which includes some very brilliant and a large number of able men, is a stratum of people engaged in professional, industrial, and commercial pursuits comparable to intelligent middle classes in Western countries. These elements only have the capacity for any real understanding of broader political questions, and measured by the whole population of Japan their number is entirely insignificant. If an impression to the contrary has gone abroad, it is due to the direct and indirect operation of the propaganda. Within the last year or two, Japan has been flooded with promiscuous writers, who have, as a rule, hovered about the capital and treaty ports, where the most progressive side of the country is on exhibition. They have been taken in hand by the Japanese, shown the best schools, the best hospitals and factories, the best of everything ancient and modern the country has to show, and the result has been a lot of very ridiculous comment. Set a tide like this running and it is hard to check, and it is not the less misleading because it is founded upon fact."

DOES THE PIANO-PLAYING MACHINE THREATEN TO DESTROY THE "RAISON-D'ETRE" OF PIANO STUDY?

RUSSELL THOMPSON

The relation of photography to the art of drawing has found a striking parallel in music through the invention of the piano-playing machine, and the same kind of problem is raised anew: How is the art of pianoforte playing affected by the invention?

The comparison thus suggested between the pianist and the piano-playing machine presents itself in two aspects: (1) from the point of view of the pianist himself, and (2) from the point of view of the audience. With respect to the audience the comparison is rather a foregone conclusion than a problem, since the interest attaching to the personal element in a musical performance must always give to the singing or playing of the living artist a charm which can never be found in the atmosphere of mechanically produced music. For the same reason the comparison is a foregone conclusion also from the standpoint of the artist who ministers to an audience, from the virtuoso several degrees downwards. I shall therefore consider the question from the remaining point of view, that of the humble music-loving amateur pianist, who is concerned not with thoughts of an audience (though perhaps not entirely oblivious of the possibility of some day being able to give pleasure to others) but with the study of pianoforte music for its own sake as a solace and spiritual refuge, comparable to that of literature.

Before stating what I consider to be the true justification of the continued study of the piano in presence of this invention, let me point out the inadequacy of the argument most commonly used, namely, that mechanically produced music is necessarily expressionless. If it be asked, How do we know this? the answer will be, We know it by experience. Obviously, however, experience only includes the past and present examples of the use of the automatic principle in musical instruments, whereas the question at issue is concerned no less with the future. How, then, do we know that mechanically produced music must always, in spite of all future improvements, lack expression? "Simply because," it will be said, "it is impossible that feeling can be manifested by an agency which possesses no feelings."

This notion results, I think, from confusing the *origination* with the *reproduction* of the expression of feeling. It is true that feeling cannot be outwardly manifested in the first instance by any means other than direct expression by a sentient being. But, this outward manifestation once obtained, is there anything in the nature of things to prevent its being mechanically reproduced? The conception of the painter, when materialized in the form of visible pigments, can be copied even more faithfully by the mechanical camera than by the draughtsman. Nor is there much reason to doubt that the most faithful reproduction of the pianoforte composer's interpretation of his own creation also lies within the scope of inanimate mechanism of some kind.

It is wise, therefore, to make up our minds once for all to accept the truth that, so long as the pianist regards the act of playing solely as a means to an end, and considers the result, as apprehended by the sense of hearing, to be the one source of musical interest and pleasure, then his playing, compared with that of the inanimate machine, is nothing else than an incomparably more laborious method of attaining what is, even at best, the same result. Or, if this is not accurately true to-day, owing to some mechanical defect which gives the pianist a temporary advantage, it may be true to-morrow. Let him therefore abandon this line of defense, and see if there be not one of a permanent nature.

Such is to be found, I think, by reconsidering the abovementioned condition of comparison namely, the regarding the act of playing as nothing more than a means, — the end being wholly included in the function of listening. The question is, Does the pianist regard his expenditure of nervous and muscular energy as, in itself, a disadvantage, an item that must be set against his pleasure as a listener, in order to arrive at what may be called the net profit? Of course he does not. Such a notion is more than wrong: it is the exact opposite of the truth. For the truth is that this exercise of the faculties, which produces the music, is a something to be added to, not deducted from, the account. Indeed it would hardly be stating the case too strongly to say that the passive pleasure of apprehending the resultant music through the sense of hearing is of secondary importance, the predominant satisfaction being derived rather from the exhilarating activity of self-expression operating through the sense of touch and the "muscular sense." We may observe the desire for musical self-expression in its simplest and most natural form in the popular impulse to "join in the chorus" of a tuneful song, — an impulse which, marking as it does the climax of the listeners' passive appreciation, plainly shows that the musical instinct demands for its full satisfaction the activity of self-expression.

The true end and aim, therefore, of the laborious practice of the piano student is to acquire the ability to express his own musical feeling by the aid of an instrument of far greater potentiality than the one which nature has given him — his own voice.

"But," it may be objected, "the crowning success of the mechanical piano player consists precisely in this: that, by allowing of variation in volume of sound and in time (both tempo and note duration) it leaves the control of expression in the hands of the operator, who can thus express himself as well by this instrument as can the skilled pianist by means of the piano."

If this claim be a just one, it reduces the study of the piano, for every purpose except that of technical display, to absolute futility. It is well worth while therefore to test the claim; and perhaps the briefest method is to waive the direct consideration of what the mechanical player *can* do, and to come at once to the point of difference: What can it *not* do? What power remains to the pianist alone?

I think the true answer will be found to be the reassuring one that there is a certain essential condition of self-expression, — a condition indispensable to the peculiar satisfaction accompanying the activity of singing or playing, which is outside the scope of all automatic or semi-automatic instruments, past, present, or future. That condition is, *the perfect correspondence between the activities which produce the sounds, and the sounds themselves.* For example, a light finger tap upon a single key produces a single delicate sound; a vigorous stroke of the extended hand causes the crash of a chord. Each single sound is the outcome of a separate muscular movement, and the nature of the sound — its duration, its force, its relation to the other sounds — exactly corresponds to the nature of the muscular movement. Thus in the playing of the piano the entire composition, as heard, is the exact counterpart, in sound, of the pianist's bodily movements; and these, in turn, are of course dictated solely by his own intellect and feelings; so that from the mind, the *self*, of the pianist to the resultant music as heard, there is organic connection throughout: between mind and brain, between brain and bodily movement, and between bodily movement and musical sound. Thus, in literal truth and without figure of speech, nerves and muscles unite with keys and strings to form one instrument, which is played upon directly by the very mind itself. Such are the indispensable psychophysical conditions of the peculiar satisfaction which is derived from the activity of producing the music, as distinguished from the passive pleasure of the listener in the result.

What, indeed, is the origin of music? The fact that music is capable of expressing emotion at all is only to be accounted for by deducing its origin from the voice sounds uttered by primitive man, which were caused by the spontaneous contraction of certain muscles under emotional influence.* If these natural sounds, in which music originated, were thus invariably the result of muscular movements, then the emotional relief or satisfaction found in the utterance of the sounds was at the same time (merely to describe it further) an emotional relief or satisfaction found in certain sound-producing muscular activities. And if the art of singing be a development and systematization of these primitive emotional utterances, we can understand how it has come about that, in singing, the muscular activities which produce the sounds are as essential to the satisfaction of self-expression as are the sounds produced; and hence that, although the *sounds* of singing may be imitated by mechanical means, the self-expression of singing is necessarily absent from the process, no matter to what extent the operator has control over the mechanism.

In the playing of an instrument, as compared with singing, the only difference is that the use, for musical purposes, of a different set of muscles has to be acquired. But the muscles of the hands and arms are no less truly a part of the musician himself than are those of the larynx, and respond no less readily and instinctively to his will and feelings. The essential conditions of self-expression remain, so long as the music is the result and counterpart of the muscular activities. They no longer remain when external mechanism is substituted for muscular movement.

Is not this confirmed by the evidence of one's own consciousness? Let the pianist ask himself whether it is possible to dissociate the unique kind of satisfaction which he seeks in playing himself instead of listening to other and better music, from his sense that the resultant sounds are the product and counterpart of the activity of his own fingers as these respond instinctively to the dictates of his own will and musical feelings. He will then realize that the mode of producing music which characterizes piano playing proper, and is entirely absent from the process of working the mechanical piano-player, is the only possible or conceivable means of satisfying that instinct for self-expression which has attracted him to the study of the piano.

* For the reasoning in proof of this point, see Herbert Spencer, *On the Origin and Function of Music.* (*Essays.*)

THE BACH-GOUNOD "AVE MARIA"

These few measures, to which I do not believe the composer attached much importance when he wrote them, did more for his glory than all that he had hitherto written. It was the fashion for women to faint during the second crescendo!

The first time I heard this little piece, it was scarcely like that which it now is, thanks to the pernicious influence of success. Seghers, of powerful tone and grand simplicity, was the violinist; Gounod played the piano part, and a chorus of six voices, which sang the Latin words, sustained mysteriously in the next room the harmonic chords. Then the chorus disappeared; it was replaced by a harmonium; violinists applied to the ecstatic phrase the two well-known methods which change ecstasy into hysteria; then the instrumental phrase became vocal, and an *Ave Maria* appeared, which, alas! was still more convulsionary; then the performers were multiplied, the orchestra was added, and the big drum and the cymbals were not forgotten. The divine frog (why not? the Chinese have a divine tortoise) swelled and swelled, but did not burst; it became greater than an ox, and the public was delirious in the presence of the monster. The "monster," however, was advantageous in this: it broke forever the ice between the composer and the great public which up to this time had been hesitating, distrustful. — *Camille Saint-Saëns.*

MORE SLEEP FOR PUBLIC SCHOOL PUPILS

Members of the Council of the Medical Officers of Schools Association (England) have sent a communication to the *London Times* alleging that pupils at the public schools have insufficient sleep.

"It is held by those who have paid special attention to the subject," the letter continues, "that a minimum of nine hours of unbroken rest in summer and nine and a half in winter is needed by the average boy from thirteen to sixteen. It is not sufficient to send the younger boys earlier to bed in dormitories in which the older boys cause a disturbance by coming up later, and a definite wrong is inflicted on growing boys by giving them only the same amount of sleep that is needed by those who have reached maturity. If this is done, it is almost certain that the majority of boys will leave school less well equipped for the struggle of life, both in body and in mind, than might have been the case if more generous hours of rest had been accorded to them during their years of development."

THE TONOSCOPE AND ITS USE IN THE TRAINING OF THE VOICE

CARL EMIL SEASHORE

Control of the pitch of the voice is one of the important elements in voice culture. The limit of accuracy of such control in singing is set by the physiological limit of the ear. This limit is measured by the least sensible difference in pitch in so far as it depends upon the structure of the ear. It varies in different individuals from less than a hundredth of a tone to entire absence of sensibility to pitch; yet it remains approximately constant in a given individual in health, regardless of training. It is a factor in musical heredity. But it requires training to develop the voice control to this physiological limit of the ear, and it is doubtful whether the ordinary methods of training ever enable the singer to reach the actual limit.

If we had some means of doing for the ear what the microscope does for the eye, this period of reaching the physiological limit of the ear could be shortened and the ultimate effectiveness of the ear could be increased. In other words, the singer could develop accuracy in pitch more rapidly, and could reach a higher degree of refinement in his control of the pitch of the voice, than could have been reached without the use of some such aid.

The Instrument

To accomplish this and to serve related purposes, the writer has designed and constructed the tonoscope and carried on experiments with it for several years. This instrument converts the vibrations of the vocal organs into visual configurations which show clearly and instantly, in plain figures on a scale, the actual vibration frequency, *i.e.*, the pitch of the tone which is sung.

A technical description of the instrument appeared in *The University of Iowa Studies in Psychology*, 1902, III, 17–28; and a full description of more recent models, with results of experiments, will appear in the forthcoming issue of the same publication. For the present purpose it is sufficient to mention the essential features of the instrument, and indicate in a preliminary way its significance for the teaching of vocal music.

A view of the tonoscope is seen in the accompanying figure. The instrument works on the principle of the stroboscope, more familiarly known as the principle of moving pictures. The surface of the drum is covered with black dots arranged in such series as to correspond in number to all possible vibration frequencies within a musical octave. The singer sings before the speaking tube which is connected with a sensitive flame capsule in such a way that every vibration of the column of air in the tube causes a vibration of the flame.

The drum revolves one revolution per second in a darkened room and the effect of the vibrating flame is to light up the drum continuously and make a line of dots stand still while everything else on the surface appears to be moving or blurred. The line which appears to stand still points to a number on the scale. The number thus pointed out designates the number of dots that pass by per second in this line, and this is the same as the vibration frequency which produces the effect; hence, the direct reading of the pitch of the tone. The behavior of the dots on the drum is most wonderful, yet simple, clear, and absolutely correct.

On one side of the row of dots which is clear and appears to stand still, the dots move up and on the other down; every alternate row forms a blurred streak. These streaks have the effect of framing the line one is reading, thus making it conspicuous. The framing effect is produced by arranging the dots into rows in alternating series, as may be seen by observing that the upper and the lower sections of the scale cover alternate rows. The rows of dots run in straight lines along the circumference of the drum and contain from 73 to 145 dots each, as may be seen on the scale. This range covers an octave by single vibration steps (later models cover the octave from 110 to 220 vibrations).

Within the octave covered by the scale, the record is read directly in units of one vibration. The reading of tones above this range is taken on the same scale; thus, the tone 280 vibrations, as well as the tone 560 vibrations, makes the 140 line stand still, but the apparent number of dots doubles for each octave.

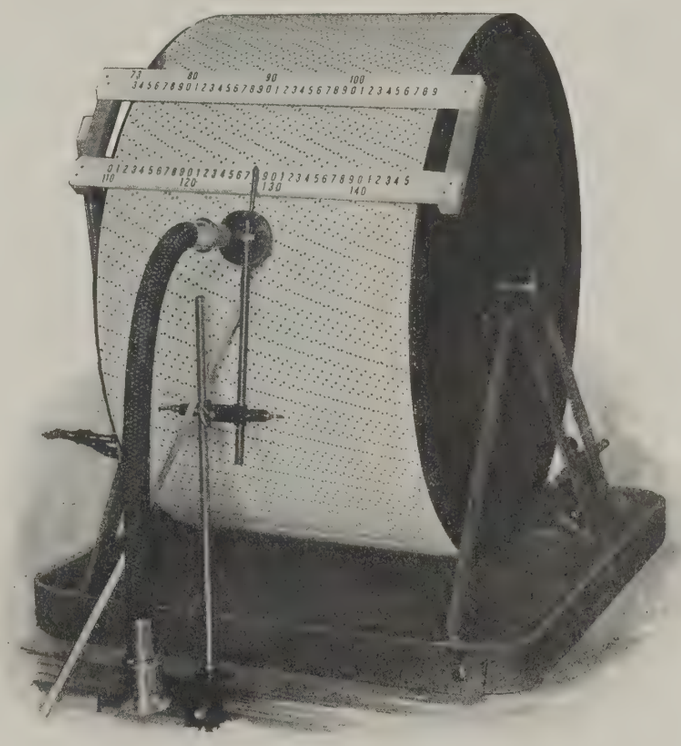
The above statement that one line appears to stand still is only relatively true, for the dots move in proportion to the deviation of the voice from the nearest integral vibration frequency. Thus, if the tone is 141½ vibrations, lines 141 and 142 move in opposite directions at the rate of half a dot-distance per second. Or, if the tone is 141.1, the 141 line moves at the rate of one tenth dot-distance per second and the 142 line at the rate of nine tenths dot-distance per second in the opposite direction, the two lines being separated only by a framing streak. Ordinarily it is not necessary to read in fractions of vibrations, but for fine measurements it is practicable to interpret this relative rate of movement in terms of fractions of vibrations, thus giving a reading fairly accurate to a tenth of a vibration. If for any extraordinary reason finer readings should be desired, that may be accomplished by rearrangement of the dots for detail at the expense of range, or complication of the apparatus.

Other parts which deserve mentioning are not shown in the figure. There is a synchronous motor of special construction built on the axle of the drum. This runs in step with a tuning-fork and serves to revolve the drum and regulate its speed. The motor is so controlled by the fork that it must run at a constant speed; if anything should cause it to vary from the true speed, that will stop the drum. The current for the motor may be drawn from any incandescent lamp circuit, direct or alternating. The fork is kept in a distant room and the operation of the tonoscope is practically soundless.

The key tone, or standard tone, is produced by the tonoscope itself and is therefore always absolutely in accord with the reading on the instrument. To produce this tone, a circle of small iron disks is fastened on the inside of the drum so as to pass under a permanent magnet connected with a telephone receiver. The passing of each of these armatures produces an oscillation in the current and the quality of the tone thus produced is agreeable and clear. This key tone may be fixed for any desired pitch, and provision may be made for several, so that one may pass readily from one standard tone to another, or produce intervals of absolutely known value by merely turning a lever.*

Practical Exercises

The tonoscope is intended to be used in all sorts of exercises in which the singer aims at the training of the voice toward accuracy in control of pitch. The instrument is put up in a commercial form which adapts it for use in conservatories of music and private vocal studies. Some fundamental exercises may be mentioned to illustrate its use.



THE TONOSCOPE

The simplest case is that of striking a tone. If we make accurate measurements, we find that even the best singers seldom strike a tone absolutely right; there are always variations. Whether the ear can hear them or not, the tonoscope shows the nature and amount of such variations and errors. It gives the singer an objective standard by which to train himself to accuracy in the subjective standard. Here the singer may observe the effect of the mode of attack, the strength, the range, the quality, the formation, etc., of the tone. All such factors tend to affect pitch. The

* For certain psychological purposes, it is desirable to produce tones of any vibration frequency within the octave by the tonoscope. To accomplish this, one model of the tonoscope is built with an aluminum drum having holes in place of the dots. A beam of light is projected on a selenium cell which causes oscillations of the strength of a current corresponding to the number of exposures per second. The number of exposures is determined by the number of holes in a row; hence it is possible to produce as many different tones as there are rows of holes. It so happens that the tone produced in this manner has a beautiful timbre.

effects may be *seen* and the tendencies may be discerned and brought under control by intelligent training.

Probably next in importance is the singing of intervals. Most singers are satisfied that they can sing the natural scale correctly, but when tested by the tonoscope, two classes of errors are detected. There is the normal variation, tending to be distributed according to the laws of chance; *i.e.*, the errors are about equally distributed above and below the true pitch. Then there is the constant variation; *e.g.*, one singer always tends to sing a certain interval tone sharp under given conditions. In singing the chromatic scales we encounter particular difficulty which makes both kinds of variations large. Here the tonoscope may be especially useful, in that the theoretical intervals may be marked on the scale and the singer may test his subjective estimate of the interval by the objective test in each attack. Singing of melodies falls in this class of exercises. If the singer proceeds somewhat deliberately, he may read his success in each tone as he runs through a melody.

Musical intervals are not rigidly fixed quantities. There are many situations in which the singer studies voluntary variations from the fixed tones. Take the problem of the tempered *versus* the untempered scale; *e.g.*, the singer wants to study the difference between C♯ and D♭. The singer may desire to make some other definite shading in pitch, or he may want to determine the curve of shading in pitch from one note to another in various sorts of slurring. As an artist, he sings to please the ear, often producing systematic variations in pitch for the purpose of expression. In such situations he may turn to the tonoscope for objective analysis, regulation, and record.

The attack is a study in itself. Normally the voice slides up to the true pitch in attacking a given tone. The form and the amount of this slide may be seen on the instrument which enables the singer to see the nature of the fault and to reduce it under the guidance of the eye.

The difficulty of sustaining a tone is well known. By this method the singer sees the first tendency toward deviation from the true pitch and can correlate it with the felt control of the voice.

A good test of voluntary control of the pitch of the voice as well as a most excellent exercise for training, is found in the ability to produce small differences in pitch at will. One of the simplest and most effective exercises is the practice in singing the least producible raising or lowering of the pitch of a tone, always reading the amount registered and thus acquiring coordination between the ear and the voice.

Such are some of the exercises which it would be profitable for the student of singing to carry on from time to time in a course of training. Teachers can readily extend the list on the basis of their experiences. There is no end to the special exercises, branching out from these types mentioned, which may be pursued for the purpose of special training. The tonoscope is therefore serviceable for the elementary training of the voice, for research and special training in the art and the science of music, and particularly for the study of the psychology of vocal expression.

These suggestions are all based upon systematic experiments in the psychological laboratory and are offered as a contribution from psychology to the pedagogy of music.

Will the tonoscope find a place in the vocal studio? That depends upon a number of considerations, among which the following are in its favor. First, it is useful: elaborate experiments in actual training of singers have demonstrated that the use of the tonoscope facilitates the acquisition of power to sing in true pitch and enables the singer to reach a higher degree of efficiency than would have been likely without the aid. Second, it is simple and easy to operate: during eight years of experimenting the instrument has passed through several stages with the result that it is now so simplified that starting is no more difficult than the opening of an organ, and the taking of a record is as simple as reading inches on a yard-stick; it requires no special training to use it, and the singer needs no assistant. Third, it is not expensive to install or to maintain.

On the other hand, we must consider that the pedagogical principle involved is radically new in music; and the instrument is a fundamentally new conception; it will take time to reveal the problem and its solution to the teacher.

THE COMMONPLACES OF VOCAL ART

A Statement of the Philosophy of Singing from a Modern Viewpoint

Fourth Paper

LOUIS ARTHUR RUSSELL

The most important thing to know about muscles is how to make them passive. They should be ready to act instantly when called upon. In order to do this they must not be in a state of rigidity.

We all work too much when we sing. There is too much getting ready. Too much tension. Too much taking hold and not enough letting go. Too much rigidity, not alone at the throat but throughout the entire body. Too much thinking of muscles and not enough consciousness of good tone quality.

When the pupil has learned to make himself physically passive, to devitalize the vocal mechanism so that all parts may be ready to respond automatically to his thought, he will have no further trouble with physical processes. His throat will open in just the right manner to produce the quality he is trying to express. His tongue will be just where it ought to be without trying to put it there, and he will be able to sing with comfort to himself and others.

Between flabbiness and stiffness there is a middle state which we call balance. This is the condition of buoyancy spoken of in the preceding paragraph.

Let us experiment in the search for this middle state, this balance of effort, which supplies enough, but not too much muscular force. In cultivating automatic control of muscular tissue we must learn to think minutely, and to watch closely, *the sensations of effort*, as we study the *results of effort*. Let us use, as an example, the process of opening the pharynx (the back mouth and upper throat). We will first take the two extremes of back mouth action, "tight closure" and "great opening." Willing, to violently say "go" we stop as in stammering, upon the consonant, several times repeating it, thus, *g-g-g-g-go*. Notice closely the feeling of pressure of the back of the tongue upward, and of the soft palate downward, each toward and against the other. Now suddenly change the effort and open the throat and back mouth (the fauces) wide, for a good hearty yawn; notice the stretching of the soft palate upward and sidewise; the uvula recedes, often quite out of sight; the tongue flattens and its back part recedes, as it were, into the throat (more truly into the neck). In either of these experiments muscular tightness or stiffness will ensue, and we feel the strain which, if long continued, will become painful. Third experiment; while holding the yawning position endeavor to repeat the word "go" or "gay" as in the first exercise, contracting violently for the consonant (*g*), not quickly, but slowly, feeling the stammering contraction as a somewhat prolonged pressure of tongue and palate together; separate the lips and teeth (open the front mouth) so that with a mirror these conditions of the inner mouth may be seen and carefully noted, as to the appearance as well as to the internal sensation. These exercises are not for long practice, for they are conditions to be finally avoided; we are simply using them in the study of sensation in "overstrain." Now, when these conditions are realized and under control, we enter into the practice of the more subtle condition of *artistic tension*, just enough of muscular effort to allow the throat its proper opening and correct vitality. Exercise: when the back mouth is opened in the yawning strain, quickly "let go" the extreme tension, but do not allow the muscles to relax to a condition of flabbiness; simply will to hold the mouth and throat open *without the yawning strain*. We feel the "let go" sensation and to a slight extent, the tissue, released from extreme tension, drops from its widespread condition; but if with the eye (with aid of mirror) and by a close attention to the sensation within (introspection), we see to it that the opening does not materially lessen in dimension, we shall soon learn just the right "feeling," and we will have the "wide open throat" so often called for, and without strain, the tension being just sufficient. The "let go" is of the *strain;* the correct tension still holds the throat and back mouth open, but it is now "*freely open*" *not* "*stiffly open.*" Every needed muscle is in what we call active, responsive condition.

These exercises should be practiced with the jaws closed and also with the chin dropped (closed and open front mouth), that from the first of this sort of practice the student may realize that the "*open mouth*" condition for singing is largely a condition of the *back mouth*, not a separation of the jaws at the teeth; such a manner of practice also cultivates a fine power of differentiation as to the various parts of the mouth.

Perhaps a simpler experiment in this thought of tension without strain will be the following: Take a small plate or saucer of from four to six inches in diameter (according to the size of hand), spread the fingers around its rim and hold it as if it were very heavy. Gradually relieve the strain of the fingers against the rim, until at last the finger pressure is just enough to hold the saucer; then finally, with the other hand quietly take the saucer from the holding hand, which to allow this, still further relieves the clasping pressure. The hand still remains open, the fingers still hold as if the saucer were within their grasp; but all strain is now off, except that almost unconscious and quite imperceptible tension which keeps the hand open to the finger tips, ready if called upon at any instant to resume the added pressure, if the call of the will were made, to hold the plate.

This experiment may also be made without the use of a saucer; the hand first assuming the strained position as the throat does in yawning. This experiment with the hand gives a more plainly visible exposition of the yawning exercise, and they both, if carefully practiced, will give a true idea of the principle so vital in singing, and especially as applied to the condition of the throat and mouth which we know as "correct tension without strain or stiffness."

The Developing of Muscular Power. — The development of muscular power up to the point of a perfect equipoise is a most interesting process. The fine art of local muscular control, leading to automatism, is in the power which brings response from any muscle or set of muscles without the slightest interference, or in fact even the most harmless sympathetic contraction on the part of any other muscle or muscles. Let us experiment. Place upon a table the following articles: a pin, a pocket knife, an ordinary sized book, a three or four pound flat iron, or any other set of everyday articles readily at hand of about this succession of relative weights. Sit or stand easily at the table, and with as *slight an effort as possible* raise the pin (pick it up) and place it at some other point on the table. There will be no appreciable effort, and seemingly no muscular tension. Move the pin from place to place several times; now change the action, doing the same thing with the next heavier article (the pocket knife), placing it from point to point on the table; now alternately pick up and replace the pin, then the knife several times; after which raise the next heavier article (the book), doing the same as before; after several movements of the book, alternate the action with the other two articles, then at last carry the exercise on to the fourth article (the flat iron), doing the same as with the others. Note carefully the muscles of the hand and arm and finally of the body at the shoulder, seeing that only the *required tension* is used in each case. For the heavier weight the hand grasp is tenser (tighter) and the muscles in the arm harden and thicken. After each picking-up of an article relax the muscles entirely and let the hand and arm *drop* to the table, use no more energy than is absolutely required in each case, and feel assured that no part of the body or of the limbs is in contraction, unless absolutely required. As a further experiment — with one hand lift the lighter article and with the other lift a heavier one, alternating at pleasure among the four or more articles, always noting that there is a perfect independence of effort, one hand interfering in no way with the doings of the other. This simple experiment teaches us to differentiate muscular effort, both as to the degree of effort (much or little) and as to its locality (one muscular centre or another). It also shows us that great strength is attained by muscles in combined effort (contraction), and that two muscles or two sets of muscles may be under control of the will at one time doing different things; the other muscles, unneeded for either of the efforts, being in perfect freedom, or in the greater efforts (lifting heavy weights or the like) certain muscles of the body "brace" us for the effort (as a fulcrum under a lever), supporting the more active members in their muscular effort and creating a physical "balance."

Let us carry the experiment one step farther. Walk across the room with elastic step, breathing with rhythmic regularity, deeply, fully; swinging the arms loosely in all directions, bending the body at the waist (hips), as if bowing, also in all directions, and bowing the head lightly on all sides. While making all of these motions as gracefully, as easily as possible, quietly but suddenly grasp with one hand the back of a not too large or heavy chair, lift it off the floor and raise it either at the side or in front of you with extended arms, as high as you can without extreme, straining effort. At the same time keep up the loose, elastic motion of the other arm, and the neck, and as far as possible, with the body at the hips; raise the feet alternately and lightly from the thigh, kick out in front and back, noting that in all these moving joints there is a perfect freedom of action, quite as much, in

LOUIS ARTHUR RUSSELL

fact, as before raising the chair, except perhaps in the case of the muscles at the waist; these will not have quite the same freedom, as before, yet a swaying of the body is quite easily controlled and must be insisted on. If there be no chair in the room small enough (light enough) some other object may be used. Let it now be noted that the large muscles of the body are necessarily called into action, the body braces itself for this extreme effort and adds counterpoise, offsetting both the weight of the object lifted and the muscular tension of the lifting member; the insistence upon the freedom of the other muscular centres insures us against interfering contractions, the body, being the strongest muscular centre (at the waist), assumes the burden of effort (a very girding on of the loins), and we have in evidence extreme effort under perfect control, with elastic freedom and without unnecessary tension.

To cultivate power with muscular freedom we must learn how to localize effort, and *how to economize energy;* thus reducing to a minimum all interfering conditions, and preventing waste of energy and of muscular tissue.

When we can do the little things of muscular effort with freedom, we gradually increase the effort by the added tension of muscle, until we reach our limit of strength in any direction. Perfect physical control admits of the doing of several things at once, each act requiring mental control over some particular muscle or set of muscles. In this case of course a perfect freedom, a complete dissociation of muscular centres must be within our control. Beginning, therefore, our culture of muscular control at a point of complete inertia, or as nearly so as we can command, we separate the movable parts, and learn to control each in its simplest phases, then in more complex action, until at last the whole muscular system is in perfect response to our will.

(To be continued)

SAID BY CHOPIN

I cannot create a new school because I do not know the old.

Play as you feel.

I have perhaps, to my misfortune, already found my ideal, whom I worship faithfully and sincerely. Whilst my thoughts were with her I composed the Adagio of my F minor Concerto.

I shut myself up for a fortnight and play Bach. That is my preparation. I never practice my own compositions.

You must sing if you wish to play.

The correct employment of it (the pedal) remains a study for life.

I am not at all fit for giving concerts; the crowd intimidates me, its breath suffocates me. I feel paralyzed by its curious look, and the unknown faces make me dumb.

Fancy a tree with its branches swayed by the wind; the stem is the steady tune, the moving leaves are the melodic inflections.

SAID BY GLUCK

The mania of discussing things which they least understand is a very common fault in men.

However gifted a composer may be, he will only produce indifferent music if the poet does not kindle in him that enthusiasm without which every work of art is dull and lifeless.

Simplicity, truth, and unaffectedness are the leading principles of the beautiful in every work of art.

The union between the air and the words should be so close that the poem seems made for the music, no less than the music for the poem.

The true aim and object of dramatic music is to enhance the effect and the situations of a poem without interrupting dramatic action or marring the effect by unnecessary ornamentation.

The greatest beauties of melody and harmony become faults and imperfections when they are not in their proper place.

My purpose has been to restrict the art of music to its true object — that of aiding the effect of poetry by giving greater expression to the words and scenes, but without interrupting the action of the plot, and without weakening the impressions by needless instrumentation.

The Philharmonic Academy of Bologna is offering a prize of 1000 lire ($200) for the best original string quartet (two violins, viola, and 'cello) submitted before October 31 of this year. The competition is open to composers of all countries.

* *

Humperdinck's comic opera, *The Forced Marriage* had an exceptional success recently in Strassburg, according to report.

GREGORIAN MODES

JAROSLAW DE ZIELINSKI

Under the Greek system, as settled by Pythagoras, the diatonic scale was composed of two disjunct tetrachords, a tetrachord being a succession of four notes made up of two whole steps, and something over; this over-plus, not quite half a step, as represented to-day in our system by the intervals of B–C or E–F, was called a "hemitone."

Here are the two tetrachords which present the disjunct system, together with the Greek names for each string of the lyre: —

Upper Tetrachord	e	Nete
	d	Paranete
	c	Trite
	b	Paramese
Lower Tetrachord	a	Mese
	G	Lichanos
	F	Parhypate
	E	Hypate

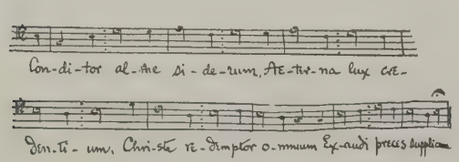
Readjusted by the Greek mathematician Claudius Ptolemy, the Pythagorean system found its way into Italy, was adopted by the Christians for their liturgical chants, and as it offered the same notes that are used to-day, the gradual transformation — which took place toward the end of the sixteenth century — into our present major and minor scales, met with no difficulty.

As regards the musical signs called "neumes," of which the contemporary musical notation is the logical result of a natural and progressive evolution, they appeared in the west about the beginning of the eighth century, when, following a decree of Leo III the Isaurian, an army of artists, priests, and lay brothers, found itself obliged to leave Byzantium and took refuge in Italy.

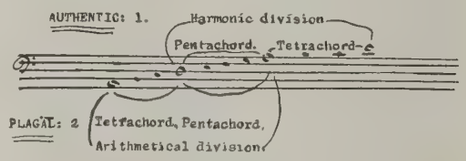
But we owe to St. Ambrose (about 384), Bishop of Milan, the initiative in laying the foundation of a system of modes that reached their final evolution about the year 600 under the reign of St. Gregory the Great, whose choice of the traditional songs, propagation of the same by means of oral instruction, and regulating their usage, made him a reformer of no small importance.

The Ambrosian hymns were based, as regards the music, on the following modes (after the Greek system): Doric, Iastic, and Æolian; the Doric was the scale of *mi-fa-sol-la-si-do-re-mi;* the Iastic had three forms: *sol* to *sol* the normal, *si* to *si* the intense, and *re* to *re* the soft (molle); the Æolian was the scale of *la-si-do-re-mi-fa-sol-la;* be it well understood without any chromatic alterations in any one of these scales, unless it was a *si bémol*, this alteration being introduced to avoid the *tritonus*.

The melodies — always written in one mode or another — were not intended exclusively for this or that text, but served, on the contrary, for many, the object being to express musically an indefinite sentiment always inspired by faith, rather than to couple said musical expression with a given set of words, and one of the best examples of this melodic type is the following song, full of sweet expression, written in the Greek mode of Iastio Intenso: —

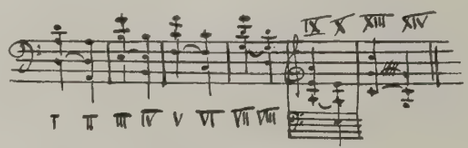


These austere, inspired Ambrosian songs, full of praise, justice, and fraternal love, acquired great sweetness through the school of St. Gregory, but it is a mistake to suppose that the so-called Plagal modes were the invention of that bishop. The system of plain song or Gregorian modes was a gradual evolution of the diatonic genus of the Greek, which names were applied to the different modes of new origin; thus the scale of *re* to *re* became known as the Dorian mode; from *mi* to *mi* was the Phrygian; *fa* to *fa* was the Lydian, while the Iastian *normale* became known as the Mixolydian, and was *sol* to *sol;* *la* to *la* retained the name of Æolian; *si* to *si* was the Locrian, and *do* to *do* was the Ionian; as stated before, chromatic alterations did not enter into the make-up of these scales, for the reason that they were not used. Furthermore, the name Authentic (κυριοι ἤχοι) was applied to the first four modes, which were also known as Ambrosian, while Plagal (πλαγοι ἤχοι) was the name given to the four modes that found their origin in the four Ambrosian modes (Dorian, Phrygian, Lydian, and Mixolydian) by substituting the arithmetical division of a scale for the harmonic division.



The above example shows, 1: the Dorian scale, from *re* to *re*, with the intervals of a perfect fifth (diapente) below, and of a perfect fourth (diatesseron) above; it shows also two tetrachords — d to g, and a to d — the second of which is transferred an octave lower, giving 2: the Hypo Dorian scale, from *la* to *la* with the perfect fourth below and perfect fifth above. The first of these two divisions was known as "Harmonic," while the second was called "Arithmetical."

Bringing into use the same arithmetical substitution for the harmonic of all the scales built on the seven different degrees, and starting with the D (third line on bass staff), known prior to the eighth century as Lichanos Hypaton (λιχανὸς ὑπατῶν), the following series of Authentic and Plagal modes was obtained: —



Notice that the final of every Authentic mode is the initial note of the scale, while the Plagal modes have the same final as the Authentic to which they belong, which of course is not the initial of the Plagal mode.

The word "Hypo" was used by the Greeks to express the name of a scale formed out of the preceding one — the newly formed scale beginning a fourth below the final, or what we would call tonic — and this word "Hypo" implied the same thing as our dominant or fifth above.

The dominant of each Authentic mode is always a fifth above the final, excepting in the III mode (2d Authentic), which has *do* for its final, because of the uncertain character of the *si;* this *si* is a varying tone, and under certain conditions — to avoid a *tritonus* or a *quinta falsa* — would be changed to a *si bémol*. In the Plagal modes the dominant is a sixth above the initial tone (which is not its final or tonic), excepting the IV and VIII modes (2d and 4th Plagal) in which it is the seventh; and this is because in the IV mode the scale begins on *si*, an uncertain tone, hence the sixth note is obtained by counting from *do*, while in the VIII mode the sixth note would be *si*, hence changed again to *do*.

To go back and analyze the above given scheme: modes I, III, V, VII, IX, XI, and XIII are called "Authentic" (also uneven), while the II, IV, VI, VIII, X, XII, and XIV are called Plagal (or even). The I, III, V, VII became known as Ambrosian, while the II, IV, VI, and VIII were called Gregorian; the IX, X, XI, and XII are attributed to Charlemagne. In the XI and XII modes occurs an impossible division according to either harmonic or arithmetic form, since in both cases there is a diminished fifth (*quinta falsa:* b–f, mode XI) and an augmented fourth (*tritonus:* f–b, mode XII) where should be a perfect fifth and a perfect fourth respectively; consequently both these modes have been condemned as impure, and being strictly prohibited in ecclesiastic music, they are never used.

Indeed the best authorities have gone so far as to expunge their names, and the Ionian, XIII proper, is often called the XI, while the Hypo Ionian, XIV proper, is called the XII, causing thereby much confusion.

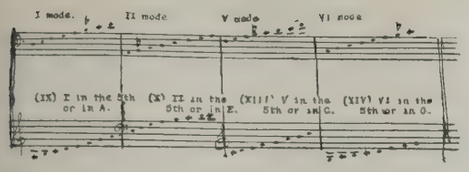
After the final and dominant, the mediant is the next important tone in a Gregorian scale, and it is found between the final and dominant, except in modes VI and XIV (3d and 7th Plagal), when it falls on the next note above the initial tone.

The participant is a note found generally in close proximity to the mediant in the Authentic modes; in the Plagal forms it is the initial tone, except where that tone is *si* or *fa* (Hypo Phrygian and Hypo Locrian, modes IV and XII proper), when it is shifted to the next note above; the II, III, IV, and X modes have two participants.

The movement of voices is called — in Gregorian music — *modulation*, and such modulation is always within the *ambitus* or extent of the mode, which takes in one step up or down beyond the initial tone or its octave.

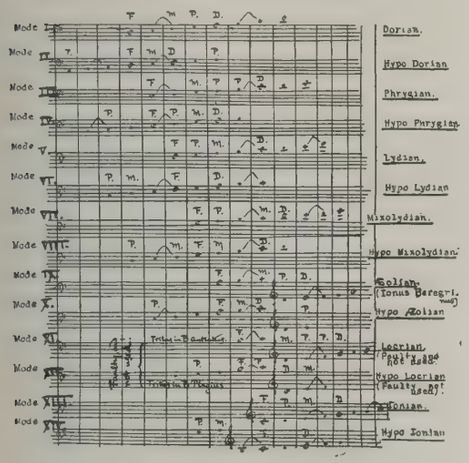
Each mode has its distinctive character as well as cadences of its own; by comparing the VIII mode with the I it will be noticed that the scale of *ambitus* is exactly the same, and that the difference lies in their finals and dominants; carrying the comparison farther, we will notice that the resemblance is still greater between the IX and I modes, in both of which the first note is also the final, and the fifth their respective dominant; furthermore, the first tetrachord of one is exactly the same as that of the other, excepting that it is a fifth higher, the only difference between the two modes being in their upper tetrachords, the half steps not occurring in the same place.

To avoid the *tritonus* between *fa* and *si* in mode I the latter note is often changed to *si bémol*, and when this change is made the two modes (I and IX) are exactly the same; although this chromatic alteration (from *si* to *si bémol*) takes place in mode I, the IX mode is considered as having been *reduced* to the I — a 5th lower — and it becomes known as I in the 5th, or in A. By changing the *si* to *si bémol* in the II, V, and VI modes, similar reductions of modes X, XIII, and XIV are obtained, and they become known respectively as mode II in E, mode V in C, and mode VI in G, simplification that serves its purpose in Gregorian music by bringing the last four modes (IX, X, XIII, and XIV) within the limit of the original eight Church modes.



The *reduction* must not be mistaken for *transposition*, which, when put into practice, is merely a reproduction, higher or lower, of the same scale.

Finals and dominants of Authentic modes; initials and finals of Plagal modes: —



MUSICAL FESTIVAL AND PEACE JUBILEE IN BOSTON, 1869

C. W. WHITNEY

One of the greatest musical events in the history of America, and probably the crowning feature in the career of P. S. Gilmore, was the great musical festival and peace jubilee which took place in Boston in 1869, commemorating the return of peace to our beloved country after four long years of internal strife and bloodshed, during which the dark war-cloud had hovered over the land and countless thousands of the young men of our country had offered up their lives and poured out their life's blood in sacrifice for the cause they had espoused and believed to be right.

The last gun of the great Civil War had been fired, and four years had passed before the doors of the great music palace were swung open in Boston to the multitude of people from all over this broad land, who came to lift up their voices in song and melody in a spirit of thankfulness that the white-winged dove of peace had again settled over a reunited nation. To Mr. Gilmore, perhaps more than any one else, belongs the honor of having conceived the idea of holding this magnificent musical festival, and by his great enthusiasm and untiring energy was the work carried through to its successful consummation.

The account of the event here recorded is compiled from an old book, published some thirty years ago, and long since out of print. The building in which this event took place was erected especially for the occasion, and up to that time was the largest building that had ever been erected on this continent. In size it was 300 by 500 ft.; height of roof, 100 ft., and side walls 36 ft., with a promenade more than a quarter of a mile long. It was gorgeously decorated on the interior with frescoings, banners, and bunting.

The 15th of June was the opening day, and Boston was crowded with hosts of strangers from every part of the Union. There are probably but few people living to-day who were present at this great music festival, and still fewer who took part in the exercises. The amphitheatre was 200 ft. in depth from the front of the orchestra by 300 ft. in width, and was filled to capacity by 10,000 mixed voices who formed the grand chorus. Its base or front centre was occupied by the orchestra of 1000 instruments. Behind the orchestra was the big drum, 8 ft. in diameter, and farther back was the immense pipe organ. The renowned Ole Bull was the leader of the violin section, and beside him sat Carl Rosa. Mr. Gilmore was the director.

The opening number was Luther's choral, *God is a Castle and Defence*, from 10,000 voices and 1000 instruments. The vast volume of sound was grand and indescribable. This was followed by the *Tannhäuser* overture, then came the *Gloria* from Mozart's Twelfth Mass. In Gounod's *Ave Maria* Madam Parepa-Rosa made her appearance as the first soloist of the jubilee.

The accompaniment of 200 chosen violins, led by Ole Bull, Carl Rosa, Schultz, Suck, Meisel, Eichberg, and others, began sweetly playing. Suddenly a note, clear and sublime, and heard above all else at the farthest corner of the hall began the *Ave Maria*, which the prima donna sang with matchless skill. In this and in *Inflammatus*, she was encored as no woman was ever encored before.

At the conclusion of the first part of the concert the *Star-spangled Banner* was given with grand effect, producing wild excitement. The choral combinations of the parts used in the piece were very ingenious. These, with the aid of a great military band, an immense drum corps, and of artillery, were given to the chorus, orchestra, and organ. The artillery, firing by means of electricity, was a novel and striking feature of this piece, as was also the ringing of the bells of the city in unison, from the telegraph stand.

In the second part, the *Hymn of Praise*, composed for the occasion by O. W. Holmes, and set to the music of Keller's American hymn, was the first piece, followed by Rossini's overture to *William Tell*. After the Coronation March, from *Le Prophète*, came the *Anvil Chorus*, from *Il Trovatore*, which received an uproarious encore, the hundred firemen, in black trousers, red shirts, and white caps, looking very picturesque, beating their anvils with fine effect. *My Country, 'Tis of Thee* closed the first day's program.

The second day of the jubilee was made still more exciting by the presence of President Grant. The Common was covered with people, and the streets were so crowded as to make motion almost impossible, and around the coliseum the crowd was so dense as to make it difficult to approach the doors. As the President passed down the centre aisle of the building to his seat, arm in arm with Governor Claflin, followed by other high officers of the nation, the vast assembly sent up a mighty cheer. In the midst of the scene of enthusiasm the powerful organ thundered forth the strains of *See the Conquering Hero Comes*, and then, as the music progressed, at a signal from Mr. Gilmore's baton the colossal chorus of 10,000 voices arose in giving the words of that welcoming anthem.

There was more classic music on the second day, but the President appeared to prefer the more popular patriotic airs. In compliment to the President the *Star-spangled Banner* and the *Anvil Chorus* were repeated, with the original 100 red-shirted firemen to beat them, and the cannon and bells. The 100 anvils were arranged in four rows, extending from the front of the platform to the back of the orchestra stage. The battery of Parrott guns placed immediately within the coliseum, was manipulated in front of the conductor's stand, the process being that of touching, at the proper moment, the keys of an electrical instrument, to which the guns were connected by wires precisely as the keys of a piano are struck, when harmony in the measurement of time is demanded.

With evident satisfaction the President listened to Parepa-Rosa as she sang Handel's *Let the Bright Seraphim*. Another vocal triumph was that of Adelaide Phillips in the singing of Mozart's aria from *Clemenza di Tito*. The chorus, *Glory to God in the Highest, Peace on Earth, Good-will to Men*, was another of the performances. Another was, *And the Glory of the Lord shall be Revealed*. This was taken up by the 1000 altos, and answered by the basses and sopranos until the hall rang. The chorus of Mendelssohn, *He, Watching over Israel, Slumbers Not nor Sleeps*, had an almost divine effect in pathos and melody. The second day's program closed by the singing of *America*.

Mr. Gilmore's program for the third day consisted of popular and patriotic music, such as kept the crowd in a continual furore of pleasurable excitement.

The first piece, the overture to Auber's *Fra Diavolo*, was played by the full orchestra of upwards of 1000, and a novel and pleasing effect was produced by placing 50 cornets on the solo cornet part, Arbuckle playing the lead. Luther's choral, *The Judgment Hymn*, was given by the full chorus, with orchestral and organ accompaniment. Next was *The Peace Festival March*, composed by Signor Janotta. It was played by the grand orchestra and military band combined. Madam Parepa-Rosa next sang an aria from *Robert le Diable*, then the *Anvil Chorus* and *Overture Triomphale* on the American national air, *Hail Columbia*, composed for the festival by C. C. Converse, closed the first part of the program. The second part included the *Prince Frederick* March; *Star-spangled Banner;* a cornet solo by Arbuckle, *The Harp That Once Through Tara's Halls;* the overture to *Stradella* and the *One Hundredth Psalm*.

In the evening a jubilee ball was given in the coliseum. A dancing hall of colossal proportions was provided, and the coliseum presented a most magnificent appearance under the effect of 50,000 gas lights. The order of dances was twenty-two in number, and the ball opened at 9.30.

The orchestra was made up of a dance and promenade band, the former under the direction of Mr. Gilmore, and the latter under Harvey Dodworth, of New York. Ten thousand persons were present, and the affair was in all respects superb — the largest ball, indeed, ever known in this country.

A purely classical program was arranged for the fourth day. Among the performances were the *Gloria* from Mozart's Twelfth Mass; the *Hallelujah Chorus, Achieved is the Glorious Work*, the *Prayer*, from *Moses in Egypt*, etc. The choral, *To God on High*, and *Sleepers, Awake: a Voice is Calling*, were both sung almost perfectly, showing magnificently their solid grandeur and beauty. The purely instrumental performances, Weber's *Jubilee* overture, and the *Fifth Symphony* of Beethoven, were given most admirably. Miss Phillips gave Handel's *Lascia chio Pianga*.

Saturday was the fifth and last day of this grandest musical festival of modern times. Ten thousand school children constituted the great attraction of the day. It was the largest chorus of children ever brought together in the world, and the concourse of spectators was vast. Chorals, three-part songs, national airs, etc., were performed with great skill and power by the juvenile songsters, eliciting unbounded applause.

Hail Columbia and *Now the Twilight Softly Stealing*, were exquisitely sung. Brinley Richard's song, *So Merrily Over the Ocean's Spray*, was one of the most telling features of the day. *God is a Castle and Defence* was given with fine effect, and Ole Bull's skill as a violinist was displayed in the solo, *A Mother's Prayer*. The orchestra played the overture to *William Tell* and the Coronation March from *Le Prophète*. Madam Rosa repeated *Let the Bright Seraphim*, with Mr. Arbuckle's accompaniment. A duet, *Quis est homo*, sung by Madam Rosa and Miss Phillips, was a performance long to be remembered.

During the intermission Mr. Gilmore was called from the orchestra to the artists' room, where Carl Gartner, of Philadelphia, presented to him a massive gold watch of great elegance and cost, and a heavy gold chain as a testimonial of respect and regard from the members of the orchestra. The gift was unexpected to Mr. Gilmore, who made a fitting response. The *Russian National Hymn*, with words of welcome to President Grant, showed the excellent vocal culture of the children, and the concert was brought to a close with the singing of the *One Hundredth Psalm* in grand chorus.

The festival, though a mighty conception, was a triumphant success, and the result was the greatest musical event of modern times.

THE PIVOTAL POINT

THEODORE STEARNS

This article means to discuss the separation of the pupil from the teacher, — the so-called dissolution of the dependent into the independent. There is no instructor but recalls the time when his chrysalis became winged and animated into an energetic future. Likewise there is no pupil but who anticipates the final wearing of the cap and gown of seniority, whether in music, art, *belles lettres*, or science. Just where this dissolving of the salt of study in the fluid of instruction occurs is the question.

The mere gaining of a diploma may not signify the unquestioned right to teach, although this is our only tangible point upon which we can swing the pivot. Still less is a specified number of lessons or a stereotyped laid-out " course " the race track upon which the start and finish is made. The crucial moment when the pupil is teacher-fit may be years after the diploma or long before, according to his native talent for imparting knowledge coupled with the essential experience. It all depends on the student's holding to what he himself likes the best.

Under the portico of my front porch last spring two robins built their nest, and the wonderful process of hatching the eggs and the later feeding the ever open bills of the impatient fledglings became my daily observation as I lay quietly in a hammock six feet away. Frequently a bold little head would peer out over the cup of mud and straw and fairly stare me out of countenance. The whir of the returning father or mother robin would send all the beaks open in an ecstasy of anticipated nourishment. The day came when the last of the brood hopped out of the nest, stumbled awkwardly along the shelf under the eaves, and after several comical feints spread its wings and, swooping down the hill, was forever lost to my view in a clump of park foliage. Thereafter the nest was vacant; not even the smallest sentiment of fondness for the warm home circle actuating them to return for even a cursory inspection. They had learned to fly, with due deference to prowling cats, and fly they did.

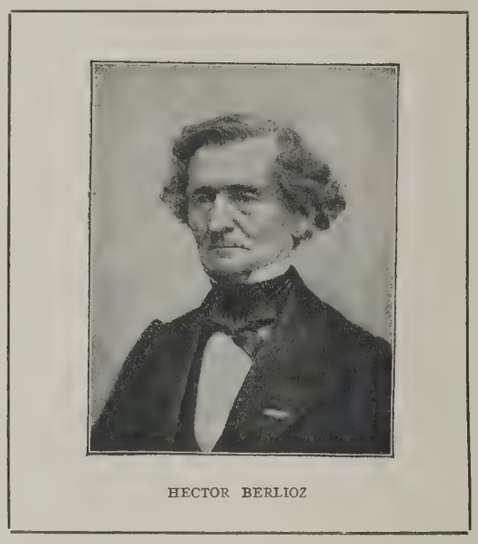
The first plunge into the world of unassisted effort must be made boldly and should be in the line in which the pupil is most proficient. From the moment the accepted quota of study has been carefully assimilated the earnest pupil will begin to climb out of the nest and look at the wide vista of broader and higher musical life. With the senior year of the last text-books, if not before, the scheme of utilizing all previous study should be grasped and the wings will be given their prefatory trials. 'Tis a poor farmer, indeed, who plants his seed and then fails to gather the fruit.

Nature, assisted by studious endeavor, will as instinctively lead the aspirant to independence as she bids the feathered songsters to fly. First to know and understand exactly that which you propose to teach is the prime requisite. Following the above simile the words of Longfellow are a magnificent exhortation to seize the fleeting opportunity with watchful eye and determined hand:—

"Turn, turn, my wheel,
All life is brief.
What now is bud will soon be leaf ;
What now is leaf will soon decay.
The wind blows east,
The wind blows west,
The blue eggs in the robins' nest
Will soon take beak, and feather, and breast,
And flutter and fly away."

In the Shadows

Many trips into away-from-the-car places in our own country have brought me into intimate touch with that vast musical fraternity of America known as the ignorant tune player. As a general rule he fills the conception of our forefathers of the "Jack-of-all-Trades." In the corn



HECTOR BERLIOZ

fields of Kansas, in the pine woods of Michigan, in the cotton belt of the Gulf States or the obstruse counties of Pennsylvania, he holds the breathless attention of his immediate coterie of believers, and is, as far as they are allowed to know, an artist, an instructor, a Mecca of musical knowledge. With this case I desire to point out the fact that, more than you can appreciate, he is thoroughly honest and sincere in his convictions and naturally is more enthusiastic than his cultured antithesis who wields a baton before his symphony orchestra or the staid conservatory professor with breasts dangling full of tinseled rewards. This much to his credit. His first worth consists in the fact that he can reach immediate neighborhoods which are closed to his more intelligent contemporary. His musical crime is that he discharges his pupils after they have learned "a tune or two" by ear, as a matter of course. These in turn become monstrosities of music and logic, albeit enthusiasts, and they are all ramifications that are frosting their cake before they have baked it. They are the opposite of the genial caricatures made by Mark Twain which, as he says, " are as good as the originals, besides keeping still."

But they have a deadly influence on the pivotal point. In their sphere, they exercise the idea that effect is enough without the graduations of studious preparation; for them a brick house is as good on a sand pile as it is on bed rock — until the undergrowth chokes it. Their line between the teacher and pupil is exceedingly short, and a "tune" is likely to snap it at that. At this stage the well-meaning but ill-directed plowboy or milkmaid who can pound out a few " pieces " is liable to soar over the country pedagogue, and if not carefully watched will, — like the dandelion seed — promulgate questionable musical wisdom in all sorts of unwished-for gardens.

They are the birds who did not avoid the cats and never "flew" accordingly.

In the High Light

Now if you take Richard Strauss, whom I once heard describe Mascagni as a "school-boy" and ask him when he would be ready to discharge a pupil, his reply would probably make you blink. The method of the master in shaking hands with his favorite pupil, which is an accepted certificate of dismissal, is exceedingly interesting. Richard Wagner was greater than Carl Tausig, yet the eminent composer never idealized his nineteen-year-old pianist of Zurich into a pupil. Liszt had sent the boy to Wagner, who received him much as a ruffled hen would an irresponsible duckling. " His piano playing makes me tremble," wrote Wagner. " He declares he is tired before we have walked a half hour, yet he refuses to go back."

In his next-door *zimmerschen* Tausig commanded Wagner's respect for his tremendous playing. In Wagner's villa the youth was silent before the eloquent scores of the *Nibelungen Ring*. This bond of sympathy between the graybeard and the boy leveled age as well as attainment, and the two shook hands. It was the ideal straining-point between the teacher and the pupil.

When Cherubini chased Hector Berlioz out of the Paris Conservatory Library (so Hector claimed), there was just this same instinctive block of stock, somewhat vivisected.

Again the thread cropped out when on his death bed Beethoven, fingering the unknown Schubert's manuscripts with that glimpse into the future which is not yet our privilege, exclaimed, " He has it in him."

Paganini placed both hands on the shoulders of Hoerlein, the old instrument maker of Würzburg, who ever after during his life worked hours longer, — aye, watched his glues and varnishes the more jealously — because he had been touched into the title of master.

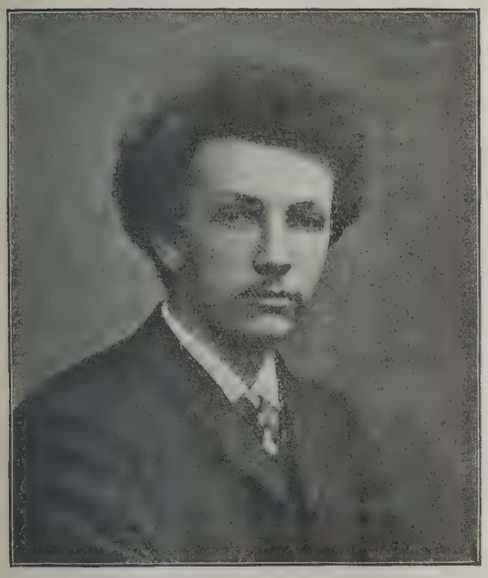
To be dubbed knight was the leading ambition of the squire of the Middle Ages. And thus the novitiate of to-day should approach with proud humility his initiation into the ranks of instructors. The equality of technic and interpretation with that of your teacher should be accompanied by the knowledge of *why* you are able ere you may safely pass the Alpine heights of enlistment.

CARL TAUSIG

The " tune " of the backwoodsman is identical with the feeble fingering of the Austrian composer's manuscripts, only the brush must be cut away to give the necessary light and air for conscientious development. The noblest moment in your life of study will be when you receive a *bona fide* diploma of worth, whether from the taskmaster who says " it is well," or from the artist who leads you beside him, rejoicing in your joint success and who no longer merely beckons you on.

THE MATTER IN DETAIL

Schulz left the conservatory and went to Carlesruhe to study with Felix Mottl. At that time Mottl was reincarnating Gluck operas and giving similar dust-worn scores a new lease on life on the Carlesruhe operatic stage. A year or so afterward I met Schulz unexpectedly on a Brooklyn car in a breathless investigation of a Flatbush Avenue suicide "story." After the story was 'phoned in I accepted his invitation to attend a concert given by his Maennerchor, and the difference between his directing then, and his former manner, was so marked that I demanded explanation. There was something more to it than the mere food of experience. There was a subtle hint of professionalism about his up beats that many a distinguished conductor might envy. I remarked this particularly and Schulz was delighted.



RICHARD STRAUSS

"That's right where Mottl stopped me," he explained. "I hung around the orchestra pit six months before he would let me touch the stick. The gift of Mottl's in bringing a *crescendo* out of your singers and orchestra with your up beat was what I determined to get. I got hold of a little shoemaker's chorus that met near the opera house and practiced on them. Finally it came — you can't explain it — and Mottl was kind enough to come to one of my rehearsals. 'It's time to move, Schulz,' he said. 'You've got the idea, now get out and work it up.' Of course there was more study, but that is where Mottl was pleased."

In a northern Ohio university town, the assistant teacher in harmony disclaimed being more than a student. Yet his strict fugues in double and quadruple counterpoint were marvels of excellence in technic and general grasp. That he instructed some fifty or more pupils a week was to him only a means to an end. When he marked the consecutives in my exercises with his red pencil I used to wish I could do that. He knew next to nothing probably of expression or tone color in orchestra or free composition. His forte lay in strict theoretical work, and very wisely he made a specialty of it.

All post-graduate work like this heralds the final emancipation, and precedes the same, from the shackles of student life, so-called.

The antithesis of these examples may be found in the struggling village teacher, who, long before her time, gives lessons to children for twenty-five, forty, and fifty cents. Usually these cases are governed by the necessity for earning a living and therefore are deserving of great respect, and at the most, a gentle criticism. There is always the question of environment to be considered with them. Those who have had little or no advantages cannot very well be expected to realize the fatal consequences attending a premature flight into the dignities of pedagogics.

"What of it?" you say. "If such robins fly too soon and fall, let the cats eat them." Now, it is very true that their influence is small, but a pebble thrown into a lake will move an immense radius of water; and when these teachers are, as is happily not always the case, careless, self-estimated monuments, and who play waltzes in 4–4 time with E–G–B chords on the fifth degree of the key of A minor, they certainly become fit subjects for home missions. These "don't care" or who would not care if they could, and, as teachers, even their scramble after money is flimsy protection. If they can be led into the better significance of the meaning of instruction through reading, or are amenable to reason, the problem is easy. Fortunately, the number is small, for the majority of youthful teachers are more desirous to learn than they are to teach.

NOTES

Strauss led a concert of his own works at Kiel some weeks ago. The chief number on the program was *Heldenleben*.

* *

Hermann Winkelmann, the distinguished Wagner singer at the Vienna Opera, will retire from the stage at the end of this season and devote his time exclusively to teaching.

* *

Bruckner's Ninth Symphony had a great success at Darmstadt recently. It is a work that is unduly neglected outside of Germany.

* *

Felix Weingartner has discovered in the archives of the Paris Opera the almost forgotten Berlioz cantata, *Cleopatra*, composed in 1829.

* *

August Ludwig, of Dresden, has finished a five act light opera entitled *Rauschgold*, dealing with Leipsic art conditions in the year 1800.

* *

A five act music drama, *Santa Caterina*, music by Georg Liebling and text by Alice Liebling, was produced in May for the first time at the Manzoni Theatre, in Rome.

* *

Artur Rössel, concertmaster of the Weimar Orchestra, has given up his position as instructor at the conservatory in that city.

* *

Under Balling's direction, Liszt's *Christus* was given recently with success at Carlsruhe.

* *

Benno Stolzenberg, opera singer and song writer, died in Berlin, May 12. He was for many years connected with the Braunschweig and Carlsruhe Operas, managed the Dantsic Opera from 1878 to 1882, and taught singing at the Cologne Conservatory from 1885 to 1896. Until shortly before his death Stolzenberg was active as a teacher in Berlin.

* *

Mascagni not long ago conducted his *Iris* in Florence, and was given a warm ovation.

* *

It is said that Dvorák's *The Bartered Bride* has been translated into French, and will be given at the Brussels Opera next season.

* *

Villent-Bordogni, the composer, best known by reason of his collections of "vocalises," died in Algiers, recently, aged seventy-two.

* *

Prof. Julius Klengel has celebrated the anniversary of his twenty-fifth year at the Leipsic Conservatory.

* *

Heinrich Knote, now in Munich, will sing again in New York next season at the Metropolitan.

ON THE NEW EDUCATION

President Hadley of Yale University writes in *Harper's* of the new methods of fitting the kind of education to the kind of pupil to be educated. He says: —

"The tendency of the elective system as conducted at present is to confine the scientific boy to scientific subjects, the literary boy to literary subjects, the administrative boy to administrative subjects. The result of this is that our engineers or physicians go out into life with their imagination uncultivated, and their sense of values (except commercial values) undeveloped; that our barristers lack the training which should give them clear and precise apprehension of the ordinary facts of life; that our merchants have narrow ideals instead of broad ones, and care for science and literature only as they can be subordinate to money-making.

"I believe that the next generation will recognize that the engineer ought to have imagination just as much as anybody else; that it is the possession of this quality which makes him a first-rate engineer instead of a second-rate engineer; and that we can cultivate imagination by bringing books and affairs before him in the right way. I believe that the next generation will recognize that precision of thought is what distinguishes the first-rate speaker or artist from the second-rate speaker or artist; and that this precision can be attained if, instead of hurling facts of science, of language or history at his impervious skull, we open his eyes to the infinite possibilities of close thought and precise expression in all fields of knowledge. And we shall, I think, come more and more to find that the truly great merchant or statesman is not the man of a single narrow aim of money-getting or office-getting, but the one who has been taught to use science or language in such a fashion that he ceases to regard them as instruments of his trade, to be hired and discarded at will, and has become insensibly permeated by that breadth of spirit which leads him to make scientific truth his standard, and poetry or history the inspiration for his conduct."

THE OLIVER DITSON RELIEF FUND

The annual meeting of the Oliver Ditson fund for the relief of needy musicians was held May 19 at Mr. Ditson's late residence, 233 Commonwealth Ave., Boston. The following officers were elected: President, B. J. Lang; treasurer, Charles H. Ditson; trustees, B. J. Lang, A. Parker Browne, Arthur Foote; clerk, Charles F. Smith. The fund is the result of a bequest of Mr. Ditson, and has constantly been of the greatest use in aiding destitute musicians and their families. Applications may be made to any of the above officers.

MUSIC TEACHERS' NATIONAL ASSOCIATION

The Music Teachers' National Association's twenty-eighth annual meeting was held at Oberlin, Ohio, June 26–29, 1906. The regular sessions extended from Wednesday morning, June 27, to Friday afternoon, June 29, preceded on Tuesday evening by an informal social gathering. The first half hour in the afternoons and the whole of Wednesday and Thursday evenings were occupied by music. Two half days were devoted to the study of music in colleges and schools. Papers on the special work of the conservatory, on culture courses, on historical reading for teachers, on the use of the memory in musical work, on European musical associations, etc., were read by Frank Damrosch, Edward Dickinson, Thomas W. Surrette, O. G. Sonneck, H. D. Sleeper, R. L. Baldwin, and many others. Professor Stanley, of Ann Arbor, gave an illustrated lecture on a famous opera of the seventeenth century.

In the August issue of THE MUSICIAN Community Music in Des Moines, Iowa, will be presented.

COMMUNITY MUSIC

SAMUEL SWIFT

Not every community of nine hundred square miles owns the traditions, historical and intellectual, that give distinction to Litchfield County, in Connecticut's northwestern corner. Here lived men and women who have played noticeable parts in American life. At Litchfield itself there flourished one of this country's first and best-known law schools and also its earliest seminary for young women. In the towns and hamlets of this pleasant region, colonial houses, their beauty ripened by generations of wind and weather, recall the clean, cheerful, comfortable ideals out of which they were evolved. The land is furrowed by lofty hills, and kept green by vivacious brooks. It is a country of sweet, wholesome aspect.

But not even these favored conditions could, or did, of themselves, induce a spirit of active cooperation and fellowship among the people as a whole. Such a spirit never is manifested in any scattered population unless and until the lead be taken by persons of exceptional qualifications. Fortunately, this community to-day has two such. They are Mr. and Mrs. Carl Stoeckel, of Norfolk, a thriving place of twelve hundred souls, and their work is of unique sort. Specifically, it is musical work. In a larger sense, it is sociological.

It was the writer's privilege to attend, on June 6, the seventh annual concert of the Litchfield County Choral Union. It was held in Music Hall, Norfolk, a large and attractive wooden structure just completed by Mr. and Mrs. Stoeckel on their own estate. Cost is no gauge of art, but it may properly be stated here that this colonial building, 166 feet by 59, seating 1400 auditors and 400 on the stage, represents an expenditure of some $10,000. The annual concerts, held from 1900 until this year at Winsted, must regularly involve expenses of from $5000 to $10,000, assumed with modest generosity by Mr. and Mrs. Stoeckel.

At this concert, a chorus of 350 voices — the Norfolk Glee Club, Winsted Choral Union, and Salisbury Choir — sang Mendelssohn's *Hymn of Praise*. The tone was fresh, abundant, creditably flexible. They sang with intelligent zeal. Richmond P. Paine, of Hartford, conductor of the union and its constituent bodies, kept his forces on their mettle without fatiguing them.

Sixty orchestral players from the Metropolitan Opera House and the Philharmonic Society of New York, with Henry P. Schmidt as concertmaster, took part as usual. Until 1900 no genuine concert orchestra had ever been heard in Litchfield County, save on one prehistoric occasion, when Theodore Thomas and thirty-eight musicians pioneered their way to Winsted. So the orchestra is still a source of lively curiosity, and half of every program is rightly devoted to instrumental music, under direction of Dr. Arthur Mees. This year's list included the overture and bacchanale from *Tannhäuser*, the scherzo from Tschaikowsky's Sixth Symphony, a Strauss waltz and polka, and Weber's *Jubel* overture.

The *Tannhäuser* overture had been played once before, but the incredulous amusement on a few faces showed that the clashing of cymbals, the click of castanets, and the insistent voices of trombones were still of extra-musical interest to some hearers. This was healthy and reasonable; it recalled the argument of a noted London art critic, urging the National Gallery to buy a Piero di Cosimo painting of rather unconventional subject: "It will cause lots of unaccustomed visitors to gasp out 'Lord, ain't that funny!' but it will not fail to make a definite impression on their minds."

The orchestra, then, under Dr. Mees' skilful guidance, was keenly followed by the audience, and the Wagner numbers were especially applauded.

In soloists, the Litchfield County Choral Union and its public have been strikingly favored. This year, Madame Nordica, Madame Louise Homer and Edward Johnson took part, and their sincere and admirable art met instant, ample response. Previous concerts have enlisted Madame Homer, Madame Lillian Blauvelt, Shannah Cumming, Carrie Bridewell, Sarah Anderson, H. Evan Williams, Emilio de Gogorza, Gwilym Miles, Herbert Witherspoon, George Hamlin, and others.

All this seems wonderful enough, and it is not generosity alone that has accomplished it. Mr. and Mrs. Stoeckel have shown both devotion and wisdom. Mrs. Stoeckel's father, the late Robbins Battell, was an amateur musician of uncommon quality. He organized a small choral society among his acquaintances in and near Norfolk, some fifty odd years ago, and he it was who founded Yale's chair of music, at first occupied by Gustave J., father of Carl Stoeckel, and now held by Horatio Parker.

After Mr. Battell's death, Mr. and Mrs. Stoeckel sought to honor his memory by some living monument. Mr. Stoeckel had already organized the Litchfield County University Club, of two hundred resident college graduates. Its meetings drew together many elements not before associated, and a valuable spirit of solidarity has grown up. Books to be written on local topics have been commissioned from several members, by the club, among them a volume on the birds of Litchfield County, by H. K. Job, for which President Roosevelt is to write an introduction.

The success of this club in stimulating both social and intellectual talents had an influence in later plans. In 1897 the Norfolk Glee Club was formed. Its eighteen men and women members met at the house of Mr. and Mrs. Stoeckel. Its concerts quickly attained popularity. Then came the plan to make a musical memorial to the late Mr. Battell. The neighboring town of Winsted, now boasting ten thousand inhabitants, was asked to organize a choral body to join the enlarged Norfolk Club in public concerts. The Norfolk founders agreed to give the services, for rehearsals and concerts, of Mr. Paine as conductor. The first joint concert was that of June 6, 1900, at Winsted, when Alfred R. Gaul's *The Holy City* and an orchestral program divided the day, Mr. Paine and Dr. Mees conducting. Since then, Torrington, Canaan, and Salisbury have organized choirs and been admitted, on the same terms, after two years' probation, to the Litchfield County Choral Union, which now has seven hundred active members. The repertory for mass concerts has included Coleridge-Taylor's *Hiawatha*, Mendelssohn's *Elijah*, Handel's *Messiah*, Verdi's *Requiem*, and Sullivan's *Golden Legend*. Mr. Paine's time is now devoted from January to June, to training the five choirs. The conversion of raw recruits into good choral material has been done swiftly and thoroughly. At first many had to learn their parts by mere imitation, after hard drilling. Now most of the singers read with considerable ease, and newcomers are expected to do so. Absence from rehearsals is rare. Some members drive four miles through arctic weather to be present. There is eager interest always.

Members are made to feel that their share of the work is as important as that of Mr. and Mrs. Stoeckel. The singers buy their own scores and every local society administers its own affairs, this being a part of the very delicate tact of the founders. Soloists, orchestra, conductors, railway fares, are paid by the Stoeckels.

Absolute democracy prevails. Substantial citizens and their women kind, professional folk, farmers, railway employees, factory workers, shop girls, household servants, stand on a level and are content to do so. One of the best tenors in one of the smaller societies is the village barber, who learns his parts between shaving his customers. He has no piano, but just practices away without an instrument. On the evening of the concert this year, the station employees at Norfolk were much concerned because a special train bearing a section of the chorus, was late. The stationmen were themselves members of the chorus, and feared that they could not get to the hall in time, after their duties were over.

Very animated was the scene in Music Hall at the public rehearsal and the concert, on consecutive evenings. The audience was in gala dress, diverse as its own make-up. The soprano choristers wore light blue shoulder sashes over their white gowns and the contraltos scarlet sashes. Red music books and uniform red fans completed a picture, recalling the gay moving throng before the gate of Seville's bull-fighting arena, in Bizet's *Carmen*.

Perhaps additional zest was lent to the evening by another new feature. No tickets are hereafter to be sold for these concerts. Instead, they are given away by members of the choruses. No seats are reserved. All fare alike.

It is not too soon already to see results of this new musical life in Litchfield County. Most plainly do they show in the decided improvement of music in the churches. Moody and Sankey, H. P. Danks, and their ilk, no longer satisfy the people. Of the final outcome, in effect and influence, no man can fix the limit.

ABOUT HENRIK IBSEN

If a writer's chance of remembrance may be measured by the degree in which he is appreciated during his lifetime in foreign countries, the name of Henrik Ibsen is destined long to remain especially illustrious in Scandinavian literature. There is no doubt that his writings have been read or acted outside of Scandinavia to an extent unparalleled even by his fellow Norwegian Björnson, much less by the Swedes Tegner and Runeberg, or by the Dane Oehlenschläger. The influence of all the other authors whom we have named, who alone might pretend to be his rivals, was confined to Scandinavian peoples. Of Ibsen alone it may be said that the whole of central and western Europe responded to the impulse given by him, as regards the point of view from which modern life ought to be studied, and as regards the spirit in which it should be portrayed.

Henrik Ibsen was preeminently the man who, as playwright and poet, undertook to interpret the effects of nineteenth-century civilization in general, and of Darwinism in particular, upon social and domestic life. Born in 1828, he was thirty years old before the *Origin of Species* was published, and some years elapsed before

HENRIK IBSEN

the far-reaching relations of that work to current popular conceptions of religion, ethics, and history were distinctly felt. That his mind would be peculiarly open to the purport of scientific investigation and discovery might have been inferred from the fact that he took but a faint interest in the study of the Greek and Latin classics, whereas he was apprenticed to a chemist from the age of fourteen. The incisive and unflinching realism for which he was ultimately to be distinguished may be attributed partly to a congenital aptitude for exact scientific observation, and partly to the close and sometimes poignant contact with realities which he owed to some years of active journalistic work. He had reached his thirty-fourth year, however, before the specific qualities which were to be associated with his name and to bring about a kind of revolution in dramatic composition were unmistakably revealed. He was a romanticist more or less of the Oehlenschläger type long before he invented and exemplified the peculiar outgrowth of Romanticism which we have learned to describe as Ibsenism. Of the five romantic dramas which he wrote as director of Ole Bull's theatre at Bergen, only two have been published — *Lady Inger at Ostrat* and the *Banquet at Solhaug* — and neither of these, taken by itself, would have availed to give him a conspicuous place in Scandinavian or even in Norwegian literature. In two subsequent dramas, on the other hand — *The Warriors in Helgeland* and *The Rival Kings* — it was evident that he had fallen completely under the sway of Oehlenschläger, in whose hands the old Scandinavian mythology had been made to live again precisely as had the classical Greek religion in the hands of Keats. The two plays last mentioned reproduced the style and spirit of the Norse sagas, and it was forthwith acknowledged that they had placed Ibsen in the front rank of Scandinavian dramatists.

His first characteristic piece, however, was *Love's Comedy*, produced in 1862. This was an undeniable precursor of his ironical social dramas, and the views of human life disclosed in it set the whole Philistine world of Norway against him. Partly for this reason, and partly because he was exasperated by his country's refusal to take part with the Danes in their struggle against the German Powers, he said good-by to Norway in 1864, and thenceforward lived chiefly in Rome, Dresden, and Munich till 1892, when he returned to Christiania. To the broadening influence of his environment during those thirty productive years should doubtless be attributed the fact that most of his work belonging to that period has a cosmopolitan rather than a provincial flavor. Thus the lyric dramas *Brand* and *Peer Gynt*, which appeared in 1866 and the following year, and which are of a very high order of poetic workmanship, reflect, and are intended to reflect, phases of distinctively Norwegian character, yet they are acknowledged to possess universal validity. The double drama, *Emperor and Galilean*, which Ibsen published in 1873, must be regarded as a work apart in which he diverged from the prevailing aim and tenor of his dramatic compositions. Here he foretells a "Third Kingdom," which shall transcend both classic and Christian culture.

It is to be noted that this conception of three distinct stages of culture has been embodied by a well-known Russian writer of fiction in a trilogy of novels.

Recurring to the species of satirical social dramas with which his name is especially associated, we observe that *The Young Men's League* was finished in 1869, and that this was followed at intervals by seven plays, with most of which English and Americans are conversant: *The Pillars of Society*, *A Doll's House*, *Ghosts*, *An Enemy of the People*, *The Wild Duck*, *Rosmersholm*, and *The Lady from the Sea*. These dramas provoked a storm of controversy wherever they were acted or read, but especially in England, which at the time was less ready than was Continental Europe to face realism on the stage. It was inevitable that Ibsen should shock the Pharisee and the Philistine in all countries. When, however, the storm of obloquy and reproach had subsided and the cloud of misconception had been dispelled, it came to be generally recognized, even in England and the United States, that a great heart searcher, mind purger, and truth revealer had arisen. It also came to be acknowledged that while squeamishness might be revolted by his plainness of speech, he was at bottom a stern and uncompromising reformer. His austerity, his grimness, his severity, recall the attitude of a Hebrew prophet.

From the technical point of view Ibsen's method was revolutionary, for his pieces begin where most plays are on the point of ending, and the interest of his dramas is almost exclusively psychological, or rather, pathological. The plays by which he will longest be remembered set forth the conclusion that we feel to be unavoidable from the premises of a given problem in character or social circumstance. It must not be inferred, however, because Ibsen carries analysis to extraordinary lengths, that he talks about his *dramatis personæ* instead of letting them reveal their natures by utterance or act. No long and explanatory monologues are needed by him to place the spectator *en rapport* with the figures on the stage. His characters are real personalities; each presents a consistent individuality in thought, language, and behavior.

Above all, it may be said of Ibsen, as it has been said of Sudermann, that although his subjects are drawn from everyday life, they are invested with a charm of atmosphere and a potency of suggestiveness that eliminate the commonplace. He often depicts vice, but for him it has no fascination; punishment dogs it as relentlessly as Nemesis pursued Orestes, or as remorse overtook Macbeth. The divine lawgiver we may abjure, as we may evade penal statutes; but Ibsen teaches that, so long as human beings dwell together in organized societies they are subject to a moral law that is fenced about and enforced by penalties from which there is no appeal, a law which men must obey or incur the retribution which, by the very nature of things, attends its violation, a law by whose mysterious and resistless workings goodness on this earth harvests blessings, while the evil-doer reaps a curse.

No sane and sober-minded person would exaggerate Ibsen's peculiar merits by comparing him to Sophocles or Shakespeare. Yet it was given to him to exhibit, to an extent unparalleled in recent times, the specific and sovereign quality which was so conspicuous and so memorable in the Greek and Elizabethan dramatists. By him, as by them, not merely surface phenomena, evanescent manners, and ephemeral ideals, but the primal truths and basic realities were bodied forth upon the stage in shapes of beauty or of terror. Like them, he pointed no particular moral, but by poignant or appalling examples drove home to the quivering conscience the moral lesson human life. Like them he was a philosopher, teaching and preaching through consummate works of art; an artist in whom a thinker was articulate.

CLOSING EXERCISES OF THE INSTITUTE OF MUSICAL ART, NEW YORK

Frank Damrosch, the Director of the Institute of Musical Art, New York, made the address at the closing exercises of the Institute, held in its Recital Hall, at 53 Fifth Ave., June 5. Certificates were awarded to those who had completed the Institute's one year's course for teachers of music in the public schools, and it was announced that hereafter this would be a two years' course.

Mr. Damrosch, in his address, spoke of the success of the school in its first year, and in awarding certificates he took occasion to compare the music in the public schools of to-day with what it was some few years ago, and warmly praised Superintendent Maxwell. A feature of the exercises was the playing of the school's orchestra, one of the violinists being a student six years old.

Referring to the foundation of the Institute, Mr. Damrosch told of his having had the idea in mind for many years. He never found a real understanding of the need until he talked about it to James Loeb. Mr. Loeb it was who gave the school its $500,000 endowment. "I have been sending students to Europe for many years," Mr. Loeb told Mr. Damrosch, "to be disappointed in every case, not because of the lack of ability of the students, but because they did not know how to take advantage of the opportunities there."

Summing up the plan of the Institute, Mr. Damrosch said that it included serious study, individual attention to every student, and appreciation of his needs, a discipline which insisted on the curriculum being carried out, and a corps of teachers in sympathy with the ideals of the school, and glad and able to carry them out. Mr. Damrosch said that the faculty were to be classed among the inspired teachers. He also praised the students highly. "A school that began in October with three hundred students and has at the end of the school year nearly five hundred, certainly can feel that it has met a need," he asserted. "For the future we shall continue to carry out these plans."

Of the system of music teaching in the New York City schools, Mr. Damrosch said in part: "Years ago, it was my experience in a New York school, that the only requirement for a teacher of music was to be able to pound out an accompaniment to a patriotic song, and shout 'Sing louder, boys.' I took charge of the music in the schools in 1897. It was not until Superintendent William H. Maxwell, who is now at the head of the schools, took charge, that I was able to make the progress that I wished. I cannot speak in sufficiently high terms of the work he has done. Dr. Maxwell has been called autocratic. So was Hercules when he cleaned the Augean stables."

The rest of the program included Mendelssohn's *Laudate Pueri*, by choral class and organ; Pugnani's *Les Commeres*, by Franz Kneisel's violin class; Elgar's *The Snow*, by the choral class with accompaniment of violins and piano; and Mozart's *Allegro vivace* from the *Jupiter Symphony*, by the orchestra class.

BREATHING IN ITS RELATION TO PIANOFORTE PLAYING

FRANCIS H. MORTON

Among the benefits to be derived from the consideration of this element in performance, the exaltation of expressive power calls for mention. The rise and fall, ebb and flow of *feeling* is brought home to one in a peculiarly personal and intimate manner; but like other things, sympathetic respiration may be carried to absurdity, and the performer's spasms of breath would suit an attack of indigestion rather than the music that gives rise to such burlesque!

As a cure for nervousness it should be of considerable worth, because, as a rule, when the player is thus afflicted, breathing is the last thing to receive intelligent attention, and subsequent music seems to issue from a sort of breathless emptiness that even afflicts the eyes with vertigo.

It is impossible for such a state of things to exist, if a regular and sympathetic inflow of breath be sustained to give vigor, life and fresh courage to a faint heart.

Let us now summarize our remarks on the subject: —

1. *When to take a gentle, even breath of some duration.*

(*a*) In most ascending passages.
(*b*) When nearing a climax or *sforzando*.

2. *When to take a quick and full breath.*

(*a*) On *ff* chords following a soft passage.
(*b*) During a sudden and quickly ending *crescendo*.
(*c*) *After* a silence (𝄐) if not of too great duration.
(*d*) On the repetition of ascending sequence forms, with expiration between them, but each breath a little deeper than the previous one. In this case a *full* inspiration will not be taken at the beginning of the sequence tending to a climax.

3. *When to hold a full inspiration a moment.*

(*a*) On nearly all climaxes. The greater the climax the longer the "suspensive" moment.
(*b*) On a silent pause (𝄐) succeeding a climax.

4. *When to exhale slowly and evenly.*

(*a*) Generally on the last note of a composition if it be a tranquil ending.
(*b*) After a lesser climax, and during a *diminuendo*, if not too long drawn-out.
(*c*) On a descending passage when possible.

5. *When to exhale fully and quickly.*

(*a*) On an *allegro* passage following a pause (𝄐).
(*b*) On the last note of a quick, vigorous movement.
(*c*) On an *sfz*, or accent, followed by a silence or pause (𝄐).
(*d*) When a descending passage (*ff*) forcibly and abruptly reaches its final note. It must be a short passage, followed by a rest, or note of some duration, so that an inspiration may follow in good order.

6. *When breath must be suspended, no matter what stage is present at the instant of suspension.*

The attention of players in general should be drawn to the intense effect of a sudden silence, if the breath be suspended precisely the length of such silence. The real mentality of a sudden pause in silence is then the better appreciated and adequately driven home to the inner realization. Here are two illustrations; others may frequently be found in modern music especially.

The above is from Chopin's C♯ minor Polonaise, Op. 26, No. 1, and graphically marked with the same symbols as we used before; but in measure 2 comes a sudden and unexpected silence, denoted by the radiations. It is as if all movement, all animation were *gripped*, held motionless a moment, while one may feel the vastness of what all music passes into — silence. Then comes an undecided, yearning exchange between B♭ and B♭♭, where respiration is indefinite, partaking of both negative and positive symbols.

Beethoven's use of silence in his sonata Op. 2, No. 1, is perhaps less dramatic, but equally as effective: —

Here we take a full breath on the *ff* chord, exhaling slowly on the diminuendo descending passage, when in measure 2 the silence catches us with breath nearly gone, so it must not be long. Then in the ascending crescendo passage, we naturally take another breath (see 1 (*b*)).

These extracts will serve to show what conditions the best management of respiration. Naturally there will be numerous passages encountered that defy all set rules we may make, so the best thing to do here is simply to continue breathing fully and steadily in such passages.

This procedure in complex music will serve to maintain a tranquil mental poise, otherwise imperiled by the conflict of rhythm and harmony.

Where the *tempo* is very rapid we cannot adhere to all rules concerning ascending or descending passages, for they may follow each other with such rapidity and run up or down with such involution and change that only the *general* trend to or from a climax can govern our breathing in any degree. But a valuable rule may be formulated with regard to phrases. It is this: Wherever phrases are distinct and well marked, punctuate them by a short breathing space. It is quite impossible to say just how long to punctuate, but perhaps long enough to allow the last note to diminish so that the new phrase may enter with a fresh accession of tonal power, as denoting a fresh thought or idea on the composer's part. We talk about a thought "striking us" and there is a realistic truth in that idiom, for there is a something felt at the very inception of a thought that is in no way equaled by any subsequent reflection. Therefore it seems a reasonable thing to begin a new phrase with fresh inhalation and augmented tone as compared with the finishing sound of the fore-phrase. Note we say "finishing sound," not finishing *note*, because although the last note may require to be accented, its time-duration will diminish the sound considerably, and if it is an accented note, it *will* be of sufficient length to sustain a suitable diminuendo, pending the entry of the next phrase.

A short note ending a phrase is rarely accented, except when it is of itself the beginning of a following phrase. Then it will be entirely feasible to commence a new idea (or phrase) with additional tone, and with increased inspiration and vitality.

No doubt these few ideas on breathing in its relation to piano playing will be thought inadequate to the subject, but if they lead to further study, with enjoyment of the benefits derived therefrom, the object of these suggestions will have been realized.

DR. KARL MUCK

Dr. Karl Muck, of Berlin, has been engaged as conductor of the Boston Symphony Orchestra for next season. The appointment of Mr. Gericke's successor is a matter of much interest to the musical public. Ever since Mr. Gericke's retirement was announced last season conjecture has been very active as to who his successor would be.

DR. KARL MUCK

Dr. Muck has been engaged for only one year. He is one of the conductors of the Royal Opera of Berlin, and shares with Richard Strauss the direction of all the important productions of the Berlin opera,

Dr. Muck has had a career of well-earned success extending over twenty-five years. He is forty-seven years old, and was born at Darmstadt in 1859. Like many other musicians who have won fame, he was at first intended for a professional career; so he studied at the University of Heidelberg for the degree in philosophy. After a year he transferred his activity to the University of Leipsic, but something more than the university attracted him to the Saxon city, for besides his university studies he began work also at the Leipsic Conservatory, and soon after received the degree of Ph. D. from Heidelberg. Later he made a public appearance in Leipsic as a pianist, in the Gewandhaus. It was a successful appearance; but instead of devoting himself to the piano, he turned conductor. Beginning with minor posts in small municipal opera houses — Zurich, Salzburg, and Gratz — he finally won an important position in the opera of Prague, where he was conductor for six years, from 1886 to 1892. One of his engagements at this period was as conductor for Angelo Neumann's traveling opera company, — a post in which Anton Seidl was a predecessor. His first appearance in Berlin was at the Lessing Theatre as visiting conductor. In 1892 he was engaged as conductor at the Royal Opera in Berlin, and has been there ever since. He has, however, frequently appeared as conductor of orchestral concerts in most of the musical capitals of Europe. One of his most important engagements of this kind was in Vienna, where he conducted the Vienna Philharmonic after that organization, having lost Hans Richter, took up the plan of having visiting conductors appear in rotation, in the manner of the New York Philharmonic. Dr. Muck will make his first appearance in Boston at the initial concert of the twenty-sixth symphony season in October.

OUTDOOR MUSIC IN JULY

LOUISE KARR

Midsummer is not a time for the more strenuous musical occupations, but I doubt if ever certain gifts in this line are more appreciated than during the months we give up to an outdoor life and one free from care and study. True, our musical sense may be in abeyance while golfing, automobiling, or mountain climbing, but at sunset time or moonlight hours, sitting on the rocks or floating about in canoes on lake or river, then the people who play guitars, mandolins, flutes, or banjos find themselves

popular enough, and it pays them well to have a good stock of pieces ready for such occasions.

Music on the water! There is poetry in the very idea. The most prosaic person, fairly afloat at the close of a long summer day,—let me add incidentally, if he doesn't happen to be laboring with the oar or paddle, — finds himself inclined to lift up his voice in song, and searches his memory for something that will express the feeling of the hour.

These people, I have observed, are apt to be the ones who cannot sing very well: there is a prejudice among trained singers that singing in the open air is bad for the voice, and for this reason you often find them sitting mute under these circumstances; their feelings are just as keen, no doubt, but prudence rules. This is not wisdom, for if sufficient care be taken, one may safely sing in the open air, though naturally, one should not attempt it in foggy or in cold, raw weather, or for too long at a time, and above all, one should avoid straining the voice.

Is not the trouble, after all, that the temptation is to the two latter dangers? Straining the voice is so easy under the open sky, when there is nothing to confine the tone; and the hardest thing of all is to stop when one first notices fatigue — "Just one song more" is a difficult plea to resist.

I do not wish to put my opinion against that of experts in such a matter, but I believe that if a singer uses a correct method, one that takes the strain from the throat, and breathes properly, he or she may sing in the open air with impunity, so long as they will sing softly and stop at the right time. Naturally, if an artist has a gold mine in her throat, she will take no chances. I have heard on good authority that prima donnas and primo tenores do not lead an unhampered existence in respect to much of anything — there is a story to the effect that Madame Nordica will not allow herself the pleasure of stooping to pick up a pin for fear of disturbing the equilibrium that preserves the organ upon which so much depends; but to those of us who respect art, and work for it without counting ourselves professionals, it is a duty, I am sure, to use our talents in a way to give pleasure wherever we can.

A trained memory counts for much in outdoor singing. The person who knows the whole of a song is a godsend; one such can keep up the courage of a dozen who know the first verse, and can join in, if the others are started. Most of us have been familiar with certain songs all our lives and yet we could not start any verse but the first to save our souls. With this peculiarity in view, I should advise young singers to take any favorite song, and learn it through: get the worth of it; you will not be sorry. And when you have learned one, you will be likely to begin another. If you have a store of songs, words and music, in your mind, you will not regret it in the least yourself, and will be the life of a party who is only too willing to sing on summer evenings, with only a few ragged edges of choruses and first lines to go ahead on. Then there are many pleasing songs that you can learn to sing alone, with the guitars and banjos feeling their way through the accompaniment, and with those who feel like it humming the air as well, if they want to. It is the old story, that the knowing how to use your talent is more important — almost — than having the talent to use.

Songs that tell a story are the ones we wish to hear while in a holiday mood, and how many of them there are. The Scotch ballad collections are particularly rich in them: there is *Allister MacAllister*, a lengthy relation of a dance, in eight verses, *John Grumlie*, who swore he could do more work in a day than his wife could do in three, which finishes his complete defeat in six verses, *Jock o' Hazeldean* by Sir Walter Scott, pathetic *Auld Robin Gray* in five verses, *Jamie and Jeanie*, a comedy in one act, in something like ten verses arranged for two voices as a dialogue, and many others that hold the attention from start to finish by their literary merit, no less than for the aptness of the airs to which they are wedded. The Irish seem more inclined to apostrophize the charms of the loved one than to relate adventures, humorous or otherwise; but stories may be found by persevering, Moore's *The Origin of the Harp* being an instance. Our modern songs run very much to a single stanza tersely expressed, about a bird clinging to a bough, and then flying away, or a crystal dewdrop on a leaf relapsing into the Nirvana of the Sun — but who could sing modern songs with their impossible accompaniments in a boat.

No, we must go to the folk lore and ballads for this, though occasionally we may find a story song like Charles Kingsley's *I Once had a Dear Little Doll, Dears*, if we must pay tribute to our contemporaries. The best way to find this kind of song is to get a good collection of Scotch, English, or Irish Ballads, and other collections of popular airs; any publisher can give you half a dozen, and then search through them for those that appeal to you and suit your voice, and, as I said before, *learn* them.

I should not forget to add to the above list a collection of Italian boat songs; these are very

singable, not difficult, and within the range of most voices. They may not tell a story, but they are the quintessence of water music, and sing themselves, once you memorize the air. Many habitual readers of THE MUSICIAN doubtless at this moment are listening to Venetian gondola songs, or catching echoes from across the Arno, or are drinking chocolate and beer on the Rhine boats, while the "Fatherlanders" rush to the side of the steamer greeting the towering "Lorelei" with a hearty chorus of "I know not what comes o'er me," and so on. Others may be seated on the summit of "Drachenfels," listening to the orchestra and watching the Rhine flowing far beneath, or hearing the fountains plash in the "Flora" at Cologne, while the best of music and moderate eating and drinking go on uninterruptedly. Wherever they are, they are good Americans, we may be sure of that, and will come home more musical than they went away.

Just a word about the instruments that may be carried about easily for summer playing. The violin is too sensitive to be subjected to exposure, but guitars are eminently the thing, and also the flute, which is not influenced by atmosphere, may often take the place of the voice. All popular airs may be played on this latter instrument: the new Boehm system of fingering has removed many difficulties that formerly beset the amateur, and it is now among the easiest of instruments. There are popular arrangements combining the wind instruments with each other, with piano, or with guitars and mandolins. If any combination is desired, it can be obtained.

FOR THE YOUNG PEOPLE

Conducted by THOMAS TAPPER

PIANOFORTE PRACTICE METHOD—II

W. RALPH DRIFFILL

Previously I wrote concerning practicing, from the muscular point of view. I want to say something in this paper about the connection between brain and fingers, as applied to pianoforte playing.

If I hold my finger straight, and I wish to bend it, I must first of all think or will the movement, and then the finger bends. It is a very simple action, and yet, properly understood, it is a very complicated process that we put into force. It is not necessary here to consider the process in all its details, but simply to understand that, the action being determined, the brain, acting upon the nerves and muscles, the intended movement takes place as the direct result of the thought. This simple experiment is sufficient to illustrate the dependence of the muscular action of the fingers upon the brain.

If you are to make the best use of your brains, then, in practicing, it means that you should pay attention. In fact, attention is hardly a strong enough word. Concentration expresses my meaning better, and it may help you if I give a simple illustration of the word.

If you place a magnifying glass in the direct rays of the sun, and hold a piece of paper a certain distance behind it, you obtain a very bright spot or point of light on the paper; and if it is on a day when the sun shines sufficiently powerful, you will set fire to the paper. What happens is this: the rays of light received on one side of the lens are bent at a certain angle which brings them to a point at the back. The light and heat received are thus enormously multiplied. This is an instance of concentration.

The application of this is simple. If we wish to secure the best results, we must concentrate our minds on one thing at a time. If we are practicing a difficult measure, we must keep our thoughts on that measure, and not the next. And we should bring all our brain power to bear on just the thing we want to do. Whether in respect to fingering, phrasing, or execution generally, it is necessary to keep a definite object in view. Even if we are only practicing slow finger gymnastics, we should work with a definite intention either of training the muscles or regulating the touch.

Now I can imagine you as saying, "This is all very well so long as you are practicing slowly, but when you desire to play quickly, how are you to think of each note as you play it?" It is a reasonable question, and I will try to answer it by another illustration.

When you have been staying at the seaside, I presume you have enjoyed a trip on a steamer. If you noticed what was transpiring, you probably saw the captain on the bridge, shouting instructions down a tube, or ringing bells to the engineers. Sometimes, on larger vessels, the captain sends down orders, each of which requires several men to carry out; but as each knows exactly what he has to do, having been well drilled in his work, the orders are perfectly executed. Now, suppose we compare the captain of the ship to the brain. The brain can send down an order to the fingers for the performance of a whole passage, just as easily as it sends an order to one finger. So that if the fingers have been well drilled in their work we shall have the passage properly played. There is one other point in connection with this: after the captain has given the order, he must not forget about it. He should see that it is carried out. And it is the same in playing. When the order has been despatched from the brain watch and see that your fingers obey. Or, to put it simply: whenever you play, no matter how well you think you know a piece, keep your attention fixed on it. Think first how you want it to sound, and be determined to obtain the right result.

There is one great bugbear with which nearly all of us have to contend — nervousness. This is principally caused by over regard for other people's opinions. When playing, we are wondering how our hearers regard our performance; and, of course, while our thoughts are upon that we fail to give the necessary attention to the music. The habit of concentration will help us immensely in overcoming this drawback, especially if the fingers have been drilled to some extent into an automatic performance of a piece, in order to be prepared for instant response to the dictates of the brain.

These two short papers are the outcome of some years' experience in teaching. They could have been considerably expanded, and I might have entered more into detail; but it has been my object to generalize rather than to particularize, leaving the intelligent young student to follow out the ideas for himself. I trust that the hints I have given may be of use, at any rate to some; and that their adoption may relieve what is often, unfortunately, irksome, and lead to more thorough appreciation of music generally.

ART OF RELAXATION

When a nervous patient is sent to me for special work, the first thing I examine is her spine. Why? Let me tell you. The spinal column may be likened to a tall tower, with doors and windows opening to right and left down its whole length. Through this tower a great bundle of nerves runs; this bundle we call the spinal cord. and it comes direct from the brain. Through every opening down the long tower or column nerves escape, dividing and subdividing as they run till their minutest branches reach every part of the body.

We must therefore strive not only to become straight of spine, but to keep straight of spine, not only for appearance' sake, but in order to retain sound nerves and sound health, says Marion Harris Neil in the *Philadelphia Press.*

Let us laugh often, sing often and learn the art of relaxation and be able to snatch periods of relaxed rest frequently during the day.

Plenty of water and air, plain food, slowly eaten; rest, relaxation, work, regular exercise, laughter and play; these make the best tonic for nerves, the best cosmetic for the complexion, the best elixir of life I know of.

SAID BY TSCHAIKOWSKY

Every work of art, however much it may transcend the artistic level of the day and the society in which its author lived and moved, must still inevitably bear the stamp of the period.

My ideal is to become a good composer.

It is a well-known fact that great works of art are valued less for the undoubted creative force of their authors than for the perfection of form into which this force is molded, and also for their symmetry and for the successful fusion of the idea and its external expression.

In composition we must distinguish two separate factors: a purely inventive faculty and imagination.

SAID BY GRIEG

I am no believer in any kind of "isms."

I am not an exponent of Scandinavian music, but only of Norwegian.

Wagner is the open door of the future.

My receipt for recalling the fleeting inspiration and the storing of ideas is to travel a good deal and to see the most beautiful things possible.

A COURSE IN LISTENING

E. B. HILL

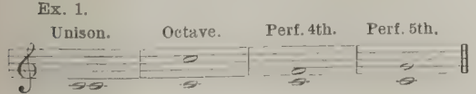
The Significance of Melody

If the attention of the listener is first unavoidably directed towards character of rhythm in music, his second thoughts must instinctively turn to the variations in pitch of the notes that constitute the rhythm, — in other words, the intervals by which they suggest what we term melody. Melody has been defined as a *pleasing* succession of intervals, but, inasmuch as the idea as to what a pleasing interval is varies considerably from generation to generation of musicians, this cannot be said to be a satisfactory designation of its characteristics. In fact, one might say that a sentence is a pleasing succession of words. For the present, therefore, a more practical analysis would be to consider a melody as a succession of intervals so arranged as to present a coherent musical idea. The next step in the study of melody is to learn the names of the intervals used in its construction.

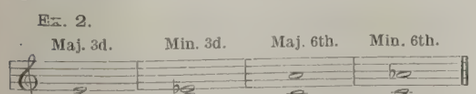
Intervals are derived from the major and minor scales, from which our music is chiefly built. The central idea of a piece of music is the prevailing key or tonality in which it is written, in spite of excursions to other keys. If we are familiar with the intervals of one key, we know them all.

Intervals are first of all divided into two general and distinctive classes, *consonant* and *dissonant*. Consonant intervals are those which can be heard alone without offense to the ear. Dissonant intervals often require some antecedent interval to prepare the ear for the harshness, and always require some consonant interval succeeding for what is termed *resolution*. The relative harshness of a dissonant interval at various epochs is as variable as the relative repute of a word or a phrase to-day in comparison with the classic era. The colloquial expression of the past is the acknowledged classic idiom of to-day. To a certain extent, music follows much the same course of evolution. Intervals are measured in either direction, but for convenience the lower note is usually considered as the starting-point. Those intervals which we call consonant (*sounding with* is the literal meaning) may be subdivided into two general classes, *perfect* and *major or minor*. In both the major and minor scale we find that the unison (no interval), the octave (from the lower note to the next of the same name), the fourth and the fifth do not vary. They are thus termed *perfect* to distinguish them from consonants, like the third and sixth which have a different form for the major and minor key.

Ex. 1.

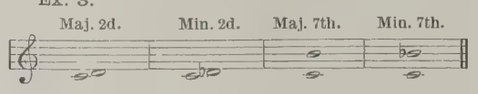


Ex. 2.



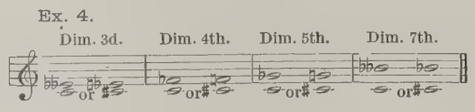
The dissonant intervals (the very derivation of the word *sounding against* suggested their character) are the second and the seventh. In the classical epoch and even later, it was considered necessary to have one of the notes forming this interval already sounding in another combination, to prepare the ear for the harshness to come. It is still necessary in strict writing, but the modern ear is more indulgent. The second and the seventh do not vary in either the major or minor scales, but in melodies and in the combinations of notes which we call chords we meet with major and minor seconds and sevenths.

Ex. 3.



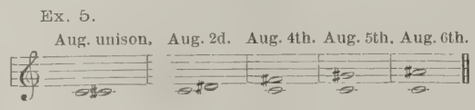
Both melodically and harmonically, we find two other classes of alteration of intervals, which are termed *diminished* and *augmented*. They are formed in one case by lessening the interval by a semitone, in the other by increasing it the same amount. Thus we have diminished thirds, fourths, fifths, and sevenths (especially the latter) in frequent use. Diminished intervals are formed either by *lowering* the upper note of a perfect or minor interval, a semitone, or by *raising* the lower note a semitone.

Ex. 4.



The augmented intervals most commonly employed are augmented unisons, seconds, fourths and fifths. Occasionally augmented sixths are found.

Ex. 5.



These are virtually all the intervals to be met with in the general run of musical literature. A few other exceptional intervals, which occur more rarely, can be disregarded. If the student can recognize and name the foregoing intervals *in all keys* by sound as well as on paper, he is well equipped for listening to melody.

An accurate knowledge of intervals is needed not only to cultivate keen perception of the melodic element, but to assist in divining its character. Melody, as before stated, the second most important element in music, owes its quality, rhythm aside, largely to the nature of the intervals which compose it. Thus a theme made up chiefly of consonant intervals will be suave and gentle in expression unless the rhythm is strikingly at variance with it. Another in which the dissonant element prevails will tend to be melancholy, agitated, or passionate. A judicious combination of both elements is most to be desired. Too much dissonance would lead to distasteful harshness, while too much consonance would pall in the end, owing to the monotony of its euphony. Furthermore, after ascertaining the rhythm the first step in interpretation is to observe closely the character of the intervals which occur in the melodic element, and to use the data thus acquired in arriving at an idea of the piece itself.

But melody is by no means confined to the upper stave in piano music. It appears in the bass, in the middle voices; throughout it must receive recognition. In music written in the polyphonic or many-voiced style, such as the canon (or invention) or the fugue, we find a theme repeated interval for interval (with a few exceptions) at a prescribed distance from its first statement. These repetitions are sometimes fairly complex, and in order to bring them out clearly, the player must be quick to catch the characteristic intervals which makes up the theme, and equally quick to bring out those same intervals in the various "responses" which follow. Here again the knowledge of intervals must be so thorough as to be almost literally automatic.

Still again, melody is significant not only for the suggestions of word and character which it contains, but also for the hints of latent harmony implied. As a melody is made up of intervals, so also are chords nothing but the simultaneous sounding of intervals. Striking as is the capacity of melody to give music a character that is varied, powerful, and subtle, it becomes infinitely more potent with the aid of its harmonic background. The development of harmonic perception is so large a subject as to require separate treatment.

THE MOZART FESTIVAL

The following are the soloists, organizations and conductors selected for the Mozart Festival at Salzburg beginning August 14: —

14. — Opera performance, *Don Giovanni*, conducted by Reynaldo Hahn, of Paris; Lilli Lehmann, Geraldine Farrar, F. d'Andrade, and others.

15. — First orchestra concert, conductor, Felix Mottl, Munich. The Philharmonic Society, of Vienna; C. Saint-Saëns, piano; Mr. and Mrs. Petschnikoff, violinists.

16. — Second performance of *Don Giovanni*.

17. — Second orchestra concert; conductor, Dr. Muck, Berlin.

18. — Chamber concert, Willy Burmester, Berlin, three Mozart quartets, played for the first time. Also first performance of *Figaro*, conducted by Mahler, Vienna. The Vienna Imperial Opera *ensemble;* the Philharmonic Society.

19. — Church concert, conducted by J. F. Hummel. *Krönungsmesse*, *Ave Verum*, and *Te Deum*.

20. — Second performance of *Figaro*.

MANUSCRIPT SOCIETY OF NEW YORK

The annual meeting of the Manuscript Society, of New York, resulted in the reelection of the old officers, as follows: Frank L. Sealy, president; F. W. Riesberg, secretary-treasurer; Carl Venth, first vice-president; Ernest Carter, second vice-president; Paul Ambrose, librarian. The above, and Addison F. Andrews, Gustav L. Becker, John L. Burdett, Luise Cappiani, William C. Carl, H. Brooks Day, directors.

Laura Sedgwick Collins was elected to the board of directors. President Sealy pointed out that the programs of the past season were almost entirely of manuscript works, and so more in keeping with the avowed objects of the society than in former years. Also that it was the first time in his recollection that the season ended with unperformed manuscripts on hand. Six active members (composers) have joined the society since December 1, 1905.

THE LEIT-MOTIF

E. A. AYLIFF

The term *leit-motif* is one which has passed into almost a musical catchword, and consequently a certain odium is often attached to its meaning. For the same reason adherents of absolute music affirm that the thing itself is simply a *ruse* to disguise a want of ideas, and explain, or excuse, imperfect progressions. Of course, in some cases, the charge may be true, but the failures of self-styled genius are scarcely due to the form employed, and to condemn a device because of its treatment is somewhat unjust. The *leit-motif* is an outcome of modern life. The instinct to describe some definite object appears to be born in musicians, and at first this took the shape of mimicry pure and simple, as seen in the counterfeit birds and beasts of madrigal days, or the cannon and martial sounds of the happily obsolete *Battle of Prague;* but now these primitive efforts have all given way to mental digressions, portrayed by means of the *leit-motif*. The age is emotional, and music, to suit its needs, must be of the analytical type, more commonly known as "program," or, when on a higher level, "romantic." Unfortunately, the line dividing the two is so vague that its presence, more often than not, is ignored, and confusion ensues in the hearer's mind. "Program" explains itself; but "romance" may, perhaps, be defined as that inexplicable "something" which arouses association by the mere suggestive beauty of sound. Most writers look upon this as a latter-day product, though a thing so subtle in its essence can be neither located nor dated. In literature, imagination began to assert its sway at the end of the eighteenth century, and the movement certainly, to a great extent, affected music. Tales of mystery filled the air, and on every side a spirit of revolt at constraining laws was abroad. The rules of the ultra-classical school were discarded by writers, and musicians, following the stream, endeavored to express poetical fancies by methods unheard of before. Music, from a science, became an emotional language, which Weber was, perhaps, the first to proclaim, though Berlioz, from the crude imitations of earlier times, evolved or developed the *leit-motif*. Both were men of the hour, and to both all honor is due; yet, even before their time, similar tentative essays were made by composers. Monteverde, for instance, who wakened the Florentine music to life, in his way may be called a master of purest romance. He it was who originally made the orchestra an integral part of the drama, in which each instrument played its part, as was afterwards done by Wagner. The latter's favorite effect, the *tremolo*, was also devised by him to heighten the thrill, when the hero wounds his unrecognized love, while the *pizzicato* he employed to depict the clashing of swords in the self-same opera. No other composer, so far, has improved on these two familiar expedients, yet their inventor's name is often passed by and the credit imputed to others.

Being far in advance of his time, Monteverde found no immediate successor, and when music assumed more regular forms, in the eighteenth century, art, like society, moved on a different plane. In that picturesque, but unprofitable period, emotion was regarded as *bourgeoise*, and therefore tabooed by the modish world. Under their silken garments men and women hid hearts as turbulent fully as those of to-day; but no sign was allowed to appear. Music was merely a pastime produced at command, and that musicians were human beings with loves and hatreds never entered the heads of their patrons, while composers themselves were the last to dream of expressing their woes in music. Probably, had Mozart lived in a subsequent age he might have put more of his trials and struggles into his music, but whether the world would have gained is doubtful. An undeniable *leit-motif* appears in *Don Giovanni*, but the time was not ripe for such matters, and the warning effect it conveyed was quickly forgotten. Mozart wrote for the needs of his time, and troubled himself but little about the future. Romance there unquestionably is in his music, but the romance, so to speak, is of powder and patches, and not of later fashions and feelings.

Beethoven, again, belonged to the transition era, between the *Zopf* and the age of "storm and stress." In literature "romance" was the ruling spirit, but musicians, as yet, were only feeling their way. All unknowingly Beethoven's stormy, passionate nature comes out in his music, though nothing further removed from "program" could well be imagined. Numberless meanings have been read into his works which he, most likely, never intended, and which simply distract instead of instructing. Some of the themes fulfil the functions of *leit-motifs*, but the listener hears what his mood demands, and not what the "program" maker asserts. Joy, sorrow, anger, and humor are all to be found in his music, and all being touched by the master's hand are responsive to those who have ears to hear. Unlike Beethoven, Schubert, in his sordid, commonplace life, had little to do with romance, and the passion which thrills through his songs was possibly quite unintentional. He sang, like the birds, at nature's behest, content to pour forth his melody day by day, with never a thought of the heights his music scaled. Liszt (according to Riemann), his greatest pupil, threw his own fascination into whatever he wrote, and thereby imparted the personal note which in Schubert's highest creations is missing. Liszt, however, was unique as a man, and can therefore be hardly compared with Schubert or other composers who followed the new romantic path. Each of these, indeed, expressed himself in his own particular manner — Chopin by exquisite melody, coupled with quaint irregular rhythms; Brahms by faultlessly classical forms; Schumann by sweetest of songs; Mendelssohn, Franz, and the rest by divers and varied modes, of which the *leit-motif* at last found fruition in Wagner. Curiously enough, though this is always connected with him, he himself thought less of its workings than most of his admirers. These at one time well-nigh raised the form to a cult, and by over-aggressive championing roused a natural hostility. "Wagner," one of his biographers says, "thought in music"; consequently the ever-recurring phrases were instinctive with him. His "thoughts," moreover, were of different kinds, whereas those of his followers are apparently wedded to gloom. Some of the rising generation go out of their way, it would seem, to discover uncanny combinations of tone, and as unrelieved tragedy falls in time, the public refuses to hear these effusions. Strauss, the greatest living exponent of "program," is of course occasionally cheerful, but opinions are still divided concerning his merits. Time alone can prove his right to rank among the immortals, and at present the world is waiting for some one on whom the prophet's mantle may fall. Till that great one arises, music must remain perforce at its present stage, — that is, with the *leit-motif* as its dominant feature. This, as it happens, is frequently blamed for faults of which it is guiltless. Absolute music is sometimes intricate and tuneless, while the charge of over instrumentation can only be laid at the composer's door. The pendulum, some say, having swung to its utmost limit, a reaction is bound to follow, but whether this is the case or not no one living can tell. Possibly simplicity may supersede the ruling methods of orchestration, but the *leit-motif* with its wealth of potential emotion and beauty has to all appearance come to stay.

SAID BY MASCAGNI

Musical expression in its spontaneous interpretation must correspond to the feelings of the listener. Only then is it art, a pure and true emanation of genius, otherwise it is science.

Can genius become old?

I always encourage originality of ideas, and attach more importance to spontaneity than to laborious correctness of form.

Music may be either instrumental or melodramatic, and all the other styles, directly or indirectly, spring from them.

Art needs a continuous stream of new vitality. Art wants the light of creative genius, and among the new reformers there was no genius (concerning Italian church music).

The field of modern melodrama is held by two great schools — Italian and German.

Popular music will ever stand as the chief and most important contribution to the history and evolution of music.

PUBLIC REHEARSALS

A well-known Parisian theatrical manager, recently interviewed by a London critic, had this to say on the subject of public rehearsals.

"We in Paris," he said, "suffer from the abuse of the *répétition générale*, for we are learning that the verdict of a dress rehearsal audience is not to be depended on. The object of the *répétition générale* is, of course, twofold. It is intended to allow the critics more time to write their articles, and also to give the author and manager an idea of the reception which the play will get from the public. It fails to some extent in both respects. To begin with, the *répétition générale* often shows the author and the manager that scenes ought to be cut or altered. If this is done — and it often is done — between the dress rehearsal and the first performance, the critics criticize a performance different from that of the first night.

"The other point in which the *répétition générale* fails is more important still. A dress rehearsal audience is composed of critics, actors, actresses, and friends of the management — almost entirely, in a word, of people who are Parisians to the finger tips, who are boulevardiers in the "Aurelien school" sense of the word, who see every play that is produced, are expert in dramatic things, and who belong to the same *milieu* as the author and the actors. They are people who, to sum up all in one short sentence, are dwellers in the higher regions of Bohemia. To try the sharpness of a new knife you would cut a hair or a thread of silk rather than a cabbage stalk, would you not? Well, that is all very well in general, but we managers (I must say that he spoke very much like a manager) do not want tests of sharpness when we have only got to cut a cabbage stalk on the first night. I have known plays which were an immense success at the *répétition générale* fail afterwards. On the other hand, I have seen plays which were only half a success at the *répétition* delight the public later.

"I can give you an instance. The press had nothing good to say of *Le Frisson de l'Aigle*, which is having a successful run at the Théâtre Sarah Bernhardt. The press was right, too. By every canon of art the play is bad. I am not sure even that the opinion of a first-night audience is a good test. A first-night audience, now that no seats can be bought for the *répétition générale*, which has become the real *première* in everything but name, is made up largely of the richer *bourgeoisie*. But the richer *bourgeoisie* has become cultivated of late years, and often gives the same kind of critical but commercially useless judgment as the audience at a *répétition générale*. Not to know all about a new play a day or two after its production is bad form nowadays. The real audience does not reach the theatre until the second or third night of the play, and it is a second or third night verdict which we managers have come to regard as decisive. Tell that to your London managers."

I tell it, but reserve the right of a critic to think that *répétitions générales* are useful if they help the critics ever so little to warn off bad plays. — *Paris Correspondence London Standard.*

SAID BY SAINT-SAËNS

I claim to preserve my liberty to like what pleases me and to reject the rest; to believe good that which is good, discordant that which is discordant, absurd that which is absurd.

It is certain that we cannot work too hard to instil in the public a taste for pleasures of an elevated order; but to offer it what is ingeniously described as "painful pleasure," to offer a feast consisting of "exquisite suffering and poetic perversion," merely ends in mortification. When we wish to mortify our souls we do not go to the theatre, but to a convent.

There is the melody of theorists, the melody of musicians and the melody of melodists.

Music is not a means of physical pleasure. It is one of the most subtle products of the human mind.

BOOK REVIEWS

THE ESSENTIALS OF CHOIR BOY TRAINING. Walter Henry Hall, Novello, Ewer & Co., New York.

This little volume consists of the series of papers on the training of the boys' voices that Mr. Hall contributed recently to the *New Music Review*. Those who did not read these interesting and valuable essays when they originally appeared should do so, now that this volume makes them easily accessible.

The majority of choirmasters who train boys have many and varied "pet notions" as to the best method of producing artistic results, but, notwithstanding, there is much that Mr. Hall says, especially on Interpretation, that will add to the knowledge even of the most successful in this work, if he will but "read, mark, learn and inwardly digest," for these hints are the results of practical and successful experience.

KYRIALE. Harmonized by Rev. L. Manzetti. New York, J. Fischer & Bro.

The use of "Plain Song" is now practically obligatory in most services of the Roman Catholic Church. As the various "modes" with the many variations are difficult of proper harmonization, the average organist will probably be "all at sea," unless he has the requisite assistance.

This volume contains the advanced pages of the first American edition of the Manzetti harmonization, which in spirit is admirable throughout, modern notation being employed. To play these modes smoothly, effectively, and in what may be called the "Church Spirit," considerable study on the part of the organist is required. This harmonization which Messrs. Fischer & Bro. publish will be invaluable to all who play the various "offices" in the old modes, as required by the Vatican.

We have received from the Leipsic house of Breitkopf & Härtel the Bach Year Book, for 1905, published under the auspices of the Bach Society. The contents of this little volume include articles concerning works and events in the life of this master, by Rudolph Bunge, Bernhard Richter, Fritz Volbach, and Max Schneider, the latter artist furnishing an especially comprehensive list of the literature and essays on Bach from every source, European and American.

Also from Mrs. Frederick Schuyler Wardwell, brief catechisms on German and Russian music, also answers to the latter, which she has compiled in collaboration with Mrs. E. E. Holt. These little pamphlets are recommended by the National Federation of Music Clubs, and will be found helpful for study. Also we notice a proposed plan of work for music clubs, with a list of books for study, which serve their purpose admirably.

GOLDEN THOUGHTS AND MEMOIRS. J. H. Hall. Dayton, Va., The Roebush-Kieffer Co., 1905.

This is a little volume of some 125 pages designed by the compiler as supplementary material for music lessons and talks each day of the year, having quotations from the writings and sayings of European and American musicians and educators, together with dates of births and deaths. The names included many justly celebrated with others less worthy of mention, and there are more or less inaccuracies of a typographical nature. The book is attractively published and will prove an aid to many teachers and students.

THE MECHANICS OF PIANO PLAYING. Albert G. Carmiencke. Chicago, Clayton F. Summy Co.

Here is a little work that should interest piano teachers and students who seek after a fluent technique and a sympathetic tone production. In the introduction Mr. Carmiencke states fully the object of this work, which is the acquiring of a technique that will be subservient to the musical consciousness, and at the same time acquired with the least expenditure of time and energy. To this end there is a series of preparatory exercises. Those for finger, arm, and hand action are not written in ordinary staff notation but by a special chart arrangement of numbers corresponding to the fingers of the hands. Then follow many standard exercises for technical work of every kind, trills, double notes, crossings, chords, octaves, and general independence. There are also scale and arpeggio rhythms for advanced students as well as special preparation for hand crossing.

The exercises present few forms, and these will be found easy to understand and memorize. With the short practice period (fifteen to thirty minutes) for students with limited time, Mr. Carmiencke recommends for study on the musical side the graded course edited by Thomas Tapper, or the studies of W. S. B. Mathews. After these the Czerny forty daily studies or those by Rafael Joseffy are recommended. The author says in conclusion of his preface that "the exercises are mechanical, not that technique may be exalted, but that it may serve its purpose. They aim to make technique, from the very beginning, what ideal technique is in the end, instructive." This latter word is perhaps the key to the whole question.

While there are many methods and ideas in vogue for development of an up-to-date technique, this little book can be examined with profit by all pianists and teachers, for it is a most valuable addition to the literature of piano technique methods. Forty pages octavo attractively bound in flexible cloth.

The Fitchburg, Mass., Public Library has recently published an extra bulletin showing a large increase in the collection of the Francis H. Jenks Music Library, which is one of the most comprehensive of its kind in New England.

A review of Florence May's *Life of Brahms*, written by Edward Arnold for the *Musical Times*, may well serve as a pretext for indulging in a eulogy of that composer. There are many who have said that after Beethoven no one should attempt the symphony. Yet this would deprive us of the grace of Mendelssohn and the sentiment of Schumann, to say nothing of Brahms. The young Bach once improvised contrapuntally for an old organist, who then said, "I feared that our old art was lost to the world, but I see it lives again in you." So, too, with Brahms. In the modern days of the symphonic poem, where liberty often means license, and freedom from form is too often used to cover lack of ability, Brahms stood forth as the one noble champion of the older tonal architecture, where simplicity of theme or harmony did not mean weakness, and where beauty did not imply passionate orchestral raving. Almost any bright young musician can juggle skilfully with the modern harmonic and instrumental colors; but few, if any, make the attempt to produce anything of clean-cut symmetry. Brahms has taught us that this is not the fault of the musical form, but of the modern composers and the modern public taste.

SAYINGS OF SUSAN B. ANTHONY

"No man is good enough to govern any woman without her consent."

"Self-government is as necessary for the best development of women as of men."

"The greatest compliment ever paid me was, that by my life work I had helped to make the conditions of the world better for women."

"If you would have your requests granted, your legislators must know that you are part of a body of constituents who stand with ballots in their hands."

"So long as State constitutions say that all may vote when twenty-one, save idiots, lunatics, convicts, and women, women are brought down politically to the level of those other disfranchised. This discrimination is a relic of the dark ages. The most ignorant and degraded man who walks to the polls feels himself superior to the most intelligent woman."

"That women are 'lawful citizens' is undeniable, since the law recognizes them as such through the visits of the assessor and the tax gatherer; since it recognizes them as such in the police stations, the jails, the courts and the prisons. Only at the ballot-box is the lawful citizenship of woman challenged."

"Who can doubt that when the representative women of thought and culture, who are to-day the moral backbone of our nation, sit in counsel with the best men of the country, higher conditions will be the result?"

"I do not agree that we have too many voters now. Instead of that, I say we have just one half enough, for a majority of the opinions of all the people combined is sure to be better than the opinion of any one class. They call it a 'mistake' giving to poor and uneducated men the right to vote; whereas the greatest wrongs in our government are perpetuated by rich men, the wire pulling agents of the corporations and monopolies, in which the poor and ignorant have no part."

"It is in order to lift the millions of our wage-earning women into a position of as much power over their own labor as men possess that they should be invested with the franchise. This ought to be done not only for the sake of justice to the women, but to the men with whom they compete."

"I urge all to study the intricate problems of bettering the world; not merely the individual sufferings in it, but the general conditions. Such study will show the great need of a new balance of power in the body politic; and the conscientious student must arrive at the conclusion that this will have to be obtained by enfranchising a new class — women."

RESTFUL SLEEP

In the ability to obtain restful sleep there is much variableness in the same person at different times and under different influences. Profound sleep is generally more refreshing than light slumber, but the fact that one can be roused without difficulty does not always signify that his rest is deficient. Quiet slumber is always more restful than sleep that is broken by dreams, even though the dreams be so light as not to be impressed upon the memory.

The character of sleep is affected by many influences, both mental and physical. The person who, upon retiring for the night, fails to put away the cares of the day that is past or borrows the thoughts of the morrow, is slow to reach the depths of sleep and wakes but little refreshed.

An overfilled stomach prevents sound sleep, but hunger should be relieved before retiring, and for this purpose there is nothing better than a glass of warm milk.

The bed should be smooth, but neither too hard nor too soft; the position of the body preferably lying on the right side, with the head not too high, and the disposition of the limbs such as not to impede the circulation of the blood. It is generally better not to interfere with the fantastic attitudes of little children until they have slept a while; but the head must never be permitted to remain covered.

For a wakeful child a warm bath at bedtime is better than drugs, and usually more effective; and it is a safe rule for older persons also to refrain from taking medicines to induce sleep until after they have tested the efficacy of the warm bath. — *Youth's Companion.*

ODDS AND ENDS

THE BOOKS THAT INFLUENCED TOLSTOY BEFORE HE WAS TWENTY-ONE

It is interesting to note the literary works which influenced Tolstoy and helped the development of his views during his youth, that is to say, from about fourteen to twenty-one years.

TITLES OF THE BOOKS	THE DEGREE OF THEIR INFLUENCE
The New Testament (*Gospel of St. Matthew*); The Sermon on the Mount	Powerful
Sterne, *Sentimental Journey*	Very great
Rousseau, *Confession*	Powerful
" *Emile*	Powerful
" *Nouvelle Heloise*	Very great
Pushkin, *Eugene Onegin*	Very great
Schiller, *Die Rauber*	Very great
Gogol, *The Overcoat; Iv. Iv. and Iv. Nik; Nevsky Prospect; Vy; Dead Souls*	Great
Turgenef, *The Memoirs of a Sportsman*	Very great
Druzhinin, *Polinka Sax*	Very great
Grigorovitch, *Anton Goremika*	Very great
Dickens, *David Copperfield*	Powerful
Lermontof, *The Hero of Our Times; Taman*	Very great
Prescott, *The Conquest of Mexico*	Great

— From *Leo Tolstoy: His Life and Work*, by P. BIRUKOFF.

THE BOOKS THAT INFLUENCED TOLSTOY FROM HIS TWENTIETH TO HIS THIRTY-FIFTH YEAR

From twenty to thirty-five years of age, says P. Birukoff, in *Leo Tolstoy: His Life and Work*, the new biography just published by the Scribners, Tolstoy was chiefly influenced by the following works: —

TITLES	DEGREE OF INFLUENCE
Goethe, *Herman und Dorothea*	Very great
V. Hugo, *Notre Dame de Paris*	Very great
Tyuchef, *Verses*	Great
Koltsof, *Verses*	Great
Fet, *Verses*	Great
Plato, *Phædo and the Symphosium* (Gotsin's translation)	Very great
Odyssey and *Iliad*	Very great

Thus we have the more or less complete list of Tolstoy's literary guides.

TOLSTOY AND TURGENEF

"Who of us at that time did not know the boon companion, the partner in all sorts of frolics, and the capital fellow at telling amusing anecdotes, Dmitri Vassilyevich Grigorovich, celebrated for his novels and stories? This is how he, by the way, told me of the encounters between Turgenef and Tolstoy in the same house of Nekrassof: 'My dear boy, my dear boy,' said Grigorovich, choking with laughter till tears came to his eyes, and stroking me on the shoulder, 'you cannot imagine what scenes we had here. Mercy on us! Turgenef speaks shriller and shriller, then pressing his hand to his throat, and with a look of a dying gazelle, whispers: "I cannot talk any longer! It will give me bronchitis!" and with enormous strides begins to walk up and down the three rooms. "Bronchitis!" sneers Tolstoy, "it's an imaginary illness. Bronchitis is a metal!" Of course the host Nekrassof is trembling heart and soul: he is afraid to lose both Turgenef and Tolstoy, in whom he foresees a powerful support for *The Contemporary*, so he is bound to manœuvre. We are all upset and at a loss what to say. Tolstoy is lying down in the middle of the room on a leather sofa and sulks; Turgenef, with the lappets of his jacket asunder and his hands in his pockets, continues to walk up and down all the three rooms. To prevent a catastrophe, I approached the sofa and said: "My dear Tolstoy, don't get excited! You have no idea how he appreciates and loves you!" "I will not allow him," says Tolstoy, his nostrils dilating, "to be spiteful to me. And now he walks up and down the room on purpose, crossing his democratic legs close to me."'" — From *Leo Tolstoy: His Life and Work*, by P. BIRUKOFF.

A WATERING-PLACE IN THE CAUCASUS

In a letter of June 24, 1852, to his brother Sergey, Tolstoy gives characteristic details of his life in Piatigorsk, where he was stationed while in the army as a young man: —

"What shall I tell you about my life? I have written three letters, and in each have described the same thing. I should like to tell to you the *spirit* of Piatigorsk, but it is as difficult as it is to tell to a stranger in what *Tula* consists, which we unfortunately understand very well. Piatigorsk is also something of a Tula, but of a special kind — the Caucasian; for instance, here the chief feature is *family houses and public promenades*. Society consists of landowners (this is the technical term for all visitors to the place), who look down upon the local civilization, and of officers, who look upon the local pleasures as the height of bliss. Along with me there arrived from headquarters an officer of our battery. You should have seen his delight and excitement on entering the town! He had already told me a great deal about the distractions of watering-places, how every one walks up and down the boulevards to the sound of music, and then, as he declared, all go to the pastry cook's and there make acquaintance even with family houses. There is the theatre, there are the clubs, every year marriages take place, duels, etc. . . . ; *in one word it is quite a Parisian life.* The moment we got out of our traveling cart, my officer put on blue trousers with fearfully tight riding-straps, boots with enormous spurs, epaulettes, and so got himself up and went for a walk along the boulevard to the sound of music, then to the pastry cook's, the theatre, and the club, but, so far as I know, instead of an acquaintance with family houses, and a bride who owned 1000 serfs, he — in the course of a whole month — only made acquaintance with three shabby officers who emptied his pockets to the last penny at cards, and with one family house, in which, however, two families live in one room, and tea is served with little scraps of sugar to put in one's mouth. This officer, moreover, spent in one month about twenty roubles on porter and sweets, and purchased a bronze mirror for the adornment of his toilet table. Now he is walking in an old jacket without epaulettes, is drinking brimstone water as hard as he can, and appears to be taking a serious cure; but he is astonished that, although he walked every day on the boulevard, frequented the pastry cook's, and did not spare money on the theatre, as well as on cabs and gloves, he could not get acquainted with the aristocracy (here in every little fort there is an aristocracy), while the aristocracy, as if to spite him, arranges rides and picnics, and he is not admitted anywhere. Almost all the officers who come here suffer a like fate, but they pretend they came only for 'treatment,' so they limp on crutches, wear slings and bandages, get drunk, and tell strange stories about the Cherkessi. Yet at headquarters they will again tell people how they were acquainted with family houses and amused themselves tremendously; and every season they go to the watering-places in crowds to amuse themselves." — From *Leo Tolstoy: His Life and Work*, by P. BIRUKOFF.

SAID BY RUBINSTEIN

When musical thoughts are lacking then the *leitmotif* comes in handy.

What is poetry? It rhymes, but is not so. What is truth? It does not rhyme, but is so.

I prefer a society of ladies to a society of gentlemen, and yet I prefer a forest to a flower-garden.

I once intended to write a composition entitled *Love, Theme and Variations*, but I gave it up, because when I was young I might have found the theme but had not experience enough for the variations; now I might write the variations but cannot find a theme.

I am not a friend to the pen, and especially do I dislike letter-writing.

There used to be little concert halls and great artists; now we have great magnificent halls, but —

The teacher of singing can make or spoil a voice; he can mistake the voice of an alto or contrariwise; he loves to invent new methods of teaching, and always finds that the professor who preceded him taught his pupil badly.

The public behaves in the same way towards both specialists. It has confidence in charlatan. Everybody consequently recommends his doctor as readily as his teacher of singing. And, after all is said, it is still nature who is the best doctor and the best teacher of singing.

It is a pity, but true, that no translated opera ever is as good as the original.

The full program for the Bayreuth Festival, which opens on July 20 and closes August 22, is as follows: —

July 22, *Tristan und Isolde;* July 23, *Parsifal;* July 25, *Das Rheingold;* July 26, *Die Walküre;* July 27, *Siegfried;* July 28, *Götterdämmerung;* July 31, *Tristan und Isolde;* August 1, *Parsifal;* August 4, *Parsifal;* August 5, *Tristan und Isolde;* August 7, 8, 11, *Parsifal;* August 12, *Tristan und Isolde;* August 14, *Das Rheingold;* August 15, *Die Walküre;* August 16, *Siegfried;* August 17, *Götterdämmerung;* August 19, *Tristan und Isolde;* August 20, *Parsifal.*

The participating artists will be Madame Schumann-Heink, Ernst Kraus, Marie Wittich, Krupfer, Bertram and Katherine Fleischer.

* *

Ch. van Istendahl has been appointed as Boumann's successor at the Amsterdam Conservatory, to fill the position of chief 'cello teacher.

* *

Eugen d'Albert's *Flauto Solo* was performed at the Essen Music Festival, May 24–27.

* *

In Mannheim *Lakmé* is said to have had a favorable reception. This opera is heard frequently in Europe, although in America it is known practically by name only.

* *

Professor Singer, of Stuttgart, who has been giving chamber music concerts in that city for forty-five years, will abandon the course after this season, in order to enjoy a long vacation.

* *

At Monte Carlo not long ago, Ganne's opera, *The Flute Player*, had a friendly reception. The text is based on the well-known story of *The Rat Catcher of Hamelin.*

SOME HOBBIES OF PROMINENT MUSICIANS

MYRON A. BICKFORD

It is believed that an exposition of the various ways in which musicians divert their attention from the cares of business and find that relaxation which is so necessary to the proper balancing of one's existence will prove interesting to the many readers of this magazine. With this belief in mind, a number of interviews have been secured.

The fact that different people have so many diverging ways of obtaining their amusement and recreation makes it doubly interesting to learn something of their methods. It seems to be a fault of musicians, perhaps more than of almost any other class of brain workers, that they do not allow themselves enough recreation. The old adage of

W. H. SHERWOOD

"All work and no play" could well be reversed in the wording and applied to musicians. They literally play too much and do not work enough, that is, at something to divert the attention from the all-absorbing subject.

It is absolutely necessary to have a change of occupation in order to keep the human machinery in the best working condition.

These musicians who have been selected for these interviews will be found to cover a wide range of action, and while the information concerning each will necessarily be somewhat brief, yet it will give an inkling of their fads and outside occupations.

One of the older musicians, who has been prominently before the public in a many-sided capacity, is Dr. H. R. Palmer. His former great activity in forming and conducting conventions and normal schools in various sections of the country has borne splendid fruit, and the lovers of music who have received their first inspirations from him are legion.

In his younger days he was an organist, but his chief life work has been along the line of musical theory, harmony, and composition. His writings on these subjects are an acknowledged authority. In spite of his great activity along musical lines, he has for a good many years made a special study of astronomy and the "Bacon-Shakespeare Controversy," and has lectured on both these subjects in many different states of the Union. However, his pet hobby is the latter subject, and during the past few years he has spent much time and research in collecting proofs that Shakespeare neither did, nor could write the immortal plays and poems attributed to him. Some years ago, when there was a considerable discussion of this subject, he undertook the study of it in order to uphold the Shakespeare side, but shortly became convinced that the mass of evidence was on the Bacon side. Although Dr. Palmer has reached an advanced age, he is still very prominent in musical circles (and is at present the President of the Clef Club, of New York.)

F. H. Tubbs, the well-known teacher of singing and voice culture, concludes that he has no particular hobby, outside of his regular teaching. All his outside interests bear on that one thing, he having "an eye single to the glory" of the vocal art.

Taking a short trip into the middle west, we are introduced to a man of whom a prominent New York paper says, "One of the greatest pianists of the world to-day," William H. Sherwood. This is certainly high praise, and well merited, too, for Mr. Sherwood stands as a shining example of what America can produce in a musical way. Outside of his efforts to get at the real truth in teaching and playing music, he has two hobbies.

One is the idea of moderate, all-round exercise and mild athletics and recreation for music students. Mr. Sherwood's sturdy physique gives abundant evidence that he practices what he preaches in this regard.

During the summer weeks, while he is conducting the summer music-school at Chautauqua, N. Y., he is often seen taking a spin on his bicycle along the shady roads of which that famous resort is justly proud. The other hobby to which he is devoted is the idea that American musical talent is producing better work and promising better things for the future than it is generally credited with, and that consequently our musical clubs and other interests are doing an injustice in not supporting and encouraging the American talent to a greater degree than is done in many places.

J. C. BARTLETT

N. J. Corey needs no introduction to the reading musicians of this country, as his masterly articles, as well as his lecture recitals, have made his name almost a household word among musical people.

He is active in a variety of ways, being a very prominent pianist and organist, and among the foremost teachers of his city and the middle west. Mr. Corey is of the opinion that he has no really deep-seated hobby or fad, but he is always ready for any fun that comes his way.

One of his diversions is amateur photography, with which he amuses himself during the summer vacation. To use his own words, "My accidents along that line are remarkably good, my failures equally bad." He attributes a large share of the failures to his perusals of a book entitled *Why My Photographs are Bad*, and thinks that when he finds one on *Why My Photographs are Good*, he may do away with some of these failures.

Another western musician who is very prominent is Horace P. Dibble of St. Louis, Mo. In his leisure hours he is a devoted follower of Isaac Walton. In speaking of his hobby, he says: "I find the life of a musician exceedingly wearing on the nerves, both from teaching, public performance, composition, and literary work. My temperament is such that I expend a great deal of energy on anything that I do, and the consequence is that in my leisure hours I seek something as much as possible the reverse of this." Dr. Vandyke has said that there is just enough of the gambling instinct in his nature to make it very interesting, after he has thrown out his bait, to know what he is going to get from it, and Mr. Dibble finds that he is constituted in much the same way. "A few hours out in the air, carrying a fish pole and basket, or rowing a boat, or sitting patiently, waiting for a bite, brings me home sometimes with a weary body, but always a peaceful mind. A good night's sleep finds me refreshed for the next day's work." Mr. Dibble's hobby is one of the most healthful that could be selected, and is to be heartily recommended to any and all musicians, the gentler sex included.

One of Cleveland's prominent teachers and composers, Frederick A. Williams, makes a hobby of photography and has a large collection of pictures, of which he is justly proud. In his younger days Mr. Williams exhibited a marked talent for drawing, and for some time it was a question as to what should finally be his life work. However, music was triumphant, and later results show that it was no mistake.

Among violinists, Henry Schradieck holds high rank. His compositions, studies, and arrangements are universally used and admired, and his long activity as a soloist and teacher has made him justly famous. Outside of his professional duties, he has a fad for making violins. This has absorbed his interest for the biggest part of a lifetime. When he was still a young man, he had thought a great deal about what was called the Cremona secret, and had wondered if it would not be possible to again attain the same degree of excellence in the matter of tone which was produced by the old Italian makers long ago. He had the opportunity to examine, both inside and out, a great many of the finest specimens of the Cremona masters, and after making careful measurements of the various parts, endeavored to form a theory of his own. But, as we have it in *Faust*, "All theory is gray," so, as he says, "it did not bring me very much further in my researches, and I concluded to learn violin making in a practical way."

At that time he was connected with the College of Music

MRS. FLETCHER COPP

in Cincinnati, and received a few practical lessons in handling the tools from the violin maker, Mr. Glier, who is still in Cincinnati. Mr. Schradieck was daily in the workshop, making violins, and while his productions were, in point of technique, somewhat amateurish, he was able, after innumerable experiments, to make several violins which sounded so well that he ventured to use them in public.

As this hobby took up rather more time than he could well spare from his professional duties, he was forced to relinquish it in a measure, but he has induced one of his sons to take up violin making as a profession. The young man has, of course, in his father at once his best adviser and alto his severest critic, but he inherits a love for this noble art and bids fair to one day become known.

Hubert Arnold is another violinist with whom New Yorkers, at least, are very familiar. His principal hobbies are bicycles and bicycling, and long distance spins have an especial attraction for him. He is also devoted to tennis and all outdoor sports, but on the subject of wheels he is a veritable "crank." "The best wheel in the market is a joy to me," he says.

One other pleasure which he allows himself is that of collecting rare old violin bows, of which he has a very choice collection.

Who has not heard Bartlett's *Dream*. The composer, J. C. Bartlett of Boston, is equally eminent and well known as a voice teacher, soloist, and composer. To quote his own words, "My *favorite* recreation is found in the woods — the wilder the better — with my canoe, rod, and gun.

"The recreation which I most generally *get* is on a small farm, where I have cows, a horse, chickens, etc., and where I spend the greater part of my time when not attending to my regular professional duties." Mr. Bartlett's methods of obtaining a change of occupation are to be highly recommended to all musicians.

Another eminent Bostonian, Carl Faelten, formerly with the New England Conservatory and at the present time director of the Faelten Piano School, finds his recreation in the most natural manner of taking long strolls whenever possible. He spends his few leisure hours in the winter among the hills around Boston and in the summer among the hills of New Hampshire.

George W. Chadwick, one of our most eminent American composers and conductors, is inclined to think that his only hobby is star gazing, which somewhat "lofty" occupation he assiduously pursues every fine night.

That prominent New York musical critic and author of many well-known works on musical subjects, W. J. Henderson, has made nautical matters his chief recreation, having served as an officer of the naval militia for eleven years, and a commissioned lieutenant in the United States navy during the war with Spain. His natural impulse

G. W. CHADWICK

toward pen and ink led him to romancing by reason of his relations with the sea and seamen, and the result is shown in several excellent volumes, such as *Sea Yarns for Boys*, *Afloat with the Flag*, etc.

The inventor of the Fletcher Music Method, Evelyn Fletcher Copp, is hardly prepared to say that her method is a hobby, yet a great many people called it a fad in the beginning. The wonderful success it has attained certainly proves that it was not, at least, a short-lived fad.

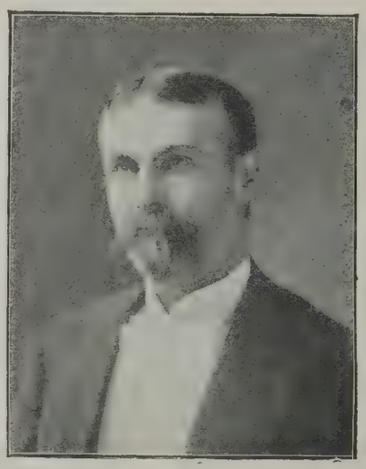
This method has been adopted by a large number of schools and conservatories, and the words of praise from prominent musicians would fill a fair-sized volume.

Gwilym Miles, the "little man with the big voice," says, "If being fond of golf and devoted to a little daughter may be called hobbies — all right."

F. H. Shepard, the well-known director of The Shepard School of Musical Theory, is well supplied with hobbies. He has made a thorough study of organ building and has in his own home a beautiful organ which is practically his own handiwork. In the recital hall of the school also stands an organ which is one of the largest and most complete ever placed in a conservatory. A large part of the material was furnished by Mr. Shepard and the entire setting up was done by him. He has also spent a large amount of time in studying the underlying laws of harmony, and his investigations along this line prove him to be an authority.

Another hobby which calls for a share of Mr. Shepard's spare time is automobiling, at which he is an adept.

The American Institute of Applied Music has in Tom Karl one who is eminently fitted to be the head of the vocal department. His success in his chosen specialty is well deserved, and those who come under his instruction are fortunate. He does not know that he has any well-



FRANK H. TUBBS

grounded hobbies, although he loves the quiet domesticity of his home life, and is passionately fond of birds. In his home are many beautiful canaries and two Mexican parrots of rarest plumage, whose antics are a constant source of amusement. However, Mr. Karl's greatest pet and his fad, if he possesses one, is a little terrier dog, "Dutchy," who is dearer to him than many human beings, for her love is genuine, not pretended.

Chas. W. Landon, a man whose works and writings have borne rich fruit, and whose example has made many another man better for having known him, has a hobby which perhaps very few musicians can lay claim to, and that is Bible study and Sunday-school work. It does not necessarily follow that the majority of musicians are heading straight for some underground habitation. Mr. Landon is also devoted to the subject of rose culture, as visitors to his home can testify.

D. A. Clippinger, the well-known voice builder and conductor, of Chicago, is a devotee of golf. As an indoor relaxation, he turns to literature, with a strong tendency toward philosophy and metaphysics.

Herwegh von Ende, one of New York's most popular violinists and teachers, was formerly much interested in geology and astronomy, and he recalls many trips to various quarries in search of rare specimens.

However, as his duties as soloist and teacher increased, he was obliged to select a pastime more suited to city life, and through his wife, the daughter of Edouard Remenyi, the great violinist, he became interested in the subject of antiques, especially those of Japan and France.

Remenyi's fame as a violinist among the musical public was equaled as an expert on the subject of antiques of all kinds, among collectors and dealers. The remnants of his large collection were the beginning of Mr. von Ende's. As an agreeable change of occupation, Mr. von Ende also occasionally expresses his ideas on musical subjects in the form of articles.

The last, but by no means the least of the musicians to be noticed in the present sketch is F. W. Riesberg of New York. Mr. Riesberg's activity along various lines of musical work is well known. He is one of the most prominent of New York's accompanists, and as organist, pianist, teacher of harmony and secretary of the Manuscript Society, he is most certainly doing his share toward the evangelization of the musical world.

As to having a hobby, Mr. Riesberg is inclined to think that the one great thing of this world, WORK, which in his case covers a wide range of action, furnishes hobby enough for him. So, to quote his own words, "I work like thunder nine months in the year and play like thunder three of the summer months." He also has a very strong liking for books and the leading daily papers and magazines, as well as his bicycle, garden and fruit culture. During the past summer, as a diversion, Mr. Riesberg spent ten days of hard labor painting one of his houses in Buffalo in company with a master-painter, who worked union hours, while he himself worked from 7.00 to 12.30 and from 1.00 to 6.30. Also, at another time he busied himself by purloining twenty-two quarts of raspberries from a neighbor's patch, besides hauling in wood and chopping the same — — *à la Gladstone.*

To again quote Mr. Riesberg's words: "There is a hobby. I have two little girls — there are no finer. God sends us great grief sometimes — their mother died six years ago. *They* are my hobby and get all my inmost life, sacrifice, devotion. So after all, I have a hobby, although I did not know it."

The musicians mentioned above cover only the merest fraction of prominent names, yet a fairly comprehensive range of action has been covered, and if these little glimpses of home life have proven interesting and diverting, the writer's object will have been attained.

NOTES

The fifth annual commencement of the Guilmant Organ School, under direction of William C. Carl, was held June 5, in the First Presbyterian Church, Fifth Ave. and Twelfth St. The soloist was Miss Edmee de Dreux, dramatic contralto of London. The public was invited.

* *

When did the first public concert in America take place? According to O. G. Soneck, writing in the *New Music Review* for June, the date was December 30, 1731, and the place Boston. Hanslick dates the first Vienna public concert in 1740, nine years later than Boston's first experiment. London has had public concerts since 1672, Frankfort-on-the-Main since 1713, and Hamburg since 1719.

* *

Louis Victor Saar, for some years past an active musician in this city, especially in the successful training of young composers, will soon leave for Cincinnati, to take up his residence there.

Mr. Saar has signed a three years' contract with the Cincinnati College of Music, as head of the theoretic department and director of the college chorus. His new post will give Mr. Saar more time than he has lately had for original composition.

* *

The first year of the Institute of Musical Art, endowed by James Loeb and directed by Frank Damrosch, which ends June 5, has shown this new school to be a much-needed and a very important factor in this city's musical life. It is serious, in the best sense, and it has already gained a wide reputation and a clientele that may tax its capacity next season.

A CHAPTER OF INTERROGATION

MARGARET MARSHALL

Is the "instruction" book (to use an old-fashioned term) still in use? At first thought one might say no, for, with all the kindergarten methods and modern ideas of the teaching preliminary to piano practice, it seems as if the book for beginners might not be necessary; but judging by the volumes which have appeared in the last few years, and are still appearing, there is even now a wide demand for such "methods." Some teachers, one must admit, still use the same book with every pupil who appears; and there are others who decidedly scorn such wholesale assistance; but there is a large number between these two extremes, and it is surely safe to say that in the experience of most of these teachers, there come times when such a work is certainly needed. Then follows the hunt for just the right book for the place, and a visit to the music store for the very latest one; some progress too rapidly, others not rapidly enough, though neither of these faults is serious: we need books of both kinds. But there are some special points for which we look and which are hard to find, — perhaps not to be found at all, — and finally we say, "I wish this were quite different, but yet it seems the best and I will give this a trial."

How would we like these various books changed? and that question can be answered with another. Why is it necessary to write pages upon pages of elementary work with both hands playing in the treble clef? The pupil learns to play in various rhythms,— in other keys than C, perhaps, — from notes written within the staff, and on lines above and below, — and has really gained some ease and proficiency, according to the speed with which he can progress; then, suddenly, he is obliged to think of his left hand in an entirely new way: it is put in a different place on the piano, and the spaces and lines have new names, and whereas he thought he could make a little music, he finds there are more notes to hinder and bother him like the first ones, and the bass clef is a bugbear to him for a long time.

A boy who used both clefs from the very first, saw a book with many pages devoted to the treble clef alone. "Why," he said, "just see all these pieces written in the treble clef!" "Yes," said the teacher, "some people think that it is easier to have only one clef, and get used to that, and then begin the bass clef." "That's funny," he replied, "isn't it just as easy to learn the bass at first?" He was not an unusually bright boy, and was not very far along the road, but at one lesson was playing a piece with both hands in bass, — another in bass and treble, — a third in treble only, and found no difficulty. The teacher lays it entirely to beginning in the normal way of playing with bass in one hand, treble in the other; it is easy to change from that to other positions, easier than the reverse. Another pupil (the first and last in this teacher's experience with whom the bass work was deferred for only a few lessons) said, "Why weren't the first pieces written in the bass clef, then I wouldn't feel queer when I play down here?" "Wouldn't it have been too hard," asked the teacher, "to have had both clefs at once?" "It might have been a little harder," she said, "but I would rather have done it, and I think I could."

Shall we skip the part that has only one clef? That cannot often be done, for the music where the bass clef begins is too hard for an absolute beginner, and presupposes too much knowledge. Shall we write the proper exercises and pieces for the pupil? A busy teacher has hardly time to compose and write down the work in bass and treble for those who need it; such pieces ought, in some measure, to be "ready-made." Perhaps you think this long tirade is unnecessary, — that in these times no teacher dreams of waiting long before introducing the lower clef. Only lately a pupil was heard of who had been studying a whole year, and no bass clef yet; she was not a dull scholar either. There are teachers who are following one set plan, as laid down for them; if that plan is changed, they must perforce change their own scheme, and the pupils will reap the benefit.

Another point and another question. Why should the music for children have so many single notes and so few chords? A bass of this description is common, — C, G, E, G, in quarter notes, or some other triad; and this is well enough for a time, but the small pupils grow wofully tired of such an accompaniment. If four notes in succession can be played correctly, certainly three, at least, can be played at once, and few children are deaf to the beauty and completeness of the whole: then one can say, listen, with some result, for there is more to listen to at a time. Almost every child enjoys playing and analyzing the various chords in their various positions, and welcomes them like old friends as the triads and chords appear in some small piece.

There is one other point to be mentioned just now. Why should the playing and reading in the so-called difficult keys be postponed until a later stage in the study? Why should all the pieces for a long time be in C, G, D, F, and perhaps B♭? Why are there so few easy, really simple pieces written with several sharps or flats? It may not be quite as easy to play in F♯ or C♭, as in G or F, but the boys and girls might not think it so hard if it were not suggested to them; or if they played in those keys earlier in their career, they would not be quite so "staggered" when confronted with them later. Will not somebody write some short pieces of this kind and let the teachers give them a trial?

Does this article seem to take a gloomy view of the books and music written for children? It should not intend that, for every one must see and recognize the advance that is made each year, and the higher tone that comes into their music without taking it beyond their comprehension. There are small volumes which teacher and pupil enjoy from beginning to end and which bring fine results. There are books for beginners which do contain in some degree one or more of the points mentioned. But we still look for a book which shall include all these and others not quite important enough to add here. Do you not agree, or are there only a few on this side the line?

TEACHING A PLEASURE

FRANCIS LEAVENWORTH

We are fond of doing that which we can do well, and instead of the "drudgery of teaching" let us say the pleasures of teaching, for there can be no drudgery when one's heart and soul are in the work undertaken.

In order to have one's heart and soul in the work, it is essential and necessary to feel fully master of the situation, and the pleasure comes as a recompense for doing faithfully and well that which we know we have done right; and the reward in seeing the fruit of one's work ripen and blossom into mature beauty.

I am not speaking in the first flush of enthusiastic teaching, but after fifteen years of close application, summer and winter, with scarcely eight weeks' time lost in that entire period.

Each day's work is a joy, and at the close I feel a sense of great happiness for the opportunity afforded me of enjoying such intimate companionship with my pupils, and feeling that in the study of music we touch each other's souls very closely.

The weariness of body and mind, at the end of each strenuous day, is very intense, and I often wonder where strength is coming from for the next day's hard work, but the idea of its being drudgery that I have undergone never enters my thoughts, because there has been no drudgery. A continuous exercise of patience is nerve-wearing at the best, but every pupil is honest and faithful if they feel that we have their good truly at heart; and who could feel impatient toward the dullest pupil if they honestly strive to do their best.

If we as teachers honestly feel happy in our work, it cannot fail to impart happiness to the pupils, and with pupils and teacher happy, where can there be any room for drudgery?

Be intense, but do not be solemn. Enforce your instruction with a little jollity; it carries more weight and lasting effect than severity.

Be thorough, and never pass over a mistake, and everything else is smooth sailing.

There is every opportunity to shirk little things if we are not conscientious, and from the little things mammoth difficulties arise. No one can allow the mammoth difficulties to stand, and then the drudgery begins.

If we feel that a day's work has been unsatisfactory, we can generally trace the difficulty to some trifle which was neglected, which should have been grasped by the horns. It has thrown everything out of true.

Live up to ourselves and our pupils will live up to us, with abundance of pleasure for all.

Nathan H. Allen, formerly organist and choirmaster of the Center Church, Hartford, Conn., has been appointed to a similar position at the Piedmont Church, Worcester, Mass.

* *

T. Bath Glasson, organist and choirmaster of the Strong Place Baptist Church, Brooklyn, N. Y., has been appointed organist and choirmaster of St. James M. E. Church, Brooklyn, N. Y., where Mr. Glasson will have a chorus of forty voices and the following quartet: Ruth Skinner, soprano, May Zinner, alto, Frank Balcom, tenor, and William Morton, bass.

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

THE PEDAL ORGAN

Every two-manual organ should contain two pedal stops at least, and one of them should be a 16 ft. Open Diapason in wood, without which an instrument is but half an organ. The other should be a 16 ft. Bourdon, or Stopped Diapason of not too large a scale. In the addition of an 8 ft. stop to the Pedal, a Bass Flute of stopped wood is more useful in accompaniment than the customary 8 ft. Violoncello, and there should be a second 8 ft. stop. The third should be a wood Octave. Both the Bass Flute and Octave may be derived from the 16 ft. Open Diapason and Bourdon by Augmentation with 42 pipes to each of these two latter stops.

Many specifications of small two-manual organs contain two pedal stops, — a 16 ft. Bourdon and often an 8 ft. Flute or Octave, but such a Pedal organ is far from satisfactory, because the legitimate pedal bass to a Great 8 ft. Open Diapason should be a 16 ft. in wood, and in the architectural design of a church, the height of the space where the organ is to be located should not be less than 18 ft., which will permit of the lowest pedal pipe to stand on a chest having a top board two feet from the floor without mitering the pipe. The greater the space allowed for the organ for free egress of sound, the better will be the acoustic effect. In the designing of future edifices in which an organ is to be placed, the proper space will always receive due consideration by modern architects.

FACTORY ORGAN EXHIBITIONS

Previous to the last quarter of a century the red-letter days in an organ factory were the occasions of the public exhibition of the large completed instruments in the setting-up room of the city manufacturers.

The leading organists freely gave their services in the interest of the art. Each builder had his coterie of admirers who were voluminous in praises of the rich diapasons, flutes, or reeds in which they claimed to excel.

These exhibitions generally took place on an afternoon, the public being invited by a notice in the local papers. Work was suspended in the factory so that there would be no noise at the appointed hour. Settees were arranged for a large audience, which consisted of clergymen of all denominations, organists from the city and vicinity, music teachers and students, as well as all lovers of organ music. In addition to certain numbers, each player indulged his own fancy in showing off the instrument in improvization. Even competing organ builders were not debarred from attendance, and learned things to their advantage. But of late years there has been such a rush of business and haste on the part of church authorities to have no delay, that such exhibitions are no longer in fashion, as was the case formerly.

THE QUALIFICATIONS OF AN ORGANIST AND CHOIRMASTER

In order that an organist shall be a successful director of music, it is essential that he should have had much experience as a member of a choir, either as a singer or as an organist under a good leader. Every organist director should be able to sing, so as to illustrate the manner in which a passage should be sung. Even if he has a poor quality of voice, he should have it under sufficient cultivation so as to make the best use of it, otherwise how would it be possible for him to teach his choir how to sing? Therefore it should be a part of the training of an organist to receive instruction from a competent vocal teacher and put it in practice with his own voice. He should also understand the characteristic *timbre* and possibilities of the soprano, alto, tenor, baritone, and bass voices, in order to obtain the best results in the selection and perfecting of his choir music. The organist should be educated in all the schools of church music, from the severe Gregorian to the ornate oratorio. He should be able to discriminate between the ecclesiastical and secular, and maintain a standard which shall exclude all tendency to that which is non-devotional. The best is not often technically difficult, and the ability to play standard compositions is only one of the many requirements of a church organist.

ACCOMPANYING CONGREGATIONAL SINGING

In order that there may be effective congregational singing, the organist should be in sympathy with the object of hymns in religious worship, using the organ for the purpose of leading and sustaining the voices. Congregational tunes should be taken in comparatively slow tempo. For an organist to hurry through the dignified congregational hymns which have a natural momentum with many voices in combination, is heartless and chaotic. Nothing will deaden interest in this class of music quicker than this course of procedure. Many young organists rush through these hymns at a break-neck speed, with the fear that some one might accuse them of dragging. Another thing to avoid is the making of extreme contrasts of power in accompanying the voices from loud to soft, or *vice versa*. A sudden change from loud to soft will cause the time to be slackened and the pitch to fall. The discriminative organist will use the same judgment in accompanying congregational music as in choir anthems and solos, making the results not the object of worship, but subservient to religious meditation.

ORGANIC COLORISTS

I am pleased to notice that more attention is being given the proper balance of the pedal organ in having a larger range of variety and expression. Hitherto in organs of medium size the pedal stops have been monotonous and inappropriate. The possibility of always having an instantaneous appropriate bass of the same nature as any individual stop is worthy of consideration, and should be adopted. It is not advisable to have so many mechanical accessories that the use of the instrument is bewildering at the first playing, to a concert organist. I have no sympathy with the attempt to make an organ of limited capacity rival a larger instrument in power and variety of combination by borrowing, grooving, and the multiplicity of octave and sub-octave couplers. Far better would it be if organists should spend their time in perfecting their command of technique in the proper rendering of the notes of the manual and pedal parts on an instrument of ten stops than to attempt covering defective and limited preparation by voluminous sensational registration effects which only please the external sense without awakening thought. Do we call that man an artist who cannot first delineate in pencil his design in true proportion and perspective, but covers his defects with a display of gaudy colors? Better would it be to have the music performed by a self-playing instrument. A painter who can only tint photographs or engravings is simply a colorist, — and many organists are merely colorists.

CORRESPONDENCE

MODERN PEDAL COMPASS

C. R. — "I notice that a compass of 32 notes is being introduced in recent large organs, and I wish that those who advocate this extension would give a practical reason for so doing. It is hard enough to reach the extreme lower or higher notes with the 30 note keyboard, and I do not believe in reducing the space between the naturals in order to insert the extra notes at the top. I do not see any use for these two extra notes at the right, excepting to display pedal melodies by an expert organist on one or two special pieces. The musical effect thus produced does not compensate for the inconvenience of cramping the pedal space, and to a listener who is not an organist nothing is gained. There is always a tendency to run to extremes, and while I am a believer in progression with no inclination to retrogradation, yet I fail to see why there is any need of more than 30 pedal notes to accomplish all the requirements of legitimate organ music. Before 32 notes are fully adopted as a standard, I would like to see this point freely discussed by organists of experience in a fair manner, without prejudice or running to fads."

Comments. — The subject of pedal compass is worthy the attention of all organists, and these columns will be open for a fair statement of opinion concerning this matter.

REBUILT SECOND-HAND ORGANS

S. M. O. — "We have an opportunity of purchasing a rebuilt second-hand organ at an organ factory for a reasonable price. It has two manuals and 27 pedal keys, but there is no name plate of the original builder on it, and, as one of the committee, I am inclined to think that it is a patched-up affair, using old pipes from different demolished organs. Your opinion in regard to the matter would be of much assistance."

Comments. — There are good and poor second-hand organs. Old organs taken in exchange are frequently made marketable by conglomeration, using the available material of several. In such a case there would be no name plate. If you are dealing with a reliable builder who is willing to put on his name plate, stating that the organ has been rebuilt by him, and if he agrees to warrant it as sound in all particulars, you would be safe. A first-class builder would not use any poor material in such a reconstructed instrument or incur expense for labor in such an investment. There is no disadvantage in old material if it has been well made. The wood stock is certainly well seasoned, and a releathered bellows is as good as new. The same may be said of the wood pipes, especially the pedal pipes, and if the metal pipes are uninjured and have been carefully handled, the tone will be as good as originally voiced. It all depends upon whom you deal with. You would take the organ for what you find it to be, as it is, with ample opportunity to test it — and warranted as it appears.

INSTRUMENTAL ACCOMPANIMENTS AT CHOIR REHEARSALS

H. J. — "The best way to drill a choir at the regular rehearsal is to use as light an accompaniment as possible while training the singers. This throws them on their own responsibilities and makes them self-reliant. It is often a good plan to leave the organ and stand before the choir, perfecting all parts and singing the anthem before rehearsing with the accompaniment. In this way the singing becomes firm and positive. I am very fortunate in having choristers who sing mainly for music's sake. They do not come to the rehearsals simply to have a good social time. Relaxation comes after rehearsal. In anthems I always use care to have only such as are generally pleasing. My choir is such that some anthems are effectively sung without the organ, after a short prelude. In such cases I do not use the organ, because if the voices become flat it is so gradual as not to be perceptible."

Carrillons

B. A. — "What is the character of the stop marked 'Carrillons'? Does it consist of bells, tubes, or steel bars? How many notes are there?"

Comments. — As used in the United States, the stop consists of 37 horizontal steel bars of 4 or 2 ft. pitch, beginning on middle C. They are struck with action work having wooden hammers from beneath, as in the old square pianoforte. Tubular Chimes are sometimes used, and in European organs the hammers strike gongs and are called "Glockenspiel."

Zinc and Pipe Metal for Basses

W. D. — "I would like to know if just as good tone may be produced from zinc basses in Open Diapasons and Gambas, as with spotted metal?"

Comments. — Yes; if the zinc is thick enough to hold the vibrations firmly. The weight of spotted metal, if of requisite thickness, would almost be double that of zinc. The objection to zinc pipes is that the material is not generally heavy enough. On this account I have known the lowest pipe of an 8 ft. Open Diapason to waver between C and D, until it was stiffened by soldering another thickness of zinc on the back.

The Position of Stop Indicators

The conventional way of arranging stop knobs has been to place the Great stops on the right with the Swell to Great Coupler in two manual with the Swell. Pedal, and other couplers on the left. In certain instances, the Pedal stops are duplicated on the right for convenience. In the manipulation of the stops, the left hand is in greater freedom on account of the pedal part sustaining the bass. With three-manual organs the *Choir* stops are placed at the right. Fifty years ago the stops were arranged in two or three perpendicular rows with straight jambs, and later were grouped in terraces, but the method of placing them together on straight jambs inclining at an angle of forty-five degrees with the manuals is much in favor where pneumatic and electric stop action is used. In two-manual organs some builders are introducing an upper manual set of keys for the stop action with the names engraved upon the ivory fronts. The pressing of a key brings on its stop, the key remaining down until it is released by pressing its relative black key, so that each white has its black, instead of the chromatic grouping of twos and threes. Other builders have the stops placed over the upper manual in the form of "key touches," having a very slight motion to operate the action. Still other builders place these for each section immediately above its manual, while one builder uses a short key between the sharps at the remote end free from any interference in fingering.

Concave and Radiating Pedals

M. R.—"As the subject of concave, radiating, and straight pedal boards has been engaging the attention of organists, I would like to give the results of my own experience. One of the greatest difficulties with nearly all pedal boards has been in the relation of the pedals to the manuals, the chief defect having been that the pedals were too far removed from the manuals, whereas the sharps should be farther under so that the organist can keep his balance when playing on the upper manual.

"I have used on my pedal piano, different methods of pedal construction for a year at a time, even using the wide German scale for a while. I have found that with the radiating pedals there is facility with the left toe and heel on the lowest notes, and also with the right foot on the highest keys. I think that playing with alternate feet should be the fundamental principle of pedipulation, and I have found that in passing one foot behind the other with radiating pedals there is a little uncertainty, as the feet do not always press down the key in the same relative spot. From my own test of various keyboards, I have found for my own use, that I have the greatest facility and convenience of position with the concave board without radiation. I am in favor of using longer naturals with the heel end slightly raised so that the heel touch shall have a better leverage with less effort."

A Palliating Disappointment

C. G. — "I would like your opinion of the methods of a firm of organ builders with whom I have had some recent dealings, and which I supposed was an honorable concern, whose name I will withhold. The transaction was this: I have had an organ built for the church where I have been the organist for many years, being engaged in other professional work. In raising the funds for this instrument I have contributed my share, but there was one special feature over which I have been much exercised. On my last vacation tour in England, I found at an organ factory portions of three or four stops which I saw taken from an old organ which was being demolished, which bruised pipes were the original ones, and which I had authentic records proving that Handel had once played upon this instrument. The pipes were beyond repair as complete stops, but I wanted to secure them and have them melted so that I could have an 8 ft. Open Diapason made from the metal and the stop-knob indicated, as an historical reminiscence. I secured these pipes and saw them melted into one lump or pig, and marked, sending it to my American home.

"When the contract for the new organ was closed, one clause stated that the Open Diapason should be made exclusively from the old metal which I furnished for that purpose. On inspecting the organ at the factory after its completion, I incidentally asked the foreman of the pipe department if the metal of the Great Open Diapason was especially from that which I had furnished. He replied that he had received his orders from the office to that effect, but that he had added a little higher percentage of tin not only to be sure that there would be enough to complete the stop, but for reasons known only to pipe makers. I was much angered at this, and made no further conversation in regard to the matter, as he said that the details of his work were not kept track of in the office, he furnishing the pipe work always up to the standard agreed upon. I have refrained from opening the matter to the concern, but after my trouble I feel very much hurt, and would like to know if there is any redress, when settlement is made for the organ which is now being set up in the church? What would you advise me to do in regard to the matter?"

Comments.—You are certainly disappointed, but a philosophical consideration will be palliating. The builders are not to blame. There were doubtless two valid reasons for the pipe-maker's action. The first was that the metal contained so much antimony, which was formerly used in the construction of metal pipes, that he could not cast it into sheets on account of its brittleness without adding a good percentage of tin. Such old metal sometimes will not run in the casting so as to hold together. The second reason was because in the remelting, after removing the dross, there was likely to be a shortage, so that the stop could not be completed. As it is, you have all the metal in the stop which you furnished, so combined that you have not lost it, and your sentimental idea is therefore carried out as fully as any one could have accomplished, and your redress should be in an expression of thanks to the builders from yourself.

Poor Mixtures

J. C. B. — "I think that the great prejudice against Mixtures is owing to improper scales and voicing, which causes them to be overweighted and too prominent. I think that builders have not yet conceived the possibilities which may be produced from these artificial overtones. The older builders were striving to elucidate a principle in the germ which they were too unscientific to develop. It is better to experiment and bring out these possibilities, rather than go to the extreme of discarding them altogether. The old idea of breaking back certain ranks each octave or two in the ascending scale was destructive of a continuity of timbre. A Mixture stop should run through the whole compass excepting the upper octave of a C terminal without breaking back into lower octaves with certain ranks. I have heard an experimental Mixture so voiced that when used with an 8 ft. foundation stop in the Swell it had an effect like an Oboe without the mutation ranks being heard as such. I have also heard a good imitation of a Clarinet obtained from an 8 ft. Flute Gamba, and a fluty mutation stop. It is owing to a variety in overtones that there is such a large variety in tone color, the natural overtones arising from the structural form which gives the prominent quality to the fundamental tone. The bad results of the past arose from poor Mixtures, and we need not blame organists for condemning them."

Three Manuals Enough

C. S. — "I was glad to notice that one correspondent has touched on the subject of multiplicity of manuals. He is right in his views. With electric and tubular action, a number of sections or chests may be played from any one manual. The comfortable position of the body in pedaling has much to do with facile execution. The idea of five manuals, even with overhanging keys, is more of a sensational array of keys than of practical utility. No more than three manuals can be used by a player at any time. When an accompaniment is played on the Swell by the left hand, there are compositions in which the right hand plays a duet between the Great and Choir by extending the thumb down on certain notes of the Choir as in Guilmant's *Cantaline in D*, or Lemare's *Pastoral* No. 1. The only use I can see for the fourth manual is to use it simply as a solo organ for one hand, and not playing in chords with both hands, but the same effects may be obtained by having the solo played from either the Great or Choir, the connection to be made with either a piston knob in the key slip or by a modern key touch placed on the slip. With pneumatic or electric action any department may be connected with the desired manual without difficulty."

Octave and Sub-octave Couplers

N. S. — "I notice in some specifications the mention of a super-octave coupler, which must be a mistake in nomenclature, because a super-octave indicates an octave higher than an octave, or two octaves above the fundamental pitch. When octave couplers are used with any single stops, the balance of tone is not in proportion, for the super-octave of any stop should always be softer than is produced when an octave coupler is used. If the octave stop is made of the same scale and power as its 8 ft. Open Diapason, the effect when played in chords is out of proportion, because it overpowers the fundamental tone which should stand out with prominence, and produces an effect similar to an octave coupler, with the exception that there is more power in doubling the chords, for the reason that every pipe is represented. I see no use for an octave coupler excepting to make the upper notes of the full organ more brilliant. A sub-octave coupler is entirely out of place in a pipe organ, if played in chords, because the undertone to fundamental 8 ft. stops should always be subdued and never of the same power, and when there are also 16 ft. stops, the unmusical effect is at once apparent."

THE CONTROL OF STOP COMBINATIONS

In regard to the subject of combination pedals, piston knobs, etc., in many instances there is too much tax upon the memory of the organist, who must remember successive intended combinations without any visible indication. Can one not obtain the same essential effects by simpler methods? Where a pneumatic crescendo pedal is applied to an organ, it brings on in cumulative order each stop from the softest to the full organ. The old method of operation was by means of a bar with projecting blocks or slats for the toe to move toward the right for the *crescendo*, and toward the left for a *decrescendo*, the number of the stops being indicated by a dial with a revolving hand. This was a very clumsy arrangement. The method now employed is by a balanced shoe pedal, pressing the toe of which the stops are drawn and taken off by pressing at the heel. Now if a similar arrangement could be in separate form for the Great and Swell, with their respective dials, bringing on the stops in their regular order of power, this arrangement for all practical purposes would simplify the present tendency of multiplicity in mysterious accessories which add to the burden of organ playing without producing adequate results.

NOTES AND QUERIES

K. M. S., Savannah, Ga., writes, "What should cause a person with a healthy, normal throat to lose, or not have, the power to *raise* the soft palate?"

Apply to a medical man for advice, as it may be serious, apart from consideration of singing.

Basso writes, (1) "If a voice capable of sounding with musical tone the bottom F♭, and ascending to upper F cover two and a half octaves, is an exceptional voice,

"(2) What advantage to its possessor over a voice of two octaves or one and a half should it secure him?

"(3) In what direction should the possessor of the first-named voice direct his energies to receive best reward?"

(1) and (2) Such a voice would be called an exceptional one, and if it were even and its possessor highly gifted, it would be a more valuable instrument than the others of one and a half or two octaves range.

(3) Study with an able and conscientious professor.

J. P., Seattle, Wash.

1. If a pupil who has had "lessons" for four years cannot read a first-grade piece at sight, he is either somewhat stupid, or he has not been wisely taught. The teacher of that pupil will do well to consider, very fairly and unselfishly, whether it is his pupil, or he himself, who is most to blame. The teacher himself, if a proficient reader, should know that the only way to learn sight reading is to *practice* sight reading; that is, to let the pupil spend a few minutes each day simply reading new pages. Be careful to begin with a page that is very easy, and to increase the difficulty very gradually.

2. If a boy has, as you say, "good expression and time," there is hope for him, even after a five years' course with unsatisfactory technical conclusion. Simply insist upon his practicing finger exercises awhile every day; but be very sure that you give him just the right studies, — studies that are fitted to his needs, and that will interest him.

3. Chopin's Waltz, Op. 42, should be played about M. M. ♩. = 72 to 80.

4. The Musician cannot pass comparative judgment upon different methods.

5. You ask, "What is the use of studying harmony?" From this we conclude that you are not a teacher, but a pupil, for no teacher would ask such a question. It is as necessary for the musician to study harmony and form, as it is for every person to study the grammar of his language. We have known a great many, who *could* remember all the rules. Unless a pupil is wilfully indifferent, or downright forgetful he can easily learn, and remember, the rules of harmony or "musical grammar." If properly pursued, with intelligence and determination, harmony is a most fascinating, as it is to the practical musician a truly indispensable, study.

G. S., Nebraska. — Yes, I have used the Schradieck Scales and Technical Studies. Some of the pieces I have played are *Adoration*, by Borowski; *Berceuse*, by Godard; *The Swan*, by Saint-Saëns; *Legende*, by Bohm; Concertos 7th and 8th, by Viotti. I have not played any of the Seybold Concertinos. I think that I began the classic concertos too early.

A. L. T. — How do you prevent children from getting the palm of the hand under the violin, or forcing the wrist out, when they play on the "E" string? Just what do you mean when you say that the fourth finger should be on the same plane with the third? Do you mean the top of fourth (when arched) should be about as high as that of the third (when arched) or that when the third is playing on the "D" string, the fourth should be held over that string — or both things? Do you mean by saying that the fourth should move in sympathy with the third — that if, for instance, when the third plays "D" on the "A" string, that the fourth should fall toward the "A" string or may it fall toward the "E" string? I sometimes find pupils draw the fourth finger *in* toward palm of hand, when the third plays. Am I right in not allowing them to do that? Now, about anticipating with fourth finger. In playing D^3, E^4, D^3, E^4, D^3, E^4, would you *not* try to keep fourth over E ready to fall? In playing an exercise like this, A^0, B^1, C^2, D^3, E^4, I find that "short-fingered" pupils want to release all notes before E, and move hand slightly for E. What remedy can you suggest?

Keep the elbow well under the violin and train the fingers to lie naturally upon the strings. Use daily the Sevcik first studies in left hand technic. Forcing the wrist out prevents the fourth finger from reaching its note. Relax the hand and the fourth finger will lie well over its string. In

the fourth finger of the long hand rests over the A string. The fourth finger of the short hand lies loosely, so that all fingers are curved and in line. The fourth always falls toward its place, allowing no rigidity in the basal joint; the hand should be free.

Ascer. — I have pupils who hold the violin with the shoulder and jaw; for practice I have them hold the arm under the violin in position, but I do not let the hand touch the violin. I do not ask them to hold the violin with the jaw and head, having the arm *hang* at the *side*, as that is an unnatural position; therefore I see no good in that. The muscles of the shoulder, in that case, are not in the same position as they are when the elbow is under the violin, and the arm bent. But I have had considerable trouble, at various times, with pupils tilting the head to the *right*. I have tried to find the cause. When asked, some of these pupils said that they couldn't see the notes if the head tilted toward the left. In one case I found that the pupil was holding his violin too high, but it was not true of others.

Hold the violin at the extreme edge of the chin rest. Rest lightly on the *side* of the jaw, tilting the head slightly to the left. Keep the shoulder down. Use a chin rest. Hold the violin on a level with the chin. Do not draw the violin away from the bow.

Aiken, S. C. — I cannot average over two hours a day, although some days I can practice more than that, but Tuesdays and Saturdays I can't do much. Saturday I teach from 8 A.M. until 6 P.M., and am too tired to practice. I am working at the first and second Dont, Op. 37 Schradieck Scales and Arpeggios. I am taking the three octave scales according to Lillian Shattuck, and wrist exercises by Casorti. I spend about half of my practice time on Dont (an hour to an hour and a half), twenty to thirty minutes on scales and technical studies. I also practice drawing the bow steadily and evenly on open strings. I would like to learn the *Mazur*, by Mlynarski. I have taken a couple of lessons on this piece, some time ago.

G. L. — (1) What edition of Sitt Studies do you prefer — the Gruenberg (Ditson Company) or Fischer? (2) Who publishes Carl Courvoisier's *Technics of Violin Playing*, and what is the price of the book? (3) What book, or books, do you consider give correct information regarding the history of the violin, and how it is made? Is Mr. Hart's *The Violin — Its Famous Makers and Their Imitators* authentic?

(1) I find both editions excellent.

(2) The *Technics of Violin Playing* may be obtained through any large music house. I think the price is 75 cents.

(3) See the Hawley Collection of Violins, Lyon & Healy. Hart's work is authentic. A recent work by Hill (London) is good. *Musical Memories*, Haweis, interesting.

R. B. — Just where should the sound post be in a violin? There is not a "repairer" in town who can even fit a bridge just as it ought to be, let alone placing the sound post.

See *Famous Violinists and Fine Violins*, by Phipson. The sound post stands upright between the table and the back of the violin, just behind the right foot of the bridge. It is set while the strings are slack. Get a sound post setter.

O. R. — If the neck of the violin rests *below* the knuckle of the thumb, doesn't that bring the thumb way up? I rest the violin just about at the first joint of the thumb, below the fleshy part. Then I do *not* bend the knuckle of the thumb. The top of the thumb can be seen from the right side of the violin. Should not the violin touch lightly at the crease of the first finger, the rest of hand brought as near as possible without touching? I have a friend whose teacher requires her to hold her hand as far as possible away from violin, letting only the thumb touch. There is an advantage when playing on the "E" string in that position.

Rest the thumb at the second, or middle joint. Do not press upon the neck with the fleshy part of the thumb. Children should hold the thumb out, resting *only* at the middle joint. If the elbow is brought well under the violin the thumb will soon adjust itself. The violin rests lightly at the crease of the first finger, except when playing vibrato. Short, thick hands require special treatment. It is sometimes an advantage for such players not to rest much except at the point where the finger touches the string.

G. L. — (1) In teaching the A string, how soon could the child change the half reach from 1, 2 to 2, 3? One could write many little tunes for the A string, in the key of A. After the child has established A B C D E so that he plays these notes in good tune, I give him little tunes like this. (From Miss Caruther's *Melodies*. I transpose them.)

A B C♯ D EE E D C♯B A♭

Buttercup, come up. Bow your yellow head;

and different little melodies with words, in key of A. They have always proven beneficial.

(2) Isn't a child who has taken two years or more able to play scales in the first position in five sharps?

(3) Is he not ready to take pieces in three sharps and three flats?

(4) Is *Oberon*, by Danbe, too difficult for a child who has taken two years?

(5) Isn't a pupil who has a good ear and has taken two and one half years ready for third position?

(1) Everything depends on the good ear of the child, also on his care as to position.

(2) I do not use five sharp exercises and scales in the second year. There is too much detail work in the other keys.

(3) Yes.

(4) Tonal work; flowing melodies are better.

(5) Yes, usually.

W. F. — I have never been able to *like* Wohlfahrt, Op. 38, for beginners. It goes so fast. I have used with better success a book recommended to me by Mr. Jacobsohn. It is Rosenkranz' *Method*. Have you examined this book, and what do you think of it? Do you recommend De Beriot's position studies? For the first work in third position, I write my own exercises.

I still like Eichberg's *Method* and Wohlfahrt's Op. 38, 45, and 54. The De Beriot *Studies in Positions* advance too rapidly for the average pupil. I like the second and third books of Hans Sitt, also Dont, Op. 37 and 38. I do not know the Rosenkranz book.

THE ARTIST'S PHILOSOPHY

EDITH L. WINN

II

I believe in gifts and aptitudes; but there is no genius in the world which is above discipline.

Recently I was talking with an earnest and hard-working physician. He spoke of a surgeon's gift.

"The man who is a good mechanic is a good surgeon, for surgery is but mechanics," he said. "Few people will believe that a skilful surgeon, by nature and training, is hard to find. There are too many men in surgery who have no business there. The surgeon has to acquire technique, however gifted he is, just as you have to undergo a certain amount of technical practice in your musical work. I am inclined to think that good surgery depends in a great degree upon the habit of strong mental concentration and attention to details."

"And these are things quite as necessary to musical distinction as to excellence in surgery," I answered.

"There are few highly gifted people in the world," the surgeon mused, "and the greatest will tell you that genius is merely capacity for hard work."

Many good musicians are spoiled by being told that they have gifts and aptitudes. They neglect daily practice in the art of expression. They *wait* for the mood. Gifted or ungifted, we must one day submit to order and discipline. He who has something to say owes it to his contemporaries to say it in his best way. I believe in writing down one's individual views of teaching.

Robert Louis Stevenson admitted that he spent half his life trying to imitate. It was only when his free spirit at last soared that he commanded a place in literature. Genuineness, attention to detail, and concentration of purpose are necessary to success. *Technique of expression leads to skill*, and *skill is power*.

The great surgeon of whom we were speaking does not permit a sound to disturb his operations. His nurses stand ready to do his bidding, moving about in their felt shoes lest a footfall should distract the attention of their great friend, for so he is; the very curtains at the window are raised noiselessly. The air is laden with suppression. There he stands, knife in hand, a spirit whose conservation of energy is to save a man from death or a woman from lifelong misery.

It is a wonderful thing to be able to say that we have had no distraction in our work. Few of us reach the high plane of concentration which the skilled surgeon reaches.

Suppose for one day we see nothing in an isolated way. Suppose we connect every detail of teaching with our own inner consciousness, and give plan and system to our work. Suppose we observe a logical order of progression in the development of each student's mind. Our strength as teachers and individuals will steadily advance.

This week a publisher sent me the beautiful books of Sevcik and his system. As I read them and study them, I am filled with wonder and admiration at the sequence of the work, its continuity, its freshness, its adaptability. Sevcik has a gift — the gift of seeing the processes of other minds and leading them out of difficulties often considered unsurmountable. Yes, he has a gift for detail; but, above all, he has a *gift for hard work*.

Mr. Carnegie sits at his desk and controls the interests of a great corporation. He is but one man, but he has a far-seeing mental capacity. The general of an army sits upon his horse and directs the movements of thousands of men as well as the destinies of a nation. He has but *one* voice with which to command, but he dwells in no little world. Every mind, such as that of Carnegie, Sevcik, and General Grant, has been a strategic mind in which there is order, system, and daring invention.

The secret of success in music depends, in a great measure, upon our power of adapting our knowledge to the needs of other people. Theories may sound beautiful, but we are to talk of things which have been *tried* in our teaching or in the teaching of our colleagues. I remember to have read that the secret of Louis Agassiz' discoveries lay in his wonderful power of meeting people on *their own plane* and finding out just what they had to give. We are to fit our subject to our pupils, and adapt our words to the nature of the subject. This implies a constant study of capacities.

Each lesson should be tinged with a definite personality, and it should be so attractive that the pupil cannot help being inspired. Old ideas should be clothed in convincing and fresh form. We should compel thought, investigation, and interest. I do not believe in persuading people to believe. I count it a better thing to convince people of truth in spite of themselves, and the better the frame is the more instantly will attention be gained to the merits of the inner picture.

One great habit of the journalist is to record daily impressions and experiences. He is as much accustomed to practice with his pen as you and I are to the practice of the scales and arpeggios. Learning the working rules of expression requires the formation of habits. One of the best and safest habits in the world is that of accuracy, and this implies a weighing of words and care in expression, as well as in statement of views. Words are things, and it might be just as well if we were choice in their selection. Precision, force, unity, clearness, and care — constant and criticizing care —will do away with the little vexatious foxes which mar many a teacher's success.

Henry Harland is said to have received $70,000 for his *Cardinal's Snuff-box*, that exquisite bit of romance with its Italian background, its fairy princess, its fanciful dainty imagery. Mr. Harland's early method of work accounts for the tragedy of his premature death. When the desire to write came upon him, in 1884, he occupied a minor place in the Surrogate's office, where his hours were so long that he found little time for literary labor. In order to lengthen the ordinary day he retired directly after dinner and slept until one in the morning, when he arose, and after drinking a large cup of black coffee, wrote steadily until breakfast time. It was under such circumstances that he wrote his first stories of Jewish life over the pen name of "Sidney Luska."—*Exchange*.

COLLEGE AND UNIVERSITY

Recently, arrangements have been perfected between Harvard University and The New England Conservatory of Music which promise results of the highest importance to musical study in this city.

About the year 1863, John Knowles Paine laid the foundations of the musical department at Harvard. He was subsequently appointed Professor of Music, and continued in this capacity until 1905, when he resigned his position. During this long term of service the number and scope of the courses were gradually but steadily increased, so that at the present time over two hundred students annually obtain a thorough and comprehensive education in all theoretical branches of music, including esthetics.

But with the growth of the Harvard Music Department there has been felt more and more, the need of certain indispensable accessories of purely theoretical instruction, especially the application of music through performance in *ensemble*, from the performer's point of view, and through experience in orchestral writing.

Some three years ago Director G. W. Chadwick offered to the students of the Harvard Music Department, through its professors and President Eliot, an opportunity to share certain advantages of the Conservatory. The privileges offered were those of active membership in its orchestra; and to the members of the Harvard composition classes, opportunity to hear played by the orchestra such of their compositions as should be approved by their professors.

The practical demonstration of the value of such application of theoretical work has been of much assistance in the discussion of various plans for its extension, between President Eliot, Assistant Professors Spalding and Converse of the Harvard Music Department, and Mr. Chadwick of the Conservatory. The establishment of definite reciprocal relations between the two institutions provide on the part of the Conservatory, for the admission of properly qualified students of the Harvard Music Department, not only into the Conservatory orchestra and chorus, but also into its courses in *ensemble* playing (chamber music) and in choir training and liturgical music. These latter courses include historical and theoretical work as well as their practical application. At the rehearsals and concerts of the orchestra are played symphonies by Haydn, Mozart, Beethoven, and Schubert, overtures by these and other classic composers, nearly the whole *répertoire* of arias and instrumental concertos, and many modern compositions. As before, opportunity will be given to the Harvard composition classes to hear their works performed by the Conservatory orchestra and chorus, but by no means the least important feature of the arrangement is that for regular attendance at any of these courses of the Conservatory, the University will allow credits toward the degrees of Bachelor and Master of Arts in the academic course.

In return for these opportunities, Harvard University offers to properly qualified students of the Conservatory, the privilege of attending certain of its own courses; including English, French, and German Literature, English Composition, Fine Arts, Physics (especially Acoustics), and Public Speaking.

WORKING IN MINIATURE

It is said that Benjamin J. Morgan, a cripple, of Winsted, Conn., has completed a wonderful piece of work, which is attracting considerable attention. Inside a bottle eight and one half inches long, four and one half inches in diameter, and one half inch thick at the neck, he has made a miniature representation of a local choral society. Twenty-five of the singers are represented on six rows, the women being attired in white and the men in black, each singer holding a red-covered choral book. The conductor of the club is shown standing in front of the singers, his baton denoting rest. The orchestra is seated on both sides of him, and the prima donna is at his right. The twenty-five dolls, representing the singers, are two and one half inches in length, one half inch across the shoulders, each doll having to be separated into twelve pieces in order to get it through the neck of the bottle. After they were passed through the neck, they were glued together. There are 781 pieces in all in the glass vessel.

UNDER THE CHESTNUT TREE

"You talked all through my solo," said the musician a little resentfully.

"Oh, that's all right," said the self-sufficient sage. "I wasn't saying anything you would care about hearing." — *Washington Star.*

* *

First Roman (while Rome is burning). — "Just listen to Nero's playing. Dost appreciate his marvelous technique?"

Second Roman. — "Hardly. I'm in the fire insurance business." — *Brooklyn Eagle.*

* *

"Yes, his delicacy of touch is quite marvelous."

"Ah, a pianist?"

"No, a society journalist." — *Cleveland Plain Dealer.*

* *

Gaining Salvation

There was a young girl named Maria,
Who sang in the Methodist quia,
They gave her no pay,
But that was her way
Of saving herself from the fia.
— *Denver Post.*

* *

No Critic

"Can your wife sing?"

"I don't know."

"Don't know?"

"No. All I know is, she does." — *Cleveland Leader.*

* *

A Remarkable Choir

An old farmer and his wife were attending church services one hot Sabbath day. The windows were open and the noisy chorus of the crickets was distinctly audible. In due course the choir sang an anthem, and the old man, a music-lover, listened enraptured. At its conclusion he turned to his wife and whispered: —

"Ain't thet glorious and divine, Mirandy?"

"Yes," she answered, "and to think that they do it all with their hind legs."

* *

"Will you go to the opera, dear, with me?"

"Indeed I will!" she replied with glee.

"And what is the bill for that night?" said she.

"About fifteen dollars, I'm afraid," said he.

* *

Miss Screecher. — "Have you finished your song?"

Steele Ayers (a composer). — "Yes."

Miss Screecher. — "Looking for a publisher?"

Steele Ayers. — "No; looking for an advertiser."

* *

"What is a sharp?" asked the music teacher of six-year-old Susan.

"When you see one of those," was the answer, "you play a little bit to the right."

S. Junior. — "This piece of music, my teacher says, is in common time."

S. Senior. — "Oh, er, well, take it back to him and say we want nothing common. We can afford to pay for a superior article." — *Ally Sloper's Half Holiday.*

* *

An Evidence of Disregard

"He seems to be very fond of music," said an auditor.

"He isn't," answered Miss Cayenne, "or he wouldn't try to sing." — *Washington Star.*

* *

Miss Gushem. — "Ah! So you like the 'cello, professor. You think there is music in it?"

Professor Zauberflote. — "Dair must be. You haf not got any out of it yet, iss it?"

* *

A tutor who tooted the flute,
Tried to tutor two tooters to toot;
Said the two to the tutor,
"Is it easier to toot or
To tutor two tooters to toot?"

* *

The Doctor's Voice

At an entertainment given in Scotland everybody had contributed to the evening's amusement except a certain Dr. MacDonald, whom the chairman pressed to sing. The doctor declared he could not give them a song. "My voice," he said, "is like the sound caused by the act of rubbing a brick along the panels of a door."

The company attributed this to the doctor's modesty, and told him that good singers required a lot of pressing, so at last he remarked: "Well, if you can stand it, I will sing."

When he had finished there was a painful silence, and then a voice spoke as follows: "Mon, your singin's no up to much, but your veracity's just awful. You're richt aboot that brick." — *New York Evening Telegram.*

* *

A Russian tenor had a queer experience a few weeks ago, and has forsworn all kings and dukes and the like for the rest of his life. The singer was stopped on the street by one of the Russian grand dukes, and the two talked upon musical matters for a few minutes. When the titled one left the singer, the latter was promptly seized by two police officials and locked into a deep, dank, and dark dungeon, dreadfully doleful and distressingly dismal. In the course of a week the duke sought the tenor, learned of his predicament and had him released. Meeting him on the street the following day he began to apologize.

"I am very sorry ——"

"May I implore your highness," the singer exclaimed in terror, "not to speak to me? You will compromise me with the police again." — *Musical America.*

* *

At the Theatre. — "Henry, what makes the members of the orchestra go under the stage so often?"

Henry. — "To get another horn, I suppose." — *Exchange.*

A Floral Tribute

It was at a matinee. The curtain was rung up for the third time, and the actress stepped forward and responded to the prolonged acclamation of her admiring audience. She spoke with a graceful modesty that charmed, then gathered her floral tributes.

Was it the intense excitement or the blinding array of footlights that dazzled and confused her? Quietly reposing on a lower box rail by the proscenium, says the *Tatler*, she saw a magnificent bunch of violets — her favorite flowers — ostensibly placed there for her by a sweet-faced, dark-haired lady behind them. With applause still ring, ing in her ears the actress leaned forward and took the lovely bouquet, acknowledging the gift by a pretty bow.

The sweet-faced, dark-haired lady reached after her with a strange and sudden haste. "Where are you going?" she cried hysterically, "that's my hat."

* *

Father worked Harder than Anybody Else

Washington had just been hailed Father of His Country.

"At least," he remarked, "they can't apply that popular song to me."

Herewith he immediately began to work.

Power of Music

When the famous violinist Yamewitz first came to London, he lived at the west end of the town. One day, after paying several visits, he found himself a little out of his latitude and called a hackney, when this dialogue took place: —

Coachman, shutting the door. — "Where to, sir?"

Yan. — "Home — *mon ami* — You go me home."

Coach. — "Home, sir; where's that?"

Yan. — "By gar, I no know — the name of de dam street has eschape, he escaped out of memory — I have forgot him. Vat shall I do?"

Coach (grins).

Yan. — "Ah! you are gay — come now — you understand de musique — eh?"

Coach. — "Music — what's that to do with the street?"

Yan. — "Ah! *vous verrez* — you shall see (hums a tune). Vat is dat?"

Coach. — "Malbrook."

Yan.— "Ah! by gar, dat is him: Marlbro' Street. Now you drive me home — eh?"

We have often heard that "music hath charms" to do many clever things, but believe this is the first time of its instructing a hackney coachman where he was to set down! — *From The Lyre or New York Musical Journal*, 1825.

* *

A maid of the Mendelssohn Choir
Was requested by Vogt to sing hoir.
She emitted one yell,
But the briny tears fell
When the other girls started to ghoir.
— J. E. M., *From the Toronto News.*

COMMUNITY MUSIC

THIS CORRESPONDENCE APPEARED IN THE SYRACUSE, N.Y., "POST-STANDARD," JUNE 13, 1906

To the Editor of *The Post-Standard*: —

The editorial in this morning's *Post-Standard*, entitled *The Music Festival and Its Critics*, and Mr. Hazard's letter on the same subject have more than local interest.

In my capacity as a writer and lecturer on music I have been called upon to study the subject of "Community Music." Perhaps a few words from the point of view of my experience may be of interest.

Two pertinent questions immediately suggest themselves when the continuance of a music festival organization is being debated: —

1. What, in the broadest sense, is the purpose of a music festival?

2. How may local interest be increased?

These questions may seem at first reading platitudinous, but let us develop them.

European countries are considered to be musical. The facts as we find them support the point of view to a very considerable extent. What makes them musical? At this distance we sometimes think it to be the possession of great composers and of world-famous organizations. As a matter of fact these contribute to but do not actually constitute the musical worth of European countries. The great factor which they possess may be expressed in the German word *Hausmusik*, which, being interpreted, means music in the home, in the friendly circle, music permeating the entire social labric, constituting in itself a valued home and community asset.

This asset contributes directly to more circumstantial and to more artistic music effort than is possible within itself. In its practice of music, lovingly and joyfully carried on in the hamlet home, as well as in the midst of a city's resources, there is fostered that love for music, that desire to listen to it when effectively performed, that willingness to cooperate in making music that at once produces the condition and the atmosphere which result in musical people.

The European community has learned a fact in this matter that we must learn in America. It avails of all its resources. We are apt to do otherwise, honestly believing, if we think of it at all, that we have no inherent resources. It is just this situation which Syracuse, Cincinnati, Worcester and the like have to face. Shall we import a glittering array of renowned artists (and the world's supply is not great) and emphasize them, or shall we develop ourselves to the best of our ability and let them emphasize us?

In conversation with Anton Lang, who took the part of Christ at the Oberammergau Passion Play in 1900, I expressed my surprise that such a beautiful performance could result from the people of a small community. In reply Mr. Lang said to me: "We do not merely study and rehearse for the Passion Play (given once in ten years), but we take up for performance every Sunday of the year the works of the great dramatists. In this way we do not approach the study of the Passion Play as a new and foreign endeavor, but it is a part of us. We are accustomed to stage representation. Our people learn this art and it enters their daily thought. It is not remote."

Here is the simple strength of the situation.

The city of Cincinnati at its last May Festival not only provided a chorus, but it prepared for participation in the festival one thousand school children. This means at once that one thousand more families found interest in the concerts; that one thousand more homes were attached to the undertaking; that one thousand more families were ready to be appealed to in its support; that one thousand young and impressionable units of the community grasped the thought that Cincinnati expresses itself at times in the art of music which is daily taught in school; that the school practice of music has an ultimate aim and purpose; that music learned in childhood fits one for a life participation in this kind of performance. In other words, the young learning citizen who is destined to become the future responsible citizen finds himself attached to the community by a golden thread of great strength.

There is forever a feeling of the foreign and remote about the great artist who dwells in our midst a day or two and then departs. He leaves us a pleasant memory, but he does not necessarily leave us a richer possession. On the other hand, if we add to the local chorus (which should reach out to every musical organization a city possesses), as a constant factor, this contribution of the children we add immensely to our resources.

Further, following the example of the peasant people of Oberammergau, we should not confine ourselves to periodic, circumstantial performances, but the work of chorus and children should be heard very frequently between times, as a family affair, as a *Hausmusik* effort; for the growth for the greater preparation and for the spread of local interest which will come from it.

This explains what Syracuse can do within its own confines to make its citizens regard with greater interest and with greater receptivity what the renowned artist contributes to its music occasions.

Now to return to the two questions which open this letter: —

1. What, in the broadest sense, is the purpose of the music festival?

It is to create a musical community, not as an individual affair, but as a contribution to a musical nation.

Hence, to discontinue it becomes not a local but a national calamity.

2. How may local interest be increased?

Reach out to more families.

Let the festival chorus extend down to the children and stimulate in them a desire to participate in its activity.

The investment to them and to Syracuse will be potent and lasting.

And, to repeat, for every child who participates in the festival another group of individuals has become conscious of it.

THOMAS TAPPER.

THE MUSIC IN THIS NUMBER

Sparkin' by de Gate ('*Vira*). Charles Fonteyn Manney.

While the text of this composition is in the negro dialect of the Southern States, it is in no sense a "coon song" but a musicianly conception, spontaneous yet refined, which the singer will appreciate upon examination. The music is simply expressive of, and secondary to, the text, the spirit of which should be carefully studied if the true effect is to be realized. Notice for example the offhand effect expressed by the grace note in last measure of first page. The "refrain" can be effectively contrasted by a little of the tempo rubato, used with discretion. The high note is F♯, which brings it into compass for either high or medium voice.

Accompaniment should be light and graceful, mostly legato. Effects in phrasing will be indicated by the text, although indications as marked should be observed.

My Lovely Rose. Charles Wakefield Cadman.

This is No. 2 of the composer's Op. 26. The mood of the text suggests a refined sentiment that makes the song especially adapted for a baritone or basso cantante. There are strongly expressive moments on pages 3 and 4 and the passionate climactic ending will also be noticed. The singer should give careful study for expression throughout. The accompaniment, mainly in chords, should be in a sustained legato, and even in the *ff* measures at the end the pianist should consider tonal quality as well as vigor, giving the voice part the requisite prominence.

PIANO PLAYERS
AND PIANO TEACHERS

Do you realize the important part a perfect action plays in the production of the tone and touch of your piano?

It is the mechanism through which you transfer your thoughts and feelings to the strings, and thus interpret the great masters.
To accomplish this, your action must be perfect in touch, perfect in repetition, perfect in power.

If your piano contains a

Strauch Bros. Piano Action

it is **perfect in these essentials**, as this **action is found only** in pianos of **quality and merit.**

STRAUCH BROS.
30 Tenth Avenue, New York

Sobre la Plaza. T. H. Rollinson.

A piano piece for students of the third grade, the rhythm of which is suggestive of a Spanish dance.

Hence freedom, variety in tempo, and well-marked rhythm and grace are important things for the pianist to notice even in the especially vigorous measures on first, third, and final pages. The second period in the dominant of the main key of the piece is a well-defined contrast to what has preceded. At first a quiet legato is essential, afterwards a vigorous and brilliant episode will be observed; both sections of the second period repeat. The final measures are mainly a repetition of the first, and beginning *p*, should be worked up to the brilliant climax as indicated at the end. There are occasional difficulties of a technical nature which a little careful study will readily overcome.

LEO OEHMLER

Under the Rose. Roland Blenner.

A piano piece in waltz rhythm, of the same grade as the preceding. The eight measures of introduction are in full chords with frequent emphasis. The waltz that follows should be moderate in tempo, always keeping the rhythm strict and well defined, yet without sense of heaviness. The first period repeats, which leads to the *trio* in G, the subdominant of the first key. In this new section will be observed similar chord formations and the time is also regular. The first period follows the *trio*. An essential in playing this piece is to have both hands absolutely together in the chords and study to this end will prove most valuable experience to the student.

In Dreams I've wandered with Thee. J. C. Bartlett.

A song well adapted for baritone, mezzo soprano, or contralto who can sing the high F with comparative ease. The text is suggestive of romantic mood tinged with some degree of melancholy which the singer should conceive in spirit to do the song full justice. A first section (B♭) leads through a pause in the dominant to B♭ minor, the tonic minor of the first key which is to portray the mood of reflective sadness called for by the text at this point. This section is short, and soon returns to the original major, *lento* 4–4. The final page is strong in its emotion, and the effect, if properly realized, is most impressive.

The pianist should observe the accompaniment carefully, which at first often in broken chords is in full harmony in change of rhythm on last page. The whole demands a sustained legato, and the final measures, with *both* pedals, as soft as possible yet clear and distinct.

Tyrolean Hunting Song. Leo Oehmler.

One of a group of three piano pieces, suitable for third grade students. It is not technically difficult, but requires considerable study as to rhythm and phrasing. The first page is written in harmonic chord passages, and will be found valuable practice in keeping both hands together. Play also in a joyous manner, with a firm, flexible wrist.

In the second period (D major) there will be noticed some contrasting figures, involving independence between the hands; rhythm always distinct and well marked. Observe the many little indications in phrasing with care for they are all important towards an artistic interpretation.

LONDON LETTER

ORTON BRADLEY

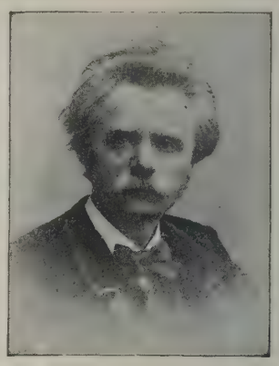
The letter for July must necessarily partake a little of the nature of a review of the season's work. At the end of the musical year we cannot but ask ourselves the question, "Have we made any progress?" Here in London the answer may be made in the affirmative, but with certain qualifications. We have certainly had an unusually successful season, if the number of performances be regarded as a criterion, probably the busiest on record; but it is a very doubtful point whether financially half the concerts that have been given have even covered their expenses. During one week in May there were actually fifty-four concerts announced to take place in London.

With regard to musical activity, therefore, we may say that there never has been so busy a year. The art of program making has also been advanced. With so many conflicting events, it has been necessary for concert givers to make their programs as attractive as possible, and the result, especially in the case of this season's orchestral concerts, has been most encouraging. Not only this, but the popular taste has been thereby improved, and as a general rule the best chosen programs have secured the best audiences.

MILKA TERNINA

The opera has also shown a marked advance on past years. Nothing could have been better done than the two cycles of the *Ring*, especially with reference to the *ensemble*. It seems hardly possible that the *Ride of the Valkyries* has ever been given better than on these occasions. Perhaps the quality of the tenors' voices left a little to be desired, but the Wagnerian tenor who shall satisfy all requirements is still missing. At least we have had Ternina and Gadski back again, and Van Rooy as Wotan, and the orchestra has been admirable.

The two novelties that have at present appeared, Poldini's *The Princess and the Vagabond* and Cornelius' *The Barber of Bagdad*, were of great interest. The former would have been improved by more rehearsals, the lack of which handicapped Percy Pitt, the conductor of the occasion. It was truly a remarkable event for an Englishman to have conducted a performance at the Royal Italian Opera! and Mr. Pitt is to be congratulated on his successful début. The latter opera was in the hands of Richter, and was an unqualified triumph. It is to be repeated several times during the season. There are several English singers engaged this year. Among them, of course, Kirkby Lunn stands preeminent. She will shortly appear as Carmen. Susanne Adams is also to return to opera and is sure of a hearty welcome, while Melba's first appearance will of course be greeted by a great audience. Melba has recently been befriending Maud MacCarthy, the violinist, in a very practical manner and will give a concert July 3 to introduce to London one Irene Ainley, a new contralto from Auckland. A new feature is to be added to the Covent Garden opera this year in the revival of the ballet for which Mademoiselle Boni and the *corps de ballet* of the Brussels opera have been engaged. They are to appear in Messager's *Les deux Pigeons* and in the production of Gluck's *Armide*. Without doubt the interest in ballet is reviving in London and the recent production of Delibes' *Coppélia* at the Empire has done much towards increasing that interest. It is not, however, very likely that we shall as yet return to the tastes of the early nineteenth century, when the salaries of the principal dancers at the King's Theatre amounted in one year (1824) to $47,000. Be that as it may, there are many beautiful ballets, the addition of which to the opera *répertoire* would be a great gain artistically, and let us hope financially also.



EDVARD GRIEG

During the week when Covent Garden opened its doors, two English opera companies were in the neighborhood of London, both the Carl Rosa and the Moody-Manners Company. The former made *Fidelio* and *Don Giovanni* their principal attractions, while the latter presented Tschaikowsky's *Eugene Onegin*, Meyerbeer's *Huguenots*, and other works.

During the present week the Moody-Manners Company will produce Nicholas Gatty's new opera *Grey-steel* at the Crystal Palace. The event will not draw such enormous crowds to Sydenham as a football match, but the production

JOSEPH JOACHIM

is creating a great amount of attention among music lovers. Operatically the season cannot be said to have been in any sense an empty one.

However, of all the interests of the musical season nothing is so much discussed as the visits of foreign artists, and never in any year have we had so many eminent visitors. Among them have been old friends and some who have come to us for the first time. Just now it is " Dr." Grieg who is attracting the most attention. He and Mrs. Grieg have been staying with Dr. and Mrs. Speyer (Leonora van Stosch), and on their way from Christiania visited Prague and Amsterdam. At the former place Grieg conducted the Bohemian Orchestra and at the latter the Concert-

THE BOSTON SYMPHONY ORCHESTRA, as it appeared in its first season (1881–1882), Georg Henschel, Conductor. During the past twenty-five years the conductors, besides Mr. Henschel, have been Wilhelm Gericke (13 years), Arthur Nikisch (4 years), and Emil Paur (5 years). Dr. Karl Muck will make his initial appearance as director, October 12, 1906.

Gebow Orchestra. Here it was the Queen's Hall Orchestra which gave a program of his music under his direction. He has also been to Oxford to receive the degree of Mus. Doc. *honoris causa*. It is his fifth visit to England, the first having been made in 1888, when his music seemed very novel and his harmonies unusual. To-day, after Strauss, de Bussy, and other moderns, his work strikes us as graceful and dainty, but no longer as peculiar or controversial.

Just now there is a controversy which is exercising the minds of several of our musicians. It would seem that Sir Charles Stanford has discovered that the Scherzo in Beethoven's Choral Symphony has been for many years played too fast, because the metronome mark in the original edition was a dotted half note = 116 (in the trio half note = 116), but in the second edition by some accident it became a dotted whole note = 116, and in the trio a whole note = 116. Reference has been made to the manuscript in the possession of the Philharmonic Society, and there the marks are half notes. In any case the Scherzo has often suffered by being rushed, and a change in the tradition can do us no harm.

To return to our visitors of the season, the famous Vienna Männergesangverein are to give two concerts, with the assistance of the London Symphony Orchestra, and next month we are to have a visit from the Vienna Philharmonic Orchestra. Joachim's annual visit is nearly at an end, and he leaves behind him a host of agreeable memories, among which not the least delightful was a sonata recital which he gave with the assistance of the English pianist, Leonard Borwick.

The visit to London of one of our finest provincial choruses is also an event to be chronicled, and all who heard them will remember the Bradford Festival Choral Society's performance of Bach's motet, *Sing to the Lord*, and the Choral Symphony.

Kreisler's only recital for the season will soon occur and Pachmann's first appearance after an absence of two years. A new tenor, Franz Naval, has made several appearances with success; but delightful as his singing is, he is not the desired Wagnerian, for whose coming we all wait.

Probably the least satisfactory sign among the whole of our season's work is the number of prodigies who are being exploited. Mischa Elman is still in his first place and has announced that at his next recital he will be assisted by his master, Leopold Auer of the St. Petersburg Conservatoire. We have still with us Vivien Chartres and Max Darewski and a new boy pianist of the mature age of eleven, named Milcio Horsowski, a grand-nephew of Rubinstein. His playing is really remarkable, even for a pupil of Leschetizky, but it is none the less immature.

A new rival of Elman's also has just arrived in the person of Joska Szigeti, a native of Buda-Pesth and pupil of Hubay, and another boy, called "Bino," is equally good at both piano and violin — and still they come.

Of future great events, the Lincoln Festival which was postponed from last year and the Handel Festival are the most immediate. The former will include in its program Dvorák's *Festival Te Deum*, Parry's *Voces Clamantium*, Brahm's *Requiem*, and Handel's *Israel in Egypt*. The "Three Choirs" Festival at Hereford will take place in September. The principal novelty will be a Sacred Symphony in F by Dr. Walford Davies, for baritone, solo, chorus, and orchestra.

The Monte Carlo season which has just ended has been remarkable for many musical events this season and for none more than for the production of Rubinstein's *Démon*, under direction of Léon Jehin. At one of the last concerts of the season Norah Drewett, a popular young English pianist, played Saint-Saëns' G minor Concerto with the orchestra and the Chopin Berceuse and a Liszt Rhapsody, which is yet another example of the *entente*. Perhaps it may be regarded as still furthering the same good end that Goldmark's latest opera should be called *Caliban* and be founded on Shakespeare's *Tempest* and Humperdinck's new work should be *The Merchant of Venice*. Siegfried Wagner is more independent and draws his inspiration for his fifth opera from *The Law of the Stars* (*Sternengebot*).

NEW MUSIC

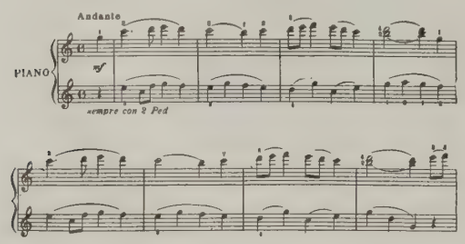
NEW PIANO PIECES

W. Aletter

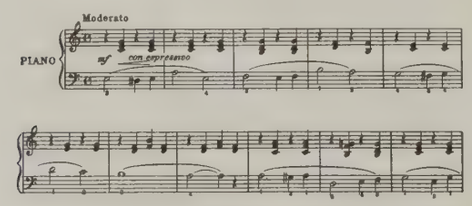
Six Piano Pieces in the Second Grade.

1. *English March* (*Marche Anglaise*). In C major, 4–4. Moderato. Three pages ..... .50
2. *Love Song* (*Chant d'Amour*). In C major, 4–4. Moderato. Two pages..... .30
3. *Music Box.* In C major, 4–4. Andante. Five pages..... .60
4. *Valse de Salon.* In C major, 3–4. Tempo di valse. Five pages..... .60
5. *Valsette.* In F ma or, 3–4. Moderato. Two pages..... .30
6. *White Rose* (*Valse Lyrique*). In F major, 3–4. Tempo di valse. Five pages..... .60

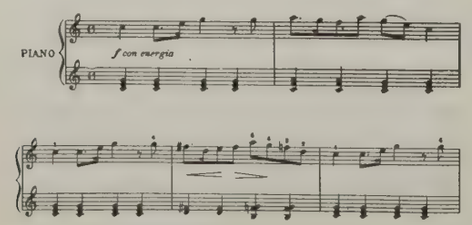
This is an eminently practical set of teaching pieces by a composer of experience, who adapts his (by grade) restricted means to technical ends, at the same time maintaining musical interest. The *English March* (No. 1) is a fine footstep rhythm, the melody chiefly single-voiced with an occasional second voice added. The trio consists of a songful melody for the left hand, accompanied by simple chords in the right. The piece gains two pages in length by a *Da Capo.*



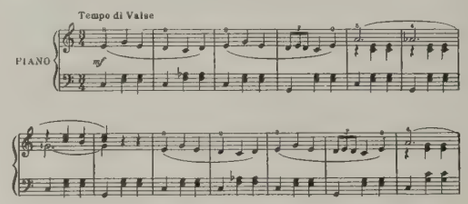
The *Love Song* (No. 2) is a useful melodic study for the left hand, to which the air is assigned throughout. It is a single-voiced melody, lying chiefly upon the staff in the bass clef, and very simple in the phrasing. The right hand supplies the accompaniment in easy chords which fill out and carry the rhythm. There is a *Da Capo* one page in length. The melody must be delivered legato, with singing tone.



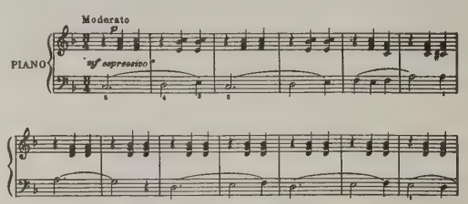
The *Music Box* (No. 3) is a quaint and original little piece, and suggests quite graphically the harmless tinkle of the old Swiss cylinder boxes. Both hands are in the high treble clef throughout, the writing is largely two-voiced, and the tone is diminished by persistent use of the "soft" pedal. A familiar German folk song is partially employed in the melody. The novelty of the idea in such an easy grade makes the piece very entertaining.



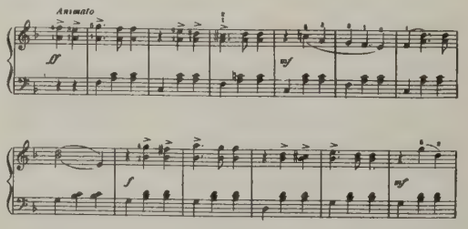
The *Valse de Salon* (No. 4) is of such a regular rhythmic flow and devoid of embellishment that it might serve as a dance-waltz as well. The melody is entirely single-voiced; in the trio it lies in the left hand. The measures at the end of brace I and beginning of brace II (see illustration) and similar passages constitute one of the few technical difficulties to be mastered. There is an episode in G major and a return of the C major strain, a trio in F major; and a return of the C major strain with short code, forming altogether a fairly lengthy waltz.



In the *Valsette* (No. 5) the melody is also entirely single-voiced. Here the body of the waltz has the theme in the left hand, the trio in the right. Both melodies are very lyric and demand a singing tone and legato touch. The trio is in the relative minor and the composition gains a page in length by a *Da Capo.*



White Roses, the last of the set, carries as a subtitle *valse lyrique*, which appellation refers chiefly to the character of the first strain. A second section in the same key is of a decidedly brisk and animated nature, and the theme is expressed in two-toned chords. The trio melody (in B♭ major) is also largely two-part over the regular left-hand rhythm, and is varied in style and of graceful effect. The opening, single-voiced theme is repeated for conclusion.



NEW SONGS

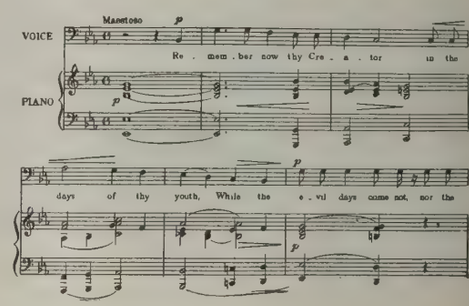
Eugene Cowles

Dear, did You Know. Medium voice in A♭ (C or E♭ to F or *a*♭). Also for low voice in F..... .50

This is a song of the romantic type, possessing a smoothly flowing and very singable voice-line of a comfortable *tessitura.* Its simple style makes the song useful for teaching; its melodious charm and the sentiment of the verses insure its popularity. The accompaniment offers a good support to the voice; and, while maintained on simple lines, is well written, playable, and agreeable in harmony. A melody-line in unison with the voice must be given with singing tone. Words by Theo. Wraitislow.

Remember now thy Creator. Sacred song for bass voice in E♭ (E♭ or G to *c*)..... .60

The serious thought and noble expression of these verses from Ecclesiastes have suggested to the composer a setting for the dignified tonal character of the bass voice. An elevated religious mood is sustained throughout; and the mood of the text is expressed with fidelity through all its changes by couching the voice part in a sort of lyric recitative, which is both singable and impressive. The song lies well within the range of the real bass voice, remaining largely upon the staff, and descends, at the close, to an optional low E♭. The accompaniment is varied and interesting.



REBUILT PIANOS OF WELL-KNOWN MAKES

Some of the most charming pianos, and certainly some of the most wonderfully reasonable in price are to be found in the big Exchange Department in Lyon & Healy's. Here you find celebrated pianos, such as the Steinway, Weber, Krakauer, Hazelton, Washburn, Sterling, Huntington, etc., that have been traded in for other instruments. In many cases these uprights have been exchanged for grand pianos. Ordinarily such pianos are sold in the condition received, but in Lyon & Healy's the little things one does not like about a piano which stamp it as several years old, are changed in their own factories. So these pianos are brought right down to date in tone, action, and general appearance. Every trace of use is removed from their cases, and altogether they are made substantially as perfect as the day they left their makers' hands. These rebuilt pianos give great satisfaction.

If you would like a good piano at about half price write to Lyon & Healy for a list of instruments in this class. They will be glad to go into full particulars, and you may depend upon every statement that they make. Tell them about what kind of an instrument you had in view and about how much you had in mind to pay. Address them 28 Adams Street, Chicago.

Lyon & Healy are the largest piano dealers in this or any other country.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.
FRITZ KREISLER.
Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

Have just finished violin for Hugo Herman, a perfect imitation of his famous Strad. Send for duplicate on trial. Write for Catalog.

THE DUNNING SYSTEM

of IMPROVED MUSIC STUDY *for* BEGINNERS

It matters not as to which musical system was originated first, but rather which is the best. The Dunning System is the only one endorsed by the world-renowned masters of music in both America and Europe, and its superiority is acknowledged by all who know of the marvelous results shown by the teachers now using it.

NORMAL TRAINING COURSE FOR TEACHERS, in BUFFALO, N.Y., beginning JULY 5, 1906
NORMAL TRAINING COURSE FOR TEACHERS, in PORTLAND, ORE., beginning SEPT. 9, 1906

Send for booklet with written endorsement of Leschetizky, Scharwenka, de Pachman, Busoni, and others. Address,

Mrs. CARRIE L. DUNNING, 225 Highland Ave., Buffalo, N. Y.

This system is not taught by correspondence, as it is a musical education in itself.

BACK NUMBERS

A limited number of complete sets for last year are still on hand.

The Musician for 1905 contains over 500 articles, essays, and sketches on all subjects pertaining to music; also 164 pages of vocal and instrumental music. Price, while they last, $1.50.

The Choir and Choral Magazine for 1905 contains nearly 140 practical articles of interest to choir leaders, choir singers, and organists; also 152 pages of church music. Price, while they last, 50 cents.

These prices include the cost of transportation. With but few exceptions there are no single copies available of either magazine.

IN PRESS

A New Work by ALICE C. D. RILEY, entitled

ELEMENTS OF ENGLISH VERSE

CORRELATED TO MUSIC

We expect to place this work on sale early in July, 1906.

Because of Mrs. Riley's well-known reputation and prominence as a writer of verse, particularly for children, we bespeak for her book a hearty welcome and believe it will be received with unusual interest, especially by the teachers of music in schools.

Mrs. Riley's book is designed for use in the Grammar Schools, the work being planned to extend through the entire eight grades.

It is intended to provide for the child an education in verse building and in the appreciation of poetic verse in its best sense, based upon a proper understanding of legitimate verse forms on lines similar to those now advanced for the education of the child in music; and in this work music is used as the basis for rhythmic measurement.

Many of the rhythmic forms are given musical illustration by Mrs. Jessie L. Gaynor, who has already set so many of Mrs. Riley's lyrics.

The regular price of the book will be $1.50. Advance orders received prior to July 15 will be filled at $1.00 per copy, post-paid, cash with order. The book will be strongly bound in full cloth.

SHAKSPERE SONGS

Compiled and Edited by CHARLES VINCENT

This collection will prove of exceptional interest to vocalists, to musical and Shakspere Clubs, and to all who are familiar with the works of the great playwright.

The contents have been drawn from many sources. The book is divided into four parts, as follows:—

I. Songs mentioned by Shakspere in his plays.
II. Songs possibly sung in the original performances.
III. Settings composed since Shakspere's time to the middle of the nineteenth century.
IV. Recent settings.

The adaptations to the piano of the accompaniments of the older numbers have been made to correspond as nearly as possible with the originals.

Part I contains: "Heart's Ease," mentioned in Romeo and Juliet; "Heigh-ho for a Husband," in Much Ado about Nothing; "Green Sleeves," in The Merry Wives; "Light o'Love," in Two Gentlemen of Verona; and "Farewell, Dear Love," "Peg o'Ramsay," and "Three Merry Men," mentioned in Twelfth Night. The second part contains settings by Byrd, Robert Johnson, Dr. John Wilson, Thomas Dallis, and Thomas Morley. The examples given in this part prove that the music written for and performed in the plays of Shakspere's period was refined and artistic in character. The third part includes songs by Purcell, Dr. Arne, Haydn, Linley, Bishop, Schubert, and Rossini. It will be a matter of interest to many to learn that Rossini composed a song to Shakspere's words which can be rendered as effectively in English as in Italian. It was written for the opera "Otello," and is characteristic of the composer. It is also interesting to find that Schumann has set to music one of Shakspere's songs. This is included among the "Recent Settings." Most of the numbers in this section are by contemporary composers. Among the number is a new song by Samuel Coleridge-Taylor.

The volume is one of the Musicians Library and contains a portrait of Shakspere and an introduction by the editor.

Published in two editions, for high voice and for low voice. Price, each in heavy paper, cloth back, $1.50; and in cloth, gilt, $2.50 post-paid.

DITSON EDITION

The DITSON EDITION is a new library of approved works, chiefly technical, for the piano, organ, violin, and other instruments and for the voice. It addresses itself to music teachers and music students of discrimination—to those who value quality, who want the best.

In its Editing and Editors

the DITSON EDITION claims superiority over every other edition.

Each volume has been carefully prepared on practical lines by a specialist; in other words, each number has been truly *edited*. While the editorial work is modern in spirit and progressive in character, the aim has been to avoid the pitfall of over-editing. There are editions so crowded with footnotes, explanations, and markings of various sorts as to confuse the pupil, fatigue the eye, and hide the music. This is not true of the DITSON EDITION, the volumes of which contain all practical hints and helps necessary while avoiding everything needless, burdensome, or extreme. A marked feature is the Editorial Preface to all or nearly all of the volumes. This introduction tells something of the composer or author, giving in many cases his portrait, followed by practical hints for teacher and pupil which greatly increase the working value of each book. This is a special feature of the edition.

The DITSON EDITION claims superiority not only in its matter—the music and its editing—but in the manner in which it is presented. First,

The Typography of the Music

The music is engraved with steel dies, "stamped" or struck note by note, character by character, on a metal plate. For each music character there is a separate die. The appearance of the music depends upon the shape and size of these dies. After a careful study we decided upon a form of notehead a trifle larger than that in common use—a notehead that facilitates reading and gives the eye a minimum of strain. This is an important feature in these days of nervous tension, and will be appreciated by the thoughtful. At a large expense we had these music dies made for us by the finest die cutter in Europe. Every music page of the DITSON EDITION is printed from new plates engraved with these new, special dies. Bearing directly upon the eye-pull is the "lay-out" of each music page. Inferior editions are crowded with music for the sake of reducing the book to a minimum number of pages, and therefore of cost. The DITSON EDITION does not for commercial reasons sacrifice the eyesight of the thousands who use it in their formative period, but carefully avoids crowding the pages by ample spacing and generous "lay-out." A second point of superiority is in

The Printing

of the DITSON EDITION. While the music is engraved on metal plates, it is not printed directly from them but indirectly by the "transfer" or lithographic process. To the highly polished surface of a lithographic stone is transferred an impression taken from the metal music plates. By the action of acid this transfer is solidified upon the stone. The stone is then placed on the bed of a printing press designed for the purpose. This press is equipped with two sets of rollers—one for water and one for ink. The water rollers, having no affinity for the grease contained in the transfer, first cover the stone with a minute film of water, while the ink rollers, having no affinity for the water, next deposit the necessary quantity of ink on the "transfer." The paper is then fed in and pressure applied. Under this pressure the paper absorbs the film of water and takes upon its surface the ink in exact reproduction of the "transfer." This brief description of the modern method of music printing makes apparent the necessity of using for the best results a paper exactly adapted in texture and finish. This paper, made by a special process, is known as "Velvet finish," and yields a clear and beautiful impression. This best paper costs more than the spongy paper used in inferior editions, but the DITSON EDITION is not reducing its cost of manufacture at the expense of your eyesight. It is printed with the greatest care and the best black ink, on the highest grade, highest priced music paper made in this country. A third point of superiority is in

The Binding

of the DITSON EDITION. The cover paper of dark *Café-au-lait* is soft in texture, yet tough in fibre, and will wear better, look well longer than the thinner and paler colored smooth papers used on other editions. The artistic cover design printed, not as commonly in one color, but in two,—a sympathetic reddish brown and harmonious olive green,—gives the edition a distinguished appearance.

While the DITSON EDITION is in every detail superior to all others, it costs no more than other editions.

Finally, the DITSON EDITION, notwithstanding the keenest commercial rivalry and competition, has not sacrificed quality—intrinsic worth—to cheapness at any point. It is built and will continue to be built on the principle of

"Not—how cheap; but—how good."

A complete catalogue of the DITSON EDITION will be sent free to any address.

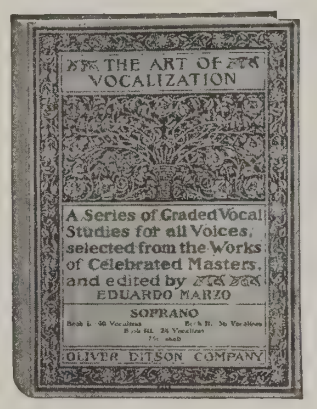
THE ART OF VOCALIZATION

A GRADED COURSE OF VOCALISES FOR SOPRANO

Compiled and Edited by EDUARDO MARZO



THE purpose of this Course is to place in progressive and systematic order before the teacher and pupil the best vocalises by the best masters. It covers the entire range of vocalization. While not intended for beginners, it contains all that is required for the complete study of the vocal art.

The vocalises have been selected from the works of Alary, Aprile, Brambilla, Bordogni, Concone, Crescentini, Lablache, Lamperti, Marchesi, Nava, Paer, Panofka, Panseron, Savinelli, Sieber, and others. Each number has been chosen not only for its intrinsic merit, but also because of its pedagogical value.

Each set of vocalises covering a special difficulty is preceded by a page of the exercise which they illustrate. Special instructions are given for practicing scales, arpeggios, grace notes, the mordent, detached notes, syncopation, trills, etc. None of the vocalises are transpositions. Each is in its original key, and was written especially for the soprano voice. The order of progression has been carefully arranged so that the vocalises may be taken up consecutively.

The Course does not pretend to teach singing without the aid of a teacher. It merely places in view all the best material that can be gathered for the study of vocalization.

BOOK I. 40 VOCALISES
BOOK II. 36 VOCALISES
BOOK III. 24 VOCALISES

Mascagni	Cavalleria Rusticana	*Wagner*	Götterdämmerung
Thomas	Mignon	*Strauss*	Die Fledermaus
Balfe	The Bohemian Girl	*Goldmark*	The Queen of Sheba

In each case these selections lead through the entire opera, taking in every air and melody of importance, and representing in reality a condensed edition of the Piano Score rather than merely a selection. The arrangements are only **moderately difficult,** without being rendered thin and insipid by undue harmonic compression.

SCRIBNER'S LATEST BOOKS

A New Book for Voice Teachers and Students

The Italian School of Florid Song

By P. TOSI. 12mo. $1.75 net

OBSERVATIONS on the Florid Song, or Sentiments on the Ancient and Modern Singers, written in Italian by PIER FRANCESCO TOSI, of the Philharmonic Academy at Bologna. Translated into English by MR. GALLIARD; useful for all performers, instrumental as well as vocal, to which are added explanatory annotations and examples in music. Reprinted from the London edition of 1743.

A reprint of a classic practical treatise on the Italian art of singing, by a noted Italian singer and teacher who embodies his own experience and that of his contemporaries at a time when the art was more thoroughly taught than it has ever been since. Grove's Dictionary of Music says that "many of its remarks would still be highly useful."

FOLK-SONGS

and Other Songs

FOR CHILDREN

Edited by
JANE BYRD RADCLIFFE-WHITEHEAD

TO a musical child there is nothing that will give greater delight than this beautiful collection. It originated in the idea of acquainting children of the new world with some of the songs which, in the old world, have kept their hold on the affection of the people for a long time; folk-songs chiefly, which, because of their simplicity and naïvete, must appeal particularly to the young. In some cases the words of foreign songs have been replaced by simple English ones, but the melodies have been kept intact.

Out of this fragrant, old-time garden the editor has gathered this volume, including at the same time, a few simple melodies and child-songs not out of keeping with the plan of offering to mothers, teachers, and lovers of children, music that is simple and child-like in its appeal.

The book contains one hundred and forty-one songs, comprising two hundred and twenty-six pages of music, is printed on paper of the best quality, and is bound in attractive and serviceable covers.

Books on the Operas

By ANNA ALICE CHAPIN

The Story of the Rhinegold

Told for young people

It contains the four operas of Wagner's "Nibelungen Ring," The Rhinegold, The Walküre, Siegfried, the Götterdämmerung, woven into the form of a story, and thus adapted to the comprehension of children, although in great demand by older readers who desire an intelligent, consecutive, and concise guide to the Nibelungen circle, told with charming simplicity.

Illustrated. Post 8vo, $1.25

Wonder Tales from Wagner

Contents:—The Flying Dutchman; Tannhäuser; Lohengrin; Tristan and Isolde; The Meistersinger of Nuremberg. Planned upon much the same lines as "The Story of the Rhinegold," and forms an invaluable companion volume to that book.

Illustrated. Post 8vo, $1.25

Wotan, Siegfried, and Brünhilde

In her unpretentious study of these three principal characters, Miss Chapin, thanks to her sound knowledge and sympathetic insight, appeals as strongly to advanced Wagnerian scholars as to intelligent laymen.

Illustrated. Post 8vo, $1.25

OLIVER DITSON COMPANY
Boston, Mass.

C. H. DITSON & CO. New York
J. E. DITSON & CO. Philadelphia

America's Musical String House

Cosmopolitan School of Music and Dramatic Art

AUDITORIUM BUILDING, CHICAGO

Students Enrolled at Any Time

Special Summer Session of Five Weeks Begins June 25th, Fall Term Opens September 10th

Piano Department, Victor Hienze, Jeannette Durno-Collins, Howard Wells, Mrs. Bruno Steindel, Mrs. Howard Wells, Dr. N. J. Elsenheimer, Daisy Waller, Lillian Dawes, Isaac Levine, Vivian Scott, Edith Laver, Grace Sloan, Laura Smith, and Olive E. Atwood. Vocal Department—Minnie Fish-Griffin, L. A. Torrens, Mrs. Willard S. Bracken, Charles Sindlinger, William Beard, Hanna Butler, Mrs. L. A. Torrens, Jennie Thatcher Beach, and Marion Green. Harmony, Composition, and Lectures—Dr. N. J. Elsenheimer. Violin—Leopold Kramer, Franz Esser, and Fritz Itte. 'Cello—Bruno Steindel. Harp—Enrico Tramonti. Organ—Clarence Dickinson. Chamber Music—Franz Esser. Public School Music—Margaret M. Salisbury. Foreign Languages—Ernest Sicard and Mina Pfirshing. Donald Robertson, Director of Dramatic Art Department; Eloise B. MacMinn, Assistant.

Donald Robertson, the eminent actor and producer of plays, will be the director of the new and permanent theatre, called the "Players' Theatre," an organization devoted to educational influences of dramatic art, the promotion and welfare of players and the maintenance of high standards in the profession. This theatre will open in August.

As the school controls its own recital hall the pupils will be afforded the opportunity of hearing numerous concerts, recitals, and lectures, including six chamber music concerts, three by the Steindel Trio, composed of Mr. and Mrs. Bruno Steindel and Fritz Itte; and three by the Chicago String Quartet, composed of Leopold Kramer, first concertmaster; Ludwig Becker, second concertmaster; Franz Esser, first viola, and Bruno Steindel, first 'cellist, of the Theodore Thomas Orchestra.

The artist teachers in this school will be available for concerts and recitals under the direction of the Dunstan Collins Musical Agency. This agency will also assist pupils of the school in securing professional engagements and positions free of charge.

For Particulars and Catalog Address

DUNSTAN COLLINS, Auditorium Building, Chicago, Ill.

SMITH & NIXON PIANO USED EXCLUSIVELY

HALF DOLLAR CHORAL SERIES

This series of volumes has been planned to give at a popular price a varied selection of attractive choral music. The contents of each volume have been chosen with care from music of proven acceptability. In no other form can so much desirable music be obtained at the price nor can the contents be duplicated by any other publisher.

FIFTY RESPONSES FOR CHOIRS
Compiled by James L. Gilbert

A new edition of a well-known collection. Several numbers have been replaced with newer and more interesting ones and such numbers as were altered by the original compiler have been restored so as to correspond with the intentions of the composers.

POPULAR ANTHEMS FOR GENERAL USE
Compiled by Hans Lichter

Twenty-two anthems of proven popularity. None of them are beyond the capacity of the average choir. The selection was made by a practical organist and choirmaster.

TWENTY PART-SONGS FOR MEN'S VOICES
Compiled by Hans Lichter

A collection of secular quartets for two tenors and two bases. With the exception of two numbers all may be sung without accompaniment. They are of medium difficulty and suitable for quartet or chorus.

TWENTY PART-SONGS FOR MIXED VOICES
Compiled by H. Clough-Leighter

Twenty secular part-songs for mixed quartet or chorus. Eight of the numbers have piano accompaniment; the remaining twelve may be sung without accompaniment.

TWENTY TRIOS FOR WOMEN'S VOICES
Compiled by H. Clough-Leighter

Twenty secular trios for two sopranos and alto. Fifteen of the numbers have piano accompaniment. Several of the numbers were especially arranged for this collection.

TWENTY QUARTETS FOR WOMEN'S VOICES
Compiled by H. Clough-Leighter

Twenty secular quartets for two sopranos and two altos, many of which were especially arranged for this collection. All of the numbers have piano accompaniments.

Each book, with the exception of the first mentioned, contains from ninety-four to ninety-six pages. The music is, in all cases, printed by transfer from engraved plates.

Price each, 50 cents, post-paid

Copies sent for examination

Catalogs giving the contents of each book will be sent free to any address

Secular Songs

HIGH VOICE

BARTLETT, J. C.
In Dreams I wandered with Thee. [C] [d to *g*]..... 60
A song of tender sentiment, flowing melodious phrases, and excellent vocal effects. Well written and warmly harmonized.

COVERLY, ROBERT
Little Corn-Flower (Die Kaiser-Blume). [D] [E to F or *a*]..... 60
Dainty and graceful lyric in a light style with easy piano part.

FOSTER, STEPHEN C.
Come where My Love lies Dreaming. [F] [F to F or *a*] 50
New edition, carefully edited, of a favorite old song.

SHELLEY, HARRY ROWE
The Ride. [D] [E to *g*].....1 00
A vigorous, breezy number, full of life and energy. Its length and brilliant style make it valuable for concert use.

MEDIUM VOICE

BARTLETT, J. C.
In Dreams I wandered with Thee. [B♭] [c to F]..... 60
(See above)

WILLIS, M. B.
Li'l Drum. [F] [c to D or F]..... 60
The natural and touching pathos of the verses is heightened and accentuated by the charming but simple musical setting.

LOW VOICE

BARTLETT, J. C.
In Dreams I wandered with Thee. [A♭] [b♭ to E♭].... 60
(See above)

SHELLEY, HARRY ROWE
The Ride. [B♭] [c to E♭].....1 00
(See above)

Sacred Song

ZECKWER, CAMILLE W.
O Salutaris Hostia (O Lord of Heaven, hear Our Cry). (Latin and English.) [D♭] [E♭ to *b*♭]..... 60
Devotional and melodious setting, in brilliant, though not florid style.

Piano Solos

ELGAR, EDWARD
Love's Greeting (Salut d' Amour). Op. 12. [E] [III–IV]..... 40
This favorite composition makes an attractive and effective piano number, and is not difficult, while the melody is charming.

GODDARD, CHARLES
Butterfly Ballet (Ballet des Papillons). Op. 69. [D] [III–IV]..... 75
Brilliant and graceful number, with middle section of sustained melody.

HEINS, CARL
Throwing Kisses (Kusshändchen). Op. 127. [E♭] [III–IV]..... 40
An attractive mazurka rhythm, introducing scales and arpeggio passages easily but effectively.

OEHMELER, LEO
Tyrolean Landler. Op. 58, No. 1. [A] [III]..... 40
A rhythmic piece, characteristic in melodic structure and available for teaching.
Tyrolean Love Song. Op. 58, No. 2. [D] [III]..... 40
More lyric than the preceding, in slow waltz tempo, with marked accent.
Tyrolean Hunting Song. Op. 58, No. 3. [G] [III]. 40
Dash and spirit and vigorous rhythmic pulses render this a very entertaining number.
Vesper Prayer (Abendgebet). Op. 60, No. 1. [D] [III]. 40
In choral style and requiring very legato phrasing. The four-part vocal writing is for the most part maintained.

ROLLINSON, T. H.
Sobre la Plaza (On the Plaza). [C] [III]..... 50
Characteristic piece in effective Spanish rhythm, strongly accented in the bass.

SCHARWENKA, XAVER
Barcarolle. Op. 62, No. 4. [G] [III]..... 30
Refined in thought and expression — a song without words.

SCHNECKER, P. A.
The Assembly Waltz. [G] [III]..... 50
A waltz for dancing, with strongly marked rhythm, and straightforward melodies.

Piano Duets

PIERNÉ, GABRIEL
Serenade. Op. 7. [G] [III]..... 75
A brilliant and piquant melody effectively arranged for four hands from the original violin and piano composition.

SCHARWENKA, XAVER
Gavotte, in F. Op. 41, No. 3. [F] [III–IV]..... 50
Strongly rhythmed, numbered, well written, and equally interesting for both performers.

SCHNECKER, P. A.
Galop Militaire. [E♭] [III]..... 75
The rapid movement, sparkling figuration, and vigor of this composition unite to make an excellent "show" piece.

Composition for Violin and Piano

ELGAR, EDWARD
Salut d' Amour (Love's Greeting). Op. 12. [D]..... 50
The tender grace of the beautiful melody renders this one of the most popular of recent compositions for the violin.

Mandolin Orchestra Music

BENNET, C. W.
The Blue Jackets. (March.) (Arr. by H. F. Odell.)
Stirring march with melodious sustained Trio.

OCTAVO EDITION

(PLEASE ORDER BY NUMBER)

Part-song for Men's Voices

HOWELL, CHARLES T.
No. 11,522. **Sleep Time, Mah Honey.** (Four Part Song.)..... 12
A refined negro song with lullaby words. The charming refrain is arranged to carry the melody in the highest part, with a humming accompaniment for the other voices.

Part-song for Mixed Voices

HOWELL, CHARLES T.
No. 11,521. **Sleep Time, Mah Honey.** (Four-part Song.)..... 12

NEW BOOKS

JOHNSON CLAUDE E.
The Training of Boys' Voices..... 75
A thorough and practical guide to the correct "placing" and training of the boy's voice, containing many vocal exercises which equip it for a text-book also. The author's style is at once simple, direct, and helpful.

RIPLEY, FREDERIC H.
War Songs for Schools
An inexpensive but well-printed collection of ten of the best patriotic songs written at the time of the Civil War. Arranged for young voices.

PUBLISHERS' NOTES

HOME SONGS

Home Songs is the title of a new collection which will appear about September 1. The book will be a companion volume to the new and enlarged edition of *College Songs*. It will contain about one hundred forty numbers, including twenty hymns, sixteen rounds, the six most popular patriotic songs, and four of Foster's famous *Melodies*. There will also be several Scotch and Irish songs, German folk songs and songs by Balfe, Abt, Hatton, Mendelssohn, and Schubert, every one of which is eminently suitable for the home and fireside. Each number will be arranged in four parts for mixed voices. If desired, however, the songs may be sung as solos with piano accompaniment or as unison, two, or three part choruses.

The price of the book will be 50 cents, but until publication we offer copies for 25 cents each. This price includes postage if cash accompanies order.

MENDELSSOHN'S SONGS WITHOUT WORDS

Mendelssohn's *Songs without Words* will be an early addition to the Ditson Edition. The volume will be edited by Dr. Percy Goetschius.

In this edition the details of form will be carefully marked because they are peculiarly essential to the intelligent study and rendering of these compositions. The conscientious study of the structure of the forty-eight *Songs without Words* is in itself an education in the fundamental principles of music form. The editing, however, will not encroach upon the teacher's domain, but will simply record for his and the pupils' convenience the pedagogic details with which the latter should be made familiar.

The names given by Stephen Heller, which have become identified with these songs in the popular mind, will be found in this edition. There will be an introduction by Dr. Goetschius in which are outlined the various forms in the *Songs without Words*. There will also be a biographical preface by Daniel Gregory Mason.

The price of the book will be $1.00, but in advance of publication we offer copies for 40 cents, which includes the ost of transportation if cash accompanies order.

Probably few musical works of so high a grade of quality, depending for their effect so little upon facile and superficial appeal, so much upon traits of real artistic excellence, have been so widely popular. They are the people's classics, and they have earned their place by their intrinsic qualities of form and expression.

THE ART OF VOCALIZATION

The true old Italian method, as demonstrated in *The Art of Vocalization* by Eduardo Marzo, consists principally in training the voice so that changing from one register to the other is not perceptible. This perhaps applies more to the mezzo soprano voice than to either the soprano or the contralto voices, as it has a good share of all three registers. The mezzo soprano, with its peculiar fulness, mellowness, and roundness of its tone quality, is of great value in operatic music.

The three books for mezzo soprano will be the next to appear. Book I will contain forty vocalises, Book II will contain thirty-six vocalises, and Book III twenty-four vocalises. There will also be three books for alto soon to appear.

The price of each book when published will be 75 cents, but in advance of publication copies are offered for 40 cents each, which includes postage if cash accompanies order.

THE FIRST SIX MONTHS ON THE ORGAN

There is no instrument which offers so wide a scope for originality as the organ. In the use of stops on the pipe organ, however, there is sometimes danger of employing combinations which do not blend well.

The First Six Months on the Organ by George E. Whiting contains practical instruction on registration. The exercises in this work are suitable for two or three manual organs. The pedal parts are not difficult. All necessary directions are given for the use of the pedals. Exercises are included for playing church music when arranged on four staves. There are original preludes, postludes, and voluntaries which may be played for the church service or as recital numbers.

This work will serve as an introduction to the instrument for students who are already familiar with the piano. It may be followed by the works of Bach, Rheinberger, Saint-Saëns, Batiste, Guilmant, etc.

A new edition of *The First Six Months on the Organ*, revised by the author is now in preparation. The price will be $1.50. In advance of publication, however, copies are offered for 60 cents, which includes postage if cash accompanies order.

REED ORGAN SELECTIONS FOR CHURCH USE

When, as is frequently the case, a church is provided with only a reed organ, the selecting a sufficient variety of attractive and appropriate solos is not easy of accomplishment. Piano music is commonly used for such purposes. Even pieces for the reed organ are frequently arranged so as to be adaptable to the piano on the one hand or the pipe organ on the other.

Reed Organ Selections for Church Use, compiled and edited by Hans Lichter, will contain thirty pieces by nineteen composers. These are intended especially and only for the reed organ. A copy should be in the possession of the organist of every small church and every reed organ teacher.

The book will be one of the Half Dollar Music Series. Until publication copies are offered at 25 cents each, which includes postage if cash accompanies order.

THE MATHEW'S SCHOOL OF THE PIANO PEDAL

The pedals of the pianoforte are a vital part of the tone controlling mechanism, since they add to the tonal effect elements which cannot be put there from the keyboard. Composers since Chopin have not written the notes in all instances as they mean to sound, but as the hands have to play them. The remainder is left to the uncertain indication of an occasional "ped" here and there in the music.

Artistic pedaling, therefore, is not only a question of making the playing sound better, but often of bringing out an idea which, but for the pedal, would not be heard at all. Pedaling is an art requiring as careful and systematic study as scale-work, arpeggios, or any element of the technique. Fine playing is impossible without pedals.

The School of the Piano Pedal by W. S. B. Mathews contains complete explanations of the best usage of the pedal. The work is fully illustrated by many original studies and by numerous selections from Bach, Beethoven, Heller, Liszt, Tchaikovsky, Schumann, and Chopin. The studies range in difficulty from the second to the fifth grades. The work is particularly rich in easy pieces of fine quality. Mrs. Blanche Dingley-Mathews' valuable cooperation has made the work especially practical for use with children.

The School of the Piano Pedal has been in preparation for nearly a year. It is now almost ready for the press and will appear at an early date. The price will be $1.25, but in advance of publication copies are offered for 60 cents, which includes postage if cash accompanies order.

STUDIES FOR THE DEVELOPMENT OF RHYTHM AND EXPRESSION, BY CARL PREYER

Teachers in search of material to be used in conjunction with or in place of Heller's *Studies in Phrasing* will be interested in Carl A. Preyer's *Studies for the Development of Rhythm and Expression*. These studies are modern both in melody and harmony, and they include an interesting variety of styles of composition. The importance of the pedal as a factor in expression is amply demonstrated.

The studies will be published in two books, each containing eight studies. They will be Nos. 110 and 111 of the Ditson Edition. The price of each book will be 75 cents, but in advance of publication we offer copies for 30 cents. The two books are offered for 50 cents. These prices include the cost of postage if cash accompanies order.

SCHUMANN'S FANTASY-PIECES, OP. 12

The peculiar genius of Robert Schumann is perhaps most in evidence in his early works, almost exclusively written for pianoforte between 1830 and 1840. Among these are the *Fantasiestücke* (*Fantasy-Pieces*) Op. 12 which will soon appear in the Ditson Edition. This opus includes the *Des Abends*, *Aufschwung*, *Warum*, *Grillen*, *In der Nacht*, *Traumeswirren*, *Fabel*, and *Ende von Lied*, all of which are in the repertory of every pianist of ability.

This opus is edited and carefully revised by Xaver Scharwenka, head of the School of Music in Berlin that bears his name.

Mr. Scharwenka is not only among the greatest of living pianists, but his reputation as a teacher is world-wide. Therefore, the many hints, annotations and other indications that he has furnished to these immortal gems in Schumann Op. 12, will be of invaluable assistance to the teacher and student, towards their proper interpretation. There will also be a biographical preface by Charles Fonteyn Manney. The price of this volume will be 50 cents.

The ninth annual meeting of the Indiana and Ohio Sängerbund was held at Logansport, Ind., on June 18. A concert was given in which the Terre Haute Schwaben Gesangverein, the Marion Männerchor and the Peru Männerchor participated. At the morning session the prizes for which the singers contested Sunday were awarded. The Concordia Gesangverein of Fort Wayne won the first prize, a gold medal; the Concordia of Alexandria won the second, also a gold medal; the third prize, a silver medal, was awarded to the Socialistischer Sängerbund of Indianapolis, and the fourth prize was awarded to the Terre Haute Schwaben Unterstutzüngsverein.

* *

The following pupils of the Detroit Conservatory of Music received their diplomas at the commencement exercises held at the conservatory hall: Piano department — Harry Nelson Boillotal, Earl Howard Keim, Jennie Roe Lewis, Edna M. Price, Evangeline Searight, Hilda Templin, Marie Jelsch, Carrie S. Koch, Metta A. Lignian, Zella K. Price, Edna P. Simon, Letha Waterman; vocal department — Myra A. Coleman, Winifred L. Griffin; violin department — Molly Forcier.

NOTES

The pupils of Marie J. Lokie, of the Detroit Conservatory of Music, gave a concert on June 15, assisted by Meta Schwenk, soprano; Charlotte McDonald, violin, and Emma McDonald, 'cello. The pupils participating were Harriet Schumaker, Nona Orleman, Emma Spencer, Martha Neugarten, Sadie Ludwig, Genevieve Hutton, Edna Peoples, Margaret Lang, Margaret Silby, Winifred Mowat, Grace Milburn, Myrtle Bower, Aileen Fox, and Florence Colton.

* *

The fifth annual commencement exercises of the West Side Musical College, Cleveland, O., took place on June 18, when an interesting program was given by Emma Whitmore, Lida M. Reussmann, Laura E. Webster, Emma L. Kohl, Bertha L. Langley, and Matilda R. Young-Schmidt pianistes; Karl F. Grossman, violinist, and Henry F. Clarke, double bass.

* *

The Los Angeles centre of the American Music Society gave its third concert recently in the Blanchard Building Music Hall. Among those presenting the program were Frederic Irving and Mrs. Campbell, who gave a piano transcription of Indian melodies, accompanying it with explanatory remarks.

* *

A concert of unusual merit was given recently at Park Church Chapel, Hartford, Conn., when the pupils of Mrs. Frances A. Smith interpreted a program consisting of songs of Schubert, Franz, MacDowell, Meyerbeer Brahms, Nevin, Henschel, and Gounod. Those who sang were Mrs. Morgan Lord, Olive M. Lord, Grace M. Knox, Jane A. Clark, Mrs. S. G. Howd, Gertrude Case, Frank W. Brodie, and B. F. Grant. Mrs. William P. Robertson played the accompaniments.

* *

The sacred cantata *Esther* was performed by the Baldwin University Choral Society under the direction of O. E. Weaver at Berea, O., on Thursday and Friday evenings, May 31 and June 1. The soloists were Gustave Bernicke, Mrs. Edith Gilmore-Schneider, H. C. Christman, W. P. Gill, and Maude E. Darling.

* *

The Ohio Conservatory of Music, Cincinnati, gave an interesting program on June 29. Pupils from the classes of John C. Davis, piano; Mrs. Charles A. Graniger, voice and Richard Schliewen, violin, participated. On June 30 the program consisted of a song recital by pupils of Laura Bellini, a recent addition to the Conservatory of Music faculty.

* *

The annual recitals of the Albin Korn studio took place on June 28 and 29 in Guernsey Hall, Scranton, Pa. Messrs. Roescher and Conrad, violinists; Mrs. Slocum, soprano; Helen Kiesel, soprano, and Harry Rose, baritone, presented the program.

* *

The Reidelsberger String Quartet appeared recently in Everett, Wash., under the auspices of the Ladies' Musical Club.

* *

The third of George Chadwick Stock's pupils' recitals was given in New Haven, Conn., recently. Millicent Judd, Margaret R. Lewis, and Iva Bishop sang, accompanied by Anna Frances Treat.

* *

Henry W. Savage, the American impresario, has obtained the release of Elsa Szamosy, prima donna, of the Royal Opera House, Budapest, and she has signed a contract with him to appear in his forthcoming production of *Madame Butterfly*.

* *

Maud Powell is studying a new violin concerto by Sibelius, the Finnish composer. She will play it at the second pair of concerts of the New York Philharmonic Society next season, it is said.

* *

Maud Fay, the American singer, who recently made her début in Munich, appeared recently as Elizabeth in *Tannhäuser*, and was well received.

Forget=Me=Nots

Song for High Voice; for Low Voice

O TOKEN flower, with heart of gold,
Plead for me as amulet;
And like some ling'ring song of old,
Bid her not forget.

O enfold in leaves of azure hue
Memories of golden days—
Of golden days and skies of blue,
Ere the parting of the ways.

Whisper to her of days once dawning,
Ere night's estranging shadows came.
Bid her remember love's sweet morning
Full ablaze with sun of Love's white flame.

Reclaim for me from nights of longing
Joys that were ours in days of light.
Let silent thoughts like spirits thronging
Put clinging doubts to flight.

O token flower of memory sweet,
Blue as summer skies,
Bear on thy petals message fleet,
Tell her all that therein lies.

O link again the riven chain
Welded by sad regret.
Though all else die, if thoughts remain,
Then heart cannot forget.

Copyright, 1906, Oliver Ditson Company

THE demand for "Forget-Me-Nots," by Engelmann, has been so great that we have issued a new edition for the piano, with handsome illuminated title-page, and have also published it as a song for high voice and low voice.

The words of the song have been beautifully wedded to Engelmann's charming melody. The thought is tender, the expression passionate, and the lyric flow of the verse lends itself to the graceful cadence of the melody, making a song which will win deserved popularity by its singable character and appealing and winning sentiment.

Special Mid-Summer Offer

Until August 31, 1906, the price for the Piano and Song arrangements will be 20 cents per copy, postage paid.

This offer will be withdrawn August 31.

CREMONATONE VIOLINS

Cremonatone Violins have the true Italian character as prominently as do the Cremonas of the 18th century.

Age is the only thing needed to give them the true flexibility and breadth of tone possessed by the violins of the old Italian masters.

Cremonatones are made by the most skilled artists in the world. Every particle of material entering into their construction is the best procurable. Each instrument requires from one to five years in the making.

Violinists who have despaired of ever obtaining a satisfactory instrument outside of the rather limited stock of high-priced old ones are cordially invited to order a Cremonatone on trial.

Cremonatones are sold for cash or on installments.

Lyon & Healy Cremonatone, G 1127, Antonius Stradivarius Model, $100.00

Lyon & Healy Cremonatone, G 1135, a reproduction of the celebrated Vieuxtemps Stradivarius, $125.00

Lyon & Healy Cremonatone, G 1151. By the greatest living Italian maker. The Bazinni Guarnerius reproduced, $165.00

Lyon & Healy Cremonatone, G 1161. By same maker as 1151. A reproduction of the Paganini owned by the city of Genoa, $250.00

ORDER ONE TO-DAY

Write for a FREE copy of Lyon & Healy's Musical Handbook fully describing Cremonatones, and also thousands of other articles of interest to musicians.

SHAKSPERE SONGS

Compiled and Edited by CHARLES VINCENT

This collection will prove of exceptional interest to vocalists, to musical and Shakspere Clubs, and to all who are familiar with the works of the great playwright.

The contents have been drawn from many sources. The book is divided into four parts, as follows:—

I. Songs mentioned by Shakspere in his plays.
II. Songs possibly sung in the original performances.
III. Settings composed since Shakspere's time to the middle of the nineteenth century.
IV. Recent settings.

The adaptations to the piano of the accompaniments of the older numbers have been made to correspond as nearly as possible with the originals.

Part I contains: "Heart's Ease," mentioned in Romeo and Juliet; "Heigh-ho for a Husband," in Much Ado about Nothing; "Green Sleeves," in the Merry Wives; "Light o'Love," in Two Gentlemen of Verona; and "Farewell Dear Love," "Peg o'Ramsay," and "Three Merry Men," mentioned in Twelfth night. The second part contains settings by Byrd, Robert Johnson, Dr. John Wilson, Thomas Dallis, and Thomas Morley. The examples given in this part prove that the music written for and performed in the plays of Shakspere's period was refined and artistic in character. The third part includes songs by Purcell, Dr. Arne, Haydn, Linley, Bishop, Schubert, and Rossini. It will be a matter of interest to many to learn that Rossini composed a song to Shakspere's words which can be rendered as effectively in English as in Italian. It was written for the opera "Otello," and is characteristic of the composer. It is also interesting to find that Schumann has set to music one of Shakspere's songs. This is included among the "Recent Settings." Most of the numbers in this section are by contemporary composers. Among the number is a new song by Samuel Coleridge-Taylor.

The volume is one of the Musicians Library and contains a portrait of Shakspere and an introduction by the editor.

Published in two editions, for high voice and for low voice. Price, each in heavy paper, cloth back, $1.50; and in cloth, gilt, $2.50 post-paid.

JOUSSE'S MUSICAL CATECHISM

Revised and Edited by
THOMAS A'BECKETT

Few works on music have shown such remarkable vitality or enjoyed such popularity as this little book.

In the course of teaching, and musical progress in general, many new and valuable definitions have been evolved and consequently the Catechism has passed through many editions. In this edition the material has been carefully revised. Much that is new has been added, including a pronouncing dictionary of musical terms and Schumann's Rules for Young Musicians.

Half Dollar Choral Series

This series of volumes has been planned to give at a popular price a varied selection of attractive choral music. The contents of each volume have been chosen with care from music of proven acceptability. In no other form can so much desirable music be obtained at the price nor can the contents be duplicated by any other publisher.

FIFTY RESPONSES FOR CHOIRS
Compiled by James L. Gilbert

A new edition of a well-known collection. Several numbers have been replaced with newer and more interesting ones and such numbers as were altered by the original compiler have been restored so as to correspond with the intentions of the composers.

POPULAR ANTHEMS FOR GENERAL USE
Compiled by Hans Lichter

Twenty-two anthems of proven popularity. None of them are beyond the capacity of the average choir. The selection was made by a practical organist and choirmaster.

TWENTY PART-SONGS FOR MEN'S VOICES
Compiled by Hans Lichter

A collection of secular quartets for two tenors and two bases. With the exception of two numbers all may be sung without accompaniment. They are of medium difficulty and suitable for quartet or chorus.

TWENTY PART-SONGS FOR MIXED VOICES
Compiled by H. Clough-Leighter

Twenty secular part-songs for mixed quartet or chorus. Eight of the numbers have piano accompaniment; the remaining twelve may be sung without accompaniment.

TWENTY TRIOS FOR WOMEN'S VOICES
Compiled by H. Clough-Leighter

Twenty secular trios for two sopranos and alto. Fifteen of the numbers have piano accompaniment. Several of the numbers were especially arranged for this collection.

TWENTY QUARTETS FOR WOMEN'S VOICES
Compiled by H. Clough-Leighter

Twenty secular quartets for two sopranos and two altos, many of which were especially arranged for this collection. All of the numbers have piano accompaniments.

Each book, with the exception of the first mentioned, contains from ninety-four to ninety-six pages. The music is, in all cases, printed by transfer from engraved plates.

Price each, 50 cents, post-paid

"Mansfeldt Technic"

By HUGO MANSFELDT

A COMPLETE LIBRARY of TECHNICAL EXERCISES

A System of the Most Necessary Daily Exercises to Produce

A Perfect Finger Development In the Shortest Possible Time

It is as useful to the novice as to the advanced student.

It is a concentration of common sense tuition and guarantees perfection in finger-dexterity. All technical problems are given a ready solution in this, the greatest system of technic.

Franz Liszt, eulogized the book in most emphatic terms.

Teachers simply glorify it because of its intelligent and valuable conciseness.

"Mansfeldt Technic" has created more accomplished and masterful pianists since its publication than all the old-time "methods and studies" combined, and accomplished it in such brief time that even connoisseurs of the art are marvelling.

Thousands are now in use by scores of the most noted conservatories and instructors of the world, and within another decade it will be the **only** system of technical exercises recognized among musicians. No other book has met with such a sincere welcome from the guild.

Price: In order to supply an urgent demand for this eminent work in separate sections the publisher is now issuing it in three distinct books — One Dollar each. The three books are also published complete in one volume — Two Dollars and Fifty Cents. Ask your dealer to order one for you on approval.

THE GRADED EDITION — THE TEACHERS' EDITION

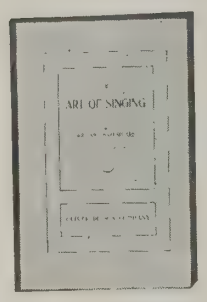
The Art of Singing

By WILLIAM SHAKESPEARE



This work is a modern exposition of the principles which were practiced and perfected by the Italian masters before the influence of instrumental music caused the study of the voice on its own account to be neglected. Breath control and the production of the voice and registers are dealt with in a thorough and scientific manner and their application illustrated by photographs and exercises.

Published in three volumes.

Public School Music

Northwestern University

THE SCHOOL OF MUSIC, located at Evanston-Chicago, on the shore of Lake Michigan, calls attention to its Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC, numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

P. C. LUTKIN, Dean, Evanston, Ill.

Supervisors or Special Teachers

A SPECIAL TEACHER to successfully carry on her work must have *Special Training*. The only School in the country devoted exclusively to the subjects of Music, Drawing, Physical Training, Penmanship, Domestic Science and Art, and Manual Training, as taught in Public and Normal Schools, is the claim of this School. Students wishing to take up this line of work, address the Secretary for catalog, copy of School Magazine, and full information.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

G. SCHIRMER'S LATEST PUBLICATIONS

WILSON G. SMITH | **A Book of Suggestions for the Study of the Cramer Etudes** (as edited by Hans von Bülow). With Modifications and Variants in Phrasing, Touch, and Rhythm. **Price, $1.00 net.**

Based upon the modern principle of exercising the mental as well as the physical powers. The Studies are presented in as many different interpretative aspects as possible.

STEPHEN HELLER | **Fifty Studies for Pianoforte,** From Op. 45, 46, 47. Selected and edited by LOUIS OESTERLE. **Price, $1.50.**

No need of wading through all of Heller's Studies. This edition, consisting of fifty in all, chosen with discrimination by Mr. Oesterle, presents all that a progressive teacher would care to use by this composer.

G. SCHIRMER .. 35 Union Square .. NEW YORK

HOME SONGS

NOW IN PRESS ... THE FINEST EDITION EXTANT

Will be issued September 15, 1906

In the course of years different songs, popular and classic, have held the attention of music lovers for a period, only to give way to newer ones as they appeared.

Many songs are speedily forgotten, never to be recalled; others seem destined to live indefinitely and pass from one generation to another.

In compiling this volume of "HOME SONGS" the aim was to collect the ever-popular songs, especially those inherited by this generation from the preceding. The past is dear to all, and these songs will awaken tender memories in the hearts of many. The younger generation should know the songs their mothers sang and their fathers loved; taking them up in a spirit of curiosity perhaps, they will discover the reason for their long life, and rejoice in finding so charming a link to a past as full of beauty as the days they live in. Not all of the numbers are of the past, however, and a glance at the contents will awaken the interest of all who cherish the home spirit and love the music of the fireside.

The songs are arranged for mixed voices, throughout, and may be sung with or without piano as desired. Included in the long list are ballads of love and adventure, patriotic songs of our own country, many of our best-known hyms, and a goodly representation of rounds, a form of music that furnished healthy amusement in the past and deserves more attention in the present.

The book contains 120 pages; bound in heavy paper, cloth back, price 50 cents.

SPECIAL INTRODUCTORY OFFER

Until September 15, copies of this book are offered in advance of publication at 25 cents each, post-paid, cash with order. The regular price, thereafter, will be 50 cents.

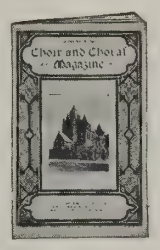
Choir and Choral Magazine

A monthly publication devoted to the music of the church.



The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

No. 5.	The Swing. F (d-g)	.30
No. 6.	Slumber Song. A(c♯-f♯)	.50
No. 7.	Learning to Play. G (d-g)	.50

"A set of altogether charming musical settings of very characteristic children's poems. They are to be sung to children rather than by them, although adults will find just as much genuine enjoyment in them.

"A group of them would make an effective recital number." GOOD MUSIC.

"Thank you very much for the songs you sent me. They are beautiful and I shall take pleasure in teaching them to my pupils." OSCAR SAENGER.

"I have always admired your versatility in composition, and it seems to me that in these sketches you are especially happy in adapting a pure art style to the demand for "short sketch songs" which seem so popular with singers to-day. I shall call the attention of some of the leading singers of Columbus to this last series, for they are surely worthy of success."

J. B. FRANCIS McDOWELL,
McDowell's Musical Institute.

NEW SONGS
J. W. BISCHOFF

Five Little White Heads. D (b-e)	$0.50
Love, sings the Lark. B♭ (d-g)	.60
Two Hearts. 2 keys	.50
The Rose I give You. 2 keys	.50
Open to Me the Gates. (Sacred Song.) 2 keys	.50

New songs by Prof. Bischoff that are fully up to the high standard of all his compositions, and are characterized by the gracefulness, melodiousness, and artistic charm which have been the invariable attributes of their predecessors from the same pen, and have gained for them their enviable popularity. The composer's long and successful experience as a vocal teacher enables him to write in a manner peculiarly grateful to the singer, and these five songs are in his happiest vein. As usual in his songs, also, the accompaniments are admirably effective.

ENDORSEMENTS

"It is admirably clear, rational, and practical. The modernity of the illustrations and the freedom from pedantry in the pedagogical point of view make it an oasis in the land of harmony text-books."
DANIEL G. MASON.
New York, N. Y.

"After a careful examination of the 'Harmony' I have decided that it is just what I want, and I shall introduce and use the work in the University."
OLIVER R. SKINNER,
Bloomington, Ill. Wesleyan University of Music.

"It is the very thing I am looking for, and as you will receive through our college office a large order, you may see by it that I have adopted it as my text-book in preference to many others."
AUGUST GEIGER,
Gainesville, Ga. Brenan College.

"I shall use the book in my courses next year."
PROF. L. R. LEWIS,
Dept. of Music, Tufts College.
Tufts College, Mass.

"It ingeniously gets down to practical application and to results for which usually two or three books are required."
PROF. CARL V. LACHMUND,
Lachmund Conservatory of Music.
New York, N. Y.

"It is comprehensive, practical, easily understood, and thoroughly up-to-date. With your most able associate you have succeeded admirably in presenting that which ordinarily seems a dry study problem, in agreeable form."
EMIL LIEBLING.
Chicago, Ill.

"I received the advanced sheets of the Foote-Spalding 'Harmony' and would say that I am very much pleased with it, and have decided to adopt it in my classes."
N. J. COREY,
Detroit, Mich. Michigan Conservatory of Music.

"I always expect my students to study reference books which I recommend. Yours and Mr. Spalding's will from now on be mentioned first."
ADOLF WEIDIG.

CLAUDE DEBUSSY'S PIANO MUSIC

EDWARD BURLINGAME HILL

At present it hardly seems necessary to assert that Claude Debussy occupies a position among contemporary composers that is unique. For it is generally recognized that he is unequaled in a certain type of vague, unprecise, delicately colored musical conceptions; he is unsurpassed in the ultra-modern mystic word, with its somewhat morbid, reflective, yet deeply poetic atmosphere. His individuality, aside from the question of liking or disliking it, is surprisingly distinct, independent, uncontaminated by the subtle sway of musical fashion. Indeed, his harmonic style is so original, so epoch-making, that he has himself become a fashion, and many imitators attempt to reproduce his vivid musical imagery. But it is a mistake to consider him a deliberate and self-conscious innovator. He does not appear to have been subject, even in his student days, to the passing influence of any great master. His experience has not been like Richard Strauss, that of evolution of individuality after frank experiment in conventional styles, it has been simply the gradual unfolding and ripening of traits of personality due to self-reliance and patient faith in the significance of his own utterance.

Achille Claude Debussy was born at St. Germain on Oise, not far from Paris, Aug. 22, 1862. He studied at the Paris Conservatory, with Lavignac in harmony, with Marmontel in piano playing (Edward MacDowell, then a boy of fifteen, was a fellow-pupil), and with Guiraud in composition. After taking prizes in solfeggio and piano playing, Debussy finally obtained the *Prix de Rome* in 1884 with a cantata *L'Enfant Prodigue* of conventional style and substance. During his stay at Rome he sent back a suite for orchestra with chorus *Spring*, composed in 1887, which has never been performed. Early in 1888 he composed *La Demoiselle élue* after Dante Gabriel Rossetti's *The Blessed Damozel* for contralto solo, chorus, and orchestra. This latter work was refused by the Conservatory authorities on account of its "excessive modernity." In fact it was not performed in Paris until April, 1893. After his return to Paris Debussy performed his military service. Both before and after this he had been active as a song composer. To this period belong the six *ariettes*, published many years later, *Five Poems after Baudelaire*, six songs to words from Paul Verlaine's *Sagesse* and *Fêtes galantes*, and others. In 1893 he composed his string quartet which the Ysaye Quartet produced in December of the same year at Paris. This was the first work by Debussy to arouse a wider appreciation of his talent; it shows the direction which his individuality was to assume later, although the style seems orthodox in comparison with the radical departures of the later works. The real Debussy appears definitely in his orchestral Prelude to Stephan Mallarmé's *Afternoon of a Faun*, an exotic subject of singularly transcendent mysticism. This piece, novel alike in its conception, in harmonic treatment, and in its play of delicate orchestral sonorities, has actually something approaching popularity in several countries; it has even appeared during the present year on the staid programs of the Conservatory concerts, where his *Demoiselle élue* was rejected as too radical. Other notable works by Debussy are the Nocturnes for orchestra (1897–1899) entitled *Clouds*, *Festival* (Fêtes), and *Sirens*, the last with women's voices (without words) used as an orchestral adjunct (this novel idea was foreshadowed in the early suite *Spring*), the opera *Pelléas and Melisande* (1902) on Maeterlinck's play, on which he had worked for thirteen years, undoubtedly his most important work, and, as well as an epoch-making opera in treatment of recitative, in novelty of the harmonic idiom, and exquisitely subtle use of the orchestra, the most complete embodiment of his impalpable and distinctively colored mysticism, of his poignant and individual force. During the present season the Chevillard Orchestra has performed a new orchestral work, *The Sea*, three symphonic sketches, *From Dawn to Noon on the Sea*, *Play of the Waves*, and *Dialogue of the Winds and Sea*, which (to judge from the four-hand arrangement) strikes a somewhat more universal note without sacrificing the charm and piquancy of detail so characteristic of his other works.

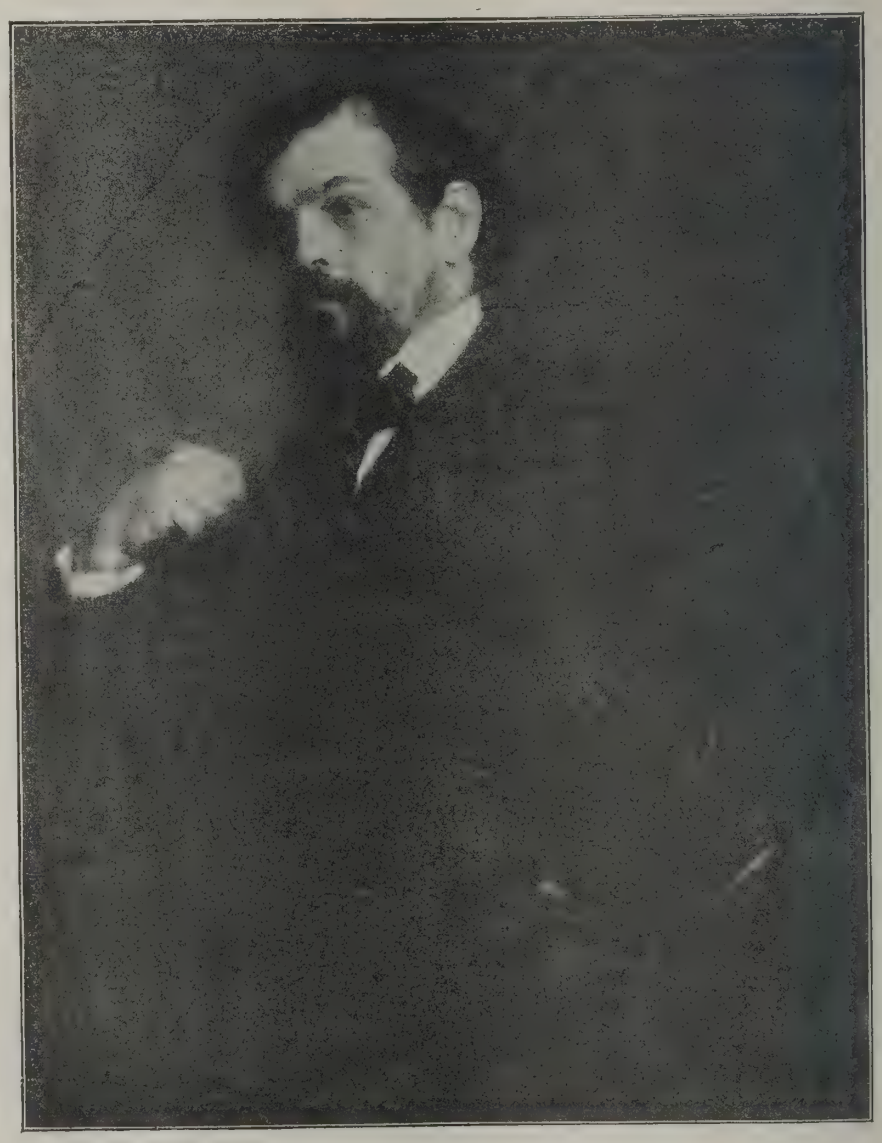
Meanwhile, in addition to many songs, the following piano works remained to be considered: *Little Suite* (1884) for four hands; *Mazurka*, *Reverie*, *Ballade* (1890); *Dance* (1890); *Valse romantique* (1890); *Suite Bergamasque: Prelude*, *Menuet*, *Clair de Lune*, *Passepied* (1890); *Tarentelle*, *Two Arabesques* (published in 1904) all belonging to 1891; *Nocturne* (1896); *For the Piano: Prelude*, *Sarabande*, *Toccata* (1901); *March of the Counts of Ross* (1902) for four hands; *Estampes: Pagodas*, *An Evening in Grenada*, *Gardens in the Rain* (1903); *Masques* and *The Joyous Isle*; *Images: Reflections in the Water*, *Homage to Rameau*, and *Movement* (published in 1905). There is also a short piece *From a Sketch-book* (published in 1904) and a transcription of Schumann's four-hand piece *At the Fountain* from Op. 85. A *Fantasy* for piano and orchestra (1899) has never been performed; a series of *Images* for two pianos, four hands, *Gigue triste*, *Ibéria* and *Valse* is still in press.

Debussy's piano music may be divided into two distinctive groups, one containing the early pieces, the other those characteristic of his mature individuality. Ten years of activity in other directions separate these groups. During that time Debussy's artistic progress was very remarkable. The *Little Suite*, composed in the year that he was awarded the *Prix de Rome*, is simple and unpretentious. It is melodious and agreeable music, correctly written, but curiously remote from the later style to come. The early short pieces, especially the Mazurka, Reverie, Dance, Ballade and Valse romantique, are often piquant and graceful, but they contain much that is commonplace; the harmonic treatment often borders on the crude; it is still tentative. On the other hand, the Suite Bergamasque, dated 1890, is so much in advance of its contemporaries as to give rise to a suspicion of a later revision. Published in 1905, it contains much that is easily recognizable as belonging to the period of its composition, side by side with details of style, harmony, and treatment that are only met with in the later epoch. The Menuet and Passepied contain most originality of thought, although there are poetic episodes in the *Clair de Lune*. The Arabesques (published in 1904, apparently with little or no revision) are the most convincing examples of his early work unadorned by critical after-thoughts. They carry out gracefully and fluently the decorative idea embodied in their title; there is no attempt to create a poetic mood of specific quality; they are skilful in construction, pretty in substance, and might pass as decidedly original were it not for the striking later achievements of Debussy.

The advances to the second group of piano pieces (beginning with the collection *For the Piano*, composed in 1901) is indeed abrupt. The sheer totality of development — in harmonic inventiveness, in originality of substance, in command of varied mood, in dominating qualities of personality — is staggering. The Debussy of 1891 is an obviously well-trained composer with some piquant ideas and a pretty talent — especially for song writing; the Debussy of 1901 is an authoritative harmonist of decided novelty, a poet of unusual distinction, the originator of indubitably unique moods. This change can be amply accounted for

when one recalls the compositions which occupied him during this interval, the String Quartet, the Prelude to the *Afternoon of a Faun*, the songs *Cinq Poemes de Baudelaire* (1889–1893) *Fêtes galantes* (1892–1903), *Chansons de Bilitis* (1898), the Nocturnes for orchestra, and above all, *Pelléas and Melisande*, which was begun as far back as 1889. During this period he was undergoing that great compeller of progress — poverty. Under its incentive he was polishing his technique, rendering it flexible, synthesizing his epoch-making system of new harmonic combinations, enlarging his powers of musical characterization so that they were at once more potent and more subtle.

To my mind the first set of the second group *For the Piano* shows unmistakably the influence of Bach, although only as seen reflected in the mirror of Debussy's individuality. The fiery Prelude is best known, and often played in concert, but the Toccata possesses the virtuoso element in equal degree, and also something of the nature of the classic Italian Toccata. The Sarabande also suggests indelibly the same classic influence, even though it be expressed in the medium of ultra-modern harmonies. It is hard to say which is most representative of the later Debussy, the sweeping, harp-like cadenza in the Prelude, the suave progressions of the seventh chords in the Sarabande (disregarding the orthodox resolutions demanded by purists), or the new technical figures which confront us on every page of the Toccata. The *Estampes*, composed in July, 1903, are more individualized in their subjects, and seem more directly personal in their outlook. *Pagodas* is a charmingly novel piece, largely in the Chinese scale, languidly Oriental and exotic, as befits the later Debussy. The exoticism of the Orient and of Debussy's style meet on terms of perfect equality. Perfect equality, also, of fingers is needed to play the original, but difficult accompaniment figure with the return of the opening theme. The ending, on an unresolved dissonant chord, is a charmingly vague effect — a troubled dying into silence. The tempo direction of *An Evening in Grenada*, *Mouvement de Habenera*, gives the clue to its nature, a fleeting variety of mood, in dance rhythm, from melting languor to smouldering ferocity, interspersed in the tender episodes. Fragmentary refrains from a far-off guitar interrupt souvenirs of the dance; the ending is faint and impalpable. *Gardens in the Rain* is a delicate and spirited fantasy of more elaborate development, that is as original in its piano style as it is in sentiment. The set of pieces is as finely chiselled and as imaginative in atmosphere as any. *Masques* and *The Joyous Isle* were at first intended to form, with a Sarabande, the Suite Bergamasque. The substitution of the earlier pieces is explained by a remark of Debussy to Louis Laloy, the Parisian editor, critic, and writer on music, cited by him as evidence of the former's artistic scrupulosity. *Impossible de publier la Suite Bergamasque, il me manque douze mesures pour la Sarabande.* (It is an impossibility to publish the Suite Bergamasque, I need twelve measures for the Sarabande.) Accordingly *Masques* and *The Joyous Isle* were published separately. They are more fantastic, exuberant developments of themes on a larger and freer scale. In *Masques* novel rhythmical and harmonic effects play the larger part; in *The Joyous Isle* it is the wayward brilliance of figures, notably the cadenza-like figure at the beginning and its subsequent harmonic treatment. Both pieces are gorgeously surcharged with imagination, resplendent with color that is almost tropical. *Images*, the latest published pieces, consists of *Reflections in the Water*, showing a certain vein of idyllic contemplation that is exceptionally felicitous, *Homage to Rameau*, which is a little constrained, as if overweighted with the responsibilities of eulogy, and *Movement*, an engagingly abstract conception of fantastic caprice. *From a Sketch-book* is a picturesque, if somewhat too vague piece, in his latest style. The transcription from Schumann is competent, if not startlingly new in treatment.



ACHILLE CLAUDE DEBUSSY

Space will not permit an analysis of Debussy's harmonic innovations, which are really extensive. They consist of genuinely new combination of triads, frequent use of seventh and ninth chords without resolution, an indulgent attitude toward "cross-relations," and a harmonic scheme based on a scale of whole tones. This latter scale was touched upon by Liszt, an innovator who is daily receiving more and just credit, in his Dante sonata and in his ballades with declamation, but Debussy has elaborated an entire system on this principle, which he has made wholly and unmistakably his own. Debussy's later piano style, with its totally original figures, variety of rhythm, opposition and contrast of subtle sonorities, is also distinctively his own, following a path that is apparently remote from the universal influence of the school founded by Liszt. In musical substance and in artistic sentiment, Debussy is first of all French to the core, then fearlessly individual. His field is his own, except for his followers and imitators. Among the piano composers of to-day he is unique in producing fanciful pieces of somewhat extended development, whose form is determined largely by the underlying poetic idea. He is preeminently a poet treating a wide range of imaginative moods; beginning with the literary influence of Rossetti he passed to Baudelaire, Verlaine, and achieved his masterpiece in conjunction with Maeterlinck; his orchestra sings a delicately individual note; his piano has extended the realms of technique and of fancy. As Richard Strauss has discovered new worlds of contrapuntal possibility, as Vincent d'Indy has fused the great traditions of the early classics with the manner of utterance and thought of to-day, so must we recognize in Claude Debussy a great harmonic innovator and an unsurpassed poet in mysticism.

PRINCIPLES OF SCALE PLAYING

A. D. JEWETT

The value of scale playing in the study of piano technique has deservedly received the recognition of all good teachers. Probably no other branch of piano technique has received more careful attention, and the reason is apparent when one recognizes how largely piano music is made up of "passage" work. The woeful lack of success that is noticeable in the stumbling work of so many students is remarkable, to say the least, considering the few principles involved and the ease with which, by correct practice, they may be mastered.

First, wait till you are ready. It is unwise to begin the study of scale playing until the Fundamental Principles of Piano Technique — Condition, Position, and Action — are well understood; an equality of finger action established, as well as independence and balance of hands, — that is, until the pupil can keep the hand in the proper position, preserve supple conditions, and demonstrate a perfectly independent action of each finger — quick, elastic, and reposeful. To begin scale playing while the pupil has to struggle with the whole hand to raise one finger (the fourth, for instance,) is suicidal to good piano playing.

There is one point that can be undertaken, however, at an early stage, and that is, the control of the thumb. In finger action it has to move up and down by the side of the hand, making as free and vertical action as any of the other fingers; in scale playing it also has to pass as freely under, and out from under, the hand, and this action must in no way disturb hand position or supple conditions. Therefore, some gymnastic exercises should be given very early, that the pupil may gain such a controlled action of the thumb.

All in all, this is the most important feature of scale technique, as this thumb control is used not only in the playing of scales proper, but in every passage containing more than five diatonic tones. Any other phrase demands that the thumb shall be used as a lever to place the fingers over the required keys, and that service must be rendered freely and cheerfully. Oh! the host of sulky, surly thumbs refusing to act until driven, and then doing it so ungraciously that the banged tone sounds like a door slammed by a sulky child.

The additional principles of scale playing may be called — *Relationship, Poise,* and *Adjustment.*

Relationship. — In playing a five-finger passage the knuckles form a straight line with the edge of the keys, and the fingers may be said to be in five-finger relationship — that is, straight with the keys. Bear in mind — to play a good, smooth scale, each finger must have an equal action. In order that the fourth finger shall have the same equal action, without being allowed to straighten, or reach for its key, place the thumb of the right hand on C, and the fourth finger on the B immediately below.

Even when the thumb is well-trained so it stays easily under the hand, without destroying hand position and supple conditions, it is easily seen that a changed relationship occurs, the fingers being more or less across the keys instead of straight with them. This is Scale Relationship. This relationship must remain unchanged the entire length of the keyboard, if a smooth, rapid scale is acquired. Any deviation of this principle, however slight, stands in the way of the highest attainment. So the first exercises given should be at the table, where the pupil should stay until the hand can be carried back and forth over the thumb, preserving this scale relationship, and knowing that each finger is so placed over its key that its action is in nowise different from that in the five-finger passage.

Poise. — In five-finger playing the knuckle of the fifth finger should be about level with that of the second finger, and all slightly elevated. This is Poise, and is controlled by use of muscles in lower arm, not by projecting out the elbows. In scale playing, the outside of the hand (the knuckles of the fourth and fifth fingers) should be held a trifle higher, thus allowing the thumbs the proper play under the hand, which it requires in backward scale playing. At this point it is well to emphasize the fact that in backward scales the thumb should be drilled to pass directly and quickly under the hand to the position where it is next to play. This is important. There is no sense in making two motions of the thumb where only one is needed, and velocity is impossible if this is neglected.

Adjustment is properly a matter of supple condition, and is not a voluntary action; however, it should be given specific study. If the proper relationship and poise has been preserved throughout the entire length of the keyboard, while the wrist has apparently kept a quiet, steady movement, with no noticeable change at any point, it can be easily seen that at the upper end of the keyboard the outside of the right hand curves out at the wrist, and at the lower end of the keyboard it curves in. Adjustment has been going on steadily during the entire journey, so quietly that the eye cannot see it. This is, as I say, primarily a matter of preserving supple conditions, and at the same time knowing that the principles of relationship and poise have not been violated.

A thought connected with the fingering of a scale demands a little notice.

5-4-3-2-1-3-2-1-4-3-2-1, etc. It is wise to take some study where the pupil can drill first, in carrying the third finger over repeatedly, until this distance is a matter of habit, then the same with the fourth finger crossing, and when the scale is taken up see that the alternation does not disturb relationship, poise, or adjustment. A common fault is to take relationship for the third finger crossing and allow either the fourth finger to reach for its key, or the wrist to wabble — either fault is pernicious. Do not lose sight of the fact that not one of the fundamental principles, Condition, Position, and Action, can be lost sight of, changed, or neglected. It is unnecessary to state that I have only attempted to treat of the technique of scale playing. Every good teacher will see the necessity of studying it for quality, rhythm, etc., from the standpoint of listening; unless the pupil hears a good scale, he surely will not play one.

In a future article the principles of chord playing will be presented.

THE TEACHER

The estimation in which a teacher of youth is held is a test of the enlightenment of a country. There is confessedly no higher work than the right training of the young. In order to do such work successfully natural qualifications need to be wisely cultivated. The spirit, if we may use so vague a word, which a teacher brings to his work is a matter of the first importance. While this is true of all great pursuits in life, it has nowhere a finer illustration than in the schools of the people which stand in intermediate relation between the home and later life. The right attitude of the teacher to pupil and instruction wins and holds the confidence of the youth. Some teachers make knowledge attractive and desirable, because they possess in addition thereto that higher wisdom or character which contributes to a tranquil and strong life, and thus makes everything valuable. What we call the atmosphere of a school is formed by many influences flowing from home, pupils and community, but a chief element in its creation is the teacher. — SCOTT.

* *

Sometimes there came into the life of the pupils in these schools a personal influence strong and lasting. Some gentle, patient, sweet-voiced and sweet-mannered girl, teaching the little ones in a summer school, so impressed her personality upon their minds and hearts that they worshiped her. Through all their lives they reverenced womanhood as idealized in her. I have heard old men speak of such with tears, showing that her image in their memory has over it the saintly nimbus. Among the student teachers, too, were ardent, enthusiastic ones, full of moral earnestness, who struck fire when they found a flint; who appreciated the scholarly instincts when they found them, encouraged the boys and girls, gave them special help and direction, and drew them to higher levels of thought and action. — MARTIN.

* *

"As the students of music become fewer the love of music will grow less. The singing school, the village band, and the folk song are the primary cause of the advance in music. I do not believe it will be possible to interest the child in music with a spirit of emulation by a mechanical player. A child may desire to be a Paderewski, a Melba, a Caruso; I do not believe any child will desire to be a phonograph. The student must have living, breathing examples before him to properly stimulate his ambition."

Manufacturers and inventors of automatic piano players and talking machines have been given a hearing before the joint Committee on patents of Senate and House, which is considering the pending copyright bill. G. Howlett Davis, an inventor, of East Orange, N. J., charged that the composers, who have contended for protection against having their music "pirated" by talking machines without paying royalties, are controlled by contracts with publishing houses, which many of them have denied. — *The World.*

THE AMERICAN CONSERVATORY

J. LAWRENCE ERB

The term *conservatory*, as applied to musical education, has been in use for nearly four centuries, having originated in Italy in the first half of the sixteenth century, the great French and German institutions being of a much more recent date. The term — which has nothing to do with flowers or hot-house methods — is suggestive of the purpose of the original institutions, namely, to *conserve* (preserve) the science of music in its pure form. This at once explains the proper meaning of the term *conservatory of music*, and the proper end and aim of such an institution.

With the history and ideals of the great European conservatories we are all more or less familiar. Thanks to a system of patronage which would, in this country, be both incongruous and impossible, they have been able from the first to devote their energies entirely to the education of talented youths for the highest places in their profession. The conservatory label has always meant much; for, from the beginning, the faculties of these institutions have been made up of the greatest musicians of the day, and the training has been consistently high-toned, with primary regard at all times for artistic purity and truth. Hence, the roll of the students at the great European conservatories reads very much like a list of the modern masters, and apart from the conservatories there seems to be little musical salvation in Europe. This is due principally to the fact that these institutions are, as a rule, endowed, or subsidized, so that the energies of the Director and Professors need not be wasted in looking after financial matters, but may be directed entirely toward artistic ends, making it possible to reject all applicants except such as are possessed of genuine talent and a willingness to work.

In America this state of affairs does not obtain. It might well be said of American musical education that "the *lack* of money is the root of all evil." The music teacher is so proverbially impecunious that he cannot afford to teach simply for the love of it, but must, perforce, look out for the wherewithal to pay "the butcher, the baker, the candlestick maker." Hence it follows that the most important thing for him is the acquisition of a *clientèle* and, as that depends entirely upon the caprice of a number of individuals, much of the intellect and energy of the teacher is necessarily expended in keeping pupils and their friends in good humor, so that the musical education is often forced to take a secondary place. This is, of course, diametrically opposed to the European system which has produced such good results. Not that there are no impecunious or "society" music teachers in Europe, but that the serious work of musical education, which falls almost entirely upon the conservatories, is carried on entirely upon the basis of artistic results, regardless of the pecuniary. It is there not so much a matter of "How many pupils can I get and how can I get them?" as of "How can I get a good teacher and who will have me?"

Not that, on the other hand, there are no American music teachers with high ideals. In the contrary, the intelligence and earnestness of many of our teachers is not to be discounted by any others in the world. But, to begin with, the public is not yet educated up to the point where it can distinguish between the good and the poor in art; and then, what is even more serious, the system of study with private teachers which obtains so largely here, leads almost invariably to a one-sided development which is not genuinely musicianly. Here lies the great weakness of our American musical education and the great opportunity of the conservatory. Excepting among conservatory graduates, it is seldom that one finds a music student educated entirely in America whose general musical knowledge is in any measure comparable with his ability as a performer. Of performers we have a plenty, almost a plethora, who have been well trained to play or sing a more or less limited number of pieces after a more or less acceptable fashion. Some read music of ordinary difficulty more or less fluently and accurately, or have a smattering of Harmony, or the History of Music, while a very few have any knowledge whatever of the formal structure or inner meaning of music. This does not compare favorably either with the better European musical education or with American education along other lines: it lacks greatly both in breadth and practicality.

The true end and aim of all musical education should be that set forth in the conservatory name, *i.e.*, the preservation of the science — and art — of music in its purity. This *can* be done by a private teacher, — and sometimes is, — but it can be accomplished much more easily in a conservatory: first, because it is very difficult to find a musician of sufficient versatility and scholarship to be able, without assistance, to impart an all-round musical education; and second, because there is no question that the public looks more favorably upon a school than upon a private teacher, no matter who he may be. Many private teachers, recognizing this fact, advertise themselves as the "John Smith," or "William Brown" School of Music, to the possible increase of their revenues, but with no gain to the cause of musical education.

The conservatory holds in its hands the future of music in America; and inasmuch as government subsidies are not forthcoming, there are two methods open for the financing of such institutions. The first, and at present the more in evidence, is that pursued by the great majority of music schools throughout the country, beginning with the great institutions like the New England Conservatory and adopted in a thousand other cities, great and small. These institutions have been founded almost universally by the cooperation of a few teachers who shared expenses and divided the profits, — or losses, — and, if they succeeded in holding together long enough, they sometimes managed to interest outside parties sufficiently to achieve an endowment or pledges of support. Such institutions have done much good in America, — until recently, in fact, nearly all the higher musical education has been in their hands, — but their great weakness lies in the fact that they must be made to *pay* or their usefulness is soon over. That this is a serious drawback has been evidenced in the case of several of the most important institutions of this type, which have either succumbed entirely to financial stress or have had to curtail their activities so seriously that much of their higher efficiency is gone. No educational institution is or should be made the subject of competitive advertising as applied to business enterprises. It exists not to make money, but to make character and culture, and, if properly carried on, is never likely to prove a dividend earner to any alarming extent.

The second and most effective method and the one most likely to endure is that which is found at Baltimore, Harvard, Yale, Columbia, University of Pennsylvania, and many other colleges and universities, in which the conservatory is regarded as a department of the institution, and work in music receives — in many cases at least — credit in the regular courses leading to degrees. In such cases the expenses of operation are generally borne and the salaries paid by the college, or university itself, which, being accustomed to deficits and "hustling" for endowments, does not necessarily cut out a part of the course in alarm at the first sign that the balance is not on the right side. Either music is or is not a legitimate educational factor. It is needless to reiterate here the arguments in favor of its educational value, which are best indorsed by the action of the many institutions throughout the land which have within a few years given it an increasingly important place in the curriculum. If it is as important as we contend it is, its proper place is in such institutions as are here indicated and upon a footing of equality with the rest of the course. It is under such circumstances that musical educational work can be properly organized and carried on, and it is here that we must look for the true growth of art education in America.

As yet most of these schools in connection with institutions of learning are in their infancy, so far as their true possibilities are concerned. While nominally on an equal footing with other departments, it is generally less easy to obtain endowments for the musical work, or even to exact equally liberal treatment in the matter of accessories. Scientific apparatus is expensive, but scientific knowledge has earned dollars and cents for the great American commonwealth. Naturally it is easier to raise money for wealth-producing education than for any other. But there is less criticism to be made on this score than on the score of inexperience in the heads of departments. Money is not always expended to the best advantage, nor is the energy always directed toward the proper end.

The efficient conservatory must, first of all, be a well-organized body, with an enthusiastic corps of instructors who work together for the common good. A definite course, graded not for the most talented nor yet for the least, and with sufficient elasticity to allow for personal predilections so far as advisable, should lead up to a definite degree, which should represent a musical equipment comparable in every respect with the professional equipment of the doctor or the lawyer or the minister. It is all nonsense to contend that a musical course cannot be graded because individual capabilities vary so greatly. As well refrain from grading in any educational work, for the argument is just as valid when applied to mathematics or languages or science or mechanics. Progress in modern education has been in great measure proportionate to the greater accuracy and rigorousness in grading.

The training of a conservatory should be such that its graduates might be able to execute well a large number of the representative masterpieces, more than sufficient to make up a good recital program. He should have an intimate acquaintance with all styles of composition so that he might be able to criticize intelligently and justly any new or unfamiliar work that might come to hand. He should be a master of composition, at least to the extent of ability to express, accurately, idiomatically, and with despatch, any ideas he may chance to have, with a sufficient knowledge of form and the contrapuntal art to develop a theme consistently. He should not be a stranger to impromptu performance, nor at a loss when expected to play or sing at sight. In other words, he should be what he pretends to be, — a cultured musician in so far as outside influences can make him so.

The prospective teacher should know something of methods; the course here should include Normal Classes, where the students could themselves solve actual teaching problems, and the study of psychology in its relation to musical training should have a place in the curriculum.

Students who have church work in view should be trained to be true church musicians, not simply organists and singers who perform in church. They should have an opportunity to assist in the actual work of the choir loft, if possible, and should be intimately acquainted with the religious music of all times and nations. They should study the true relation of music to the sanctuary and to worship, so that a church service may be more than a concert, with literary interludes. There should also be an obligatory course in Voice Culture, so that those who lead the vocal forces of the church and Sunday-school may not injure the delicate vocal organs of children. Here alone there is a vast field for conservatories all over the land, — a field that is scarcely at all cultivated at present.

The ideal conservatory should include in its course, besides the specialty of each pupil, obligatory courses in Theory, Sight Reading, Musical Form and Composition, Ensemble, History of Music, and Criticism at various points in the curriculum. A working knowledge of the old clefs and the orchestral score, and the ability to read and write music without the aid of an instrument or any audible sound should likewise be cultivated. These should be the commonplaces of good musicianship, yet how rare they are!

Every conservatory should include among its working forces a good chorus and, if possible, an orchestra, and should insist upon frequent and consistent *ensemble* study and, with instrumentalists, much accompanying at sight, and frequent public or semi-public performances for all pupils. Commonplaces, these things, in the practical life of a musician, yet how rare in the "musical graduate." Only after years of experience are these "commonplaces" acquired in most cases, when they should be present at the very outset of the practical career.

"The fault, dear Brutus, is not in our stars
But in ourselves, that we are underlings."

It is of little avail that we American musicians beat the air and fill the newspapers with our laments that the American musician does not get a fair chance. As a matter of fact, he does not — always; but scolding or complaining will not remedy matters. The American managers and concert-goers are not such fools that they will deliberately slight a composition simply because it is American; neither are they such philanthropists or patriots that they will accept a composition simply because it is American. As a matter of fact, a very great deal of the stuff that is palmed off upon the American public should not be heard at all except in the classroom for criticism. Much of it is interesting only as exhibiting talent, but not as art. Few American composers compare favorably with the Europeans in *musicianship*, — there is the rub, — though as executants or in natural ability they rank very high. Our great weakness is not in the line of natural talent, — there we loom up big; but in culture (*i.e.*, the ability to utilize natural gifts to the very best advantage), we, for the most part, fall short. Here is the problem of the American conservatory, here its opportunity. The future of music in our country will be determined very greatly by the manner in which this problem is met, and there are many hopeful signs in the air.

GOD'S WAY WITH A SOUL

My figure in this world has not been great, but I have had a great experience. I have never been a great agitator, never pulled a wire to get the will of men; never did a politic thing. It is not for this reason, but because I was looked upon as a singularity — not exactly sane, perhaps, in many things — that I was almost never a president or vice-president of any society, and almost never on a committee. Take the report of my doings on the platform of the world's business, and it is naught. I have filled no place at all. But still it has been a great thing even for me to live. In my separate and merely personal kind of life, I have had a greater epic transacted than was ever written or could be. The little turns of my way have turned great changes — what I am now as distinguished from the merely mollusk and pulpy state of infancy; the drawing out of my powers, the correcting of my errors, the winnowing of my faults, the washing of my sins; that which has given me principles, and, as the fruit of this, an abiding in the sense and free partaking of the life of God. — *A Fragment from Bushnell.*

FROM THE TALMUD

A lie has not a leg to stand upon.

Actions speak louder than words.

Good deeds are better than creeds.

Avoid anger and thou wilt not sin.

It is sinful to hate but noble to pardon.

A true wife makes the home a holy place.

Adversity is the true school of the mind.

The consciousness of God's presence is the first principle of religion.

He who teaches his son no trade is as if he teaches him to steal.

Do not isolate thyself from the community and its interests.

He who seeks a faultless brother will have to remain brotherless.

Be in the habit of receiving every man with a pleasant countenance.

Who is rich? He who is satisfied with his lot.

The world stands on three things: on law, labor, and benevolence.

He gives little who gives with a frown. He gives much who gives little with a smile.

The noblest of all charities is in enabling the poor to earn a livelihood.

It is better to lend than to give. To give employment is better than either.

THE VAGRANT PHILOSOPHER

WILSON G. SMITH

We were comfortably seated in our accustomed places in my studio, — Vagrant and I, —when the subject of conversation turned upon the lack of true art appreciation among the wealthier classes. I could see that Vagrant was rapidly warming up to the subject by reason of certain suggestions of mine. I was in a somewhat pessimistic mood, and possibly colored to an extent the mood of my friend. At any rate, while I was talking the clouds of smoke poured from his mouth like an intermittent volcano. Vagrant was surely becoming not only interested, but almost ready to explode. I only awaited the explosion. Finally it burst forth with lurid vehemence. "So long as the commercial atmosphere prevails," said Vagrant, "there will be no general art growth in our country. The eternal race for wealth leaves no room for intellectual or artistic recognition of culture. Wealth is so rapidly acquired that it precludes the concomitant culture which imparts to it its real value. Society is so much occupied with social fads and functions, that pink teas and other similar fancies usurp the higher culture that ought to be associated with ease and luxury. What has genuine art to do with the devotees of golf links, tennis courts, dog and cat shows, horse shows, and club house banquets? True, when it is the proper caper, society attends symphony concerts and grand opera, but then merely to display its wealth, and hold social chit-chat to the musical accompaniment of master minds. Observe, if you please, the indiscriminate applause from this class of art patrons. They rave over Strauss, Brahms, and Tschaikowski, when Mozart and Haydn are quite beyond their ken. From the standpoint of real culture they do not know the difference between a symphony and a yard of ragtime. It is not the gloved hand that inspires the artist, but the sincere applause of heartfelt and mind-felt appreciation. It is the artist with a scandal halo or some freak idiosyncrasy that attracts the social moths. Paderewski, for example, became a popular idol primarily because of the hippodrome advertising of his chrysanthemum locks. Society went to see a freak artist, and commented upon his hirsute adornment while he poetized at the piano. Other artists of equally conspicuous merit failed to attract the same public, because they depended upon their art, rather than the patent medicine methods of the press agent. It is only necessary to mention von Bülow, d'Albert, Pugno, Reisenhauer, Hambourg, and others of their ilk who have made musical history for the esoteric circle, but were and are caviar to the elect who attend concerts with their carriages and coachmen, and who ask after the first movement of a symphony has been played, if the next number on the program is to follow. Is it to be wondered at that art does not thrive in such an environment? They rave over a chromo, and let genuine works of art pass by unheeded. In rhapsodizing over ultra-compositions they revel in — to them — muddy water and imagine it deep, congratulating themselves upon being esteemed wise. It is all merely a shallow and shabby veneer, and can never become real culture. When we, as a people, evolve a folk song literature, we will possess the basic material upon which the superstructure of art can be erected. The folk song of our present conditions is the clink of the almighty dollar, and the lustre of art is but the false shimmer of gold. One generation amasses wealth, and the next generation is kept busy spending it. The telegraphic click of the stock exchange is sweeter music to the ear of the king of finance than the immortal strains of a Beethoven symphony. So, also, the tongue of social gossip is more alluring to society than the dulcet tones of a diva. Do you think that society would patronize symphony concerts at 50 and 25 cents? Hardly; with them high prices indicate high art, and the higher the price the higher the art. When intellectuality and culture draw the social distinctions, rather than the pocket-book, we can hope to have an aristocracy from which art appreciation can evolve. Do the people who ostentatiously interfere with our enjoyment of a symphony, by arriving late or exchanging social chatter, interest themselves in concerts at popular prices? No! the reason is obvious. It is not the proper thing, socially. They spend thousands of dollars on horse shows and kindred spectacles. A blue ribbon means more to them than the opus number of a Brahms symphony. I warrant there is more real appreciation in an audience of so-called commoners than in all of the gilded clique that agitate gloved hands when Tschaikowski's symphony is played. What wonder then that native talent goes a-begging, or elsewhere for recognition or support. Domestic articles, even in commercialdom, have not the same value as the imported product, even though an expert cannot distinguish any difference in intrinsic value. It merely exemplifies a dominant trait in human nature. A thousand cities claimed great Homer dead, where once the selfsame Homer begged his bread. Many are anxious to lay laurel wreaths upon the grave of him whom they failed to recognize while living. Posthumous charity is cheap, and does neither the living nor the dead any particular amount of good. A skull surmounted by a laurel wreath and this legend, 'what's the use?' typifies the value of artistic ambition or endeavor, generally considered. After all, to change conditions necessitates a radical change in human nature. The initial step is the cultivation of an altruistic attitude of man toward man. Let the individual practice self-culture, and he will radiate an atmosphere of progress that will impart to his fellow similar desires. The inspiration of example works miracles in the upbuilding of art; for genuineness imparts confidence, and confidence begets imitation. Men are much like sheep. They require a leader. All the rest are sure to follow."

As Vagrant closed his diatribe a kindlier light shone in his eyes, and I could see his features assume a more optimistic expression; and as he left me to my studio and my thoughts, I was compelled to admit that there was more truth than poetry in what he had said, severe though it was.

LATIN AND GREEK

The benefits of instruction in Latin and Greek, enormous as they are, received exaggerated praise, in spite of the dictum of Sir William Hamilton, which was often quoted, that nothing brought the classics into such disrepute as requiring them of every student. To enforce this statement it is not necessary to appeal to the opponents of classical culture. The words of a renowned scholar, distinguished for his knowledge of antiquity and his love of the ancient landmarks, tell the story well. "The classical revival," says Freeman, "in all its forms and stages, fostered the idea that the languages, the arts, the history of Greece and Rome, at certain stages of their being, were the only forms of language, art, and history which deserved the study of cultivated men. It led to the belief, not perhaps fully put forth in words, but none the less practically acted on, that those two languages, and all that belonged to them, had some special privilege above all others; that studies which were honored by the ambiguous name of 'classical' were fenced off from all others by some mysterious barrier; that they formed a sacred precinct which the initiated alone might enter, and from which the profane were to be jealously shut out. Such a state of feeling, which has even now far from died out, could not fail to lead to mere contempt, and thereby to mere ignorance, of everything beyond the sacred pale. And what is more, it hindered any knowledge of the true nature of those things which were allowed a place within the sacred pale. It led to a cutting off of so-called 'classical' studies from all ordinary human pursuits and human interests."

To a very considerable extent this reproach, if it is a reproach, is likewise American. The opportunities, the honors, the pleasures, and the rewards of a liberal education were opened during the first half of this century to those only who had been disciplined, by the preparatory schools, in the ancient languages, and this discipline was continued through the greater part of the subsequent collegiate curriculum. — GILMAN.

AMALIE JOACHIM, SINGER AND TEACHER

FREDERIC S. LAW

Amalie Joachim, who died in Berlin, Feb. 3, 1899, was the favorite concert singer of her time in Germany. Her voice was a contralto, remarkable for power and depth, but her chief claim to the position she occupied was her gift of interpretation. As a singer of the German *Lied* she was unrivaled. She had the art of combining words and music, of so fusing them together by her individuality that no matter how familiar the hearer might be with the song, it seemed a new creation.

Unlike her more famous husband, Joseph Joachim, the noted violinist who has never been in this country, she made a brief professional visit to America ten or twelve years ago. Her voice, however, had lost its youthful freshness, and her really artistic singing, therefore, failed in exciting much popular enthusiasm. On her return she devoted herself more particularly to teaching. In this she was highly successful; her class of pupils was large and cosmopolitan in character, embracing artists and amateurs not only from Germany but from many foreign countries as well. Her magnetic temperament, her genial humor, her rich experience as a singer, made her lessons memorable occasions to ambitious students. They were allowed to remain in the studio and listen to the instruction of others; it rarely happened that the "hearers' corner" was not filled with an attentive throng, eager to catch her every word and hint about the art to which she had given the best years of her life.

Olga Plaschke of Königsberg, during her study with Madame Joachim, seldom failed in being among the listeners, and took notes of many lessons which she heard in this way. These notes were published after her teacher's death, and a number of them are here reproduced, in the belief that they will be found profitable and suggestive to those interested in the art of song. Care has been taken to select such as are of the most general application, and thus most useful to students of singing.

The breath is the song! The management of the breath by the singer corresponds to the bowing of the violinist. Breathe deep; do not raise the shoulders; they have nothing to do with the lungs! Hold the breath where you have the short ribs, and let it stream out as you have need. Practice holding the breath; in that way you accustom yourself to keeping a good stock of it on hand. Avoid rigidity; the whole body must be flexible and yielding. One must be able to throw the singer around like a cat — and like a cat, he must always light easily on his feet. The clothing must never confine the body so that it prevents perfect freedom in breathing. Avoid stiff collars, — we singers are not soldiers! The neck must be free and unconstrained.

Before singing prepare yourself by a quiet, tranquil breath and then emit quiet, tranquil tones. Never wait until it is too late for this, and then jump in as if it had just occurred to you, "Oh, I must sing too!"

Bring the voice to the hard palate; do not sing thin, soulless tones, but let them ring round and full. Rather practice briefly, but with firmness in the voice and zeal in the heart.

Not such uncertain tones! Do not keep them back in the throat, — let them out. I do not want you to sing with more force than the body allows, but let the voice ring.

Sing your vowels with a clear timbre, so that your words can be understood and more expression put into the song.

A certain period of discouragement and discontent is sure to come to every one. But it is a good sign. It shows that one is not satisfied with the old self, and it almost invariably indicates marked progress.

The contralto must master the upper medium tones as well as the head tones. A dark timbre in the upper tones is a sure sign of the contralto voice.

Once in a while practice humming with the mouth closed.

Do not blow out the tone. The more the singer hears his own voice, the less ringing is it to others.

Do not attack the high tones with timidity; be brave and a little saucy with them! One must take the bull by the horns. If I seize him by the tail, he will turn against me and trample me under foot. But if I grasp him by the horns, I confuse him; he will either leap over me or turn and run away. He who avoids a difficulty and runs the other way, like a dog with his tail between his legs, will never overcome it, but will be overcome by it, and in the end will lose all power to accomplish anything.

You must be able to sing two measures in one breath, — but do not fail to take breath at every comma and after every phrase, even the shortest.

In singing runs and exercises, keep them up without stopping — extend them and do not allow yourself to be intimidated by anything. Don't be afraid to give yourself a push; your voice will run along all the better for it.

Cultivate the head voice, particularly in exercises; bring it down into the upper medium, which always shows wear when used to the exclusion of head voice. This makes the voice shrill, especially with sopranos. This is the reason that so many singers are prematurely obliged to abandon their art. I have sung for forty-five years, and know how many stars of the first magnitude have suddenly faded away in that time for that very reason.

Nowadays our tenors sing more and more effeminately, while our contraltos begin to sing like men. We women must be careful not to yield to this affectation of singing like basso-profundos!

In singing the tone must rest on the breath, — the breath must bear it up.

Pauses are important in giving expression as well as opportunity for rest. They must never be shortened by the accompaniment; they belong to the voice.

My dear child, you seem to have no interrogation mark in your mouth. When you do not understand, you must ask.

We seldom sing for ourselves, but generally for others; so let us be careful to speak distinctly. The thought must always be brought out clearly, not only as a whole, but in all its subordinate divisions. We know the song, to be sure, but you must remember that the commercial traveler Meier, who sits there in the concert room and has paid two marks for his seat, does not know it, and he must have it all clear in his mind, — otherwise he has the right to say: "I didn't understand a word she said!"

In singing we do not say, *I*, *thine*, *mine*, etc., but *ah-ee*, *thah-een*, *mah-een*. However, you do not need to sing more than the *ah*, the ear supplies the *ee* much as the sight acts in viewing pictures of small size, in which the artist does not depict the eye with any attempt at exactness but simply marks its place by a dot.

My larynx is set somewhat obliquely in the throat. Physicians say that it is impossible to sing when the larynx has such a position. So much for theory!

A young lady had chosen Brahms' *Vergebliches Standchen* (*Useless Serenade*), but while singing, grew embarrassed by reason of the text. The teacher remarked her confusion and said, "Why did you choose this song? You were not obliged to sing it. Either sing it freely or let it alone. Then you sang the end so peculiarly — *Gezube?* That sounds like an Indian word — no, it is *Geh zu Bett* (go to bed)! The final consonants must be heard as clearly as any of the others; they must not be pronounced lazily."

She then sang the song herself, and thus illustrated the proverb, When two people do the same thing, it is not the same thing. Though before the song had made an unpleasant impression, it was now like a Defregger *genre* picture; we saw two fresh, healthy, roguish children of nature before us and enjoyed their sportiveness. At the end she said, "Do not sing folk songs with too much expression; rather sing them simply and naturally."

Repetitions should never be sung in the same way as at first. If you sing the passage loud the first time, sing it soft the second time — or *vice versa*, according to the sentiment expressed. Otherwise it becomes stupid and tiresome, and that is something never allowed in art.

Sing firmly and not so flippantly! Think of nothing but the song you are singing. Singers, like horses, ought to have blinders so that they may see nothing, hear nothing, while they are singing. They should have nothing to do with the world around them.

Art comes from ability. The voice must be mastered, so that it obeys the will of its owner; but this requires unremitting diligence.

In the first study of a song sing with firm, full tones; do not attempt it *piano*, — that comes later. It is also better not to begin with the text, but to give each note its proper name; for example: F♯, G, A♭, etc. Learn the words of your songs by heart. To sing everything from memory, however, is a special gift.

To a pupil who boasted of the praise her friends bestowed upon her singing, she said: "Ah, my dear young lady, what have I not heard about my singing? I might almost think that I was the dear Lord himself — but I never believed it!"

It often happened that, when she found fault with a pupil, the latter sought to excuse herself on the plea that she sang much better at home. Her answer was always uncompromising: "I do not believe it." "Oh, when they listen to me," once complained a young English girl, "I can't sing so well as I can at other times." "Just because they are listening, I should show them what I could do," was the ready reply. "Oh, I am so afraid," was often heard as a pupil rose to sing. "Of course you are," was the sarcastic retort: "I have already bitten you twice to-day!"

It was only natural, with all Madame Joachim's good humor and geniality, that the most confident singer should feel embarrassed at the contrast between her own imperfection and the consummate mastery of her teacher. To all such she used to say, encouragingly: "We are here to study. If you were perfect in your art, you would not need me."

Apropos of Schubert's song, *Gretchen am Spinnrade*, which was often brought by pupils, she protested against the tendency to choose songs of a tragic and melancholy nature. She said, justly enough, that no young girl could possibly have sufficient experience of life to be able to sing such a song. "Bring me something cheerful," she used to say appealingly. "It almost seems as though our young ladies were in a state of desperation, judging from the songs they choose."

In ending, Fräulein Plaschke says: "The last song I studied with Frau Joachim was Schubert's *Death and the Maiden*. 'You must sing the part of Death softer,' she said; then after a pause: 'Have you ever heard Joachim play the voice of Death in the quartet, *Death and the Maiden?*' I replied 'No.' 'You should hear him play it; he plays it wonderfully (*wunder-schön*).'"

BACH IN AMERICA

FREDERIC S. LAW

The departure of Dr. J. Fred Wolle less than a year ago to take the chair of music in the University of California closed one of the most interesting chapters of American musical history — that of the Bach festivals at Bethlehem, Pennsylvania. These festivals gave that town a distinction among our cities not unlike that enjoyed by Bayreuth in Europe. It may be that Dr. Wolle will be able to transplant the Bach cult to the sadly shaken shores of the Golden Gate, but it will hardly find so congenial a habitat as the secluded Pennsylvanian town nestled among the hills of the upper Lehigh.

Founded nine years before the death of Bach, in 1741, by German Moravians who brought to their new home the love of music that characterized them in their native country, it was from the first a centre of musical culture. Records are imperfect, but an orchestra was in existence as early as 1780 and Haydn is known to have been in correspondence with Bethlehem musicians. Many of his works, as well as others by Handel, Mozart, and Beethoven, were heard there for the first time in America, though larger and better known communities have in many cases taken the credit of these first performances. *The Creation*, for instance, is generally supposed to have been sung first in Boston in 1818, but it had been given in Bethlehem eight years before.

The old Moravian Church in which the festivals were held is now in its second century, and when built in 1803 was one of the largest auditoriums in the country, accommodating a congregation of a thousand. Standing on the edge of the Moravian burying ground with its low, uniform marble slabs prescribed for all, whether young or old, rich or poor, partly surrounded by the quaint ivy-covered community buildings of the eighteenth century, the influence of such a locale was a strong factor in the effect produced upon the hearer. Bach's choral works were heard under very nearly the same conditions as those for which they were composed — in a building consecrated by the prayers and praises of generations of believers, while the chorales which intersperse them had been household words in Bethlehem since Bach's own time; hence when they occurred and the audience rose reverently to join in singing them there was nothing to remind one of the concert room. It seemed rather a service in which the great truths of revealed religion sank into heart and mind through the solvent power of music without need of spoken word from priest or preacher to enforce their reality. This indeed was Dr. Wolle's aim as expressed in a letter to the writer sketching his ideal of a temple devoted to religious music of the highest type: "A place where all can worship through the music. Like a church without theology. A service without a sermon."

As a matter of record, a brief *résumé* of the activity of the Bach Choir of Bethlehem will not be uninteresting to those who see in it a proof that the taste of the times is not so superficial as some would have us believe; that an art couched in the severe idiom of a bygone day has not lost its inherent power to enthral and elevate if it be reproduced, so far as may be, in the spirit of him who conceived it.

Since Bach wrote his choral works for the seasons and festivals of the church, their transference to the concert room does essential violence to their religious character; they were meant not only to be heard, but those hearing were expected to participate in them by singing the chorales introduced for congregational use. Then, too, the great length of the larger works compels their abridgment under ordinary circumstances. At Bethlehem this was avoided by hearing them in two "sessions," as they were called, one at four o'clock in the afternoon, the other at eight in the evening. Both were well within a two-hour limit; thus the entire work was given without undue fatigue to either singers or audience.

An interesting feature was the announcement of each session made by the playing of chorales by a choir of thirteen trombones stationed in the belfry of the church. The solemn tones of the trombone are closely connected with the life of the Moravian. They are heard on festival occasions of the church — no one who has been at Bethlehem on Easter Sunday will forget the impression made by the sunrise trombone playing. Deaths are announced from the belfry by chorales so chosen as to signify to the hearer whether the departed one is young or old, man or woman, single or married. Thus both the music and the instrument acquire a significance which is lacking to those out of the church fold.

The Bach Choir was organized for the purpose of singing the great *Mass* in B minor, of which they gave the first complete performance in this country in March, 1900. This was followed by a festival of three days in the spring of 1901, which included the *Christmas Oratorio* (a first performance as a whole in this country), the *St. Matthew Passion*, and the *Mass*. Two years later the scheme was greatly extended by a repetition of these works with the addition of the *Magnificat* and five of the cantatas; the second Brandenburg *Concerto Grosso* was also played. With fine poetic insight the music, which filled six days, was so chosen and arranged that it formed an epitome of the church year. Beginning with the Annunciation made in the *Magnificat*, it illustrated the birth of Christ, His sufferings, death, resurrection, and ascension in an impressive progression which found a fitting climax in the *Mass*. The same thought was followed on a still more comprehensive scale in the next festival. A cycle of nine days was projected, divided into three sections of three days each, the design being to bring the works to a hearing in the appropriate church season and as near as possible to the days for which they were composed. The Christmas festival was held in the last week of December, 1904; that for Lent in the following spring, when the unfamiliar *St. John Passion* was sung; the Easter festival concluded with a performance of the *Mass* on the first day of June, 1905.

In view of their magnitude and of the high standard of performance, these chronicled results are interesting, but it is still more interesting to consider the practical means by which they were brought about. Tradition, custom, atmosphere, count for much; but, after all, the hour must wait on the man who is destined to fill it with deeds. J. Fred Wolle is descended from one of the old Moravian families of Bethlehem, in which music took its customary place as the first of domestic enjoyments. Still, in the early forties, at the age of twenty-one, he went to Europe to study the organ under Rheinberger in Munich, and returned to take charge of the organ in the old church. An enthusiastic student of Bach, he was able to inspire his singers with a like enthusiasm for the music of the master, in spite of its great difficulties. He had at his command nothing more than the average vocal talent of the ordinary country town. Thus there were more poor and indifferent voices than good; but by skilful management, of which particulars follow, he obtained a really fine *ensemble* from the material at hand. The number was never more than a hundred and twenty-five, and part of the time but a little over a hundred, yet in the comparatively small auditorium, with its admirable acoustics, such a band of singers proved in the main ample in volume, besides manifesting a flexibility and a responsiveness to the leader hardly to be secured from a much larger body.

The choral director will be interested in Dr. Wolle's method of dealing with his chorus. Since many of the works demand five, six, and even eight parts, he chose the younger, lighter voices for first sopranos; the more mature singers were assigned to the second soprano. The tenors, generally the weak link in any choral chain, received a great deal of separate drill and were not allowed to sing in full voice. This softness on the part of the tenors served materially in securing a homogeneity of tone color among the voices which was particularly noticeable in the later festivals. Much of the singing was *mezza voce*. This served to adjust the general timbre of the chorus as a whole to the standard of organ tone, as illustrated in the Diapason,—not loud, not soft, but clear and penetrating,—so that the good points of the voices were emphasized and their poor ones obscured.

From such a medium tone it was easy to swing into a powerful forte on the one hand or to sink into a subdued piano on the other. The idea of procuring an organ-like tone from the voices is particularly appropriate to the singing of Bach. This effect was further accented by a larger number of basses than is generally thought necessary in a chorus of this size; Dr. Wolle laid especial stress upon having that part the most numerous —

lightness and freshness in the first soprano, fulness and depth in the bass were his principal requirements from the voices. This predominance of the basses gave an impressive weight and dignity to the great fugues of the *Mass*, not to forget the tremendous effect of the long run for them in the chorus from the *St. Matthew Passion* — "Have lightnings and thunders in clouds disappeared?" This was like a veritable stirring up of the elemental powers of nature.

The scholarship displayed in the singing was a keen delight to the musician. It was something to remember to hear a choral fugue declaimed in such a way as to reveal the technical structure with freedom and clearness: subject, answer, episodes, the climax of the stretto, the firmness and solidity of the pedal point — all with an organ-like tone, yet characterized by plasticity, a mobility of expression and *finesse* of utterance entirely beyond the power of any instrument to imitate. The enjoyment of the singers in this complex and recondite form was unfeigned and unmistakable; it gave the impression that they could analyze it with as much ease and certainty as their leader.

Regular rehearsals were held twice each week, and two weeks before the festivals every night. They were informal in nature. Dr. Wolle directed them in general without the aid of an instrument. He sat at the piano, explained the score, marked the expression, in difficult passages occasionally sounding a few tones as a help, but the music was usually read at sight without instrumental assistance. The orchestra was largely formed from local forces, reinforced at festival seasons by professional musicians from New York and Philadelphia, and received the same painstaking drill during the year. The spirit of their leader animated the singers. Notwithstanding the arduous nature of their study, it was but seldom that anything interfered with a Bach rehearsal. They came from all ranks and conditions of life; clergymen and letter-carriers lifted up their voices together; next to a university professor sat the boy who washed the bottles in his laboratory. It proved the sociological power of music—of music, too, that is popularly supposed to be so learned and scholastic that it appeals only to the profession.

Truly, "Bach is no brook, but an ocean," and this the people, or at least the singers, of Bethlehem have learned. Not that it has always been smooth sailing on this ocean. The Bach Choir and its founder have not been exempt from their share of the discouragements familiar to those engaged in similar enterprises — local lack of faith in so ambitious a scheme, indifference on the part of many who should have been the first in encouraging it. A guarantee fund was raised, not without the usual difficulty; but it is gratifying to be able to say that it was only necessary to draw upon it once — for a slight deficit in the Christmas festival of 1904, in spite of the great expenses of the undertaking. The widespread interest in the festivals was shown by the attendance of visitors from many parts of the country. These came naturally in greatest numbers from the nearer cities, New York, Philadelphia, Buffalo; but there were not a few from more remote places, such as Boston, Baltimore, Richmond, Chicago, Minneapolis, Denver, etc., drawn by the lure of music practically lost a century ago, but now to all appearance happily destined to a revival befitting its innate power and majesty.

Dr. Wolle has begun his campaign on the Californian coast with Handel and Beethoven. It cannot be doubted, however, that he will before long seek to reveal the beauty and dignity of Bach to a new community. May he find a corps of singers as loyal and devoted to him and his patron saint as were those of the Bach Choir of Bethlehem.

ANTON SCHMOLL

A composer widely known to many teachers and students of the pianoforte is Anton Schmoll. French by affiliation and environment, he is a native of Germany.

Anton Schmoll was born at Fromberg, near Kreuznach, Aug. 17, 1841. As a boy his experience was in some respects not unlike that of Schumann, Berlioz, and others, for his parents intended to make a mining engineer — and not a musician — of him, although at an early age he gave evidence of more than usual talent for the divine art.

ANTON SCHMOLL

For a while the boy yielded to his parents' wishes, entered a school for mines, studied there for a time, and then served his time in the military service.

After leaving the army, he started out for himself in the pursuit of a musical career. Leaving Germany, he went to the south of France, accepting for a time a modest mercantile position, studying the higher branches of music in his leisure moments.

At the age of twenty-six Mr. Schmoll removed to Toulouse, and published a number of piano compositions, which served to bring him considerable reputation.

Five years later he went to Brussels, but not finding matters absolutely congenial, he migrated to Paris in 1874, where he has since resided.

Soon after reaching Paris Mr. Schmoll was fortunate enough in making the acquaintance of the late Stephen Heller, then in his sixtieth year, who for years had been a musical celebrity in the French capital. Heller lived an eccentric, retired life in those days, but, nevertheless, Mr. Schmoll sought an introduction, and from this grew a friendship between the two that continued until Heller's death, in 1888.

Of late years Mr. Schmoll has been active as a teacher and composer, mainly for the piano. His works, numerous and popular in France, are to some extent known and highly esteemed in other countries. His Primary Method is much used, also the studies, Op. 116, 119, ten sonatas, Op. 61 and Op. 70, *Lecture Album*, also studies, Op. 121, 123. Mr. Schmoll is also much interested in scientific subjects, especially in astronomy. He is one of the original twelve founders of the French Astronomical Society, which has long since reached a membership represented by four figures. He tabulated statistics of sun spots, which he brought before the society at various times, which brought him favorable notice from the Academy of Sciences.

Mr. Schmoll is also interested in psychology and metaphysics, and has published interesting papers on these subjects. He is in truth an interesting example that proves that one can be at once a profound reader and thinker, as well as a successful exponent of the "Divine Art."

THE LITTLE JAPANESE

Young Japanese children enjoy more liberty than Western children. They are permitted to do as they please, provided their conduct is not actually harmful. A boy is allowed to be so mischievous that, as a Japanese proverb says, "even the holes by the roadside hate a boy six or seven years old." Punishment is rare, and the entire household, servants and all, will intercede for the offender, the little brothers and sisters offering to take the punishment themselves, says a writer on Japan in the *Sunday Magazine*.

Whipping is not common, but its substitute, the *moxa*, or burning, is more severe. But frightening a child by angry looks or harsh words is condemned. To slap about the head is proof of vulgarity and ignorance; nor are they punished by keeping them from play or depriving them of some special food or pleasure. Perfect patience with children is expected, and admonition is the chief restraint exercised, until they go to school.

Eccentricities and singularities are suppressed. There is much formal and serious demeanor. During recreation hours in the playground and the gymnastic halls, there is, to the foreigner, an oppressive silence. The thud of the foot on the ball is the only noise made at football.

The rules of jiu-jitsu require silence and the suppression of all visible interest in the spectator. But the Japanese student learns how to read minds and motives, to remain impassive under all circumstances, and even while most amiable to be secretive and inscrutable.

His outward acquirements are a small part of his real education. His real learning is his Japanese soul. Between his mind and the Western mind is a wide, deep gulf.

RAINY DAY OCCUPATIONS

A rainy day cupboard is a device intended for the alleviation of the care of mothers. In it are placed toys to be mended, games from which the interest has temporarily departed, pictures to be cut out and pasted in scrap-books, specimens of rock to be classified, a book of conundrums, one on familiar science from which easy experiments could be taken for trial, a charade book, story books (new and old for all ages), crepe paper for making flowers, sewing, knitting, and crocheting materials, stamps to be pasted, materials for kite making, in a word — anything.

THE PARTING OF THE WAYS

EMILIE FRANCES BAUER

It is not assuming too much to say that too many talents are as detrimental to the great end as too few. A child in whom numerous talents make themselves manifest requires all the careful thought and study that the parents have to give to the problem which faces them. The temptation is strong to overwork such a child, as it is not difficult, since he learns so quickly that it is hardly apparent that he is overworked. The difficulty will not come in, however, from this side of the question, but from another, far more subtle, consequently far more serious. In the first place, most people who manifest a very marked talent in one direction are more than likely to have talents in several directions. Especially is this true from the very beginning, as it is but natural that after one study has been pursued to the exclusion of others it is no longer obvious that there ever has been a talent for anything else. The danger which besets the multi-talented child is that early in his life he will receive smatterings of so many different accomplishments, that by the time he has reached the age and the stage where concentration is necessary, it is no longer possible to concentrate, because not only has he become accustomed to scatter his energies, but he has also developed a liking for the different studies, and he would feel it a great hardship to give up any one accomplishment for the sake of the other. This must not be mistaken to mean that concentration and narrowness are synonymous, because no great art stands upon its own foundation, but each art by itself will require all the energies and the strength and the thought which one individual has to spend. The study of literature, philosophy, and history is necessary to any art and should be regarded as the foundation rather than as a complement. Music requires it; painting needs it; it is indispensable to sculpture and, of course, to *belles lettres*. But music does not require painting, neither does painting require music, farther than as inspiration, and in this way every art is necessary to every other. The argument that the one represents a relaxation from the other is only fairly good, after all, because the first thing to be kept in mind is that "Art is Long and Time is Fleeting," and even the hours of relaxation and rest should be spent in such a manner as to bear directly upon the art to which one's life has been plighted. For instance, after a fatiguing session at the piano, there is nothing gained in picking up the brush and the palette, because it is absolutely necessary that these two or three hours be spent in the open air and in almost violent exercise as an offset to the nerve force that has been given to the music. If conditions are favorable, the walk may lead to the park and the right sort of a book will add to the benefit, as will also the right companionship. He who studies a great art must devote every energy to surrounding himself with the atmosphere which makes for his growth. If the student cannot go to the atmosphere he must bring the atmosphere to himself. This is no task of insurmountable difficulty; it requires nothing but a little self-denial at first, which, at the same time, is of the greatest assistance in developing concentration. The average student loses too much time in reading. This must not be construed to mean that the student should not read. To the contrary, he should read very much, but, again, he should select only such works as bear directly upon his art. Neither does this mean a narrowness of literary subjects and a confinement to works upon music; quite the contrary. As the seat of everything is in the brain, the mind must undergo a systematic and steady course of training, and one may become as thoroughly immolated in music through certain courses of reading as through years of voice or piano technique. But the flabby, silly American novel of the day will not do it. Such reading consumes time and eye-sight, giving in return absolutely nothing. It is unpardonable to pick up reading of this nature even for a moment, as it is not only time taken away from serious work, but such atmosphere as is created by the study is dissipated by this class of reading. It is not within the power of a writer of an article of this sort to prescribe a course of reading, because for each different need there is some author to supply the material to tone up the deficiency. Some students need to build up the imagination, others must actually supply a temperament which may be latent and only needs the proper literature to bring it into existence.

It is possible that the taste for reading works of the nature just referred to would have to be cultivated, but the time spent in cultivating this taste would be well spent, as so many other faculties would be brought into play. To one who does not know the tremendous power and the vast education to be derived from one book, this may seem extravagant. Not so, however, to those to whom each page is a step onward and upward into new planes of thought which open to the mind as beautiful landscapes and valleys unfold to him who climbs the mountain.

It is a great responsibility to select between talents, and if the delay is too long, it is that much more difficult to decide. Again, those following music will in pessimistic vein advise, by all means, to keep on with the painting and drop music; the sculptor will assure you that there is no future in sculpture as a life work. But all this means nothing, as the society woman will tell you there is nothing in society life, and there are many women who will tell you that there is nothing in home life; so that at last you are driven back upon your own responsibility, and the thought — perhaps there is nothing in it for him, but there must be something in it for me, at least, I must work so that there will be — must decide the matter.

It is not difficult to prove that the public has little confidence in him of multi-talents, as there are few people willing to patronize the vocal teacher who is also a piano teacher, a composer, and an authority upon Theory and Harmony. Yet there is no reason why one should not be equally good at all of these, as they are so closely united in the matter of study.

However, upon analyzing the matter, it is not difficult to see that each of the branches just mentioned involves a life-study, and the probability is that he who is really great in any of these selections knows when he has come to the parting of the ways, and knows, furthermore, which path he wants to follow.

Therefore, if even in music itself one must choose one branch or another, how were it possible to be successfully pianist, singer, painter, sculptor, reader, poet, *ad infinitum?* Fortunate he who has all these tastes, for whichever he decides upon will carry the influence of the sister arts, but if he dabble with all, mediocrity is the only end for all, as each art is a jealous mistress that will bide no distribution of favors and will endure no rivals.

PRESERVING DYING DIALECTS

Although nothing can be done to prevent the decay of local dialects, much can be done to preserve their records. The phonograph is being applied for this purpose both in Guernsey and in the Isle of Man. The dialect language in the former is Norman-French, in the latter, Manx, one of the Gælic group.

It is believed that in the Isle of Man, with the passing away of the present generation, no one will be found to speak the dialect. The phonograph is being sent to different parts of the island by the Manx Language Society; old men whose accent is pure will speak into the receiver, and the records are to be stored at Douglas.

It is said that the old Norman language, still spoken in the Channel Islands, is in its main features the same as that used by the cultured classes of England eight centuries ago; the tongue in which Taillefer sang the *Chanson de Roland* at the battle of Hastings.

In Alderney it will certainly have become extinct in a very few years. In Guernsey it will probably linger on for a generation or two. In Jersey Norman-French will survive longest, owing partly to the larger size of the island, partly to its proximity to France, and partly also to the influx of French agricultural laborers, who spend some months each year during the farmers' busy season.

It is proposed to use the phonograph to preserve records of the dialect poems, folk songs, and folk lore of the island.

A Hugo Wolf festival is to be held in Stuttgart, Germany, from the 4th to the 8th of October. Wolf's opera, *Der Corregidor*, will be given, as well as choral and orchestral works, chamber music, and songs. In this country there has as yet been no Hugo Wolf festival, but not a few song recital programs have looked as if made in preparation for such an event.

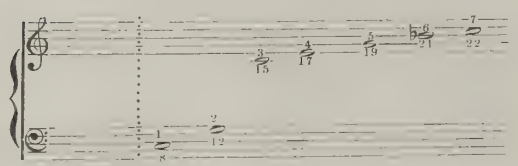
THE MAGIC PEDAL, THE SOUL OF THE PIANOFORTE—V

MARY VENABLE *

Esthetic Use of Harmonics

When a string is in vibration, it produces not only the principal tone heard, but also, more faintly, the intervals of the octave above, the twelfth fifteenth, seventeenth, nineteenth, twenty-first, etc., as shown by the figures below the tones in the following example, where the lowest C is the fundamental, generating note. All others represent the harmonics (overtones) which sound faintly with the generating note, and constitute the first, second, third, fourth, etc., overtones as indicated by the figures above the notes. None of the tones intervening between these can be produced from the fundamental C.

Fundamental and harmonics



It is the presence of these harmonics or overtones that gives to the fundamental tone its fulness. In playing arpeggios, it is best to follow, as nearly as possible this natural sequence of related tones, and emulate the example of the great pianists, who rarely sustain with the pedal a closed octave deep in the bass, but release with the fingers the tones filling up the octave before employing the pedal to hold the bass and other tones. Otherwise too many harmonics are generated and the tone, instead of being rich and clear, sounds thick.

Mozart — *Fantasie in D minor*

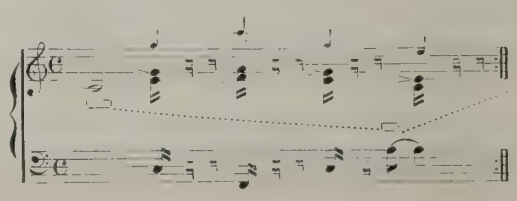
Therefore, in playing this measure from the Mozart Fantasie in D minor, the F and A in the left hand should not be sustained beyond their apparent duration of an eighth, by either fingers or pedal; but the octaves D should be held by the fingers, and the use of the pedal delayed until after the second D is played, so as to sustain in the left hand only the open octave. Similar places occur in Beethoven's D minor Sonata, Op. 31, No. 2, Rubinstein's *Kammenoi-Ostrow*, etc.

Some overtones are much fainter than others, but the more sonorous and carefully made the piano, the greater the number of consonant harmonics, which are strong enough to be heard distinctly when separated from their fundamentals. Any one of these overtones can be obtained and silently isolated from its sounding fundamental, by the silent pressure of a finger upon the key corresponding to its pitch, and its tone continued by itself, without striking the strings belonging to this key.

Paderewski — *Minuet a l'antique*

An exquisite effect results from playing keys in the lower part of the piano and then, by silent pressure of the fingers, sounding tones, the strings of which have not been struck, but which respond in sympathy with their fundamentals. How well I remember my mystification as to how he produced this result, when I heard Paderewski play in 1892, on his first visit to this country. At the close of the cadenza in his *Minuet a l'antique*, there floated out from the harmony a wild, palpitating, spirit tone which was produced by the silent pressure of the key D, indicated here by the sign [⎵] over the note. The little finger silently pressed this key down, while the D and G strings of the preceding arpeggio (the tones of which were sustained by the damper pedal) continued their vibration and communicated movement to the unstruck strings of the high D, which is an overtone of each of the preceding D's and G's. After the tone was begun, by this silent pressure of the finger, the foot was removed from the damper pedal; then the thumb released its D; and the melodic D, beginning the next phrase, continued to sing on, in the most captivating manner, apparently without having been produced.

Schmitt — *The Pedals of the Pianoforte.* *Page* 41



Until the cause is known, it is most astonishing to hear tones of which the strings have not been struck nor the keys touched. Hans Schmitt gives an illustration in which dainty overtones appear of themselves, an octave or more above the highest tones, directly produced by the hammers striking the strings. He writes this example on three staves, but it is here written on two, for the sake of condensation and of a clearer understanding, and Signor Gorno's sign of silent pressure is used to show which keys are to be lowered without striking them. The keys, audibly played in the usual way, are written in large notes of the value of sixteenths, and the tones not played by the fingers, but appearing of themselves, are shown in the highest small quarter notes with upturned stems.

Besides overtones, each fundamental also generates faint undertones, an octave, twelfth, fifteenth, etc., below itself, which cannot be isolated, but from which the fundamental can be obtained. Applying this principle, an arpeggio may be sustained after it is played if the keys corresponding to its most nearly related undertones have previously been pressed down by the fingers. The arpeggio sustained in this manner, without using the pedal, has a peculiarly transparent quality. If desired, this quality can be varied, before releasing the chord, by applying the damper pedal, which, freeing all the strings in the piano from their dampers, allows their full sympathetic vibration and the generation of many harmonics, which round out the tone of the sounding chord.

Schmitt — *Page* 45

A delightful effect resultant from sympathetic resonance may be employed by self-accompanied vocalists to obtain echo effects such as are suitable in pastoral songs, shepherd songs, jodels, etc. By keeping the foot upon the damper pedal, and throwing the voice against the sounding-board while singing two or three final tones belonging to the same harmony, a most realistic and sylvan echo will be evolved. Beautiful as is this effect, I have heard it but once upon the concert stage.

* Through an oversight, Miss Venable's name was omitted in the instalment of her article, *The Magic Pedal*, which appeared in the June issue of The Musician.—Editor.

By resorting to this echoing power of the piano, a prolonged trill may be made to close with spectral daintiness, if it is begun with great strength, evenness, and brilliancy, continued at the same speed decrescendo, and ultimately the fingers removed from keys, when the piano will for some time continue the trill. The impression upon the hearer will be greater, however, if the fingers simulate playing, as this induces him to listen for the sound more closely than if the hands were removed. Paderewski not infrequently employs this method of trilling, decreasing the sound to almost nothing, then gradually working up through a crescendo to a fortissimo climax.

Schumann — *Paganini, from "Carnival,"* Op. 9.

When the dampers are raised while playing, each harmonic appeals to and sets in vibration the strings of the piano which are in unison with it, and frees the fundamental of this new tone; so that the longer the original tone is sustained, the greater the increase in distantly related and discordant harmonics, and the more blurred the tone becomes. Moriz Rosenthal avails himself of this law in a striking and unusual manner in the Paganini of Schumann's *Carnival*, to sound, without striking their strings, tones that are not directly related to those previously struck, but which are set free by getting the whole piano into strong vibration, while using much pedal and employing tremendous strength. Schumann's own marking of this chord in small notes, his *ppp* and his placing of the pedal marks *after* the chord, indicate his desire for this unattacked resumption of the tones by means of a silent pressure of the keys, such as has been so often indicated by the sign ☐.

Descriptive Orchestral Effects obtained by Blurring Tone

Purity of tone is ordinarily desired by the pianist, but there is no musical law which cannot be broken if the poetical feeling calls for it. Liszt, Rubinstein, Rosenthal, Bauer, Paderewski, Carreno, Zeisler, Sauer—all the distinguished modern pianists — produce dramatic orchestral effects by the use of the pedal in blurring, discordant tones, as in the storm of the Wagner-Liszt *Senta* Ballad, the *Orage* by Liszt, as also the beginning of his B minor Ballade, etc. To avoid sullying the tone to an offensive degree, the pedal must be lightly pressed, raised and depressed again, whenever the blurring of tones threatens to grow unpleasant. Often, in order to produce the desired effect, the pedal is kept in constant agitation, in which case it is said to be trilled. The pedal can be used in this manner without releasing the important bass tone and others sonorously played.

Blurring of tones is allowable in cases where well-conceived, characteristic tone coloring can be obtained by its means only. For instance, some pianists play the last movement of Chopin's B♭ minor Sonata with the pedal down almost continuously, so as to give the right meaning, which Rubinstein interprets thus: "This [sonata] is a whole drama, with its last movement, after the very typical Funeral March, which I would name: *Night Winds sweeping over Churchyard Graves.*"

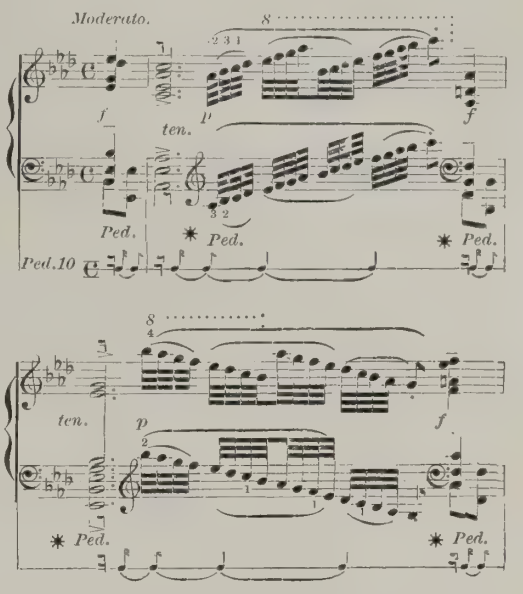
It is partly by means of blurring the sound that master players express the feeling of Chopin in his C minor Etude, from Op. 10, *Allegro con Fuoco*, which, composed after the fall of his beloved Warsaw, depicts tempestuous passion, destruction, ruin, and despair.

Cradle songs, spinning songs, the murmur of water and the rustle of leaves—all these can be pictured in tones by an esthetic and significant harmonic confusion scarcely felt. The works of Chopin, Liszt, and many composers more modern, abound in such descriptive orchestral passages in which the blurring of tone, if not indulged in to excess, is very effective; for these indistinct and confused passages act as a foil to the chaste simplicity of pure beauty of tone, which again is enhanced by the temporarily obscured harmonies. Chopin's *Berceuse*, Liszt's *Spinning Song*, Moszkowski's *In Autumn*, are examples which contain passages more or less blurred in tone.

Gorno — *Part II, No.* 48

Music-box effects, so common in the compositions of Liszt and others, may be produced by delicately playing the keys in the upper register of the piano, while tones previously produced and sustained as melody and accompaniment sound sonorously, so that with a judicious trilling of the pedal, the dissonances are not heard. In the extreme upper range of the piano, where there are no dampers, the pedal pressure may remain unchanged, but the lower the passing notes descend, the greater care must be taken in the management of the pedal, that blurring does not become too great, through the cumulative effect of tones produced by hammer stroke and of overtones which produce themselves from other sounding tones.

Gorno — *Part II, No.* 49



Even scales may be played while using the pedal, especially if preceding chords are made to sound distinctly, so as to give a firm harmonic foundation for the passage. The pedal should be pressed down firmly after the chord is struck and then allowed to rise but slightly, and is trilled in such a manner as to blot out with the dampers the tones of the passage which are foreign to the harmony of the chord. Such scale passages often occur in stormy, descriptive, and dramatic music.

Extremes in pedal effects should be used sparingly in order to be relished; but one cannot dine off caviar. Purity of line as well as diversity of color is the aim of the musician-pianist, and the pedal should be used with taste, the ear being arbiter of effects. The correct use of the pedal is largely dependent upon the way in which the fingers are used; how *they* produce, sustain, and end tone, and of which tones of the harmonies are made most prominent. The pitch of the tones and the rate of speed at which they are played are likewise powerful elements in determining how, when, and when *not*, to use the pedal — for occasionally the disuse of all pedal makes a profound impression upon the emotions of the auditor. These many factors in correct pedal usage are some of the causes that contribute to make the pedaling of one artist different from that of another, for what would be a correct, even an artistic employment of the pedals by one, might be incorrect and bad sounding if adopted without change by one who used his fingers in some other way.

The conscientious musician rarely uses any means of artistic effect for mere display of virtuosity. We have in this respect a model in Rubinstein, whose technical skill was extraordinary, yet who truly said: "I play as a musician, not as a virtuoso." The best use of pedals and fingers is that which most completely expresses the conception of the composer; and how difficult of achievement this often is! Verily, Chopin's speech was golden when he said: "The correct employment of the pedal is a study for life."

BACH AND PICTORIAL MUSIC

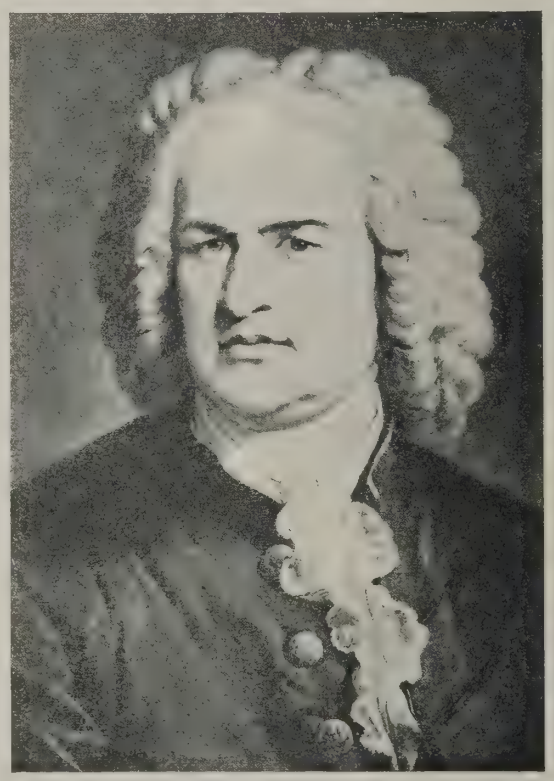
ERNEST NEWMAN

Like art itself, the theories of art are modified a good deal from generation to generation, and it does not do for any esthetician to dogmatize too positively as to what is possible or impossible, legitimate or illegitimate, in an art. Classical theories as to the functions of music and poetry do not quite cover all that Strauss and Debussy have done; even a comparatively modern work like Lessing's *Laocöon* has already worn a trifle thin in parts. In music, of all arts, it behooves us not to be too ready to put up boundary stones, for each great musician has an unkind habit of moving them a little farther on; he unconsciously provides us with new esthetic data much faster than our theories of esthetics can assimilate them. Now one of the crucial questions of modern musical esthetics is how far music is justified in adopting pictorial suggestions from painting, from poetry, or from the world itself, and trying to translate them into sound. We need not go at present into the question of the bearing of this tendency upon program music; we need not, that is, discuss the difference made in the problem by the presence of words, as in the opera and the song, or the absence of them, as in the symphonic poem, or how far pictorial symbolism is in order on the stage, where scenery and gesture combine with the music to make a picture there is no mistaking, and out of order in the concert room, where the eye is told to see something at the bidding of the ear. That both stage music and concert music are full of suggestions of this kind there is no need to insist upon. Wagner's "fire music," his dragon theme, his flaming sword motive, his spinning wheel, are no more frankly pictorial in intention than scores of similar things in songs and symphonic poems, — the spinning wheel of Schubert, the slaying of Goliath in Kuhnau's Biblical sonata, the dying sigh of Strauss's Don Quixote, the canter of Till Eulenspiegel through the market place, the swaying of the waves in barcarolles and gondola songs, the volleying of the rain in the well-known song of Brahms, and so on. How far these attempts at graphic suggestion are right in one medium and wrong in another, or right in both, or wrong in both, or why they are right in one and not in another, are interesting questions that we need not stop to consider now. The main point at present is to collect as many data as possible that bear upon the subject.

Now we have recently had a lot of quite new data supplied to us from an unexpected quarter. Last year Albert Schweitzer published a remarkable volume, entitled *J. S. Bach, le musicien-poète*, that showed how endless is the work of musical criticism, how many new things there are to be discovered if only critics and historians will do the research part of their work with proper thoroughness. M. Schweitzer knows his Bach probably better than any other man living, — knows it so well that he can keep every part of that gigantic mass in his eye at once, and so notice a number of curious traits of style that do not strike the casual observer of a work or two here and there. Of all composers, Bach has been held up to us as the type *pur sang* of the absolute musician; he was the immovable bulwark against the pretensions of program music writers and all who thought that music could express anything "outside itself." Now M. Schweitzer shows that if there was ever a musician infected with the desire to "paint" in music, to "represent things," it was Bach; he proves it so conclusively, with such a wealth of detailed reference to Bach's works, that henceforth it cannot be questioned for a moment. Bach does habitually three things that are usually supposed to be done only by modern composers who "are not true musicians," who "forget the boundaries between music and the other arts," who "try to do in music what poetry or painting can do much better," and all the rest of it; that is, he (1) never loses a chance of "painting" in music, of trying to make his melody and his harmony and representation in tone of something visible and moving; (2) uses pictorial phrases of this kind as *clichés*, so that a motive used to represent a serpent, for example, in one work will be used when a serpent is mentioned in another; and (3) tries, by juxtaposition of two representative motives, to narrate an actual episode or suggest the union of two frames of mind, — as when he symbolizes doubt, which is a kind of compromise between hope and fear, by joining a "hope" motive with a "fear" motive. For a full discussion of the subject I may refer my readers to M. Schweitzer's book; here I can only give a few typical extracts from it.

Bach has, he says, "a vocabulary of his own, as it were, of musical expressions, which always recur in the same form in all his works, in the Passions and the cantatas as well as in the chorales. For this or that idea he has this or that invariable expression; when the same idea recurs, the same musical formula recurs. In the Capriccio on the departure of a brother, the elements of this musical language are already clearly seen. The Lament, for example, is typical of the way in which Bach will express in his cantatas and chorales all the *nuances* of grief. For quiet grief . . . he will always employ a motive in quavers or semiquavers going in pairs; . . . for agitated grief, broken with sobs as it were, he will use a motive irregularly syncopated; . . . for acute grief, a chromatic motive of five or six notes." And as each of the friends witnessing the departure of the brother feels one of these orders of grief, the Lament comprises them all. As M. Schweitzer says, "These fifty bars make an epoch in the history of descriptive music; it is the first time in all music that we meet with such precision of language."

He goes on to show in detail how minutely descriptive Bach was in the music he wrote of the chorales, and how a similar picture in two chorales will bring out the same type of phrase in the music to each. The downward line, for example, representing the descent into the tomb, in



JOHANN SEBASTIAN BACH

the Partita, based on the poem *O Gott, du frommer Gott* (about 1709), reappears in the cantata *Ich steh mit einem Fuss in Grabe* (about 1730). M. Schweitzer shows by analysis the symbolism of the figures in the first chorus of the *St. John Passion*. In the cantatas written after 1734 Bach "is still fond of the descriptive; indeed, characteristic themes are now used more abundantly than ever." In the cantata *Herr Christ, der einzig Gottessohn*, he paints the stumbling, wandering gait of the sinner in an almost grotesquely distorted bass; while the same device is adopted for the words "My steps faltered with fear" in the cantata *Allein zu dir, Herr Jesus Christ*. The same phrase, — a fourfold repetition of a descending figure of three semiquavers followed by a quaver — used in the cantata *Ich habe in Gottes Herz und Sinn* to illustrate the words, "See how everything that is not sustained by the arm of God is broken and falls to the ground," reappears in the *Matthew Passion* when the Saviour prostrates Himself before His Father.

Take again the minute attention Bach gives to the description of the waves in the cantata *Christ, unser Herr, zum Jordan kam*. "We are not surprised that Bach should have seized the opportunity to paint the movement of the waves; but what *is* surprising is the observation it reveals. The master has seen large waves and small ones; he has seen slow waves broken in upon by rapid ones; he has understood that this rhythm, apparently so monotonous, is the result of an inexpressible diversity of rhythms that are always changing. So he naturally represents the rapid waves of the Jordan by a series of diversified themes which he manipulates simultaneously."

In his cantata *Ach wie flüchtig, ach wie nichtig*, "the vanity of things here below is compared to a mist that forms and instantly disappears." Bach represents this by a certain figure made up of ascending and descending scale passages. Twenty years later he writes a chorus in his *Eolus Satisfied*, descriptive of the winds driving the clouds of autumn before them. The picture being the same as that of the earlier cantata, he uses the same scale passages to paint it, as will be seen at once from the quotations M. Schweitzer gives. We have also musical-pictorial illustrations of "a firm walk, a stumbling walk, lassitude, collapse," and a hundred other things.

M. Schweitzer sums up this aspect of Bach's mind in these words: "What holds the chief place in his work is pictorial poetry. Before everything he seeks the image; in this he is different from Wagner, who is rather a lyric dramatist. Bach is more akin to Berlioz, and nearer still to Michael Angelo. . . . But his painter's soul remained unrevealed to his contemporaries. His pupils and his sons took no notice of his pictorial instincts, no more than they suspected that his true greatness was that he was a poet in music. So with Forkel, Mossevius, von Winterfeld, Bitter, and Spitta. The latter, whose profound acquaintance with Bach's work gave him a chance of seeing the real facts, feels a kind of fear in pushing his researches too far in this direction. When he cannot do otherwise, he admits that this or that page contains descriptive music, but always adds that it is a pure accident to which no importance need be attached. These examples are, for him, merely curiosities. He always affirms that the music of Bach is above 'puerilities' of this kind, that it is *pure* music, the only classical music. This apprehension leads him astray. . . . Look at Bach at work. However bad the text may be, provided it contains an image he is satisfied. If he happens to detect a pictorial idea, it takes in his mind the place of the whole text; he fastens on to it at the risk of running counter to the dominant idea of the piece.

"Exclusively preoccupied as he is with the pictorial element, he does not perceive the weakness and the defects of the libretto. . . . The poetry of nature in his work is not lyric, as in Wagner; it is seen rather than felt, — eddies of wind, clouds coming up on the horizon, leaves falling, waves in movement. His symbolism is as visual as that of a painter." And he goes on to show that in Bach "there exists a whole series of elementary themes proceeding from visual images, from each of which comes a whole family of diversified themes, according to the different *nuances* of the idea that has to be translated into music. Often we find twenty to twenty-five variants of the same root; for when Bach has to express the same idea he always recurs to the same fundamental formula. . . . There exist some fifteen or twenty categories in which we can place all the characteristic motives of Bach."

Mr. Schweitzer goes on to show how this passion for pictorial representation sometimes leads Bach quite astray, tempting him to commit crudities as bad as any that a modern young programist could commit. "In trying to reproduce a visual image, he lets himself be carried away into writing themes that are admirably characteristic, but are no longer musical phrases. In his youthful works these cases are rare, because the melodic instinct was then stronger than the descriptive instinct; but later on, the examples of this ultra-pictorial music become pretty numerous." Further, Bach tries to tell a story or suggest a complex idea by *combining* typical themes, just as Strauss might do. "Since these characteristic motives have a very precise signification in Bach's music, it is not surprising that the master combines several of these motives, and, with an audacity that has scarcely an anal-

ogy in the work of other composers, represents in this way a complex idea in music. Turn over the pages of any volume of cantatas and you will find examples where several motives combined sum up the text, either by their succession or their simultaneity. In the Christmas Oratorio, when the Magi tell the terrified Herod of the birth of the Messiah, there comes this reflection — 'Why be afraid? Oh, should you not rejoice?' Bach underlines this by the motive of 'terror' and the motive of 'joy' in combination. . . . In the cantata *Ach lieben Christen seid Getrost* the words 'take courage' are figured by a contest between the motive of 'terror' and that of 'joy'!" Sometimes two motives will be opposed or combined, sometimes three.

I have given only a brief outline of the facts M. Schweitzer has established so fully and so conclusively; for the complete statement of them I must refer the reader to the book itself. They will probably induce many people to look at the esthetic problems involved in descriptive music in a new light. They settle nothing by themselves, of course; but the mere fact that Bach should have been so completely possessed by this desire to represent visual images in music shows that it is not, as is often thought, a mere aberration by a few irresponsible moderns. It clearly comes from some deep-seated need in the musical nature; and that being so, it will not do to dismiss the pictorial attempts of Liszt, Berlioz, and Strauss with a sneer. There is, indeed, not one composer of eminence in whom this passion for "painting" in music is not seen at some time or other. The upshot of it all seems to be that the faculty does not want repressing, as the rigid classicists contend, but leading into the proper paths. I must not, however, stray into the esthetic argument I deprecated at the beginning of this article; here I only wish to give the reader some of the latest data on the subject, and to refer him to M. Schweitzer's exceedingly able book for a quantity of others.

A CONNECTICUT CHOIR

What a wonderful age we live in! It is sometimes to be wondered whether we are quite worthy of the blessings that are showered upon us. Surely the golden age has begun when a noiseless choir comes into existence. Did not the poet remark, "Heard melodies are sweet, but those unheard are sweeter still." The ideal of the unheard melody has been realized in Connecticut, where a deaf and dumb choir fingers out delicious anthems, and the congregation indulges in melodious gesturings. Oh, that this glorious system of dumb-singing may spread. May our street singers and vaudevillians adopt it. May those objectionable persons who bring their music when they call regain their popularity by only performing in this humane fashion: —

The village blacksmith doth rejoice
When now to church he comes —
He does not hear his daughter's voice,
He sees her busy thumbs
And fingers taking topmost notes.
Among the deafs and dumbs.

—*Kansas City Independent.*

EVERY CHILD WHISTLES

The town of Hazelton, Pa., is nervous, and the most nervous man in the place is a merchant, who gave away six thousand toy whistles to school children.

He thought the whistles would prove a strong advertisement. They did inside of an hour. His name was being anathematized all over Hazelton. Then an indignation meeting of frenzied citizens was called at the Mayor's office for the purpose of taking steps to get back at the noise-disseminating man.

Upon the authority of the meeting a notice was inserted in the local papers requesting that the little whistle tooters should assemble at a certain hour in front of the man's house, when they would be presented with another gift.

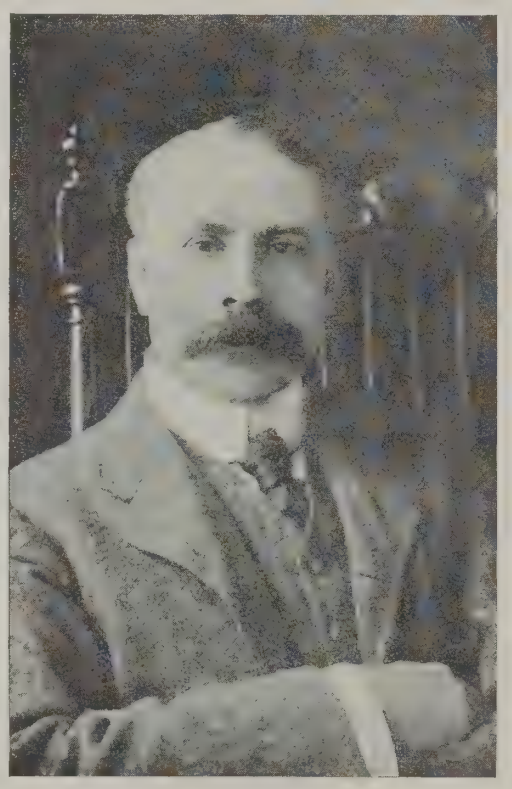
The children went and took their whistles with them. The homestead was nearly blown off the earth, and the merchant lost his temper and said things. — *News Item.*

A REVIEW OF ERNEST NEWMAN'S "ELGAR"*

EDMONDSTOUNE DUNCAN

The modern movement, on the side of which every young musician will almost inevitably range himself, owes its birth to no school and to no individual, and still less to the propagandist tendencies of a newly inspired press. Music is steadily aiming at a freer expression of emotion, and in the effort she discards, for a time at least, most of the intellectual processes which were current from the days of Bach to those of Brahms.

This movement is not confined to any one country. France has a notable list of champions. Germany has her Strauss; and, if in England, the name of Sir Edward Elgar suggests itself as the popular leader of a new and important digression in the history of natural art, it is a convenable indolence which causes us to turn a blind eye to the splendid efforts of other men moving much in the same direction. The great educational influence in the music of England to-day, as it was twenty years ago, is that of Sir Hubert Parry, to whom Elgar himself admits a considerable obligation. We are learning to assimilate the best spirit of Bach. The romantic impulse is still a live thing. Poets, and esthetic



SIR EDWARD ELGAR

writers from Ruskin to Pater, have given an imaginative stimulus to the *hearing* of music which forbids any further indulgence in mere academic displays, such as the old-time composer so dearly loved. The revelation of the orchestra (which unthinking people might attribute solely to Richard Strauss) has come gradually enough through Schubert, Wagner, Berlioz, and Liszt, with Beethoven as the founder of their experimental enterprise. Add to this, the improvement in orchestral playing, the new school of conductors, and the close study of orchestral methods by all composers worthy of the name, and we have some of the facts which touch the mainspring of modernity in music. So much of the advance we have made is claimed for Sir Edward Elgar, by his press friends, that it seems almost essential to call to mind the real state of the case.

Ernest Newman is one of Elgar's warmest admirers. In his daily records of English music our author rarely praises any other work. Indeed his attitude of pronounced hostility to almost the whole body of English composers, with this single exception, is now pretty generally known. Such statements, sweeping as they appear, are necessary in considering Mr. Newman's book.

Approaching Elgar's work from the critical standpoint of a partisan, Mr. Newman carries his methods to a high pitch of success. He dismisses the twenty-four early opus numbers as "slight in quality," excepting the *Serenade* (Op. 20) and the *Froissart* overture (Op. 19), both of which are discriminatingly approved. "The idea of the overture," says Mr. Newman, "grew directly out of a scene in Sir Walter Scott's *Old Mortality*, where Claverhouse asks Morton — 'Did you ever read Froissart?' It is interesting to mark that much of *King Olaf* remains with the finest music Elgar has ever written. We are not, however, to flatter our composer. Thus (on p. 39) we read that "as usual in his love-duets, Elgar falls much below the general level of his music. On occasions like this" (the third scene in *Caractacus*) "his characters become mere marionettes, talking the commonplaces of the novelette." Similarly the cantata ends "in a sputter of bathos and rant." Though Mr. Newman speaks highly of Elgar's *aims* in the oratorio *The Light of Life*, he considers the *form* of the work hopelessly out of date, if not indeed as dead as Queen Anne.

The essayist devotes his best efforts to such works as *Gerontius*, *The Apostles*, and the *Enigma Variations*. In all of these descriptive articles the comments are lucid and illuminative. The references to the musical illustrations, however, occasionally come with something of a shock, as in the case of the theme of "Jesus as the bestower of light" (No. 28); but this is inseparable from our author's system of analysis.

One is glad to note that Cardinal Newman's share in *Gerontius* is not overlooked in such a passage as the following: "It was because in his next oratorio, *Gerontius*, Elgar was fortunate enough to get a theme alive with human emotion from first to last, that he succeeded in making it such a masterpiece." The famous *Chorus of Devils* meets with Mr. Newman's disapproval. I place the passage side by side with Mr. Vernon Blackburne's estimate of the same music. Probably Mr. Newman's is the true view; and it emphasizes a real danger which modern dramatic treatment of oratorio must learn to avoid.

(ERNEST NEWMAN)
To the present writer it seems on the whole a failure. It exhibits all the devices of theatricalism turned to excellent uses, yet it never rises above the theatrical,— that is, it lacks the final essential touch of conviction.

(VERNON BLACKBURNE)
The *Chorus of Devils* is one of the most amazing compositions, surely, that has ever issued from the pen of any musician. . . His finest work goes out rather to the idea of hell than to the idea of heaven.

Another comparison of the two writers above quoted discovers that whereas Mr. Blackburne finds in *The Apostles* Elgar's finest work, "much of the music is dull" from Mr. Newman's view.

It may be observed that the earlier opus numbers are not completely noticed in Newman's review (*e.g.*, Op. 4, 5, 13, 14, 18). This is unfortunate as some of these pieces, though small, are much admired. Many organists, for example, would be glad to know about Opus 14, which comprises twelve voluntaries for organ. Another omission, which militates against practical utility, is that of *all Elgar's publishers*. A beautifully printed score deserves the name of its printer. Sir Edward Elgar's declaration against "program-music" is considered in a briefly ingenious chapter which reiterates Mr. Newman's belief in the black swan of music.

But these little books must not be taken too seriously, for contemporary judgment is often a vain thing, and fully one half of the pronouncements now so confidently made, may, in the eyes of posterity, look extremely foolish. History should make men cautious.

* "Music of the Masters" Series. London, John Lane, 1906.

Rudolph Aronson, of New York, has made a contract with Ruggiero Leoncavallo, by the terms of which the latter's new opera, *The Youth of Figaro*, words by Sardou, will be brought out in this country for the first time. This, it is said, will be the first instance that a grand opera by a European composer will have its initial production in the United States.

* *

The members of the orchestra of the Verdi Theatre in Florence combined a short time ago in energetically denouncing their leader, Giuseppe Baroni, whom they accused of brutality and absolute lack of politeness towards those subordinate to him. Things came to such a pass, and the scandal was so great, that the directors of the theatre were moved to dispense with the services of the leader.

AS TO THE MAKE-UP OF CLASSICAL ORCHESTRAS

SIEGMUND VON HAUSEGGER

The question whether it is always proper to use the powerful string orchestra, such as is available to our great music institutions, has been raised on many occasions in the *Signale*. And in fact it requires much thought to determine to what extent any one work of the classical period may be benefited by the large supply of stringed instruments required for the modern score. The orchestra of Bach and his contemporaries is not taken into account on this occasion, as it constitutes a matter of special consideration.

To relinquish the advantages of the complete, finished, and impressive music for the modern orchestra, would mean to go back to the old days. On the other hand, it is clear that there is a misproportion when we find in a Mozart symphony from eight to ten wind instruments, while there are from sixty to seventy stringed instruments, — a proportion which is likely to interfere or even to frustrate completely the intentions of the composer. If we resort to musical history for an explanation, the answer will be simple, which is, to reproduce each work of art by the medium of its time, — that is to say: Mozart, Haydn, and Beethoven, by means of the stringed instruments employed at that time. This plan would be acceptable if we could claim that all the works of that time had been created, not only for the instruments, but also by means of the instruments available at that time, and that these very instruments could do full justice to the works. But if we take, for instance, Beethoven's Third, Fifth, or Ninth Symphony, it looks as if a considerable number of the classical works were written with a bold disregard of the conditions of the period, with a desire for new means of expression. Wherever this may be the case, it is necessary to remove obstacles and barriers that prevent a free development of the expression without considering the historical side of the question, and avail ourselves of such means of expression as reveal the true character of a composition.

The classical orchestra originates, as Richard Strauss has well said, from the string quartet, and has only by degrees developed into what Strauss calls the dramatic orchestra. Its style must, therefore, bear resemblance to that of chamber music, particularly as to its earliest stages. The string quartet constitutes a body of four individualities, not only of the same tenor, but also of the same rank. Even if, now and then, one or another part plays the accompaniment, either will at once reassume its rights of equality; not merely appearing as a serving element of the whole, but retaining its own individuality and independence. Thus, no mere subordination, but similarity of sentiment, mutual adaptability, yet an ever present individual expression will warrant a uniform performance.

Since the chamber music style has been applied to the orchestra, the performance of the latter must be governed by the same general principles. As a matter of fact, it is again the *ensemble* play of the four individual parts performed by many instruments which are supported by wind instruments. In order to obtain uniformity of expression in the slightest, most subtle shades required by the chamber music style, and a full recognition of their significance, the number of the additional players must be as small as possible, though sufficiently large to preserve the proper balance with the wind and percussion instruments.

The character of the modern string orchestra may be illustrated by one of Berlioz's sayings: "A slight motion of the arm, an imperceptible feeling aroused in the player, things scarcely noticeable with a single instrument, bring out, when multiplied, the most splendid shades, arousing feelings which penetrate the very depth of the heart." What has been said here about the violins may be applied in general to the whole orchestra. In place of a clear conception on the part of each single player there is a more unconscious than conscious, a most discreet, shading, which, multiplied, gains the desired intensity of expression only by the suggestive influence of the director; the fully conscious sentiment is expressed by him alone: the orchestra represents the instrument on which he plays. The development of the modern orchestra, therefore, goes hand in hand with the art of conducting. The performance of a composition appears centralized in the director, and the latter's task in leading a modern orchestra differs, therefore, altogether from his work with the classical orchestra; for although the latter, being a many-headed body, such as any orchestra presents, needs a dominating authority who, owing to the frequent scantiness of the old scores, has a comparatively harder task to perform than in conducting a modern orchestra, the leader's first duty is to shape the performance so as not to make it appear as the outcome of a single, but on the contrary, as the result of the various individual sentiments of the orchestra. The difficulty of making a performance objective increases with the number of stringed instruments, and with the necessity of giving life to more unconscious than conscious sentiments. This task of animating being performed by the leader, it cannot

SIEGMUND VON HAUSEGGER

but assume an altogether subjective character which varies from the chamber music style.

We have seen that a string orchestra, whether it is small or large, may signify two entirely different things, essentially as well as partially. It follows, therefore, that each one should be used where its peculiarity is in accordance with the artistic character of the work itself. A small orchestra will answer for the symphonies of Mozart and Haydn; but even in the final movement of the *Jupiter* symphony or in the introduction to the *Don Juan* overture there is a tendency toward the monumental which exceeds the scope and character of the chamber music orchestra. The orchestral style anticipated in these works was destined to find its perfection in Beethoven's symphonies.

Beethoven's orchestra differs as much from Mozart's as the personalities of the two masters. In Beethoven we find the most pronounced subjectivity, which calls for the utmost centralization of expression; in Mozart, objectivity which requires decentralization in favor of an *ensemble* in the chamber music style. From the impressionism where, in the developing measures down to the final movement of the Fifth Symphony, the clear line leads into the darkness of mysticism, up to the almost colorless strong passage in the first movement of the Ninth Symphony, from the serene atmosphere of the *Pastoral* down to the thrilling mourning song of the hero in the funeral march of the *Eroica*, the creation invariably deals with the deepest conflict of life; whether it presents the conflict itself or the longing for its opposite, peacefulness, it is always a bold flight of imagination far beyond the limits of the given means,—a vision of something inexpressibly lofty. Sentiments as subjective and as powerful as these cannot be expressed except by the means of the modern orchestra. Above all, a small number of stringed instruments would not be sufficient to hold their own against the large number of wind instruments of the Beethoven orchestra.

A great number of stringed instruments, however, is likely to obliterate the wind instruments in their leading parts. This fault cannot always be removed by toning down the strings, because the latter would then be obliged to resort to a lifeless, colorless performance; but even where the wind instruments do not play the leading part, they are most likely to have their effect weakened by a larger number of stringed instruments. On the other hand, their tone will, when strained, sound pointed and sharp, instead of full. Besides, the musical balance is often lacking in chords where, among the wind instruments, the natural tones of the brass instruments prevail. Such inconveniences may be done away with by doubling the wood-wind instruments,—a procedure which is customary in many orchestras. Of course it would not be sufficient to double the wood-wind instruments merely in *tutti* passages; it would, perhaps, be advisable to follow Richard Wagner's instructions about the performance of the Ninth Symphony, where he recommends the greatest care in regard to the doubling of the wood-wind instruments in order to obtain the most appropriate and satisfactory musical effect. In this very composition it might even be wise to double the horns, which should, however, be reserved for the climaxes and altogether withheld in the *adagio*, the same as the wood-wind instruments. Who might not wish for the majestic effect of the trombones in the first movement? Their use would, however, change the character of the sound completely, while the doubling of the horns simply goes to intensify the sound. On the other hand, it would be a mistake to deprive the Fourth and the Eighth Symphonies of their graceful character by doubling the wood instruments, since their heavy breadth of tone merely adds to the heroic or ultra-passionate expression.

Additions of that kind should be made with the greatest care. Any change may bring about the same result as the changes produced in the horn and trumpet parts. Just as these changes must not be carried farther than to correct imperfections caused by the peculiarities of the instruments of that time, without ever changing the diatonic character of Beethoven's brass instruments to a chromatic one, no less attention should be given to an increase in the number of instruments, likely to change the entire character of the Beethoven orchestra. In consequence the writer does not approve of the use of the E♭ clarinet as a supporting instrument, any more than to the use of trumpets as a means of intensifying the melodic line.

The above explanations have left a wide range for the conception of the classical orchestra. A historic review may reveal its outward conditions, but it cannot give a thorough knowledge of the intrinsic value of the master works which are interpreted through the recognized medium of the orchestra. The historic side cannot be the last resort in this case any more than in other questions concerning art. What counts in that respect are the living works themselves, or if one desires to go into the very depth of the matter, the personality that reveals itself in such works. So we may either limit ourselves to the composition of the orchestra available in the composer's time or in the manner of the genius boldly disregard all time-honored traditions and restrictions.

MR. HOWELLS' ENGLISH

I read his *Venetian Days* about forty years ago. I compare it with his paper on Machiavelli in a late number of *Harper*, and I cannot find that his English has suffered any impairment. For forty years his English has been to me a continual delight and astonishment. In the sustained exhibition of certain great qualities — clearness, compression, verbal exactness, and unforced and seemingly unconscious felicity of phrasing — he is, in my belief, without his peer in the English writing world. *Sustained.* I intrench myself behind that protecting word. There are others who exhibit those great qualities as greatly as does he, but only by intervalled distributions of rich moonlight, with stretches of veiled and dimmer landscape between; whereas Howells' moon sails cloudless skies all night and all the nights.

In the matter of verbal exactness Mr. Howells has no superior, I suppose. He seems to be almost always able to find that elusive and shifty grain of gold, the right word. Others have to put up with approximations more or less frequently; he has better luck. To me the others are miners working with the gold pan — of necessity some of the gold washes over and escapes; whereas, in my fancy, he is quicksilver raiding down a riffle — no grain of the metal stands much chance of eluding him.

— MARK TWAIN *in Harper's Magazine.*

TIME FOR STUDY AND SLEEP

Mothers know that the newborn infant must sleep about twenty-two hours, and that this amount is so slowly lessened that the child still demands twelve hours when it is about twelve years old. It is quite likely that the normal amount is not reduced to ten hours until about eighteen years of age or perhaps until twenty-one years. Nine hours may be required until well along in years.

To let boys of fourteen sit up until ten oclock and then rout them out at six is nothing short of criminal, but it is a long-established custom. Lower animals can be quickly killed by depriving them of sleep — the boy is not killed, but perhaps he is so exhausted that he loses resistance to disease. Medical students not infrequently make the same mistake, forgetting that a tired brain never absorbs anything. The midnight oil frequently represents wasted time and money and the student sleeps during the next day's lectures when he should be wide awake. A good test of exhaustion is the tendency to sleep during a dry lecture — and this is no joke.

Experience has proved that those who retire in time to sleep at least nine hours, and occasionally ten, get far more out of their course than the "grinds." Some of the best men habitually take ten hours. Theoretically a student should be as fresh at the end of the term as at the beginning — the vacation is for another purpose than sleep. The whole subject, though very old, is so new to the laymen who do the damage to school boys, particularly in boarding schools, that there is urgent need of wider publicity and much discussion for enlightenment.

Physicians might teach mothers that it is harmful to waken children of any age — they should waken in the morning naturally. If they are not in time for school they do not retire early enough. If they are sleepy heads it is either the fault of the parent or the result of ocular defects. There is much comment upon the large number of midshipmen who fail at the Naval Academy in a course not worse than in many colleges. It is suspected that they would do better if they had ten hours' sleep daily. —*From the American Medicine.*

A BOOK FOR THE REAL WOODS

The latest and best book on camping out in the woods, *Camp Kits and Camp Life*, has already gone into the second edition. The size of the book is such that it will easily fit into the pocket and the information it contains is of the particular and specific kind that is good to have by one in the real woods.

WHEN GOETHE SNUBBED HECTOR BERLIOZ

An interesting article appeared recently in the *Rivista Musicale Italiana* by Kling about Goethe and Berlioz.

In 1829 Berlioz had sent the score of *Le Damnation de Faust* to the great poet, accompanied by a letter full of youthful enthusiasm. Goethe sent this manuscript to one of his friends, the musician Zelter, writing with it: "Have the kindness to send me in a few words your opinion about this work that I may quiet my mind about this bizarre accumulation of notes."

Two months later Zelter sent Goethe the following answer, worthy of Beckmesser: —

"There are individuals who reveal their state of mind only by coughing, expectorating, or clearing their throat. Berlioz seems to be one of them. The odor of Mephisto's sulphur attracts him and he has to sneeze in order to make all the instruments of the orchestra make an infernal noise, but Faust remains passive. However, I thank you for sending the score. The day may come when I may have occasion to produce it at a conference as a horrible example."

This answer was sufficient to quiet Goethe so much that the enthusiastic letter with the manuscript was never acknowledged. A similar instance of Goethe's aversion to composers occurred when Schubert sent him the delightful music he had composed for the song of *Mignon*. It was only after Schubert's death that Goethe had realized the value of the composition and the fame of his collaborateur.

MANUEL GARCIA

In the death on July 1 in London of Manuel Garcia at the extraordinary age of more then one hundred and one years, the art of music has lost its oldest exponent. He was contemporary with a long list of names preeminent in music, which include Berlioz, Schumann, Mendelssohn, Chopin, Wagner, Verdi, Liszt and many others, all of which are, to the present generation, but a tradition or a pleasant memory. Mr. Garcia was only a a few years younger than Schubert, who died in 1828; he was over twenty when Beethoven passed away; and he saw during his long and eventful life, the rise of Weber, Rossini, Wagner, Verdi, Meyerbeer, and later operatic stars, even to Mascagni, Puccini, and others of the present day. What an experience such a life was! One can scarcely realize it. Here are a few brief facts as to Garcia's life and work. He was born at Madrid, March 17, 1805. The father Manuel del Popolo Vicente Garcia (1775–1832) was well-known as a singer, and it was for him that Rossini wrote the part of *Almaviva*. He was also prolific as a composer, writing forty-three operas, a symphony, and other works. Further than this, he was a skilled teacher, his three famous children being his best pupils.

The elder daughter, Maria Felicita, was born at Paris in 1808, and died twenty-eight years later at Manchester, England. In the few intervening years she developed extraordinary genius as a singer, and her name remains one of the most celebrated in history. Marrying first an American merchant, Malibran by name, and later De Bériot, the violinist, she passed a life of extreme activity. To her acting, singing, and power of vocal improvisation were added linguistic skill and a gift of draughtmanship. Her vivacity was a delight to all who knew her.

Hardly less distinguished was the younger sister, Pauline Viardot Garcia. It is interesting to recall that Mme. Viardot sang with Wagner the duets from *Tristan and Isolde* during his second residence in Paris. This bit of private history is derived from the recently published letters of Wagner to Mathilde Wesendonck.

Returning to the subject of the sketch, it may be said that he studied with his father and with various singing masters during a sojourn in Naples (1811–1816). At the age of fifteen he took harmony lessons of Fétis, in Paris. In 1825 he visited England with his father and his sister Malibran, who then made her first appearance in that country at the age of seventeen. In the autumn of this same year the family crossed the ocean and inaugurated in New York the first season of Italian opera given in the new world.

After his return to Europe, Manuel Garcia, the younger, joined the French army, and took part in the conquest of Algeria. On his return to Paris he engaged in work in the military hospitals. It was at this time that he began the study of medicine, specializing on the voice and the anatomy of the vocal organs. Subsequently he connected himself with his father as a scientific teacher of singing. In 1840 a treatise on the human voice won him the congratulations of the French Academy.

Garcia was appointed professor of singing at the Paris Conservatory by Auber. In 1847, he published his *Treatise on the Art of Singing*, which has since been translated into many languages. In 1848, like many others, he was driven to London by the revolutionary movements in Paris. On Nov. 10, 1848, he was elected to the professorial staff of the Royal Academy of Music and held his office for forty-seven years. In 1895 he resigned from the Royal Academy, but still taught privately. Perhaps his most remarkable lesson was that given on St. Patrick's Day, 1905, when he observed the centennary of his birth.

Manuel Garcia's first famous pupil was Jenny Lind, who in her twenty-first year had damaged her voice by over exertion, and came to him to repair the injury. After hearing her sing, Garcia is reported to have said, "Mademoiselle, you have no longer a voice." Under his instruction the renowned Swede's singing improved steadily, and she afterwards became one of the greatest singers of the century. Since then, the number of famous pupils has been very great. His invention of the laryngoscope made him famous for all time, and for this he was made *Dr. Med. h.c.* by the University of Konigsberg.

MUSIC TEACHERS' NATIONAL ASSOCIATION

The twenty-eighth annual convention of the Music Teachers' National Association was held at Oberlin, Ohio, June 27–29. The first session Wednesday, the 27th opened in Warner Hall, with President Waldo S. Pratt, Theological Seminary, Hartford, Conn., in the chair. The address of welcome was delivered by Pres. H. C. King who said, in part; "When one has but one opportunity of addressing an audience, one feels conscious of the things left unsaid. So to-morrow, I shall think of many things I wish I had said to-day. We welcome for your own sakes, for the significance of your own life and work, for the great art for which you stand, for the broad lives you are making to the esthetic side of life, as against the material. You stand for a life that means leisure and time. I have often deeply realized the criticism of one of our German critics, that America's greatest need is to take repose.

"You make common cause with all the great ideals. We do not come into the ethical and religious without beauty. I welcome you to a college community. I should be the first to testify to the great influence music has had in Oberlin. In the early strenuous days this influence was especially wholesome."

The first paper of the morning was read by O. G. Sonneck, Librarian of Congress, Washington, D. C., on *European Musical Associations.*

Albert A. Stanley of Ann Arbor, Mich., gave an illustrated lecture on *A Seventeenth Century Opera — Cesti's Il pomp d'oro* 1666, illustrated by excerpts given on the piano by Professor Stanley and by lantern slides, showing wonderful mechanical mechanism of stage settings of that time.

The afternoon session was opened with a violin recital by Edwin Grasse of New York City, followed by a discussion on *The Study of Music in the College*, by Henry Dike Sleeper, Smith College, Northampton, Mass.; Albert A. Stanley and Abram R. Tyler, Beloit, Wis. This was followed by another on *The Curriculum of Piano Study*, by August Geiger, Gainesville, Ga., and Kate S. Chittenden, New York City.

The session closed with a song recital in the evening by Theodore Van Yorx of New York City.

Thursday's session was opened by discussion and papers. *Music in the Secondary School* and *The College and the Secondary School* were the subjects of L. B. McWhood of Columbia University. *Credits for Individual Study of Applied Branches*, by Ralph L. Baldwin of Hartford, Conn. The principal paper given was *Unification in the Educational System from Standpoint of the M. T. N. A.* by George C. Grow of Vassar College.

In the afternoon a piano recital was given by Carolyn Louise Willard, assisted by Lillian French Read, soprano, both of Chicago.

In the evening a concert of modern music was given by members of the faculty of the Conservatory of Music. The program included the Fugue from Max Reger's *Symphonic Fantasia*, Op. 57, Cesar Franck's A major sonata for piano and violin, movement from D minor piano concerto of MacDowell, Saint-Saëns' Scherzo for two pianos, Choral for organ Vierne, also shorter pieces and songs by Mrs. Beach, Elgar, Franck, Hue, Bemberg, Kopyloff, Boisdeffre, and Tor Aulin. The artists were George W. Andrews, organist; W. K. Breckenridge, and Mr. Lindquist, pianists; Caroline Harter violinist. Mr. and Mrs. Adams, vocalists.

The final session, Friday, opened with a discussion on *The Conservatory of Music, It's Aims and Possibilities* by Frank Damrosch, Institute of Musical Art, New York City; Willard Kimball, University of Nebraska, P. C. Lutkin, Northwestern University. Then followed the annual election of officers. In the afternoon, a paper entitled *Culture Courses* was read by Thos. W. Surette of New York, followed by another by Edward Dickinson of the Oberlin Conservatory of Music, entitled *Teaching Music History.*

NEW YORK STATE MUSIC TEACHERS' CONVENTION

The eighteenth annual convention of the New York State Music Teachers' Association was held in Geneva, N. Y., June 25–28. The following is the program of the proceedings.

Monday evening, June 25, the annual banquet was given, with addresses by Pres. Carl G. Schmidt, Jaroslaw de Zielinski Mrs. P. N. Nichlos. F. H. Shepard, H. Brooks Day, W. H. Jordan, Louis Arthur Russell, and Chas. D. Vail. Tuesday was the first convention day, the program opening with an address of welcome by the Mayor of Geneva, followed by an address by Jaroslaw de Zielinski, on *The Trend of Modern Composition.* There was also a piano recital given by Jessie Shay, and in the evening a concert by Margaret Hughes Wilson, soprano, Nina Clark Hooker, contralto, Florence Newell Barbour and Marguerite Stillwell pianists.

On Wednesday, June 27, the proceedings for the day included an address by Henry G. Hanchett on *The Development of Instrumental Music in Relation to Instruments.* Round Tables by Louis Arthur Russell and Wm. C. Carl. Organ Recitals by George E. Fisher, and Wm. C. Carl at Trinity Church, and the Beethoven Trio Club, assisted by Mrs. Caroline Cutler, soprano.

The final convention day was June 28. The annual election of officers took place at the morning session, —Ludwig Schenck being chosen President, — followed by an illustrated lecture on *The Voice* by S. C. Bennett and Mrs. Walter T. Hubbard, soprano, with a varied program of songs by modern composers. There was an excursion to Watkin's Glen in the afternoon, and in the evening a "two-piano concert" was given by Wm. H. Sherwood and Georgia Kober, with choral numbers by the Geneva Choral Club. The numbers for two piano, included Liszt's *Preludes*, Schumann's *Variations*, Op. 46, first movement of Grieg's A minor Concerto, Op. 16, Chopin's *Andante Spianato and Polonaise*, Op. 22, Concerto in E♭ by Liszt, and other numbers by Arensky, Grieg, and Chabrier. The addresses, round tables discussions, etc., proved to be of unusual interest and excellence. The musical programs presented were of the highest artistic merit.

THE MUSIC OF THE ISRAELITES

"I am the Lord thy God, and thou shalt have no strange gods before me!" was Jehovah's command to the Jews. This was taken literally, and pictorial representations were forbidden. This law put a ban on painting and sculpture and the Israelites turned to music. That it attracted the Jews, and was used to a great extent in their sacred ceremonies, cannot surprise us; for music among the arts is as unique as the belief of the Jews in one Deity, which among ancient people was unique. Their conception of God as a spirit,—being devoid of substance and form,—found in music an art that alone could conjure impressions similar to those inspired by the contemplation of Jehovah, the Intangible and Omnipotent. The very character of music, its indefiniteness, its lack of material models, its evanescent quality, its ethereal nature demanding only a vibration of the air to make itself manifest, appealed intensely to them and prompted them to adopt it in their temple service, from which the pictorial arts were strictly barred.

Moses was a disciple of the Egyptian priests, and through him the Hebrews became acquainted with Egyptian music. These ancient people not only employed flutes, lyres, and many other instruments, but it has been proved conclusively that this wonderful people was as conversant with the present system of our scale as we of the twentieth century. From a flute and other instruments found in the tombs, it has been shown that nearly three thousand years before Christ the Egyptians were using our modern music, their scale being the same as our own minor scale.

Moses, on his return to his people, gave the Temple music into the care of the Levites, with regulations governing its use. The regulations as well as the privileges accorded by him to the Levites were further augmented by David and Solomon, and under the latter the number of temple singers and musicians was increased to the astounding number four thousand.

Not only for temple service were there regularly appointed musicians, but institutions similar to the orchestras and opera troops at royal courts today played an important part in the musical life of this ancient people. In these troops women took part who were barred from the temple service, their place being taken by boys. These women singers and players usually belonged to the harem of the king, and dignified as was their position in the beginning under David and Solomon, they, and the entire organizations, devoted to the practice of profane music, gradually degenerated and became so great a menace to public morals that the prophets repeatedly rose against them. Harps, trumpets, drums, cymbals, flutes, and psalters were used by the Israelites, though the oldest instrument of all is the "shofar" (also shophar), made originally of the horn of a ram. This shofar was used for calls to assemble the leaders, the priests, or the people, according to the signal blown. This practice has been retained to the present day in orthodox synagogues. The ancient signals are as follows:—

That the characteristic effect of certain intervals was known and felt by them, we see by the popular belief of the Jews, that this last signal drove the devil to flight. This interval of the minor seventh, F♯-E, blown on the shofar, has a peculiar penetrant, startling effect that well accords with the belief of frightening the Evil One.

The Israelites were the first people who made music the direct appeal of man to God. Among other ancient people this cannot be found, and only after the spread of Christianity music again appears in a similar exalted position.

The range in this old temple music is often small; in many hymns three notes sufficing. The *Sch'ma Jisroel*, as sung in the Dresden Synagogue, has but three tones. In many of these old temple hymns we find the forerunners of the *melismas* so characteristic of Plain Chant. The *melismas* are the rapid little figures heard in the ritualistic music of the Catholic Church. The *Ite Missa est* on festive days and the *Alleluias*, are good examples of the use of the *melismas*.

Music was intimately associated with every deed in the life of the old Jews. The prophets became inspired with the instrument in hand and in song proclaimed the future; Saul's violent temper was calmed by the music of David; when the prophet Elisha wished to soothsay before King Josaphat, he called for a harp player to inspire him; schools for teaching prophecy turned to music as the incentive, for of their disciples we read: "they prophesied on zithers, harps, and cymbals"; Miriam sang her *Song of Triumph* when Pharaoh and his horses were drowned in the Red Sea; Jephtha met her father, dancing to the music of instruments; and Joshua's people cried out and blew with might into their trumpets, "and the walls of Jericho fell."

Treatises on music like those of the Greeks have not been found in their literature, but the last scriptural sentence referring to the falling walls of Jericho suggests that perhaps the higher laws of acoustics were not unknown to them. We know to-day that every building has a fundamental tone, which, if sounded continually, will, by the reiterated pulsations of the sound waves, crumble the structure, no matter how large and well constructed. Who can say that the Jews did not understand this power and use it?

Their influence, great as it has been in our religious and moral life, is none the less powerful in the tonal art. Our present music is based on theirs, for of the Egyptians (their musical forefathers) we have so little knowledge that we cannot derive our present art from them. With the founding of Christianity many of the hymns of the Jews were taken into the service of the new religion.

Dom Pothier, in his researches on Plain Chant, says: "With the singing of the Psalms, it (the Church) could not help transmitting a predominant taste for free rhythm after the fashion of the singers of Israel, and there is no doubt that a melodic cadence passed from the Synagogues to the Agapes, from the Agapes to the Catacombs, from the Catacombs to the Basilicas."

At present there lives in Damascus a tribe of Jews of which we know that it never went out of existence and that its rhetorical and musical traditions are ancient and authentic. Their melodies have a striking resemblance to Gregorian Chant. One melody in particular corresponds in almost all its characteristics to the chant of the Lamentations as sung in the ritualistic music of the Catholic Church to-day. This Plain Chant culminated in the art of Palestrina, from which the music of Bach developed; Bach is the founder of our present system, and thus the historic thread of Music's development from the time of the Israelites under Moses to this day is unraveled.

The love and understanding of music shown by the ancient Jews has come down to its descendants of the present day, as the many famous Jewish musicians and the general appreciation of the Jews for music prove. In this is again verified the tenacity of this race to retain its characteristics under the varying conditions it has been subjected to throughout the many centuries of its existence.

LONDON SOCIETY APPLAUDS HEGEDÜS AND AMERICAN ARTISTS

A concert of much interest to Americans was recently given in London at Grosvenor House under the distinguished patronage of the Duchess of Marlborough and the Duchess of Westminster. Rudolph Aronson the well-known manager had the arrangements in hand.

Conspicuous among the performers was Ferenez Hegedüs, the violin virtuoso, who has had phenomenal success in England this season. Leon Rennay, whose vocal equipment is well known, sang a group of French songs with purity of voice and refinement of style. Paris Chambers, the American cornetist, played a *Berceuse* by Tschaikowsky and Barthelemy's *Serenade Coquette*, and Arthur Shattuck the American pianist's artistic interpretations elicited well-deserved applause.

All of above-named artists will appear in the United States and Canada during the ensuing concert season.

OUTDOOR MUSIC IN AUGUST

LOUISE KARR

Almost every one is away from home by August, and as the evenings begin to lengthen, and the weather is not so dependable, it is well to think of amusements that may be had under cover. I don't know of anything that is more fun than getting up a Kinder-symphony, and the big, open music-rooms connected with most hotels, or the wide piazzas around on their sheltered sides, are just the places for rehearsing.

A Kinder-symphony is interesting from start to finish. If there happen to be a lot of children, they can be pressed into service, and it is one of the prettiest things imaginable to see them seriously performing on their toy trumpets and whistles, and no trifling matter in the eyes of piazza ladies and gentlemen. It will keep them occupied for a good number of afternoons or mornings.

* * * * * *

It is by no means necessary to get them up with children, however, in spite of the name. They are called Toy symphonies or Musical Jokes in preference to Children's symphonies in the German catalogs, and it is no infrequent thing to see grave and reverend musicians performing. Quite a famous performance was given once of the Romberg one, in London, in 1830, in which Sir Arthur Sullivan played the Cuckoo, Charles Halle the Quail or, as we say, the Bob White, Joseph Barnby the Nightingale, Dr. Stainer the Trumpet, A. Randegger the Drum, and so on. This Romberg Symphony is very popular and has been given many times.

* * * * * *

The most famous of these farcical orchestrations is that of Haydn, and he is indeed considered the originator of them. Papa Haydn, although it is said he rarely laughed, was of a lively and fun-loving disposition; his sense of humor was keen and not overrefined, and he dearly enjoyed a practical joke. He was not alone in his appreciation of the latter; in going about the show places of the region where he lived and died,—the Vienna territory,—one sees grottoes with fountains cunningly arranged to surprise the courtier where he stands all unheeding, besides many other devices for fooling the unwary. Haydn's duties as master of music to the pleasure-loving court of the Princes Esterhazy called him to be constantly thinking of some new and original device. His farewell symphony was an instance of his wit and invention; the Prince had kept his orchestra in exile for some state reason and the men sorely wished to regain the comforts of home; of course it wouldn't have done to have asked him out and out to go, for that would have settled him to stay, as he was dealing with musicians who had no musical Union to protect them, and were little better than servants, so Haydn adopted the expedient of having one after the other of his players, as he finished, blow out the candle attached to his music stand and leave the room: as the last and favorite player departed, leaving the stage in darkness, the Prince took the hint, and the party was allowed to go home the next day.

* * * * * *

The idea of the toy music is said to have come to the composer while he was listening to the noises at a village fair. The Germans had long made toy instruments,—whistles, wooden squeakers, and blowers to imitate the call of different birds,—and when the peasants came in their picturesque costumes for a day or week of jollity, archery, games, wrestling matches, singing contests, and so on, they would all arm themselves with some one of these funny little noise makers, and somewhat superior to our pandemonium of fish-horns, electric and steam cars, and automobile toots that rejoice the Broadway crowd on Election night, a medley of sound would arise, soft, romantic, and amusing. We may imagine the composer buying toy after toy at the booths, and taking his part in the joking and horse-play going on all about, and finally accumulating his novel orchestra of bells, whistles, drums, and triangles, gravely managing the various-shaped bundles and getting them back to his own quarters in safety. He worked up his orchestration in secret, supporting the toys with two violins and a double bass, into one of the prettiest and most catchy of his compositions, and producing the score, handed the parts about to his players at a regular rehearsal without intimating there was anything unusual in the proceeding. We may imagine the amusement that ensued. I should fancy it was one of the great Capellmeister's most successful attempts at directing the gay court assembled; it has delighted many and many a lively audience since, and has been complimented by many imitators.

* * * * * *

This symphony is not difficult to get up. It calls for, of course, a reliable pianist, but the part is not hard: some one who understands the 'cello is a help, but the violin parts may be taken by young players who are fairly proficient. It is to be obtained scored without the 'cello and violins, but these add so much that it is a pity to leave them out. The toys should be practiced a great deal with the piano and metronome. I remember getting one up once, where the piano and triangle parts were taken by young girls, both reliable and thorough musicians as far as they went, but not very far advanced. We counted the whole piece through with the piano alone, with the triangle alone, with the piano and triangle together, in this way, *i.e.*, one, two, three, four; two, two, three, four; three, two, three, four; four, two, three, four; and so on, until these two parts were perfectly sure and could start anywhere and go on, either alone or together, following my beat and counting aloud. It was a pretty thing to see how secure these two girls were, no matter what happened among the other more inexperienced instruments, counting aloud and knowing just where they were the entire time. It was a good lesson for them in *ensemble* playing, and in the value of correct time and rhythm, and they could not have done it unless they had had good training. So I advise giving the triangle particularly into the hands of some one who has a good sense of time, who does not get rattled, and who will do honest work; the triangle comes in so jubilantly, and gives a sense of security, when the others are uncertain. The drum must be looked out for, too; that is important; if the cuckoo calls and the nightingale warbles a bit out of time and tune, it adds piquancy, but get the drum in order if you don't want the other players all broken up.

After the children, or grown-ups, are quite solid with the toys, then bring on the violins, and you will begin to feel yourself an embryo Safonoff or Weingartner, and it is really great fun. When you get them smooth, and the performance comes off, the concert room will be full and the piazzas, too, and you will probably take your little orchestra "On the Road," to the other hotels, before you disband for the summer.

* * * * * *

There is one difficulty: it is rather hard to keep the tempo to metronome markings with inexperienced players. It is much better to give a performance a little slowly, and get finish and spirit, than to rush it through in a jumble. If the time is taken somewhat slower, however, the slow movement must be taken proportionately; there is nothing funnier than to hear the allegros played slowly because they are difficult and the adagios briskly rendered because they are easy. This is a kind of practical joking that would not have found favor with Haydn and his musicians any more than with latter-day critics, and *ensemble* players should give it a wide berth.

Haydn's symphony is not the only one now to choose from; there are twenty-six of these scores catalogued that one may order, and others not so easily obtainable. Birchof, Diabelli, Gerstenberger, Holten, Mozart, Reinecke, Romberg, Spindler, Wolfhart, and many others have contributed one, and Chwatal has written three. There is quite a difference in these: some aim at pretty effects, as in the sleigh-ride and bird pieces, and some introduce more comedy. There is also a good deal of latitude in the number of the little instruments called for. There is one that calls for but a drum and triangle besides the violin and piano, another, the *Festival March* of Gerstenberger, for three bells, in C, G, and E♭, a drum,

castanets and a bell-tree. The *Merry Sleighing Party*, by Chwatal, calls for trumpet, drum, triangle, castanets, bell-tree, whip-snap, pop, zobo, and metallophone, besides the supporting instruments. Perhaps the greatest favorites among the number of these pieces are the *Merry Sleighing Party* just spoken of, the Haydn, the one by Holten, and the Romberg one, this latter being the one so distinguished by being performed in London by great musicians. It would be safe in ordering from a distance, without having the opportunity of trying over the airs, to choose from among these four, which have stood the test of popularity.

* * * * * *

The expense of ordering is not great; the complete score costs between $1.50 and $2.50, and the little instruments are ten, twenty-five, fifty, and seventy-five cents apiece — with the exception of the cuckoo with bellows, the metallophone, and the bells with steel bars, and the large triangle (the latter much the best for effect, the real orchestral triangle is the one to depend on); these latter range from $1.00 to $2.00 apiece. This expense, divided among the number of players necessary, is practically nothing. The easiest way to order is to send for a catalog of Children's Symphony Music and a price-list of the little instruments; if you mention in writing that you would like information as to popularity and difficulty, you will obtain it. It is then easy to compare the number of instruments with the number of possible performers and come to a wise decision.

ANOTHER OPINION ON MOZART'S LAST ILLNESS

Dr. J. Barraud of Bordeaux has been interesting himself in the symptoms of Mozart's last illness and is convinced that it was not a case of cerebral meningitis, as most authors have claimed, but Bright's disease instead.

He takes up first the question of heredity. The composer's ancestors were all normally healthy and his father was especially so; only his mother was sickly. Mozart himself as a boy of six was small and delicate, but well formed. He was so extremely nervous that when he heard a trumpet he would almost faint. At that age he had an attack of scarlet fever, and three years later he fell a victim to typhoid in Lille, suffering a relapse in Amsterdam. While recovering therefrom he composed six symphonies, six sonatas, and many small things, thus overtaxing his strength. A dangerous attack of smallpox followed in October, and for nine days the boy was almost blind. Then in 1781 he was severely ill with influenza.

Dr. Barraud has made an especially thorough study of Mozart's condition during the period preceding his marriage. He was at that time thin and small, with a sallow complexion; the head was unusually developed, the nose enormous, and the eyes were large and sunken, while his glance was very unsteady. The man was already in weak condition; he was overworked, and to this cause of his physical decay must be added another — lack of the necessaries of life.

Though the great success of *Die Zauberflöte* seemed to mark the turning-point in his fortunes, it came too late. The unfortunate composer had suffered so much that the most trivial circumstance would upset his mental equilibrium. During the last months of his life he was constantly a victim of hallucinations, while his hands and feet were terribly swollen and he was pathetically thin and haggard. A few hours before the end, his doctor visited him for the last time. He used cold water applications for his head, which only rendered his condition worse, and at one o'clock in the morning he died. Dr. Barraud sums up his conclusions in these words: "Overwork, constant fatigue, and want. At the early age of thirty-five the great master was a physical wreck; his strength was entirely gone, so that he had no energy with which to combat the illness to which he succumbed."

FROM MOZART'S LETTERS*

PARIS, May 1, 1778.

Eight days passed without the least news; they had engaged me and I kept my word and came. Then I had to wait for a half an hour in a large, cold room, unheated or even provided with a stove. Finally the Duchess of Chabot came with great politeness and bade me make myself at home with the piano, while none of hers had been prepared, I wanted to try it. I said that I would gladly play something, but now it was impossible, while I could not feel with my fingers, because they were so cold, and asked her if she would kindly show me a room where there was a fireplace in it. "*O oui, Monsieur, vous avez raison.*" That was all she said. Then she sat down and began to draw for a whole hour in company with other gentlemen who sat in a circle around a large table; accordingly I had the honor to wait a whole hour. Windows and doors were open. Not only my hands were cold, but my whole body and feet were cold, and my head soon began to ache. There was then "*altum silentium,*" but because of the cold, headache, and tediousness, I did not know how I should begin. I often thought to myself that if it was not for Mr. Grimm, I would go away the very next minute. Finally, to be short, I began to play on the miserable piano. What troubled me most was, that Madam and all the gentlemen did not cease their drawing for a moment, while I was compelled to play to the chairs, tables, and walls. Under these trying conditions my patience was sorely tried. I

WOLFGANG MOZART

began the Fischer Variations, played half and stopped. Here was an elogen multitude. I said, however, what was to be said,—namely, that I could not do myself justice on this piano, and that I should be very glad to choose another day when there would be a better piano there. She did not agree to this, I must wait another half hour until her husband came. He, however, sat down by me, and listened with all attention, and I — I then forgot all about colds, headaches, and played in spite of the miserable piano as I generally do when I am in good humor. Give me the best piano in all Europe and any kind of people for an audience, those who do not understand or those who do not care to understand and they who do not feel with me what I play, then I lose all pleasure in playing.

* Translated from *Signale für die Musikalische Wells*. Taken from the excerpts of the published collection of *Mozart's Letters*, by Ludwig Nohl.

MATERIAL FOR MUSIC STRINGS

"One of the most generally accepted, but mistaken, ideas that is entertained by the people of this country," said an American traveling representative of a leading foreign manufactory of gut strings, "is that strings used on musical instruments are manufactured from catgut. If that were true, the cats in this world would have been exterminated many years ago in supplying the market with material for musical instrument strings.

"The fact is that they are manufactured from the intestines of sheep, and in obtaining enough raw material even from these animals the manufacturers at times find difficulty.

"The only string made from the intestines of the feline is that used for surgical purposes — for sewing up wounds. One would be amazed to know that there are millions of musical instrument strings used in North America alone, and just think where the tabbies would be if they had to supply the consumption!

"Another amazing thing is that there are over seven hundred different grades of musical instrument strings. The demand for strings in North America is increasing every year, especially in the South and in Mexico. There are more guitar strings sold in Mexico than any other kind, but through the South the banjo string still holds its own, despite the fact that every year has marked slight but gradual falling off in the demand. The harp is becoming more popular, and there is a good demand for this instrument."

A GLOCKENSPIEL

The city of Graz, in Austria, is indebted to one of its citizens for a work of art such as no other Austrian city, excepting Salzburg, can boast. Gottfried Maurer has arranged a Glockenspiel (set of bells) on his house, Fliegenplatz 4, which, on account of its new mechanism, can be considered among the most complete contrivances of its kind.

The twenty-four bells of the set weigh together 2325 lbs. They are regulated by a tower clock weighing 880 lbs., with two pendula of 440 lbs. each. By an ingenious arrangement of the works the bells, when completed, can play an almost unlimited number of *Lieder*. At present they play the Austrian national anthem, *Das Mailüfterl*, and another popular jingle.

The clockworks regulate at the same time a moon-globe according to the different phases of the moon. When the bells begin to play at eleven o'clock in the forenoon two artistically carved wooden figures dance out of the windows. The quarters of the hour are struck in full chords.

AUTOMATIC INSTRUMENTS

John Philip Sousa, who stated before a committee of the House of Representatives at Washington that the automatic musical instruments are destroying the human voice so far as singing is concerned, said:—

"From observation I am convinced that these machines will have a very ill effect on the progress of music in this country. The facility with which young people can hear music in their homes without any mental or physical effort must certainly reduce the number of amateur students very materially as the years go on. And as the amateur becomes scarcer the professional teacher will necessarily suffer and be forced to seek some other means of livelihood.

"It was stated to me by a professional gentleman of Boston that there are fewer bass singers in New England to-day than ever before. I have noted myself that at summer resorts and on yachting parties the mechanical music maker has generally superseded the human voice and those instruments nearest the people, such as the mandolin, the guitar, and the banjo. Publishers of music for those instruments and manufacturers of them inform me that their sales have decreased very materially as the popularity of the mechanical machines has grown.

THE SYMBOLISM OF WAGNER'S "PARSIFAL"

AGNES M. SCHULENBURG

The human mind loves an enigma, a riddle, a hidden meaning; it likes to say one thing and mean another, it plays with sign and symbol, appears to tell one story which is in reality two, and is delighted if some one else is clever enough to find it out. Fable, myth, and allegory are the result. The ancients began in the earliest times to personify sun, sky, and sea, the winds and trees. Apollo, Neptune, Diana, Pluto, were the deities of these. Fauns, nymphs, and dryads inhabited the water, the fields, the woods, and so fairy tales began. And as ancient lore deals with natural phenomena, and objectively, modern minds body forth spiritual forces. The myth has developed into allegory, and the senses, the will, the conflicts of mind, body, and soul, are symbolized in modern fiction, the drama and the opera. Myth-making was, I believe, an unconscious tendency; allegory is a wholly conscious one.

Child's fancy has turned to the higher forms of imagination, no longer naïve, but charged with a serious purpose, to teach, to uplift, and the lesson is veiled in beauty to make it palatable.

RICHARD WAGNER

This serious purpose is at the root of all Wagner's music dramas, and allegory was the form in which it was clothed. Of all these, the *Niebelungen Ring* and *Parsifal* have been most discussed and much misunderstood, for the reason that their meanings are not apparent to the ordinary mind. Not only was Wagner a great musician, but also a poet, philosopher, and reformer. His religious and political ideas are the basis of the *Ring*, and are developed into a finer, more spiritual significance in *Parsifal*.

To Schopenhauer, Wagner is said to have owed his philosophy; and his regard for animals, his tenderness for all suffering, were Buddhistic. His religious ideals were those of a modern mind to whom form and ritual have no meaning; to whom they are in fact antagonistic. He taught truth, not creed, and church and state of his time were no longer sacred institutions to him since they had become unworthy of the idea they once represented. They were to him but the husks of a dead ideal.

PARSIFAL

For this reason Wagner has been called an Anti-Christian. His own words deny this. Could the spirit of Christianity be more adequately expressed than in *Parsifal?*

In writing an allegory, it is well to use known symbols, and Wagner did this in *Parsifal*, taking, besides, an old tale and putting it to new meaning. Space does not permit me to trace the development of the story from its ancient sources, but I shall treat a few of the symbols which Wagner used to make the meaning of this work clearer.

The Grail has come to mean several things,—a basin or vase, royal blood, and a precious stone. Thus it becomes a chalice of precious stone which gleams with hidden light,—again, the vessel which Jesus used in consecrating bread and wine,—which also caught up His sacred blood after the crucifixion. It was believed that "whoever adored it and gave himself to its service would be endowed with superhuman power. Wherever his destiny led him, whenever he fought for truth and virtue, the Grail would sustain him." Purity and truth were its strengthening powers.

The spear, like Siegfried's swords, was of double agency,—to give aid or to inflict suffering.

Wagner derived *Parsifal* from the Arabic *parseh*, pure, *fal*, foolish. The derivation was found incorrect by later scholars, but the name and its meaning must be retained as Wagner intended.

David Irvine, in his *Parsifal and Wagner's Christianity*, aptly divides the characters of the opera into two divisions: those that must die: Kundry, Klingsor and Titurel; those that will live: Amfortas, Gurnemanz, and Parsifal; and he says that the "negative ones have a more pronounced individuality." This is true of all evil forces. They are destructive, aggressive, chaotic, while *good* is calm, upbuilding, and undisturbing. Perhaps that is why evil *seems* more interesting. Judging by the character of *Parsifal*, this certainly is the case, and Kundry, who presents the con-

flict of right and wrong within herself, has not only our greatest interest, but also our sincerest pity.

In Kundry, Wagner has chosen only two phases of woman's character: in her good moods, sympathy and helpfulness; in her evil ones, her power to tempt man's physical nature. *Das ewig weibliche* in its maligned sense, or the power of sex, she exerts only when under the influence of Klingsor, and then against her higher will. There is much meaning beyond this which we can all read.

In the first act, Gurnemanz says in her defense, "Kundry never lies," a statement thoroughly contradicted in the scene of enchantment, but here she is under the influence of the Prince of Lies, which explains the situation. Destined to wander on the earth until she finds one of pure heart to heal her of her sins, she regains her spiritual nature through Parsifal, but dies in the end. Why this should be is the one problem which no one has solved for me. The triumph of good over the evil within her seems sufficient.

Kundry is the only character in whom one sees the conflict of right with wrong, being supremely one or the other, and the changes in mood are necessarily more dramatic and evident, less subtile and complex, than in real life. Sullen, but helpful in the first act, seductive and vindictive in the second, she enters upon the third cleansed and uplifted, and most effectively is the transition from the second to the third state effected in the stage presentation. After the Castle of Enchantment has been destroyed by Parsifal's waving of the spear in the sign of the cross, — which clearly symbolizes the destruction of the Lie, through Truth, — the curtain goes down on the scene, Kundry lying amid falling leaves. In the third act, Gurnemanz rescues her, frozen and benumbed, from a niche in the mountain side. So comes Spring after the icy sleep of Winter; so comes the renewal of life after death; so come hope and faith and a moral rebirth after sin. In this third act, Kundry has nothing to say beyond a few words at the beginning. Says Irvine, "Contrition does not waste itself in words, it *serves*."

The power of Klingsor over Kundry is an intellectual one, intellect perverted, and while Klingsor typifies evil, it is evil surcharged with knowledge and conceit, of which latter Amfortas is also a victim. It is a truth well known that wickedness is never as dangerous a tool in the hands of ignorance as in those of intelligent wilfulness.

The character of Amfortas is so dependent on that of Titurel that one cannot be treated without the other, and the whole philosophical significance of the opera turns about the meaning of the latter. Wagner once asked, "Have you any idea who my Titurel is? He is the old Wotan, who still lives, although in the grave, and by the grace of the Saviour;" and another authority writes: "Titurel is no other than Wotan in whom the 'will to live' was broken."* In other words: Titurel symbolizes the Orthodox Church whose life is sustained through form and ritual. He does not wish to die and selfishly urges Amfortas to uncover the Grail, though it cause the latter much suffering. So just as ritual, as the forms which clothe the church, must die, so must Titurel.

SCENE FROM "PARSIFAL," ACT II

* Those who are acquainted with the philosophy of the *Niebelungen Ring* will remember that Wotan symbolizes the Orthodox Church and the conventional idea of God and that the "will to live" is Schopenhauer's basis of philosophy, which became also the basis of the *Ring*. Bernard Shaw throws much light on the meaning of the latter in his very original exposition, *The Perfect Wagnerite*.

Amfortas typifies the king or ruler of any state who has fallen from grace through temptation, yet one who has conscience and cannot die, whose heroism consists in lamenting his downfall and who hopes for relief. The life of the people is intimately involved and suffers with him. His spiritual condition affects the church as well as the state and only a moral rebirth through the agency of one pure in spirit can save him and it. And church and state must be cleansed from without by forces young, healthy, and pure, and those capable of understanding and sympathy, that they may be more able to right existing conditions.

In Gurnemanz we have the faith of the people, the simple kindly man who believes; on him depends the life of church and state.

And now Parsifal. His journey through life begins from his mother's arms. Herzeleide (Heartsorrow), the mother, shields him from all knowledge of grief and pain. Knowing the experiences of the father, she tries to keep from him all weapons, but he meets men with arms in the forest and instinctively learns the uses of them. Leaving his mother, though the sorrow at his departure causes her death, he wanders into the world and learns his first lesson in suffering through the death of a swan. Lives there a man, I wonder, who has never killed a bird or learned of its pangs? "Whence art thou?" asks of him Gurnemanz. "I know it not," replies Parsifal. "Who is thy father?" "I know it not." "My name? I had several, but I no longer remember." Do not these queries remind one forcibly of a quatrain of Omar's? The suffering of the king awakens in him but wonder, not understanding, and he must journey farther into the Garden of Temptation.

The advances of the flower maidens he meets with naïve pleasure, and the grosser blandishments of Kundry receive but innocent response. With her kiss, given in the name of his mother, the temptation of the king becomes apparent to him, and a deep and spiritual understanding of the power of sin rouses the desire to heal and uplift. The threats of Klingsor and Kundry have no terrors for him, nor can they harm him. With the spear he returns to Montsalvat, heals the wounds of the king, and becomes the keeper of the Grail.

The story of *Parsifal* is so lucidly symbolic that it needs little explanation on my part. Parsifal was, however, an ideal man for whom there was no real temptation. What Kundry's kiss did was to awaken his imagination and to give him, through sympathy a conception of sin.

That the temptation in this music drama is only the temptation of sex, has caused much criticism of Wagner, and since Parsifal was the "hero of renunciation as Tristan was the hero of passion," many believe that the author preached celibacy. I think that this should be taken no more literally than the rest of the allegory. *Parsifal* is a spiritual and psychological drama, rather than a physical one, and there is a deeper meaning evident when we remember that the Grail stands for the Ideal, that ideal Truth: Montsalvat, the ideal church, Parsifal, therefore, in his full development, the head of the church or the Ideal Leader. We may call him by any name we wish. And the attributes of this leader are written constantly between the lines of this mystical allegory, and the trinity it teaches is the most powerful ever preached in the interest of humanity,—Pity, Compassion, and Redemption.

SCENE FROM "PARSIFAL" ACT II

THE DEVELOPMENT OF MUSIC

CAMILLE SAINT-SAËNS

As we grow older, we have the feeling that we are slowly mounting a tower from which our glance embraces an ever widening horizon. At the same time we lose our interest in nearer things. We try to encompass the whole of facts, and recognize in them the parts of a monster chain, factors of an ever-growing development. However much the art of the present may occupy us, the whole of the art interests us still more. We recognize that in its history, as in that of mankind, the law that like causes give birth to like effects holds good. Cast iron laws govern the development of man in all its manifestations. According to appearances, it is the geniuses who lead the march and make revolutions, but great epoch-making changes occur only under conditions that come at the right moment. How often, in the exact sciences, is the same discovery made at the same time by different investigators who do not know each other? Speaking of art, and especially music, the reform which Richard Wagner occasioned was only so successful because it came at the moment when the world and the art were ready for it.

When I was a lad of fifteen, the operas of the day angered me beyond measure—operas cast in one and the same

CAMILLE SAINT-SAËNS

pattern, consisting of "Numbers," with a play as a necessary background. I dreamed of music dramas, which were to be divided, not into numbers, but scenes, and these scenes were to be in every detail of the music the fitting and exact expression of the multitudinous subtleties of the words of the play. At that very time Wagner wrote his *Lohengrin*.

The opposition which meets every new phase of an art does not, however, stop its march. It only hinders the development, and necessarily effects some good, for without it the evolution of the art would proceed too rapidly; new forms would be deserted too quickly and could not be worked out in fullest detail. They would remain only half-opened flowers.

The creating artist never knows that he himself is the source of his own development. It is indeed necessary that he should not know this — the belief in the absolute freedom of his creative power, in the force of his genius, is a necessity to him. He obeys an instinct which is stronger than his will and which he thinks to be his will, while the artist who lacks this instinct and has only the will can never become a creator. But in spite of his unconsciousness and the masterfulness of his personality, the artist is always more or less the creature of a tendency which bears him onward and carries him away with itself. Hence the epochs — the well-known "schools" of art.

In architecture we see the gradual transformation of the Gothic style into the ridiculous over-ornamentation of the Renaissance, which achieved its full development in the fifteenth century. The artists of this epoch doubtless looked down upon those of the pure Gothic period. To speak of a time nearer our own, contrast the abortive art of the Louis XV style with the severe simplicity of the Louis XIII and Louis XIV. To-day it is the Gothic and Louis XIII and XIV styles which are considered classic.

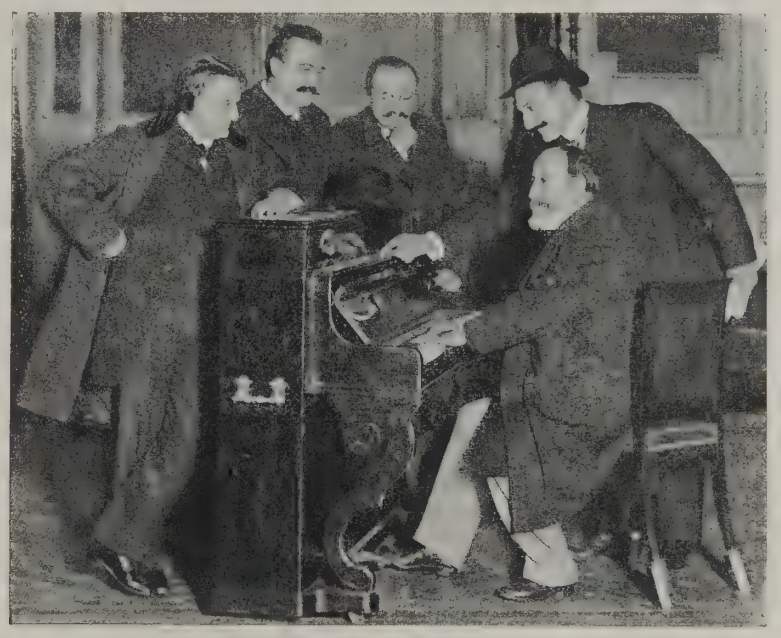
To be sure, a reaction which leads an art back to the normal, or near it, always follows these exaggerations. Victor Hugo says that the line of man's development is in the form of a spiral.

Music, also, has undergone these vicissitudes and reactions.

When the tentative attempts of the Middle Ages to form a diaphonic art were given up, composers were dazzled by the beauty of a fully developed polyphony, the outgrowth of harmony and counterpoint combined. Melody was considered vulgar and was banished from all forms of music, even from the madrigal. For a whole century composers used the art of *contrap unctus floridus*, or something of an indecisive tone-color allied to it — a sort of compromise between the modes of the ancient Greek music and our own scales — an immature art, but ennobled by the beauty of its form, and still admired by us for that. In the seventeenth century men grew tired of this forced style. Melody was once more enthroned, and soon became a despot. Polyphony was cast aside — men bowed only to melody. Abortive attempts were made from time to time to reintroduce the polyphonic style, but succeeded only in so far as the indication of the harmonies and the direction to use them *ad libitum* on the clavecin or organ.

Gradually polyphony glides into its proper place, and under the magic pen of Sebastian Bach attains such a high development that a new reaction begins. With the return of Philipp Emanuel Bach to the Italian style a new order of things is introduced. Haydn, Mozart, and Beethoven appear in the world of music and may be compared to Corneille, Molière, and Racine in the world of French literature. Although the likeness is not identical, in both cases the beauty of the diction and the purity of the style, that attribute of everything great in art, must be admired.

The most remarkable phenomenon of modern art is the emancipation of instrumental music. From being



SAINT-SAËNS AT A REHEARSAL

merely an accompaniment to the dance, it has developed, especially by means of variety of color, into an art by itself. Under the influence of Weber and Berlioz especially, the orchestra became a wonderful palette, so that gradually interest in color superseded interest in form. Now, even the voice is subservient to the orchestra. This state of affairs means a demolition of the very foundation of music of the past four centuries. It is veritable anarchy. We are returning to nonsense. If the teachings of the past are not deceptive, a reaction is near. What will it be? No one can say; but let us hope that a mighty genius will conjure a sane order out of this chaos,—an order in which form and color shall be sister beauties.

HOW A SMALL BOY PRACTICES

Written by Marion Taylor (aged 13 years).
Submitted by Lula D. Hay, Jacksonville, Illinois.

First comes the preparation. He goes down cellar, tips over the barrel, and gets a nice big red apple; stops at the pantry for a half-dozen or more ginger snaps and brings them all to the piano. The apple is placed at the very bass end of the piano, while the ginger snaps are arranged in a row at the other end. Then upstairs he goes for the alarm clock, which he puts in front of him. He is to practice fifteen minutes. The preparations are not complete without Pete (Pete is the cat), who is soon sleeping in a chair by the boy's side. Then he gets the music and puts it before him.

A half of a cookie disappears. A scale is played with one hand.

Intermission.

The remainder of the cookie is eaten and a bite taken out of the rosiest side of the apple.

A scale is played with the *other* hand. (A look at the clock.)

Intermission.

He takes up Pete, and tries to make him eat a ginger snap, but as he won't do that, he is put on top of the boy's head, though Pete soon jumps down into the chair. Three measures of one piece are played.

Intermission.

A bite is taken out of the apple.

Looks at the clock.

Pete is again disturbed and is made to play a scale. This is kept up until the cat absolutely rebels, and then there goes a streak of gray through the parlor, out of the door, with a streak of boy close behind it. Round and round the house they go, till Pete scrambles up a tree.

The would-be musician comes in, looks at the clock, and says: "Oh, I've practiced ten minutes," sits down and takes another ginger snap. The first bell rings for school: "There, that's fifteen minutes; — no, it's a half hour that I've practiced;" and off he goes.

CHARLES WELS

Charles Wels, among the prominent organists of New York who died recently, was born at Prague, Bohemia, in 1825. In his youth he showed great talent for music and had as his teacher Tomaschek, acknowledged by many to be one of the leading piano teachers of that time. Mr. Wels had among his fellow-students such well-known musicians as Hanslick, Lebert, Goldschmidt, Dreyschock, Schulhoff, and Kuhe. In Prague it is known that Wels often played for Berlioz, Wilmers, Thalberg, and Liszt. His first composition was published there at the age of eleven.

After completing his studies, Mr. Wels went to Leipsic. It was here that Moscheles accepted two of his compositions dedicated to him. As a concert pianist he made successful tours through Germany and Poland, followed by a few years in Dresden with his old friends Liszt, Wagner, Robert Schumann, Emil Nauman, and Frederick Wieck.

In 1849 Mr. Wels came to New York and immediately became one of the leading pianists. He became a teacher here, and was appreciated and befriended by such well-known musicians as H. C. Watson, Henry C. Finn, Theodore Thomas, Scharfenberg, Theodore Eisenfeld, Maurice Strakosch, Richard Hoffmann, George F. Bristow, and H. A. Wollenhaupt.

Charles Wels became organist of St. Stephens in 1852. It was here that he founded its national reputation for Roman Catholic classical music in America. The performance in this church of the religious masterpieces of composers from Haydn's time to that of Verdi, attracted hundreds of people of many faiths from many parts of the country. It was at St. Stephens that the requiem for Louis Moreau Gottschalk, was heard. Many famous Italian singers visiting this country, as well as Brignoli, Ysidora Clarke and Isabella McCullough, were accustomed to join in the song service.

Among the one hundred and twenty-five compositions published by Mr. Wels are five masses, the last of which is said to be his best work, though it was written in his seventy-second year. He wrote church music, concert works, and chamber music, also several compositions for educational purposes. He bore the enviable reputation of never being without an organ position for fifty years. He never missed a service nor was he ever known to be late.

By all who knew Mr. Wels as a pianist, organist and choirmaster he was greatly admired and beloved. As a man, musician and composer was he known to continually strive for the advancement of music in this country and for the elevation of his art.

NOTES

The first presentation of Smetana's *Verkaufte Braut* will be heard in French next October in the Brussels Monnaitheater.

* *

There will take place in Berlin next October under the guidance of Count Hochberg and the music leadership of Jos. Joachim, Siegfried Ochs and Georg Schumann a Handel festival lasting three days. The German Crown Prince has agreed to be the patron.

* *

The City Council of Leipsic has voted the sum of $3750 for a statue of Bach to be erected in front of the Thomaskirche.

* *

It is said that Edouard Colonne is planning a series of Wagner-Berlioz Festivals in the larger German cities next fall. He will either take his own orchestra, or, in case that would prove impracticable, use one of the prominent German orchestras.

* *

Anton Beer-Wallbrunn, of Munich, has composed the music for a new musical comedy by Georg Fuchs, entitled *Don Quixote*, which will be produced next season in Berlin. An excerpt from the third act, *Don Quixote's Ride*, was played at a concert in Nürnberg not long ago.

* *

Humperdinck's three-act comic opera, *Die Heirat wider Willen*, was received with great favor at the Hoftheater in Munich. Felix Mottl conducted, and Baptist Hoffmann of the Berlin Royal Opera sang the principal baritone röle.

Not only have nearly all the students now in the Institute of Musical Art, New York, reenrolled for next year, but applications from a large number of persons in addition have been received. As the accommodations of the Institute are limited to about six hundred, it is possible that only a small percentage of these new applicants can be admitted. It is hoped, however, that next year the school can be enlarged so as to extend its opportunities to a larger number of pupils.

* *

The Saengerbund of the Pacific Northwest will hold its next meeting in Spokane one year from the present summer. This organization includes all the German singing societies of Oregon, Washington, Idaho, and Western Montana. The Spokane Singing Society Harmonie already is commencing its preparations for the entertainment of the German singers. The exact date has not yet been set. The association meets once every two years, and held its last meeting at Portland, during the Lewis and Clark Fair.

* *

There were three interesting musical programs given at the recent commencement exercises of the Virginia Female Institute, Staunton, Va. F. R. Webb is the musical director.

* *

The program of the commencement recital of the Conservatory of Music, University of Wooster, Ohio, June 11, included numbers by Beethoven, Hawley, Thomas, Wagner, Schubert, Rubinstein, Chopin, Moszkowski, and others.

* *

The program presented at the annual concert of the American Conservatory of Chicago, Ill., June 15, included Mendelssohn's *Ruy Blas* overture, Mendelssohn's Concerto for Violin, the Liszt E♭ Concerto for Piano, also Weber's *Concert Piece*, Op. 79, and the Saint-Saëns C Minor Piano Concerto, besides several vocal numbers. Adolf Weidig conducted.

* *

The Clef Club of Redlands, Cal., has completed its third season, which was said to have been the most successful in its history. Harry R. Patty is the director.

* *

An especially enjoyable program was that given at the recent commencement concert of the Drew Theological Seminary Chorus, Madison, N. J., under direction of Charles A. Gilbert, assisted by Henry Weston Smith, organist; Walter V. Holt, reader; and Bertha Orndorff, soprano.

* *

E. C. Marshall is the director of the Northwestern State Normal School of Alva, Oklahoma, and it is largely through his efforts that the recent musical festival in that city was one of the leading events in that section. The Choral Club gave Cowen's *Rose Maiden* and also an orchestral concert under direction of F. N. Innes, the well-known conductor and bandmaster. Assembly Hall, where the festival was held, is one of the best auditoriums in the West, and the building is said to have cost over $150,000. This is certainly a remarkable evidence of artistic growth, as the city of Alva is only about fifteen years old.

* *

The first Competitive Musical Festival of Macon, Ga., was held in the Macon Auditorium, May 16–17, and consisted of a music reading contest and also of one between violin students under seventeen years of age. The results proved highly satisfactory, and much worthy musical talent was displayed by the various youthful competitors.

* *

The first public recital by Dr. Hodge's choral class, of Battville, Ala., was given under his direction at the court house of that city, June 26.

COMPOSERS' EVENINGS

T. L. RICKABY

I noticed in a recent magazine the outline of a series of special programs — one of Haydn, another of Mozart, and so forth. They were authoritative, valuable, and to the utmost, representative. The writers were historians, artists, and experienced teachers, and thus were pre-eminently fitted for an undertaking of this kind; but having to confine themselves to the piano works of the composers chosen, they were handicapped more or less, and their articles failed to the extent of not being of general utility. The programs suggested were admirably fitted for the conservatory, the college, or the select circle of the eminent city teacher. The various numbers consisted mostly of concertos (requiring two pianos, an effectual obstacle to performance in ninety-nine towns out of every hundred), and sonatas, and there could be no question as to their value. But to get the right amount of good from them would require a concentration which could not be found outside of a small class of very earnest music students. For the average audience it would in all probability be a tiresome matter to listen to any one of the programs outlined, which to fulfil their proper mission must have advanced and musically cultivated listeners, and the majority of us are not so fortunately situated. We are slowly — and let us hope, surely — forming our audiences; literally creating them by the slow process of individual instruction and occasional concert giving. It is my intention in this article to offer a few suggestions for special programs, which, while they do not carry with them the authority of the writers alluded to above, will prove a pleasure to any audience, and will be a source of instruction and inspiration to all those pupils who "have ears to hear."

I do not consider it advisable to give programs of American or Russian works — simply because they are American or Russian. If a special program is to be of real service to pupils, or to a community, it must give the works of a representative, — an epoch marking, writer. And even then some discrimination must be used. I would certainly pause before giving a Grieg, or Brahms, or Tschaikowsky evening in Podunk — or anywhere else outside of a strictly and undeniably musical centre. I would also reserve Schumann, Liszt, and Chopin for a season of musical revival or development, — which may come after many years of work. I might say at this point that personally I have grave doubts as to the utility or even desirability of a Liszt or Chopin program. I am with this matter something like the "poet" who was writing about the purple cow. He had never seen one, and never wished to see one. This narrows the choice of subjects somewhat, but we still have Bach, Handel, Haydn, Mozart, Beethoven, Schubert, and Mendelssohn. What a wealth of material this galaxy represents! A positive embarrassment of riches. Music progresses with everything else. We must now bow to Brahms, Tschaikowsky, and Grieg, as our new masters, but as teachers I really believe we can reach the latter only through the former.

Why give a concert devoted to the life and work of any one man? In the first place it is necessary to know intimately the life and circumstances of all great men in music, art, or literature, so as to understand more completely the legacies they bequeathed to the world. There is another reason, and, as Carlyle has put it so much better than any one else could, I will quote him at this point: "As I take it, the history of what man has accomplished in this world is at bottom the history of the great men who have worked here. . . . Great men taken up in any way are profitable company. We cannot look, however imperfectly, upon a great man without gaining something by him. He is the living light fountain which it is good and pleasant to be near. The light which enlightens, which has enlightened the darkness of the world, and this not as a kindled lamp only, but rather as a natural luminary shining by the gift of Heaven; a flowing light fountain as I may say of native or original insight, of manhood and heroic nobleness, — in whose radiance all souls feel that it is well with them."

Now it unfortunately happens that, as a rule, musicians are not classed with the great men. In Carlyle's *Heroes and Hero Worship*, and also in Emerson's *Representative Men*, those chosen to stand for the great ones of the earth are the prophet, the priest, the seer, the poet, the writer, the warrior, and the king. Of course, it might be said in this case the musician and the poet were identical. There is nothing to indicate this, and it is more than likely that Carlyle (whose opinion was that "musicians are a wind-baggy sort of people") never intended that they should be considered great men. Now we know better, and so it were well that teachers should from time to time focus the eyes of their public on some bright particular star of the musical firmament, and let them gaze for a few moments on that. Those tone poets whom the world of art has honored by the term "great" were truly great in all that goes to make men so. They were literally "lights which enlightened the darkness of the world," — "natural luminaries shining by the gift of Heaven," "flowing light fountains of original insight and of manhood and heroic nobleness." Our musicians were creators, if not divinities; they were prophets composing for future generations rather than their own. They were warriors, but their weapons were "sweet sounds" rather than lead and cold steel. They were conquerors, but their victories were and continued to be bloodless, because over the hearts and souls of men rather than their bodies; and who will deny that they were poets, and philosophers, and monarchs whose subjects are legion and whose kingdom is unbounded by language, or tribe, or time?

HOUSE IN WHICH BACH WAS BORN

THE BACH MUSEUM AT EISENACH

On the first of January, 1906, the new Bach Society of Leipsic was enabled to take possession of the birthplace of Johann Sebastian Bach, thanks to the liberality and self-sacrifice of many donators. Standing as it does near Marien and Annatale streets, among the plain buildings, it makes even to-day a favorable impression, though the peasant houses were built very soon after the Thirty Years' War. The few small changes which have been made during the last few decades can be easily remedied by the aid of old pictures. Also the pretty garden behind the house offers still the agreeable appearance of an old-fashioned peasant garden of that modest time.

On the first of April, 1906, the rooms, once occupied by the Eisenach musician, Ambrosius Bach, the father of Johann Sebastian, were vacated by the last tenant. The interior has still the same appearance. The plain chests and closets of and preceding the time of Johann Sebastian Bach have been preserved as the last possession of the eighty-seven-year-old lady who gladly cleared the platform before the window which Mrs. Elizabeth Bach, born Lämmerhirt, Sebastian's mother, formerly occupied. The living room on the upper floor, with the small dormer windows facing the house door with the old-fashioned knocker, and Sebastian's roof with steps which lead to the low sleeping rooms, are kept in the old way, and, at the most, need but slight repairs. The living rooms will, in this manner, assume their former appearance.

As soon as the rest of the rooms of this floor are free from renovations of later years, the large four-windowed instruction room of Ambrosius Bach will be well adapted for a museum, while on either side of this room there will be a room for the library. The entrance hall for all these rooms will likewise serve for the exhibition of the art subjects of the Bach Society. The ground floor, uninhabited at Bach's time, except for being fitted out for the needs and rented by the licensed Brewery Inn, will be rented by the present tenant, Prof. Rheinhold Tappert, who retains the care of the house.

The principal cost of the repairs will go toward the protection of the house against the weather, as well as toward making the large second story room water tight. By fall the house will have its living rooms and exhibition rooms in good condition. It will depend upon how well the work is carried on whether or not the house will be placed in an inhabitable condition again, and the exhibition rooms filled with all that which will restore, secure, and honor the memory of Johann Sebastian and the Thüringer Bachs.

In order to attain this end, the new Bach Society appeals to every one who is in a position to cooperate in this cause in order that there may be (early in 1907) a dedication of the house, with an enthusiastic festival in Eisenach in honor of the great master.

The most welcome gifts are: —

I. The works of Johann Sebastian Bach.
   (1) Manuscripts, facsimiles, and copies.
   (2) Published prints of all kinds.
II. Letters and documents of Johann Sebastian Bach.
III. Works (biographies) about Johann Sebastian Bach.
IV. Original busts, pictures, and copies of Johann Sebastian Bach.
V. Pictures of municipal buildings, churches, organs.
VI. Musical instruments such as Bach used in his works.
VII. Works, manuscripts, publications, statuary and pictures of the Bach family, of teachers, of predecessors, contemporaries, pupils, and promoters of his works.
VIII. Thüringer court-house from Bach's boyhood, about 1685–1695 and earlier.
IX. Contributions for the maintenance and management of the Bach house, and a fund for the enlargement and caring for the Bach Museum.

The management of the Bach Museum is composed of the following members: Dr. G. Bornemann, Eisenach; Dr. O. V. Hase, Leipsic; Dr. Joseph Joachim, Berlin; Prof. Georg Schumann, Berlin; Fritz Steinbach, Cologne.

For further information address communications to the Eisenach member of the committee, Dr. G. Bornemann, Warthburgehaussee, nr. 9, or to Messrs. Breitkopf and Härtel in Leipsic, Nürnbergerstrasse, nr. 36.

VINCENT D'INDY

EDWARD BURLINGAME HILL

The phrase, "French music," no longer calls up the names of Gounod, Bizet, Massenet, and Saint-Saëns, as it once did. While Gounod and Bizet have their individual niches from which nothing can oust them, we admire Massenet chiefly for his graceful fertility in opera that is half French, half Italian, and we respect Saint-Saëns as the valiant architect of much music in a semi-classic style. It is the so-called younger school (which contains artists of maturity though their hearts and minds are young) that is maintaining France in the tide of musical progress, and it is through them that French music of to-day will pass down to history. In a somewhat heterogeneous group that contains Gabriel Fauré, Henri Duparc, Pierre de Breville, A. de Castillon, Charles Bordes, Gabriel Pierné, Guy Ropartz, Gustave Charpentier, Paul Dukas, Claude Debussy, and others (one is tempted to include Ernest Chausson, who died in 1899), Vincent d'Indy is incontestably the leader among his contemporaries by virtue of the clear superiority of his traits, artistic, intellectual, and human.

His preeminent qualifications for this position are, first, the intrinsic importance and inherent originality of his creative work; second, the acuteness of his esthetic perceptions and his unusual gift for imparting his vast accumulation of technical and artistic skill; third, his zeal for maintaining the traditions of French music, and more specifically for furthering the ideals for which César Franck stood, his work as an editor and restorer and his services generally as propagandist.

Paul Marie Vincent d'Indy was born at Paris, March 27, 1852, of an aristocratic and wealthy family. D'Indy was brought up by his grandmother, Mme. Theodore d'Indy, who nurtured his growing fondness for music at classical sources only. When he was ten years old he began the study of the piano under the famous Conservatory teacher Louis Dièmer, and harmony with Henri Lavignac, also a Conservatory teacher. Two later influences of significance were his acquaintance, in 1867, when he was fifteen, with Berlioz's remarkable and inspiring treatise on instrumentation, and, two years later, his initiation into the Wagnerian principles and practice of art under the guidance of Henri Duparc, himself a pupil of César Franck.

In spite of military service during the Franco-Prussian War, d'Indy found time to meditate an opera text after Victor Hugo's *Les Burgraves*. In 1872 (under the advice of Duparc) he became a pupil of César Franck, first at the Conservatory, later at his house, in his private class. D'Indy apprenticeship to Franck was the most important event in his student period. He not only learned where he stood technically, he absorbed Franck's remarkable and thorough instruction in everything that pertained to the technique of composition; he became permeated with that spirit of devotion to the cause of a pure symphonic style and to the continuance of specifically French traditions which was so entirely the essence of Franck's mission. Indeed, Franck's unselfish concentration on high and severe standards, irrespective of applause, or hope of self-advancement, impressed d'Indy so powerfully that this example has become the moving influence of his life.

Shortly after becoming a pupil of Franck, d'Indy made two musical pilgrimages, one to Brahms (in consequence of the publication of the German Requiem) which was virtually fruitless, the other to Liszt, with whom he studied for a short time. Later d'Indy took the position of second drummer and chorus master, under Colonne, in order to become versed in the practicalities of orchestral procedure. In 1875 an overture, *Les Piccolomini* (now a part of the Wallenstein trilogy), was first played at a Pasdeloup concert. In 1880 came *La Mort de Wallenstein*, the third in the trilogy of symphonic poems after Schiller. In 1882 a one-act comedy *Attendez-moi sous l'Armie*, was given at the Opéra-Comique. In 1884 an orchestral piece, *Sangefleurie*, founded on a French legend, was given. In 1885 d'Indy won the prizes offered by the city of Paris, with *The Song of the Bell*, text by himself, after Schiller, for solos, chorus, and orchestra. In 1887 d'Indy became chorus master of the Lamoureux concerts and prepared the choruses for a production of *Lohengrin*.

In 1888 the young composer went to the Wagner festival at Bayreuth. D'Indy was one of the founders, with Franck, Saint-Saëns, Gabriel Fauré, De Castillon, Chausson, and Duparc, of the National Society of Music, an important institution, and since César Franck's death he has been its president. In 1893, at Government request, he was ready to reorganize the Conservatory, but the project was defeated. Although offered a professorship at the Conservatory in 1895, he refused in order to be free. In the following year he utilized this freedom to establish a music school with Alexander Guilmant, the organist, and Charles Bordès, the conductor of the remarkable chorus, "The Singers of St. Gervais." This school, called the Schola Cantorum, embodies more fundamental principles of teaching and encourages more lofty standards of art.

In 1897 d'Indy's opera *Fervaal* was produced at the Théatre de la Monnaie in Brussels. Next year it was given at the Opéra-Comique in Paris. In 1903 his opera *The Stranger* was given at Brussels, with subsequent performances in Paris. In the interval between these operas d'Indy produced some important orchestral works, such as his variations entitled *Istar*, incidental music to Catulle Mendès's drama *Medée*, from which an orchestral suite has been arranged. He also brought forward a masterly string quartet, his second. During the last few years a second symphony and a sonata for piano and violin are the most noteworthy of his works. At present d'Indy's interests are divided between composition and his manifold interests at the Schola Cantorum, including his duties as director, as teacher of composition, and as organizer of concerts within the Schola and throughout France.

As a musician, d'Indy has gone through formative influences that were healthy and natural. On one side he has been deeply affected by the German composers Bach, Schumann, Wagner, and Brahms; on the other, he has always remained faithful to César Franck and his essentially French methods of expression. As a consequence, d'Indy retains something of German seriousness of substance, while his manner of musical speech is unmistakably French. In the meantime d'Indy has developed a personal idiom of singular force, poetry and sense of beauty, in which scarcely any external sources can be traced. Undoubtedly d'Indy's most important works are his operas *Fervaal* and *The Stranger*, for both of which he has written the text as well as the music. To these might also be added the far earlier, prize-winning *Song of the Bell*, although it represents d'Indy at a much less advanced stage of development. *Fervaal* is obviously Wagnerian in inspiration; the subject, individual scenes, and characters remind one strangely of one or the other of Wagner's operas. Still, in spite of this evident patterning after Wagner, there is so much in the musical treatment of the subject that is strongly French in the clearness and logic of his harmony, in the lucidity with which the drama unfolds. Even the sound of the orchestra is so French in its finesse, its euphonious yet forceful instrumental combinations, that the Wagnerian sources become merely a side issue. In its essence *Fervaal* could have emanated only from a strong and fastidious personality like d'Indy's. It is a drama of great emotions, of vigorous action; a conflict between old and new religions, in which love arrays itself through tragedy on the side of the new religion. One comes away from *Fervaal* elevated, exalted by the depth of sentiment and the purity of its ideals. From the strictly musical standpoint, *Fervaal* is not only full of a high order of beauty and dramatic expression, but its technical achievement is marvelous.

The Stranger is a drama of psychological development — the action is comparatively slight. The Stranger, a figure half realistic, half mythical, spends his life in serving others, only to suffer contempt and scorn. He loves Vita, a young girl of the fishing village where the scene is laid. She is betrothed, but comes to sympathize with the lonely, misunderstood Stranger; ultimately loves him, casts off her betrothed, and finally sacrifices herself with the Stranger in an effort to save a ship in distress. Both drama and music are absolutely devoid of any suggestion of Wagnerian influence. The music especially, from beginning to end, is in d'Indy's most individual style; it is distinguished by unusual directness and conciseness, by simplicity of means with which its dramatic efforts are attained. In this economy of resource and mastery of every shade of expression, *The Stranger* is unalterably French.

VINCENT D'INDY

D'Indy's two symphonies (excluding an early symphony, *Jean Hunyade*, Op. 5, which the composer has dropped from the list of his works), one *On a Mountain Air*, the other without superscription, are in direct accordance with his training and aspirations. They are the natural outcome of a pupil of César Franck, who is endeavoring to preserve the traditions passed on to him by his master. Nevertheless, in the first d'Indy combines two important predilections which deserve later mention, one, the use of folk songs as symphonic material, the other, artistic receptivity towards nature. The second symphony is the ripest expression of his individuality and exhibits not only an extraordinary command of technique, but many new harmonic combinations, expressive themes, variety and depth of sentiment. His other orchestral works, including a symphonic poem, *The Enchanted Forest*, *Wallenstein*, a trilogy of poems after Schiller's drama, the legend *Sange Fleurie*, the variations *Istar*, the suite *Medée* and the variations on a choral for saxophone and orchestra show his gradual evolution as a master of musical style and a virtuoso in the use of the orchestra. D'Indy's chamber music, of which the two string quartets, the trio for clarinet, 'cello, and piano, the *Songs and Dances* for

wind instruments and the sonata for piano and violin are the ripest examples, show consistent achievement in carrying on the Franckian tradition of chamber music while giving free play to individuality. They are highly original in treatment of theme and form, and expressive of high idealistic beauty. Space will not permit mention of d'Indy's church music, cantatas, songs or piano music, but reference must be made to the recurrence in them of the trait before mentioned — impressionability to nature.

In one of his earliest orchestral works, *The Enchanted Forest*, there is the mystery of deep woods, although the musical representation suggests occasionally the methods of Weber or César Franck in the *Wild Huntsman*. The early *Poem of the Mountains* and the *Pictures of Travel* for piano are tributes to this same sensibility. In the symphony *On a Mountain Air*, the "outdoor feeling" is even more clearly indicated. In *Fervaal*, a Druidical opera, whose scene is laid in the Cevennais region, the element of nature is perhaps the strongest trait in determining its specifically French character. In an article on *French Music* Henri Gauthier-Villars, the eminent critic, says of *Fervaal:* "If chance takes you to the Rhone Valley, leave the train or boat at Montelimar, cross the river and ascend the slopes which lead to the small peaks of black basalt and the ruined towers of the old chateau of Rochmaure. Then climb to the neighboring summit of the ancient volcano of Chenavari. There you will see the majestic unfurling of the river at your feet, then far off the august outline of the grandes Alpes, and turning around behold a labyrinthian tangle of sharp and rounding peaks with intercrossing valleys. It is the old land of a thousand peaks, where the signal fires were lighted, calling the clans to combat; it is Cravann, the Cevenola Gaul. And if excess of intellectuality has not deprived you of the power of admiration . . . you will feel and understand why *Fervaal* has been conceived in this country; and could not have been elsewhere. You will realize that this musical poem and its general treatment is as thoroughly Gallic and of the Cevenola region as the *Ring of the Nibelungs* is definitely German and Rheinish.

D'Indy's great distinction, both as a musician and as a man, consists in his innate aristocracy — an aristocracy of mind as well as of character. His marvelous perception on all problems relating to esthetics, to matters of technique, his acute mental grasp of the entire history of art development (of literature, sculpture, and painting, as well as of music),the power of his own instinct as a creative artist would lose an important element in their value were they not balanced by an equally unusual and penetrating love of humanity, an ardent desire to make his great treasury of knowledge accessible to others. D'Indy is firm in his belief that the composer's work is far from done when he completes his composition; he must also be the fervent apostle of musical truth as he sees it; he must labor unsparingly to help others to acquire the indispensable training in technique; he must sacrifice himself unceasingly in order that others may benefit by this lavish giving of himself. This broad conception of the moral obligation of the artist is one of d'Indy's dominant traits, one which is directly accountable for the commanding influences which he exerts upon French music of to-day.

To give an example of the personal eloquence with which he expresses himself on this phase of the artist's duty, a quotation from his *Treatise on Composition* is of singularly illustrative force. "'And now abideth with you Faith, Hope, and Charity, these three; but the greatest of these is Charity.'" I. Corinthians, 13:4. "Above all, the artist must have Faith — faith in God, faith in Art; for it is Faith that incites one to learn, and by this knowledge to rise higher and higher on the Ladder of Being, towards its end, which is God. The artist must practice Hope; for he expects nothing from the present; he knows that his mission is to serve and to contribute by his works to the instruction and to the artistic life of those generations which come after him.

"The artist must be actuated by sublime charity, 'the greatest of these'; his purpose is to admire generously, for the one principle of all creation is great, divine, and charitable love."

"From the call of the clans proclaimed by the patriarch, a folk song as old as the rocks of Cravann, to the heroic ascension of the ideal (and real) mountain of Iserlich (the close of the opera), there is not an essential moment of dramatic action, no primal thread of the musical woof of *Fervaal*, which is not as thoroughly of the Cavenole earth as the giant chestnut-trees which plunge their roots into the soil."

The Stranger also, while less definitely of one region, has the indisputable feeling of the French coast and the restlessness of the sea. That this sensitiveness towards the moods of nature is inseparable from d'Indy's musical personality may still further be realized from the character of his latest composition for orchestra, *Summer Hours on the Mountain*, in three movements. First, *Morning*, a sunrise on distant glaciers; then *Afternoon under the Pines*, in mingled sun and shadow, while the sounds of a fête rise spasmodically to the solitary dreamer; finally, *Evening*, picturing a joyous return to shelter amidst the last rays of the setting sun, the slow nightfall and the return of the initial theme.

It is difficult to praise sufficiently the work of M. d'Indy as a teacher. The earnest and devoted pupil of César Franck, whom he admired and loved not only as a teacher, but for the purity and unselfishness of his character as a man, he has done everything within his power to spread Franck's musical gospel. He has written sympathetic and discriminating articles on César Franck, his works, teaching, and character; he has promoted performances of his works, but perhaps the greatest tribute to his memory is the foundation of the Schola Cantorum. The purpose of the Schola is to present César Franck's principles in art, to perpetuate his theories, and to continue the spirit of his mission toward French music. It aims to cultivate its students in the highest sense, to arouse in them the moral purpose of art, not merely to provide them almost automatically with a superficial knowledge of technique and then cast them off.

This insistence on esthetic development is the keynote of d'Indy's *Treatise on Composition*, of which the first volume only has appeared. At the outset its definitions are not only novel but illuminating, and the thoroughness with which the more elementary topics of rhythm, the growth of harmony, and later the early forms of composition, such as the motet, are discussed show a teacher of superb intellectual equipment for his task, whose perception of artistic truth is of priceless import to the present generation. The whole tendency of this treatise is illustrative also of that of the Schola Cantorum, namely, to exert a wholesome counter influence on the materialistic turn of modern art, to cultivate a sense of proportion and a proper appreciation of the masterpieces of the past.

That d'Indy should also be a musical archæologist is only a natural sequence of the foundation of the Schola. He has prepared editions of Rameau, Destouches, and Salamon de Rossi. During the rehearsals of *The Stranger* at Brussels, he was working at a reconstruction of Monteverde's *Orfeo*, which has since been given at the Schola Cantorum. He has also discovered much hitherto unknown Italian church music dating from the fifteenth to the seventeenth centuries. He is also an admirer of folk music, of which he has published two collections, one in collaboration with M. Julien Tiersot, the other ninety folk songs of the Cevennais which he has harmonized. In confirmation of d'Indy's interest in folk song it is only necessary to recall the admirable effect produced by folk themes in *Fervaal* and *The Stranger*. The symphony *On a Mountain Air* is built up of ingenious transformations of one pastoral melody. There is also a fantasy for oboe and orchestra on popular themes.

In analyzing M. d'Indy's mental and intellectual traits, there is somewhat the same discrepancy to be explained as in connection with his musical development. Influenced at first by German musicians, he also seemed to feel an affinity for the German poets Goethe, Schiller, and Uhland. Yet in his later compositions, their plan and technical handling, in their emotional contents, and above all in his practice of life he shows much more spiritual kinship with César Franck. In spite of his appreciation for German literature, he is inevitably and fundamentally French in his conception of the relation of art to life. His literary gifts are manifest in the lucidity of style and vividness of depiction in which he sets César Franck before us. His *Treatise on Composition* is masterly in clearness and force of exposition. The texts for *Fervaal* and *The Stranger* are imaginative, full of color, and well adapted for musical setting.

This extract, originally part of an address to the pupils of the Schola Cantorum, indicates the lofty attitude which d'Indy holds towards his art, an exalted standard which in its essence is truly religious, and as such cannot but elevate all those who come within its ardent influence. Indeed, the symbolic intent of *The Stranger* seems so clearly autobiographic that one is tempted to infer that, whether consciously or unconsciously, d'Indy has embodied in this opera the unselfish strivings of his own life. Certain it is that in these grasping, modern times, when the tendency of all artists is to magnify their achievements in every possible manner, d'Indy's example of self-effacement as regards personal distinction in order to secure a higher attitude in musical education is worthy of the highest respect and admiration. Indeed, he has abundantly succeeded in his mission, for not only Franck's music, but his equally lofty and illuminating teachings, have borne fruit as the master himself could scarcely have dreamed. To-day Franck's little band of devoted disciples, with d'Indy at their head, have proved by their works the music of which France should be proudest to-day, the far-reaching influences of his unselfish and untiring self-sacrifice and the precious truths of his teachings in musical art.

It is always difficult to arrive at any comprehensive rating of the works of a living composer, still more so when circumstances conspire to prevent our hearing his larger and most representative works in their proper framing. Nevertheless, d'Indy's dramatic works cannot yield in dramatic force and poetry to any works of our generation; their strong nationalistic traits make them a lasting ornament to French music. In symphonic and chamber music d'Indy has given us works of impeccable style, whose utterance is eloquent and poetic to a high degree. In a word, as a composer, he is the worthy exponent of French qualities, French intellect, and French emotion at their noblest and greatest. Of his position as an educator in the loftiest sense of the word, of his great mission to continue the best traditions of French music from Rameau to César Franck by his efforts as a teacher (not forgetting his contributions as a composer to the cause), he is a unique figure not only in contemporary music but in well-nigh the whole range of musical history. In France his example is bearing and will continue to bear splendid fruit, and if by his visit to this country we can only absorb some of his lofty enthusiasm and generosity in the use of his great qualities, our musical life and all those who are striving toward its adequate upbuilding will be unspeakably his debtors.

BJÖRNSON AND NORDRAAK

From a report in the columns of the Berlin *Tageblatt* of a speech made by Björnson at Richard Nordraak's tombstone in the Jerusalem cemetery at Berlin, we take the following noteworthy paragraph: —

"I am about to say something now which I have never mentioned in public before. Nordraak's death has changed my life plan completely. My mind was made up about the Icelandic war songs, and the northern mythology. With these motives I anticipated collecting the great dramas of the dead and setting them to appropriate music. His early death frustrated these plans. Later Richard Wagner drew upon these same sources. Although I am not a finished musician, I might still say I find that Wagner was not complete in his presentation of the German mythology, owing to his introduction of a sensual sentimentality which was strange to the German mythology. But that which never comes at the right time will never come again.

The Northwestern Conservatory of Music of Minneapolis, under the direction of Clarence Marshall, gave its twenty-first annual commencement at the Unitarian Church recently. The compositions given were selected more to show the musical attainments of the pupils than their technical accomplishments. The program, which contained selections from the works of Brahms, D'Albert, Leschetizky, MacDowell, Mendelssohn, and Vieuxtemps, was well interpreted by Esther M. Gillmore, Clara Hegge, Lillie E. Godfrey, and Sverre Oftedahl. George C. Spellman, a former pupil of the Conservatory, sang Homer's *Requiem* and the prologue to *I Pagliacci*.

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

ORGAN COMMISSIONS

A question has been asked if large pipe organs are purchased through dealers who sell pianos and musical merchandise, and also if commissions are paid to organists when contracts are secured, and whether the payment is paid by the church societies or by the organ builders?

It is not a prevailing custom for reliable builders to employ the services of music dealers to work up their trade, as in the pianoforte business. If a dealer or musician speaks a favorable word when a contract is about to be closed, it has generally been complimentary to the builder.

A church organ is built by a legal contract with either the church officers or donor, direct. In some instances, where the committee have no knowledge of the details, an expert is often employed by them to supervise the specification and to pass judgment on the fulfilment of the details of construction, in which his services should be remunerated by the committee, according to agreement between them, and not by the organ builder.

There is an approximate standard of prices among leading manufacturers for organs of equal capacity. Pipe organs are not made in advance of contracts, and there is no way of cheapening the standard prices for artistic work. The margin of profit is comparatively small to the builder, when the amount invested in mental, musical, and mechanical labor is summed up, added to the material and general expenses. A wealthy pipe-organ builder, made rich from the business itself, is hardly known among musical manufacturers, either in England or America. Where an organist insists upon the builder paying him a commission, it should be understood that it cannot be done without being added to the legitimate price of the instrument.

Sometimes an organist donates as his subscription to the organ fund the amount which he arranges with the builder, with the knowledge of the organ committee appointed for the purchase. This is a matter of form, to incite other subscriptions, and in such an instance the price named for the instrument is made to cover this subscription subterfuge.

A pianoforte or reed organ dealer must necessarily have a margin of profit, to meet the expenses of rent, advertising, clerk hire, and his own time included in carrying on the business.

A cheap class of organ builders, who offer lower prices than is possible in furnishing honest work, sometimes offer inducements to musicians, and even to members of organ committees, to influence decisions in their favor. This custom is detrimental in the securing of first-class work and in the extension of an irreproachable method of conducting business.

INTERCHANGEABLE STOP ACTION

J. J. Binns, an organ builder of Leeds, Eng., uses an arrangement of Stop Control which is highly commended. It is operated by Composition Pedals, and the organist can see the stops which are thus combined, and the invention does not interfere with the free use of any other stop. It was introduced in 1899, and is noted for its simplicity, being purely mechanical, and neither electric nor pneumatic. The Composition Pedals act upon the stop rods, and there is not connected with them any delicate mechanism, nor accessory stops, nor duplicate miniature draw knobs, and it may be attached to ordinary organs. The regular knobs are taken off and put on so that they may be seen without a strain upon the memory, giving control of the stops without removing the hands from the keys.

AN EVENING SERVICE IN AN ENGLISH PARISH CHURCH

G. B. H.

While touring through England I had occasion to remain over night in the old town of Ashbourne. As, guided by the sound of the church bell, I drew near the ancient edifice, I saw that two or three of the great windows were lighted up, though the mass of the building was in darkness.

Following some devout women along the dark churchyard path, I reached an open door, and entered upon a scene of mingled light and gloom, — gloom at the ends of the transept, nave, and chancel; while in the middle of the church, above the pulpit, reading desk, and seats for the choir, gas jets were burning. On all sides flowers and fruits, lately gathered for the harvest thanksgiving, blended harmoniously with the light-springing arch and the Gothic tracery.

The organ began to play, and a surpliced choir, followed by four clergymen, streamed in with their processional hymn. We were but a small congregation, — six ordinary worshipers, with a little company of parents, godparents, and infants for a christening. The intoning of the priests was clear, and so was their reading, and the chanting was good.

I fell into a train of thought on the wonderful power which, in such a spot as this, the beautiful creation of a church edifice has on the minds of men. What far-distant lands were meeting together that autumn evening in this ancient building; what thoughts of the past; what fears and hopes for the future! The beauty of the venerable pile; the mingled light and darkness; the tombs of the dead; the sublime roll of the organ; the chanting of the choristers; the touching words of the Psalms, and the melody of the *Book of Common Prayer*, — in all this, the long generations of men seemed to have combined to make a wondrous poem, a sacred drama of man's life of consummate workmanship.

A HALF CENTURY RECORD

James Bradford Baker has been the organist of the First Baptist Church of Westwood (formerly West Dedham, Mass.,) since 1856, holding his position probably as long as any organist in the United States. He was born in that town in 1842, and at the age of fourteen was appointed to the position which he has continuously held since that time. During these fifty years he has not been absent from his duties more than two or three times, and then only on account of illness.

As a token of their appreciation of his honored services, the members of the Baptist Society recently gave him a royal surprise party in the town hall, when nearly every member was present, including many who now reside out of town. Expecting to attend the choir rehearsal, he was invited to the hall to meet friends gathered there, and his surprise was complete, for he did not mistrust that the banquet was for his benefit, where there was feasting, speeches, reminiscences, stories, and the happiest sociability. One of his lifelong friends presented him with a box containing $110 in gold coin, in behalf of the members of the society, and a local poet contributed a series of original verses embodying personal traits of the faithful organist, of which one stated: —

"Well may we say a man of *Note*
Is with us here to-day;
And his own words I wish to quote, —
Who says his work is *Play*."

THE ORGAN TREMULANT

The fact that patents continue to be issued for improvements in organ tremulants, illustrates that the desideratum has not yet been attained. As alluded to in a recent number of THE MUSICIAN, there are many varieties in use, and some of them produce such a mechanical effect that the intended expression is entirely lost.

The most imitative effect mechanically produced is obtained in the reed organ by the use of the fan tremolo, which gives a gentle undulation which is pleasant if judiciously used by the player. Attempts have been made to introduce this fan tremolo in the Swell section of the pipe organ. In one instance which I remember the Vox Humana was placed in a separate box attached to the rear of the regular Swell box of a very large organ, with a longitudinal opening from the smaller into the larger box. Horizontally in this opening a fan tremolo was placed, which was set in motion when the Vox Humana was drawn. The experiment was a failure, no effect being heard outside of the Swell box. A fan tremulant in a pipe organ would only be useful with a rank of flue pipes, where the fans in revolving would be in a line near the mouths of these pipes. When so arranged with a delicate stop, the effect produced would be similar to a Vox Celeste.

The tremulant is sometimes an erratic attachment. In a large organ where there was a tremulant for the Choir section as well as in the Swell, the one connected with the latter produced no effect, while the Choir tremulant affected both the Swell and the Choir. Although with each section the tremulant was led off from its respective chest by a conductor, no skill could obviate the defect. This was especially marked, because the application was made by the inventor of the ball tremolo which is now in common use in this country. With his unusual acumen as an organ expert, he was completely non-plussed.

The tremulant is yet to be invented which will give rather a slow undulation which will produce the expressive effect attained by an artistic violinist.

CORRESPONDENCE

THE PIPES WERE BLED

J. C. B. — "Our church has been greatly stirred up by what appears to be a desecration of our organ. It was recently tuned by a local pianoforte tuner, who on taking out a number of the upper pipes showed me where holes had been deliberately bored by some dastardly hand in the foot below the mouth and concealed by the rack board. The tuner said it would be useless for him to try to tune them unless new pipes should be purchased, which he would furnish at what seems a very high price. I reported the desecration to the church authorities, and they are going to ferret out the miscreant and have him brought to justice. The organ was made forty years ago, and is valued highly for its musical quality. What seems very strange is that I noticed no defect in the speech of any of these pipes. I also found holes bored in the boots of the Clarinet pipes. Can these pipes be repaired instead of having new ones?"

Comments. — If you will examine all these pipes you will find that the holes are not of recent origin, and that they are neatly done. When the organ was finished, there were "runs" in the wind chest which caused these pipes to "hum," and these holes were bored to allow the leakage of wind to escape, and the pipes were voiced accordingly. If you should stop up these holes, the pipes would again "hum." The holes in the Clarinet boots were made, as is often customary, to give greater vibration to the reed, which is sometimes interfered with by the acoustic sympathy of the boot. The bleeding of small and soft flue pipes was a quick, but not legitimate, way of curing "runs." There was, therefore, no desecration. You should employ an expert organ tuner in the future.

Distinct Pedal Stops

S. P. A. — "While some progressive theorists are advocating an extension of the manual stops and keys an octave lower so as to furnish a properly balanced bass for each stop when coupled direct to the pedals, do you approve of doing away with the legitimate pedal stops? What would you think of simply extending the manual stops on a separate chest or chests without extending the compass of the manual keys?"

Comments. — The ideal organ has not yet been constructed, for the reason that it would involve too great an expense. If the cost had no consideration, the manual chests and keys should extend an octave lower, which would double the cost of the instrument, and require much greater space for the mechanism and speaking room for the pipes. In this way each stop would be properly represented in the pedals when the manuals were coupled, which would give the tones an octave lower in pitch than with the present short compass coupler which so interferes with distinct bass manipulation, as every organist knows. In addition to this manual extension, the Pedal Organ should have its full complement of large and varied independent Pedal stops from the 32 ft. registers and abundant 16 ft. stops up to 8 ft. Pedal stops, using sparingly 4 ft. stops. The majesty of the organ rests upon a pediment of abundant Pedal stops in addition to the coupled manual stops.

Organ Music is not Deteriorating

F. N. A. — "I would like to ask you if organ building and organ playing are falling below the standard of past years? I have read a criticism to that effect by a writer who takes the ground that organ playing all the world over is at present in the worst possible condition, and that organ building will soon be a lost art. He says that up to thirty-five years ago organs were built by the best makers with rich diapasons, but that at present *noise* is the standard, and that there is very little of genuine organ music written."

Comments. — The pessimistic critic would do well to take some instruction from one of our best organists on a modern instrument, and then regularly listen to such for two or three months as a supplementary adjunct to his musical education, and he would cease deprecating the progress in organ art. The standard of organ playing was never so high as at present, and sterling organists and composers are multiplying. Organ recitals are gradually increasing, and are even in small towns. Organists have at their command the compositions of all the masters, and legitimate organ music is constantly being added to the innumerable compositions already published. Organ builders are educated in the philosophy of mechanism and acoustics, and are striving constantly to add to the best results ever attained in the past, never discarding anything which is good, and which has been proved excellent by time and experience.

How Often should an Organ be Tuned?

A. G. — "Will you kindly inform me how often an organ should be tuned and cleaned? The organ of two manuals which I play has not been touched by a tuner for five years, and a number of reed pipes will not sound. I have never been inside of the organ, and do not understand the construction."

Comments. — An organ should be annually examined by an expert tuner. The reeds should be tuned at least four times a year and cleaned whenever a pipe does not sound. Every organist should learn how to tune and clean the reed pipes as a part of his technical education. In my own experience, I was so sensitive to the least discord that each Sunday at the close of the morning service I tuned all the reed stops in readiness for a half-hour recital before the evening service. In a well-built organ the flue pipes seldom require a thorough tuning, as they remain unchanged, but in the course of time the smaller pipes are affected by the dust in sweeping. A reed stop can be tuned in a few minutes by the organist who has the requisite knowledge. Where a church is much used, the organ should be cleaned in twenty or twenty-five years, at which time the bellows may need releathering. When an organ is cleaned, the manual pipes are taken out, the pipes cleaned carefully, and the top and rack boards smoothed off with a plane. In old organs the valves or pallets are often refelted and releathered.

A Common Occurrence

"Will you kindly reply to the following inquiry in the "Organ Department" of The Musician and oblige an interested organ reader?

"I am playing a new two-manual organ which was set up three months ago, built with tracker action, having ten speaking registers in the Swell, six in the Great, and two in the Pedal. There are two combination pedals each in the Swell and Great.

"The action of manuals and pedals is not heavier than one would expect in an organ of this size, but the movement of the stop knobs for the Great is exceedingly stiff, the Melodia and Dulciana being the only ones that can be operated rapidly.

"The Pedal Stops draw so hard that I never attempt to use the 8 ft. Bass Flute, while the 16 ft. Bourdon requires such a muscular effort to shut it off that the city organist who gave the opening recital did not attempt to do it during the entire program, and it is a physical impossibility for me to do it while seated at the instrument.

"The Composition Pedals are correspondingly stiff, requiring several blows from the foot to reduce the organ from one degree of power to another.

"The organ committee claim that this condition arises from the dampness of atmosphere when the organ was put in, and that in continued cold weather, the heating of the church will remedy the trouble.

"As the church is heated only for Friday night choir practice and Sundays, this will be a slow process, and meanwhile, the stiffness interferes greatly with ease and effectiveness in playing. The tone of the organ is considered good, but lacks the power of another instrument built by the same company in another church here, with a specification almost identical. As our church has a Gothic ceiling, with the organ placed in the northeast corner of the chancel, facing west, the pipes open directly under a steep incline. Would this be responsible for the lack of power in the full organ?"

Comments. — Your complaint is one of common occurrence where the tracker action slide wind chests are used. Such defects are compelling first-class organ builders to adopt the individual valve system of wind supply to each pipe as the only remedy which is reliable. In regard to the organ you are playing, the cause is on account of the swelling of the woodwork surrounding the stop slides, from dampness, which you will always have to contend with until the pipes are taken out, the pipe boards removed, and additional bolster strips inserted to prevent contact with the slides. Possibly the pipe boards have become warped or twisted by the dampness. If so, they will have to be dressed off and made true also. The work will require an expert from the organ factory. The whole organ will then require thorough tuning.

The power of an organ on one side of the chancel is never so well diffused as compared with an instrument occupying a central position.

Organ Appointments

C. B. — "Can you tell me how an organ appointment is generally obtained? I have been trying for two years to obtain a position, and every effort I have made has been futile, after the time I have spent and the expense I have incurred in preparation, so that I am discouraged. I have had a good teacher, to whom I can refer. Is there any way you can help me to a position?"

Comments. — The first essential is to be fully prepared for a position, and then let it be known that you desire one. If you are qualified, your teacher would be the most likely person to recommend you to some church seeking an organist. A player is generally brought to the notice of a church committee through some personal friend. A novice is generally taken on trial among other candidates, and the salary is not high to begin with. Where a professional organist has been employed at a good salary, there is not an opportunity for a novice to receive an appointment, as an experienced player is demanded. By a novice is meant one who is without a church experience. A good way to become known is to hold yourself ready to act as a substitute for organists when they are absent from their posts. If you are talented and efficient, your services will be in demand, and in due time you will probably obtain a regular position. Meanwhile, make it a plan to hear as many different organists in their church work as possible. The only aid this Department can give any one is through advice drawn from experience, in answering questions.

Uniformity in Organ Construction

C. W. — "Do you think that the time will arrive when there will be a uniformity of construction, voicing, accessories, nomenclature, etc., among organ builders? As it is now, no two builders are alike in many particulars, and it is difficult to determine which is the correct standard."

Comments. — It is quite doubtful if there will be uniformity of structure among organ builders. Each holds his ideas as a standard, and has his own constituency among organists. This favoritism is often carried to extremes. A young organist forms the acquaintance of a builder who takes an interest in his playing, and the friendship is reciprocal, to such an extent that the player becomes irrationally prejudiced toward other builders, instead of being open to every improvement. A conference of organists, many of whom are biased in their opinions, generally accomplishes nothing permanent. When plain, direct action was used by all builders, there was more uniformity of construction, but now each builder claims some improvement in chest construction, scales of pipes, accessory mechanism, etc., to such an extent that there will not be a standard in any department which all will accept. The order of mental progress does not bind itself with a creed, and mechanical development in its progress has no set boundary. Principles of philosophy never change in their laws, but the application of them is subject to such modification which is best adapted to the age of improvement.

Toes or Fingers?

D. R. N. — "In collective stop combinations, which do you think are best, composition pedals which are out of sight of the player, or piston buttons or stop keys? What objection is there, with our modern pneumatic action, of making all the combinations with stop keys or indicators which are always in sight? I know that with the pedal movements there are generally tablets placed over the keys to show the relative position of the composition pedals, and sometimes these tablets are hinged so as to show whether the composition is on or off, but to sit down to a strange organ and immediately find the right pedal is a severe tax on the memory, and the chances are that often the wrong one is touched."

Comments. — A multiplicity of composition pedals is not desirable. With all the modern improvements, it is better to have the manual combination accessories done with the fingers, and limit the composition pedals to act upon the Pedal Section and one or two couplers of the keys to the pedals. Until an organist is very familiar with an instrument, he is chary in the use of pedals of which he is not sure. In all such adjuncts the aim should be not to burden the memory nor distract the attention of the organist who needs all the power of concentration which he can command.

The Harmonies of Congregational Tunes

A. C. L. — "Is it a good plan when the choir is singing the melody of a congregational hymn for the organist to vary the harmony so as to prevent a monotony in accompaniment?"

Comments. — No organist should change the harmony of a tune. In accompanying congregational hymns, the traditional form should be adhered to, even in the holds and rhythm which have become customary. In the middle of the last century, Lowell Mason, the church music pioneer, became infatuated with the idea of having the entire congregation sing only the melody of a tune, he having become interested in the method of choral singing in Germany, where it is called "singing" instead of "music." In order to bring this about in this country, as musical editor of the *Sabbath Hymn and Tune Book*, which was issued in 1860 and introduced into the Congregational churches, he deliberately changed the harmonies and rhythmical form of many of the old familiar tunes to drive people out of singing in parts and to force them to sing only the melody. The effect was very irritating upon all who delighted in the old tunes, and the idea did not prevail. The book passed out of use, and the old forms are retained in the present hymnals.

EMOTION AND SONG

H. W. JONES

It was a wise man who wrote, "Let me write the songs of a nation and I care not who makes the laws." The phrase has ever been an attractive one, much quoted and a deserved tribute to music as a factor in the development of national life and character. However, it would have contained more of truth had it been made to read, "Let me make the laws of a nation and I care not who writes its songs."

"Music is the language of the emotions." No rational expression can precede the emotion which excites it; hence all music worthy of the name must have a cause, a why, for its existence. Primarily it was not music which begat emotion, but emotion which begat music. As emotions differ in character, so does the resultant music differ in character; and, as certain emotions are characteristic of a nation, so will its music be characteristic. An old-time Methodist revival hymn was worse than wasted on a Presbyterian, while a dignified choral would have lowered the temperature of an enthusiastic revival very many degrees. Men quibble to-day concerning the relative worth of "gospel hymns" and heavier classes of sacred music, but until the element of emotion is taken into the account no surcease of quibbling is possible. What is the purpose of this song? How came it to be written? These questions are pertinent in this dispute.

History makes national songs; national songs seldom make history. So it has ever been. The captive Hebrews by the waters of Babylon found their songs useless. If they evolved others, these were not of the same character in captivity as in freedom. Two hundred fifty years of slavery produced those pleasing plaintive minor strains heard in the plantation songs as sung by the negroes. The white race can only repeat these songs; it cannot sing them.

The sad tone that suggests a tear in even a rollicking Irish song is but an outbreaking of the half-suppressed emotion of a subject people. The minor trend of even the strongest Welsh hymns speak louder than words *In God is Our Strength, Even in Oppression.* The Anglo-Saxon sings of freedom, of triumph; the Celt, too, sings of freedom, but of freedom lost, or hopelessly beyond attainment. It is not a question of intellectual values, but of heart throbs.

The trend of the music of ascendant nations is almost invariably major; that of subject nations, minor. As are the experiences of a people, so will their songs be; all the lights and shades of national life are reflected in their melodies. Five hundred years of history may be concentrated in one good national song; and to sing it best may suggest a basis for the study and the singing of songs. We cannot sing what we do not understand and we cannot understand what we do not study. It is highly important that we realize what is cause, and what is effect, for music is not a thing of chance; a worthy song is no accident. The world is moved by song only as song comes from the hearts of the writer and the singer. A study of the history of songs is worth while.

But not always do national fortunes and misfortunes determine the trend of music. Environments other than political have their influence in determining the character of emotions. There is a species of plaintive melody, more or less minor in nature, begotten of moonlight nights, and deep shadows, and balmy breezes, and tropical perfumes, and warm blood, and life, and — love. Ah, Spain and Italy! Could those dainty melodies, forever coquetting with strings of mandolin and guitar, come from any other land? Hardly, for in no other are the environments favorable. Sorrow? Yes, keen, but not permanent. Brilliant? Yes, but not profound. What this music is to that of the Anglo-Saxon, the Latin race is to the Anglo-Saxon race.

And so, the music of a people reveals the true heart of a people. Emotion, without knowledge and judgment as a safety valve, is usually disastrous to musical standards. On the other hand, knowledge and judgment without emotion is a frozen sterile plain where ice and snow and frost and aurora may combine to present results dazzling, beautiful, and passing strange, but whereon is no hint of things alive; and only living things make history.

Far be it from this article to detract from the power of song for good or for evil. Rather in the hope expressed that it

CONCERT "DEADHEADS" AN UNGRATEFUL LOT

In the eyes of musical managers, the concert "deadhead" is indeed a peculiar person; yet he is indispensable. It is a well-known fact that the majority of recitals and concerts given by comparatively unknown talent do not pay even the expenses, and in order to make a good showing, the manager naturally turns to his "deadheads." Not long ago the New York *Sun* had some pertinent things to say about the folks who attend concerts on complimentary tickets.

"Once they have got in free they are forever under the influence of the microbe," says the writer. "They never buy again. The musical deadheads come from musical conservatories; they are the wives of employees in piano and music stores, pupils of various piano and singing teachers and orchestra players.

"It is after they have been collected and are occupying their seats that the musical deadhead begins to show his nature. Every one of them is a critic. A musical deadhead is also a very severe critic.

"'There never were so many concert grafters in New York as there are to-day,' a concert manager said the other day, 'and it would kill the business if it were not true that so many concerts were given purely for purposes of advertisement. The greatest harm has been done in the case of the orchestras. There are many men and women of musical taste who would rather hear the Hoboken Permanent Orchestra for nothing than pay for the concerts of the Philharmonic and the Boston Symphony.'

"The cussedness of the concert deadhead is frequently amusing to all those interested in the affair. Last winter an impresario wanted to introduce a violinist who had plenty of money to spend for a good start. The manager had engaged a large hall and was afraid to trust to an afternoon concert, as it might be difficult to fill it with the crowd he wanted to secure.

"So he engaged the hall for the evening and sent his tickets broadcast. He adopted a common device of theatrical managers in former days and sent his tickets to department stores and the big insurance companies downtown. The result was a packed house.

"'I'm going to have an enthusiastic crowd, too,' he said; 'not the blasé, musical deadheads. This man will start to-night with such a send-off as will carry him to California.'

"The audience arrived. It lacked nothing in respect to numbers. It was an eager, interested gathering and the faces of the old-time grafters were missing. As usual, there was an orchestra with a popular conductor to assist the soloist.

"Now, this manager, enterprising as he was, had made one bad mistake. He had assembled an audience altogether unmusical. He should have leavened the lump with a few persons able to appreciate the playing of the violinist. They could have guided the applause.

"As it was, the deadheads didn't care a hang about the violinist. How he played Bach was a matter of profound indifference to them; but they did love the band and the leader. They shouted whenever he appeared and they tried to make him play so many encores that the violinist would never have had a chance. The conductor realized the situation, however, and played as little as possible. He had a great send-off that night, however. The violinist, on the other hand, got scarcely a bit of applause, and it took all the ushers in the house to get him back for a bow."

ODDS AND ENDS

SUGGESTIONS

EDITH LINWOOD WINN

Children should be urged to dress with simplicity when they participate in a recital. There should be no flowers for pupils. This leads to distinctions which are not desirable. There should always be printed programs for the audience and as souvenirs for the class. All pupils who can play at all should appear. The names of the entire class should be printed on the back of the program. Let there be sufficient *ensemble* numbers for the whole class to appear, and to take interest in the recital. There are trios, duos, quartets, etc., for all recitals of all grades.

Let the pupils sit during long *ensemble* numbers. Let there be a short *ensemble* number at the end of the program in which all pupils appear. This should be memorized. Let the children stand at the front of the stage.

Russian and Hungarian folk songs harmonized are excellent for the last number. All music which is not good music, and music which teaches little, should be avoided.

I append several titles of works, especially useful to teachers who have classes of average grade.

ENSEMBLE

Dancla, Op. 99, Op. 178.
Bourrée, Edward German (unison).
Hungarian Poem, No. IV, Hubay (unison).
Eighteen Original Melodies, Beasley (easy).
Melodious Pastimes, Beasley (easy).
Die Camaraden, Seybold (easy).
Danish Folk Songs (Novello, Ewer & Co.).
Canzonetta, Dambrosia.
Humoreske, Dvoràk.

ENSEMBLE

Classical Violin Duets (Peter's ed.). Contains *Loure*, Bach, *Minuet*, Mozart.
Ad Verum Corpus, Mozart, violin, piano, organ.
Intermezzo, *Cavalleria Rusticana*, violin, piano, organ.
Ave Maria, Bach-Gounod, violin, piano, organ.
Duos and Quartets, Pache.
Dances from *Henry VIII*, German.
Quartettes, Dont (difficult).
Trio, *Serenade*, Eichberg.
Concertinos, Sitt, Seybold.
Sonatina, Schubert.

CHILDREN'S ORCHESTRA

For this I should use the quartets of Eichberg, *Torgauer March* (4 violins), a little gavotte, *Warner* (unison); or some melody like the *Sandman* by Harriet Sawyer, in which the children who are quite at the beginning may play with a smooth tone on the open string while one more advanced plays the theme. Teachers may write their own melodies occasionally for the very little ones and introduce them by verses.

THE MUSIC CURE

The idea of curing disease by music is not a new thought; its revival and modern application is novel. In ancient times the Hebrews employed music for curative purposes, and this, together with their prophetic powers, which were due wholly to the influence of music, formed a marked difference between them and other races. A medical authority has said that to a finely strung temperament music acts as a nervous stimulant, producing parallel effects to those of any other stimulant.

Pythagoras was a believer in the power of music as a cure for disease.

To come to modern times, it was only a few years ago that the Belgian Minister of War ordered twenty-five thousand books of patriotic and military songs to be distributed among the men in the infantry regiments. A similar experiment made in France was marked with great success, the number of stragglers on the march being reduced seventy per cent, owing to the singing. Scientists have shown that the musical tones, by virtue of regular vibration alone, quicken the respiration and circulation. Tests on dogs showed that music increased the elimination of carbonic acid and the consumption of oxygen. It was also found that music increased the functional activity of the skin.

An Italian physiologist has studied the effect of music on the brain of one of his patients whose skull was so fractured as to lay bare the brain. He observed that music actually enlarged the brain. The effect was such on the cerebral circulation that sometimes the vessels were restricted and sometimes dilated. Several health resorts along the Mediterranean have introduced music for therapeutic purposes, and a hospital devoted wholly to musical healing has been built in Surrey, England.

The music cure cannot be applied carelessly. It is not the composition as a whole which signifies, but those tones which are heard in close connection with the patient's dominant or keynote, for every human being is endowed with his own keynote. These tones may be eliminated from the composition and used independently of it. It is a phrase here and there, based on the keynote, which alone has therapeutic value. There are kinds and qualities of music as there are of light. It is a well-known fact that the individual colors composing the sun's rays are far more efficacious in the treatment of special disorders than in the use of sunlight in volume.— *New York Herald.*

SAID BY BACH

No one should play who cannot think musically.

I am what I am because I was industrious; whoever is equally sedulous will be equally successful.

To a pupil who complained of a difficulty he said: "You have five as good fingers on each hand as I have!"

Music's final cause is none other than this, that it minister solely to the honor of God and refreshment of the spirit.

My idea is that music ought to move the heart with sweet emotion, which a pianist will never effect by mere scrambling, thundering, and arpeggios, — at least not from me.

How seldom do we meet with a proper amount of sympathy and knowledge, honesty and courage, in a critic, — four qualities which he ought to possess. It is therefore very sad for the realm of music that criticism, in so many respects so useful, should often be the occupation of heads by no means gifted with these qualities.

Mr. and Mrs. Jose Marien, of the Cincinnati Conservatory of Music, are now in Antwerp, where they will remain until the middle of August, returning in time for the beginning of the next college year.

ORGAN MUSIC

ORGAN RECITAL MUSIC

From recent programs given by various organists, the following modern compositions have been selected without regard to alphabetical arrangement or gradation, their insertion being sufficient recommendation of their merit and popularity: —

Solemn March for a Religious Procession ..... *Pearce*
Andante Religioso. (Communion) ..... *Grison*
Berceuse ..... *Hollins*
Rondo in B♭ ..... *Hollins*
Romance in D♭ ..... *Lemare*
Fantasia in A♭ ..... *Brosig*
Cantilene in A♭ ..... *Wolstenholme*
Finale in B♭ ..... *Wolstenholme*
Intermezzo ..... *Macbeth*
Coronation Prize March ..... *Godfrey*
Andante in G minor ..... *Silas*
Andante con moto ..... *Boely*
Adagio in E ..... *Rheinberger*
Grand Chœur ..... *Hollins*
Allegro Festivo ..... *Best*
Prelude and Fugue in E♭ ..... *Nicholl*
Intermezzo ..... *Gaul*
Finale in Overture Form ..... *Hollins*
Salut d'Amour ..... *Elgar*
Minuet and Trio ..... *Bell*
Coro Grandioso ..... *Vincent*
Andante in A♭ ..... *Chinner*
Caprice in B♭ ..... *Guilmant*
Overture in C minor ..... *Hollins*
Toccata in G ..... *Dubois*
Chant sans Parole ..... *Lemare*
Prayer and Cradle Song ..... *Guilmant*
Grand Solemn March in E♭ ..... *Smart*
Lied ..... *Wolstenholme*
Benediction Nuptial ..... *D'Evry*
March, Pomp and Circumstance ..... *Elgar*
A Sunset Melody ..... *Vincent*
Voix Seraphique ..... *Maunder*
Homage à Mozart ..... *Calkin*
Allegretto in B minor ..... *Guilmant*
Canzone ..... *Wolstenholme*
Sonata No. 1 ..... *Pearce*
Nocturne ..... *Nicholl*
Daybreak ..... *Spinney*
Caprice in B♭ ..... *Botting*
Chœur Ecclesiastique ..... *Vincent*
Elevation in F ..... *Guilmant*
Die Frage und Antwort ..... *Wolstenholme*
Andante Cantabile ..... *Rea*
Andantino in D♭ ..... *Lemare*
Cantilene ..... *Salome*
Musette ..... *Dandrieu*
Pastorale, Nun Danket Alle Gott ..... *Herzogenberg*
Fantasia in G major ..... *Parry*
Choral Vorspiel, O Welt, Ich muss dich lasen ..... *Brahms*
Fantasia and Toccata ..... *Stanford*
Toccata in F ..... *Faulkes*
Symphonic Poem, Life ..... *Nicholl*

A HISTORY OF NEW BOOKS RECEIVED

ELGAR. Ernest Newman. Published by John Lane Company.

THE NONCHALANTE. Stanley Olmstead. Published by Henry Holt & Co.

NOTTURNO. Carl G. Schmidt. Published by Eaton & Mains.

FREDERIC CHOPIN. Moritz Karasowski. Published by William Reeves. (Imported by Charles Scribner's Sons).

ITALIAN SCHOOL OF FLORID SONG. Francisco Tosi. (Imported by Charles Scribner's Sons.)

THE PHANTOM OF THE POLES. William Reed. Published by Walter S. Rockey Co.

UNDER THE CHESTNUT TREE

Hicks. — "She takes such a delight in hearing herself talk. I couldn't imagine a worse bore."

Wicks. — "Oh, I don't know. She might delight in hearing herself sing."

* *

At a certain dinner in Philadelphia recently it was found that every one had contributed to the evening's entertainment save a certain Dr. MacDonald.

"Come, come, Dr. MacDonald," said the chairman, "we cannot let you escape."

The doctor protested that he could not sing.

"My voice is altogether unmusical and resembles the sound caused by the act of rubbing a brick along the panels of a door."

The company attributed this to the doctor's modesty.

"Very well," asserted the doctor, "if you can stand it I will sing."

Long before he had finished his audience was uneasy. There was a painful silence as the doctor sat down, broken at length by the voice of a braw Scot at the end of the table.

"Mon," he exclaimed, "your singing's no' up to much, but your veracity's just awful. You're richt about that brick!"

* *

A certain merchant in New York City recently telegraphed home to his wife: —

"Have gotten tickets for Carnegie Hall," whereupon she organized a party of eight friends and surprised her husband, whom she met at the entrance to the auditorium, simply because the stupid telegraph operator had made it read, "Have got ten tickets."

As the man had two tickets, and only about fifty cents in change with him, there were certain complications, ludicrous, though painful, and the matter was finally settled by each member of the invited party paying for his or her ticket.

* *

The apartment hotel went the way of some of its predecessors and began to harbor the transient. The first outward and visible sign of this change is always the acquisition of a band.

"Why, don't you like the band?" asked the polite clerk of one guest who had gone out ever since it arrived. "I thought you were musical."

"I am," she said; "that's why I cannot stand your band."

And the clerk has not yet understood what she meant.

* *

Patriotism

The teacher of a Brooklyn school in which Germans largely predominate was trying to instruct her pupils in patriotism. To impress the lesson on them she draped a large flag behind her desk and spent some time explaining it to them and telling them stories of the flag and its defenders. Confident that she had made an impression, and perfectly certain that a call for *The Red, White, and Blue* would result, she then said: —

"Now, children, that you have heard all about this beautiful American flag, let us sing. You may choose the song. What will it be?"

From forty lusty throats came the answer: "*Die Wacht am Rhein.*"

Name that brings Success

Mme. Emma Eames confesses that she is superstitious.

"Do you know," said she, "that, as much as I dislike the name of Emma — I admit that it is not poetic or pretty — I am so glad that it is my name?"

"Why?"

"Because there seems to be a certain musical fatality about the name Emma. Possibly few people have realized how many distinguished singers bear that name."

"Yes, of course; there is Emma Calvé."

"Oh, but that is not the list by any means. You must remember Emma Albani, Emma Thursby, Emma Abbott, and at least a dozen others who bear the charming name of Emma. I am glad, indeed, to be in their company." — *From the Chicago Tribune.*

* *

Her Feeling

"And did you attend the concert last night?"

"Oh, yes. Your daughter sang with much feeling."

"Thank you. I'm so glad to hear you say that."

"I noticed that when she wasn't poking her back hair she went fingering her belt." — *Chicago Record Herald.*

* *

A Sea Fiddle

A Lubec genius has made a violin from the door of the old frigate "Minnesota." Of course the sound waves of the instrument resemble those of the ocean. — *From the Kennebec Journal.*

* *

Said a lady who lived out in Manitou:
"I can sing and I play the piano, too —
It's as easy as pie,
But as hard as I try
I just can't teach my young sister Anna to."

* *

"Why did you persist in calling your visit to this country last season a farewell tour?" asked the manager, coldly. "It was in no sense a farewell."

"Yes, it was," replied the famous prima donna. "I fared very well." — *Judge.*

* *

Mrs. Pounder. — "To tune my piano? I didn't ——"

Tuner. — "I know it, madam. The people downstairs sent me up."

* *

A Lullaby

Miss Howe, a returned missionary from Japan, has been giving a series of talks to the women's clubs of America on "Japan, from a Resident's Viewpoint." Among her tales of the Japanese people were many concerning the recent war.

"Shortly after the preparations for war with Russia had been made," she said, "the little Japanese boys began singing the sweetest lullaby-like song I have ever heard. That song was heard everywhere, and remembering our own fondness for popular airs, I ventured to ask what this exquisite crooning little 'hush-my-child' tune might be. It was 'Bring your war-ships over here, and we'll smash 'em!'"

What Father Thought

A New York teacher of instrumental music was one day telling the father of a pupil, a lad of ten years, of the progress made by the boy in his studies. "I think he is improving a great deal," said the professor. "He will certainly learn to play the piano."

"Is that so?" asked the father, much gratified. "I didn't know whether he was really improving or whether I was merely getting used to it." — *Harper's Weekly.*

* *

There is a laughter-moving parody on the modern and programmatic symphonic poem in a recent issue of the London *Musical News.* It is entitled *A Cow's Life,* and *everything means something.* The principal theme is formed of the notes B, E, E, F, and the motives of the farmyard episodes consist of an incubator theme in B♯, comprising the notes E, G, G; the hen theme made up with G♭ in semiquivers, and the pig theme consisting of a thrice repeated low E. Another notable motif is F, E, E, D, in which the hen is much concerned. The composer modestly styles himself "A Neglected Genius." — *Musical America.*

* *

At a certain concert a young man persisted in whispering loudly to the lady who accompanied him, telling her what the music "meant," what sort of a passage was coming next, and so on.

Presently he closed his eyes and said to his companion: "Did you ever try listening to music with your eyes shut? You've no idea how much better it sounds."

Hereupon a gentleman who sat in the seat in front of the young man twisted himself about and said gravely: —

"Young man, did you ever try listening to music with your mouth shut?"

* *

Another Trial

In New York the other day a well-dressed, pompous individual came to the music counter and asked for *The Old Plaid Shawl.* The clerk inquired politely in what key he desired it. "What key, young man, can't you tell from the sound of my voice that I am a lyric tenor?"

* *

There's a Reason

It is said that music composers live longer than persons engaged in any other occupation.

Yes, they get used to their music, but other people cannot.

* *

Trials of a Music Clerk

Not long ago a customer came into one of our principal music stores and asked for *The Three Horsemen.* The clerk readily procured the popular song by that name, and the customer said, "This is not what I desire. You should know it. Every one is singing it." The clerk answered not a word, but went away and returned in a few minutes with *The Two Grenadiers,* which the customer examined and said, "This is it: I see you know your business."

* *

"You are fond of Gounod, of course?" said Miss Gusch, at the musicale, addressing the long-haired stranger near her.

"Me?" replied the man, who happened to be a waiter. "I ain't never et none."

IDEALISM IN MUSIC *

F. H. SHEPARD

In general, idealism, to my mind, consists in getting the best out of life. Idealism in music, to me, is not so much the triumph of the beautiful, not the attainment of perfection in technique or interpretation, nor the achievement of the highest in form or structure, as it is the bringing of music into relationship with life. Others will tell you better about idealism in structure and performance, so I will say a word about *idealism in music as related to the teacher and his work*, with the particular points in mind of *service to the individual*, and *service to the community*.

The mainspring of the only life that is really worth living is *service — service to others*. But how can our professional work be made of real service to others if music is merely an accomplishment? How can the study of music add anything of especial value to the life of a person of education?

The question of music as a real factor in the development of the individual appeals to me somewhat in this way: Education, we know, is not merely the gaining of information, but is the acquirement of reasoning power, training in self-expression, and the realization of our relations with the outer world. Toward these points the efforts of school and college are earnestly directed, but with only limited success. I trust I may be pardoned for this manner of speech before honored ones who are not of our profession, but they and we know that *the educational problem is not yet solved;* that way down under the whole scheme and process there is something radically wrong, for we do not find either the mental power or the *manhood* in the degree that potentially exists. And I am glad to call attention to music as a *distinctly educational force* along lines where school and college work is weakest.

The school offers little or no *direct* training for those qualities which go to make up true refinement and nobility of character. Mathematics trains the reasoning faculties. Gymnastics train the muscles. But what is there in school work to train the soul or to develop the character, — how shall we arouse sympathy, and tenderness, and nobility, and personal force? While I do not deny the influence of the home, of the school, of noble example, of literature and the church, I contend that as we cannot learn to play an instrument by seeing some other person perform, nor to figure discounts by observing an accountant at work, so we cannot, in any sufficient manner, train the nobler qualities of manhood through example and precept. We need something more direct, more tangible and forceful. I claim that the ordinary educational curriculum does not meet the demands of the case at all. Further, I claim that this missing link in true education may be supplied by the study of music, and that this is the crowning glory of our Divine art, the glory of *service in the development of true manhood*.

But how can this great service be accomplished? The answer does not point to any one particular method or person, but may be common to all methods. This is the point of the matter. If we desire a strong muscle, we must use that muscle — exercise it, train it, exact from it increasing tasks. If we would develop any desired quality of character, we must do precisely the same thing: we must *use* that quality, bring it to expression, in thought, word, and action, at frequent intervals. Through this principle, by using noble music we can bring nobility to expression; through tender music we can develop tenderness. *Every good quality* can be brought to expression through the choice of music. But it is not sufficient to simply use certain kinds of music. *We must go behind the music*, down into the personality of the pupil, and ask, not so much for a sympathetic tone, as for that sympathy in the heart which shall produce the desired quality. There are other ways of appealing to the higher qualities, but there is no more practical, direct, or beautiful way of bringing these qualities into the life of the individual. In this lies the truest and highest office of music.

And through a similar appeal the practice hours in music may be made effective in the development of *personal force* in a degree quite impossible with any study of school or college curriculum. By carrying this personal force, gained through music, into the regular school studies great good is gained, so great in many ways that music should be — yes, *shall be* — acknowledged the very *cornerstone of all education*.

The quality most needed to-day by the youth of America is *will power, determination, personal force, power of initiative*. Do the schools teach this? If we judge by the mentality of the average pupil who comes to us for instruction, we must say emphatically No. The greatest service the teacher can do his pupil, — greater than to make a real musician of him, — is to awaken his manhood, to help him realize his own powers, to supply him with this *personal force*. Music stands practically alone as a *direct* means of developing this force and the other qualities we have considered. The process lies within the reach of every teacher and every method. It is not patented nor copyrighted. It is for all, and is simply this: To take a strong mental attitude, the attitude of definite intention, and then to *express*, by every motion and every tone, the force that is within; to say, with heart, and voice and fingers, "*I can, I will amount to something in the world.*" This, to me, is *idealism in service to the individual*.

In the matter of *service to the community*, we have a field before us that is hardly imagined, much less opened up. Perhaps the first thing is to realize that music is not designed by the Creator for serious students only, but is the birthright of every one.

Are you a concert organist? Then give recitals, at a merely nominal admission fee, of music which is more than intellectual, of music which will carry your audience into a "mood." Preface your performance by explanation and anecdote. Call into activity, through the imagination, the qualities you intend to portray. You will find the least cultivated mind able to follow with pleasure and profit.

Are you a teacher of public school music? Then teach your pupils not merely to sing with expression, but to express feeling and character through the voice, making the singing secondary to expressing — and living — the emotion.

Are you a voice teacher? Then form a People's Chorus, without voice tests, without requirements as to knowledge of music, admit old and young, make a nominal charge only, give simple voice culture in the mass in addition to the instruction in sight singing, teach the expression of something in addition to words and pitches, and learn the joy of coming close to the lives of the people — the self-respecting, earnest working public, who have ideals but who otherwise are unable to follow them.

Let me say that in personal power, in your standing as a citizen and a musician, you will increase in tremendous measure through community work. We can be better citizens through a higher idealism in music. This I consider the supreme office of music, to take its place as the most vital factor in the training of the higher qualities of the individual, and in the elevation of the community, — truly the greatest idealism in music.

COMMUNITY MUSIC

(The case of Des Moines, Iowa)

THOMAS TAPPER

I

Foreword

Results in any undertaking are certain, provided there are men and women of perception, energy, and faith to work for them. A successful result is first a practical thought in the mind of an energetic and clear-headed individual. This keeps the world of thought always in advance of the world of accomplishment. Let us be thankful this is so; it causes the affairs of serious men to assume the ideal, it makes men pursue the ideal, and it makes the ideal ever onward fleeting, for no true man is ever content with the work in hand. It is the task to come that gives him enthusiasm, a clear head, and a hopeful heart.

As I investigate further and further the subject of community activity in the higher pursuits of life, I find more and more that significant men and women are the creators of the situation. It could not be otherwise, but often we overlook them in the thought that conditions come of themselves. They do not.

Many cities and towns in America are making unusual progress in civic and in intellectual pursuits, because the fact is becoming more and more evident that the truest work a man can do is for his fellow-beings, for his own immediate surrounding, for that little world which bounds his life activities. In music there is coming more and more into American community life activity of unusual promise. In some localities this activity manifests itself in one huge annual effort — the Festival. Now the music festival is valuable less for what it permits a community to hear (and see) than for what it permits a community to do. In so far as it permits the participation of as many of its citizens as may be reached, in so far is it to be a permanent and valuable asset in the community life. One is often impressed with the fact that the festival fails to bring home to the people the full value of its possibilities, for it is not, after all, the mere listening to music which builds us up as a people; it is the direct and steady effort to keep it with us constantly that produces a change in the social fabric.

Hence, many communities in which the festival does not flourish significantly are doing a valuable work in creating the music taste and atmosphere which are fundamental to real appreciation.

It is strange that there are so few men and women who perceive the wonderful latent resources of their town and who undertake logically and with long enduring patience to enable it to work out a solution wonderful beyond its own power to imagine. In our efforts with Public School Music we are accomplishing astonishing great things here and there; but few, if any, towns or cities have yet made great effort to conserve this school music accomplishment in after school days and to continue its being, to keep its spirit and its activity alive, and to develop it yet farther, enriching the community as years go on with the harvest, the seed of which was planted in the minds and hearts of children in years gone by.

Why is this? It is because we are a busy, strenuous, developing people prone to become enthusiastic over the problem of the moment, but poor investors of the growth of that problem on the morrow. We are further prone to be a spectacular people and do great things in times and seasons, with long rests between — a sort of contented hibernation; all good in its way, and according to nature. But better days are coming.

F. W. BICKNELL

Public School Music, the People's Singing Class, the Choral Union, the Singing School, utterly condemned by critics here and there, singly and collectively, are destined, I thoroughly believe, to do for us what we have hitherto thought to be the especial work of the great composers and the greater music organizations; namely, to convert us into a musical people. They certainly will do this according to the law which Emerson enunciated in the words: "Every man must learn the whole lesson for himself." Every day that passes we become more and more a singing people. We may sing badly here and there, but we are becoming more and more inclined to do it; more and more evidence comes forth that communities desire to express themselves in the art of tone. Many puerile ambitions may lie back of this effort, but the effort itself will rise infinitely above its conditions, and if we earnestly persist we shall ultimately emerge a "music-loving people."

II

A Specific Case

Taken the country over, we find much distinctive effort made in behalf of music that is not spectacular, but nevertheless is working out remarkable results. I have recently witnessed confirmation of this in Iowa. There are three distinctive people in Des Moines who are giving a practical exemplification of the fact that a community *can* bend all its energy to a common effort and make that effort successful. These people are the School Music Director, a Newspaper Editor, and a University Conservatory Director. The School Music Director, Mrs. Hortense Reynolds, is providing every child in town with love and appreciation for good music, together with a thorough education in the subject, making every child born in that city more or less a useful singing, music-loving citizen. The Newspaper Editor, F. W. Bicknell, possesses a heart and mind that takes one's breath away. He is making a distinct effort to foster love of music among his readers, — he should have millions of them, and countless imitators; he makes the best effort I have ever witnessed outside of a music journal to be of music utility to his community.

The University Conservatory Director, Dean Howard, has a music school at Drake University, which is broadly and practically conceived, well patronized, and a logical force which takes the musical child of the schools by the hand and permits him to go whither his talent permits him. Certainly all this works together for the glory, present and to come, of the situation.

Naturally there are many others in Des Moines who are doing significant work.

III

The City and Its Organizations

Des Moines may safely be called a musical city. Besides being a generous patron of the modern troubadour, it possesses home organizations that show its interest in music.

There are two choral clubs in Des Moines, besides several well-balanced choirs maintaining large choruses. The two clubs include musicians from all the schools, and they represent all interests fairly. The Apollo Club was organized about fifteen years ago. Dr. M. L. Bartlett, the Dean of the profession of music teaching in Des Moines, has been the director from its inception. The club had a period of inactivity for about two years, but was revived last winter, and this year it performed Coleridge Taylor's *Hiawatha*, *Hiawatha's Wedding Feast*, and *The Death of Minnehaha*. The club is incorporated, and its purpose is to raise the musical standard in Des Moines. It includes representatives of all the musical interests of the city, and has about eighty-five members. The president is W. L. Ryan, and the secretary Miss Ada Alderson.

More than one hundred of the leading business and professional men of Des Moines agreed to contribute $25.00 each to cover any deficit that might occur for this year's concerts, and for next season, when the club will give three or four con-

certs, presenting classical works. Besides, there is a subscription list of patrons, who agree to take at leas two tickets for each performance, or two season tickets for next season for $2.50 each. The list of guarantors and patrons will be more than double for next year, and it is the plan of the club to have guarantors and patrons enough to support its efforts.

The members pay dues. It is not intended to create profits.

The Des Moines Choral Club, of which Signor Agostino Gilamini of Highland Park College of Music, is the director, also numbers about eighty-five members. The club meets once a week and is doing excellent work. It is supported entirely by its own members, but another year will have the backing of a strong list of guarantors. This year Gounod's *Redemption* was performed in a very creditable manner, to an audience of two thousand

MRS. HORTENSE R. REYNOLDS

people, who were enthusiastic in their praise. Thus far the club has confined itself to purely choral work. September 15 it will begin preparation for the next season concerts—Haydn's *Creation*, Thomas's *Swan and Skylark*, and Mendelssohn's *Elijah*,—giving about three months' work to each.

The Women's Club Chorus is an organization composed entirely of women. It includes nearly all of the best singers in the city, about fifty in all. It is under the patronage of the Des Moines Women's Club, a literary and art club, the largest and strongest in the State. Mrs. Celeste B. Givins is the director. Several concerts have been given by the club during the past year, under the auspices of the Women's Club, and the best class of music is presented. This is one of the most popular and meritorious musical organizations the city has ever had, and it is doing a most creditable work.

Dean Frederick Howard, of Drake Conservatory of Music, gives a spring musical festival annually, when he brings the Chicago Symphony Orchestra to the State, and at the same time maintains a large choral organization. His extensive musical resources enable him to give the city many musical advantages.

One of the influences in Des Moines which cannot be overlooked, is the Musical Literature Class, conducted by Mrs. Chas. S. Hardy. This meets every other Monday afternoon for the study of musical literature, with usually a mixed program of a paper or two and a recital of the works of the composer under consideration.

Any one who will follow the musical programs that are offered in Des Moines will see that the demand of the public is for good music. The standard is high enough to permit the support of many good schools. Pupils go to Des Moines from many States of the Union to pursue their music study.

The Heft Symphony Orchestra, numbering forty-five members, under the direction of Dr. Arthur Heft, is well known. Its programs are confined to classical music. There are numerous other orchestras and half-a-dozen bands numbering from twenty to sixty performers, and the city also possesses three college bands.

Aside from the support given to the choral societies, which is by individuals, and the liberal attention given to music in the public schools, Des Moines does not directly appropriate money for music, except in the public parks during the summer. Band concerts are given regularly in two or three of the parks every Sunday afternoon beginning in June. In one section of the city business men have raised a fund to give band concerts every Saturday evening in the streets. Besides the street railway company's summer park, a summer park is inaugurating daily performances devoted entirely to the production of light opera.

IV

The Paper

The *Mail and Times* is about twenty-seven years old. It has always been devoted more or less to music, but under the proprietorship of Mr. Bicknell it has devoted more and more attention to music, education, art, and literature. In fact, this and the Women's Club Department chiefly make up the paper. The editor began about a year and a half ago to publish a special music number once a month, which is directly devoted to musical interests. The last meeting of the Society of Music Teachers voluntarily recognized its work by a strong resolution of commendation, making this journal the organ of the society. At the June (1906) meeting of the State Music Teachers' Association at Grinnell, the *Mail and Times* was selected to be its official organ.

The Editor's point of view is this:—

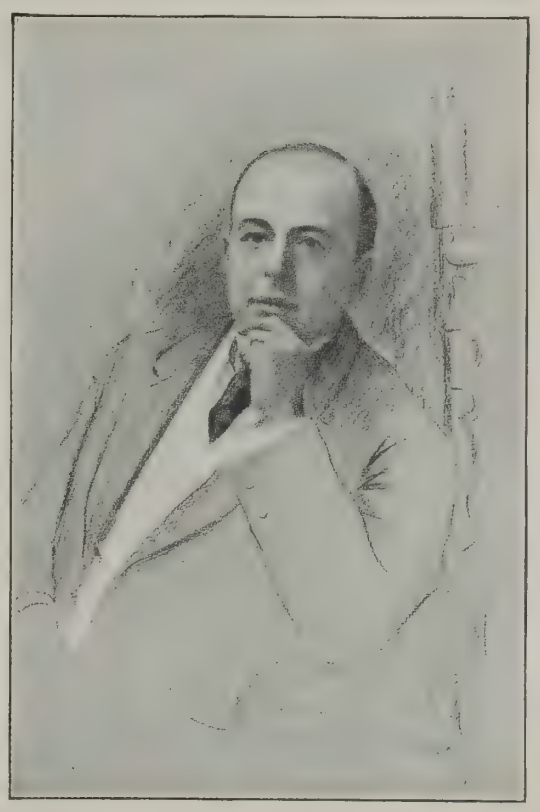
As our space is limited, we try to publish matter that will interest musicians in all departments, that will prove helpful to the teacher and to the student, and yet be found of interest to the non-professional reader. The round tables, devoted to harmony, voice and piano study, have been more or less technical, but they seem to have been profitable to readers. The work is thoroughly appreciated. We have tried to do this fairly and conscientiously, with no favoritism to any interest or locality.

We have received many words of appreciation from all over the State, and our circulation has increased extensively among musicians, both in Des Moines and outside. We invite communications and contributions from musicians on subjects of mutual interest, and we find that many of the musicians in the state are capable of offering intelligent and practical suggestions. We urge the State society to give more attention to discussions of live topics, and less time to long musical programs, particularly pupils' recitals.

V

The Public Schools

In an article contributed to a recent issue of the *Mail and Times*, Edward Iles gives an exceedingly clear pictures of How Children Learn Music. Mrs. Reynolds introduced music in Des Moines



DEAN FREDERICK HOWARD

fifteen years ago. During these years the subject developed to a great extent.

"I believe that if children were taught to sing as early and as carefully as they are taught to read, every one could sing," declared Mrs. Reynolds. "But you can't drive children to sing; you can't teach music with a club. The children must be led to study music, to learn to sing; they must be made to love it, to take pride in it. It is impossible to set a task for children in music, as in arithmetic, and hold them to the performance of it. That system will fail every time, for music is not a matter of cold calculation, but of temperament. Sometimes I see a child that is in a bad temper, has had trouble at home or in school, and imagines the world is against him. Now that boy can't sing till he gets over that spell, and there is no use trying to drive him — the sound of the other children's voices and the sight of their bright, happy faces will bring him around sooner than anything else.

Mrs. Reynold's work is logical, sympathetic, artistic, and is made significant by fine results.

For the advancement made in music in its schools, Des Moines offers, in its numerous clubs and choral organizations, excellent opportunity to conserve in after-school years the music talent delayed in the class-rooms. The mere fact of his graduating from the schools should not still the young singer's voice. He should be guided and availed of as much in the after years as he was while in the grades. If his capacity for music permits time to contribute anything to the art life of his surroundings it should *always* permit it; and it is for this reason that we recognize in a city its greatest musical asset in its local organizations. They should receive all that the young life of the schools have to offer—conserve it, develop it, and enlarge it.

VI

A Query

Recently the *Mail and Times* sent out an invitation requesting replies to the question: "Has Music advanced in Iowa." The Editor of the Musician submits the following, applicable in Des Moines and in most all communities:—

(1) Do everything in your power to establish on a high plane public school music.

(2) Do not waste this effort, but when the child graduates from school make it possible for him to continue to sing. The local musical organization is, therefore, a positive necessity.

(3) Encourage every city and town to possess a man or woman who will guarantee the conservation of the music talent unearthed and developed in the schools.

(4) Do all you can to have your choral organizations, music clubs, singing classes and the like belong to your people. The people have a song to sing, let them learn it.

(5) Encourage the patronage of great artists. We may work alone all we will, but the stimulating effect of a great artist gives us new ideals, and makes us more eager, more willing workers.

(6) Do not forget that civic betterment is a term of wide meaning. It means streets, trees, parks, water systems, transportation and the like, but it only begins with these. It means equally and ultimately *more necessarily* a fuller intellectual life, the development of the artistic sense of the community. The much discussed painting in Des Moines is a worthy possession, but an art-loving child, eager to express himself, educated to the expression is a greater and a more worthy possession. *Your investment is in him.*

(7) Watch the child leaving school; guard what he has; give him opportunity to develop it, to apply it to his own good, and to the good of his associates. That will do more for you than any one has dreamed.

And it will do wonders for any community.

A special article devoted to Music in Drake University will appear in a future issue of the Musician.

THE MUSIC IN THIS NUMBER

A Dream. J. C. Bartlett.

The text by Chas. B. Cory is of two stanzas, and is a good example of the romantic love song. The musical setting of each stanza is practically the same for the singer, who should study the song carefully for expression and to bring out the climactic periods with the desired effect the abrupt change from A♭ major to E major and by use of what is known as the augmented sixth back to the original key, all within four measures, is characteristic and very effective. Here is the vital point in the song. Notice that where this passage appears on the succeeding page, here is an abrupt change from succeeding *ff* to *pp*. The change should not be exaggerated, but sung naturally as if the mood were created at the moment without thought of previous preparation. As to the accompaniment the pianist should play the chords with which the piece opens, with singing tone, very softly, and *both* pedals are suggested for use at the same time. In the accompaniment to the second stanza the repeated chords require firmness of touch yet with light singing tone. The proper use of the pedal will assist greatly in making these passages effective, which will suggest itself at once to the accompanist if he or she be truly artistic with an adequate sense of tonal beauty.

Belinda. Mark Loeder.

The typical atmosphere of the southern plantation is suggested by the text, which is in no sense of the "coon song type" as sung in theatres of the "10–20–30 class." The three stanzas are set to a plaintive melody within easy compass. The "refrain" that follows each verse is in 6-8 rhythm in the tonic major key of the original G minor, in the nature of a waltz song, flowing and graceful. Here are two contrasts that should be carefully observed. No especial directions of a specific nature are required for the accompaniment which reproduces the voice part throughout. In consequence, the pianist should keep himself always subordinate to the singer.

A Twilight Lullaby. C. Mawson Marks.

This is of a character known as the cradle song or lullaby in the typical 6-8 rhythm with a refrain after each verse, *andante con moto* 3-4. The original melodic theme is used for the first two verses, with a second theme for the third and last verse. Available for high or medium voice the upper A♭ being optional. The singer will find many little places requiring practice and study; as for instance, the sustained phrase at the end of each stanza which must be held without effort and with full tone. The refrain should be sung somewhat faster and more animated than the verse which precedes, but invariably, however, in light voice.

Twilight Waltz. Robert Belden.

For piano students of the third grade. Notice the note E♭ that the left hand sounds as an "organ point" each measure an octave lower in pitch, for first four measures of the introduction. Waltz No. 1 has a sustained melody in right hand, which also plays a portion of the attending harmonic accompaniment which offers good practice in the "double touch." Waltz No 2 is in the key of the subdominant D♭. The melody is either in chords, or sustained in single notes, with a secondary melody played in the same hand. Waltz No. 3, in the same key, is varied from the two preceding by chords of various intervals for first sixteen measures. Notice in the next succeeding section of the same length, the harmonic bass note of each measure strongly accented, with the right hand mostly in staccato chords. Observe here the increase in tone from *mf* to *ff*. This section modulates to a return of the original theme and key, which is repeated as the closing section. There are many little marks of phrasing which should be observed, and the prevailing *tempo* is moderate with motion.

Phyllis. Lillian Irish.

A caprice for piano. A♭ major, moderate time, and a study in triplets, which are employed in the right hand with considerable frequency. There are several little moods that are suggested, which the pianist should discover in order to obtain the best effect from the piece. The repeated section on page 2, should be played not stronger than *mf* on the repeat *8va* in somewhat lighter tone. Then the vigorous accented chords that follow will be better contrasted. On fourth brace of page 3, this melody is in the right hand F clef, with the right hand crossing over left with the accompanying harmonies. Play this distinctly, but quietly until page 4 is reached; then increase the tone a little. The final section, where triplets are again used in the right hand, should be light and graceful in moderate time, accelerating time, and increasing tone to the final full chords *ff* which makes a most brilliant ending.

Danse Ecossaise. Fred. T. Baker.

A Scotch dance in schottische *tempo*. It is not difficult to read although the key is G♭, and makes an effective "black key" study. The proper "swing" is essential, the right hand playing in a light crisp tone with the octave bass notes firm, yet not unduly prominent. The pedal marks are carefully indicated. The second period in the dominant, D♭ major is more vigorous, and the melody should be brought out with proper accentuation as indicated. A third section in G♭ is considerably varied from the two preceding, and the wide arpeggio chords on page 5, for left hand, followed by rhythmic passages in single notes, should be carefully studied for the proper effect. This page is marked *p*; lightness and clearness as to rhythm are very essential. The last two pages offer much valuable material for study. The first half of page 6, should be played with much breadth of tone, sustained, and well marked. A brief episode, in D♭, on the last page will be noticed, and this is followed by the closing section in original key. Begin this quietly, increasing to *ff*, at end of piece.

Oscar Hammerstein has engaged Mme. Pinkert of La Scala, Milan, as chief colorature soprano of the Manhattan Opera House.

* *

Lilli Lehmann sang in opera at Dresden recently. Despite her age, the local critics declared her conception to be remarkably fine.

* *

The second concert by Auguste Pierre and George Enesco at the Salle Pleyel, Paris, was as great a success as the first one. Three sonatas by Vincent d'Indy, Gabriel Fauré, and Gabriel de Pierné were performed.

BARGAINS IN USED STEINWAY PIANOS

If you know of any one who wishes a very good piano at a moderate cost, he will be interested in the fact that just at the present time the well-known music house of Lyon & Healy, Chicago, have a large salesroom filled entirely with used Steinway Uprights. These Steinways embrace a wide variety of instruments. All of them, of course, are genuine Steinways, and all of them are in fine condition, but there is a great difference in the cost. Some of these Steinways have had considerable use, and have been overhauled at the factory, and are now offered at very moderate prices indeed, while others are practically new and of course command within $100 of the regular price.

Among these bargains of Steinways are quite a number of ebony finished instruments, several in rosewood, and some in mahogany cases.

These Steinway Pianos will be sold either for cash or upon very easy monthly payments. Freight on an upright piano is only a matter of a few dollars. All of these instruments are fully guaranteed to be exactly as represented. The opportunity to secure one will undoubtedly be taken advantage of by the shrewd buyers in this vicinity.

A letter to Lyon & Healy, 28 Adams Street, will bring full particulars.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.
FRITZ KREISLER.
Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

Have just finished violin for Hugo Herman, a perfect imitation of his famous Strad. Send for duplicate on trial. Write for Catalog.

PIANO TUNING PAYS
Our Graduates Earn $5 to $10 per Day the Year Round

THE TUNE-A-PHONE IN USE

We teach **Piano Tuning Action Regulating, Voicing, and Fine Repairing,** all in one, practical, easy and complete course, taken at your own home **by correspondence.** Under our PERSONAL ATTENTION system of instruction, and by use of our EXCLUSIVE invention, the **Tune-a-Phone,** ANY ONE WHO CAN HEAR can learn to tune. After two or three months of LEISURE HOUR STUDY, you can **begin to earn money** by tuning, regulating, and repairing pianos. When you have finished our course, we will grant you a **Diploma** accepted everywhere as PROOF OF SKILL. You will then be in possession of a business that will make you **independent and your own master for life**

We supply FREE a TUNE-A-PHONE, also a working model of a full-size, modern upright **Piano Action,** also the necessary **tools** for each pupil. We fit our students to command splendid profits in the pleasantest of professions.

"My best day's earning has been to tune four pianos at $3 each."—(Rev.) C. D. Nickelsen, Hood River, Oregon.

"I made $36 last week, and $212 the last two months, tuning and regulating pianos.' —Joseph Gribler, Astoria, Oregon.

THE DUNNING SYSTEM
of IMPROVED MUSIC STUDY *for* BEGINNERS

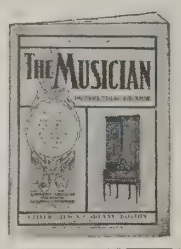
It matters not as to which musical system was originated first, but rather which is the best. The Dunning System is the only one endorsed by the world-renowned masters of music in both America and Europe, and its superiority is acknowledged by all who know of the marvelous results shown by the teachers now using it.

NORMAL TRAINING COURSE FOR TEACHERS, in BUFFALO, N.Y., beginning JULY 5, 1906
NORMAL TRAINING COURSE FOR TEACHERS, in PORTLAND, ORE., beginning SEPT. 9, 1906

Send for booklet with written endorsement of Leschetizky, Scharwenka, de Pachman, Busoni, and others. Address,

Mrs. CARRIE L. DUNNING, 225 Highland Ave., Buffalo, N. Y.

This system is not taught by correspondence, as it is a musical education in itself.



BACK NUMBERS

A limited number of complete sets for last year are still on hand.

The Musician for 1905 contains over 500 articles, essays, and sketches on all subjects pertaining to music; also 164 pages of vocal and instrumental music. **Price, while they last, $1.50.**

The Choir and Choral Magazine for 1905 contains nearly 140 practical articles of interest to choir leaders, choir singers, and organists; also 152 pages of church music. **Price, while they last, 50 cents.**

These prices include the cost of transportation. With but few exceptions there are no single copies available of either magazine.

In casting about for your music supplies for the coming season, bear in mind the publications of

CLAYTON F. SUMMY CO.
CHICAGO

OUR catalog, if not one of the largest is certainly one of the most usable, because of the practical and educational value of its contents. The piano portion contains a goodly number of teaching pieces of an original or characteristic nature; this is particularly true of the children's pieces in the elementary and easy grades of difficulty. The excellence of our catalog in this respect is widely recognized. Our song catalog is also full of attractive and desirable numbers. We also have a good choir music catalog, most of which is available for the average choir. We publish some notably successful and important text-books, and instruction books for the education of the child in music.

If your dealer does not supply you with our publications, write to us direct. We will send them on sale to all responsible parties.

We are general dealers in music of the better class, giving special attention to teachers' trade. Perhaps our terms and system of concessions would be of interest to you for your general orders. Write for catalog.

Tapper's Graded Piano Course

CONSISTING OF

Seven Books of Graded Studies
Seven Books of Graded Pieces
Four Books of Graded Duets
Four Manuals for Analysis and Theory

Written and compiled by THOMAS TAPPER

THE fundamental purpose of Tapper's "Graded Piano Course" is to supply a complete training in the literature of pianoforte music as represented by the degree of advancement attained in each grade; and in addition to this to instil a love for all music and an appreciative understanding of its message and beauty. In the selection of material the author has been guided by the fact that even from the beginning the mind as well as the hand must be trained, so that every step will represent, not only an advance in technique, but will also be a contribution to the pupil's taste.

The course may be used independently or in conjunction with any other course or method. Lessons in Dictation, Melody, and Harmony are provided and all distinctive features of composition are developed from grade to grade. All music forms are outlined and described. This subject also forms a basis for comprehensive instruction in memorizing. Special attention is given to the training of the left hand, and technical terms and signs are explained where they actually occur in the music.

In presenting all the essentials of music education — Music Thought, Music Reading, Music Playing, Music Memory, and Music Writing — the broadest possible conception of music is aimed at. It is

THE ONLY GRADED PIANO COURSE WHICH TEACHES FULL MUSICIANSHIP.

To the earnest student this course will present no insurmountable difficulties. The progress is gradual, the material pleasing, and the tasks short and well sequenced. An unusual variety of authoritative authorship is found in every volume, the contents of which have been selected because each piece and study involves some definite problem to be mastered.

Grades I to IV of Studies and Pieces (eight books) are now ready and will be sent for examination. The price of each book is $1.00.

A descriptive booklet of Tapper's "Graded Piano Course" will be sent free, postpaid, to any teacher, school, or student on request.

A SYSTEM OF FUNDAMENTAL TECHNICS

FOR MODERN PIANO PLAYING.

By WILLIAM MASON, MUS. DOC. REVISED and ENLARGED by W. S. B. MATHEWS.

PART ONE.—Tone Production,

Including Two-finger Exercises with Octaves, Bravura, Chords, and the Use of the Pedals.

PART TWO.—Principles and Material for Passage Practice,

Containing Dr. Mason's Celebrated Method of Scales and Arpeggios, the Application of Rhythm and Metre, and the Principles for Developing Velocity.

DR. WILLIAM MASON'S "System of Fundamental Piano Technics" comprises the net results of a century of evolution in the art of piano playing and piano pedagogy. It is founded upon the advances made by the older technicians, such as Clementi, Tomaschek, Dreyschock, and others. Taking the operative part of their innovations, Dr. Mason, during fifty years of active work as artist and teacher, has superimposed upon their material and processes the various missing elements for completing the command of the piano in all the directions of modern playing. He is the inventor of an easy method of diversifying all kinds of passage practice and of imparting to this usually dry part of piano study many of the qualities of musical creation. His rhythmic devices educate the player as well as improve the playing. His two methods of velocity are radical and never failing. His method of octaves, when superimposed upon the education of the hand in the manifold forms of the two-finger exercise, reduces this part of the technic to easy dimensions without sacrificing completeness. The most important feature of the Mason System is the emphasis placed upon Tone Production, the mechanism of producing and Vitalizing Piano tones for every possible demand in artistic playing.

This revised edition of the "Mason Fundamental Piano Technics," contains all the practical exercises which were in the first edition, together with the following additions:

A Complete Restatement of Tone Production, for Melody, Passages, Chords, Octaves, Bravura, and the Artistic Uses of the Pedal.

In short, a complete apparatus for piano expression. The subject of Chords, previously neglected by technicians, although of the utmost artistic importance, is here taken up anew and so handled that the teacher, by following directions, will be able to impart to pupils a rich, melodious, and beautiful control of chords and harmonic coloring. Any student who will build up the tone production through the various single-finger forms, through double touches to chords and octaves, will arrive at an elastic, full, and commanding tonal control of the instrument. The object of the present arrangement of the material and subjects has been to bring out more clearly the interdependence of parts in the system, and to prepare a more progressive order of arriving at maturity in this division of technics.

The Work Contains Thirty-eight Illustrations Showing Every Position of the Hand in Playing.

Price of Parts I. and II., Each, in Paper, $1.00; Complete in Cloth, $2.00, Post-paid.

COPIES SENT FOR EXAMINATION.

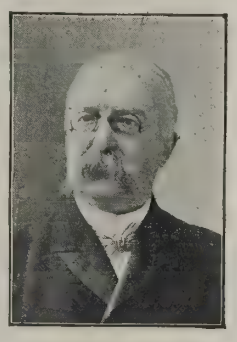
ELSON'S

Music Dictionary

By LOUIS C. ELSON

Professor of Theory of Music at the New England Conservatory of Music



EVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation*. By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rachh-*mahn*-nee-noff.

In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music are the following:

Rules for pronouncing Italian, German, and French.

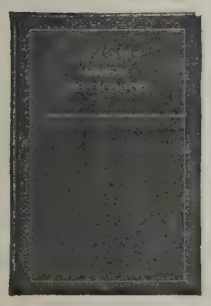
A list of popular errors and doubtful terms in music.

A list of prominent foreign composers and artists, with their chief works, the pronunciation of their names, and the date of their birth, etc.

A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms, but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.



The book comprises 306 pages and is bound in serviceable cloth covers.

PRICE, POST-PAID, $1.00

Copies sent for examination.

A Guide to the Ring of the Nibelung

By RICHARD ALDRICH

Handsomely bound in cloth. Price, $1.25, postage paid

We have many excellent notices from the press regarding this book, and the following from the *Music Trades Review* will show how it has been received:

"A Volume of Exceeding Merit: The Oliver Ditson Co., of Boston, have just issued *A Guide to the Ring of the Nibelung*, by Richard Aldrich, the eminent critic. Despite the existence of several handbooks to Wagner's great musical trilogy, Mr. Aldrich's book will commend itself to opera lovers as the most readable and compact work on the subject which has yet appeared. It covers the ground in the most thorough manner, and the student who wishes to make a close study of the score will find Mr. Aldrich a helpful and trustworthy guide. The average music lover, who desires to enhance his pleasure by a knowledge of Wagner's aims, method of working, and achievement, will delight in the author's manner of presenting the subject; and to the general reader the work is of value as an entertaining sketch of a colossal genius in relation to his greatest undertaking. To the happy faculty of treating his subject in the most concise and lucid fashion, Mr. Aldrich adds a charm of style, at once easy and elegant, which holds the reader's attention from cover to cover. His presentation of his material is comprehensive and logically planned. The volume is handsomely produced, and is sold at $1.25."

—Music Trades Review, Jan. 6, 1906.

THE FAMOUS
INTERNATIONAL SHAKESPEARE
AT PRACTICALLY YOUR OWN PRICE

In taking inventory, we find a few sets of the "International Shakespeare," 13 library volumes, which have become slightly rubbed from handling in our stock room; not enough to impair their real value, but sufficiently to prevent their shipment as perfect stock at the regular subscription price, $39 a set. Rather than rebind such a small lot, we have decided to close them out for 50 cents down and $1.00 a month for 12 months. This price, $12.50, represents but little more than actual cost of the sheets; and the sets are practically as good as new; in fact some of them have never been removed from the boxes. This is a rare opportunity for those who desire a beautiful and serviceable edition of Shakespeare's works.

BEST EDITION EVER PUBLISHED

This edition of Shakespeare's works is the newest and by far the most satisfactory now before the American public. It is complete in 13 volumes, library size—7½x5½ inches, containing over 7,000 pages, with 400 illustrations, many of which are beautiful full-page plates in colors. We commend it to all who desire a good library edition at a moderate price. It contains the following unique and exclusive features, which are absolutely essential to a proper understanding of Shakespeare's plays:

Topical Index: By means of which the reader can find any desired passage in the plays and poems.

Critical Comments explaining the plays and characters; selected from the writings of eminent Shakespearian scholars.

Glossaries following each Play, so that you do not have to turn to a separate volume to find the meaning of every obscure word.

Two Sets of Notes: Explanatory notes for the general reader and critical notes for the student or scholar.

Arguments, giving a full story of each play in interesting, readable prose.

Study Methods, consisting of study questions and suggestions,—a complete college course of Shakespearian study.

Life of Shakespeare by Dr. Israel Gollancz, with critical essays by Bagehot, Stephen and other distinguished Shakespearian scholars and critics.

SENT FREE—For Examination

On receipt of the accompanying coupon, we will forward a complete set for examination, express charges prepaid by us. If it is not satisfactory simply return it at our expense. No advance payment required. Terms 50 cents on acceptance and $1.00 a month thereafter for 12 months. Regular subscription price $39. Mail the accompanying coupon to-day without fail. This adv. will not appear again.

THE UNIVERSITY SOCIETY,
78 Fifth Ave., New York.

COUPON

The University Society, Inc.
78 Fifth Ave., New York. (T. Wat., 4-06)

You may send me, express prepaid, for examination, a slightly damaged set of the International Shakespeare, 13 volumes, cloth binding, for which I agree to pay you 50 cents on acceptance and $1.00 a month thereafter for twelve months, IF IT IS SATISFACTORY; otherwise I will return it at your expense.

SCRIBNER'S NEW BOOKS

Ready Early in September

THE ART OF THE SINGER

Practical Hints about Vocal Technics and Style

By W. J. HENDERSON

Author of "What is Good in Music," "The Orchestra and Orchestral Music," etc.

12 mo, $1.25 net. (Postage extra)

CONTENTS:—What is Singing? The Artist and the Public; Fundamental Breathing; Breathing and Attack; Practice in Beginning; About Tone Formation, etc.

The purpose of this book is to offer practical hints about the technics of vocal art and some suggestions as to style. The author aims to present the best that was taught by the old masters together with the practice and precepts of the leading singers of our own time. The ultimate aim of the writer has been to show that the fundamental principles of singing, as discovered by the masters of the seventeenth century and taught by the famous teachers of the eighteenth, are those upon which the real art of to-day rests. The high position which Mr. Henderson holds in the world of music gives special importance to his book.

FOLK-SONGS

and Other Songs

FOR CHILDREN

Edited by

JANE BYRD RADCLIFFE-WHITEHEAD

TO a musical child there is nothing that will give greater delight than this beautiful collection. It originated in the idea of acquainting children of the new world with some of the songs which, in the old world, have kept their hold on the affection of the people for a long time; folk-songs chiefly, which, because of their simplicity and naïvete, must appeal particularly to the young. In some cases the words of foreign songs have been replaced by simple English ones, but the melodies have been kept intact.

Out of this fragrant, old-time garden the editor has gathered this volume, including at the same time a few simple melodies and child-songs not out of keeping with the plan of offering to mothers, teachers, and lovers of children, music that is simple and child-like in its appeal.

The book contains one hundred and forty-one songs, comprising two hundred and twenty-six pages of music, is printed on paper of the best quality, and is bound in attractive and serviceable covers.

Books on the Operas

By ANNA ALICE CHAPIN

The Story of the Rhinegold

Told for young people

It contains the four operas of Wagner's "Nibelungen Ring," The Rhinegold, The Walküre, Siegfried, the Götterdämmerung, woven into the form of a story, and thus adapted to the comprehension of children, although in great demand by older readers who desire an intelligent, consecutive, and concise guide to the Nibelungen circle, told with charming simplicity.

Illustrated. Post 8vo, $1.25

Wonder Tales from Wagner

Contents:—The Flying Dutchman; Tannhäuser; Lohengrin; Tristan and Isolde; The Meistersinger of Nuremberg. Planned upon much the same lines as "The Story of the Rhinegold," and forms an invaluable companion volume to that book.

Illustrated. Post 8vo, $1.25

Wotan, Siegfried, and Brünhilde

In her unpretentious study of these three principal characters, Miss Chapin, thanks to her sound knowledge and sympathetic insight, appeals as strongly to advanced Wagnerian scholars as to intelligent laymen.

Illustrated. Post 8vo, $1.25

Needful Novelties

The DITSON HOUSES are constantly adding to an already replete assortment of valuable aids to Musicians and Music Lovers, useful specialties that are really necessary helps. Every article added is the best of its kind, and we herewith offer a noteworthy example.

Olson's Patent Violin Chin and Shoulder Rest

Price, $2.50 Complete

CUT A

Shows the Chin Rest alone.

CUT B

Shows the Shoulder Pad alone.

CUT C

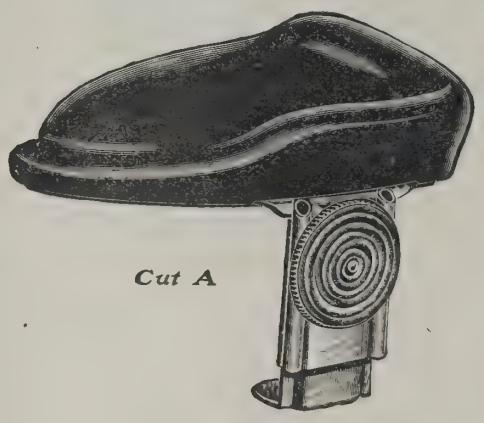
Shows the Chin and Shoulder Rest complete, adjusted to Violin.

CUT D

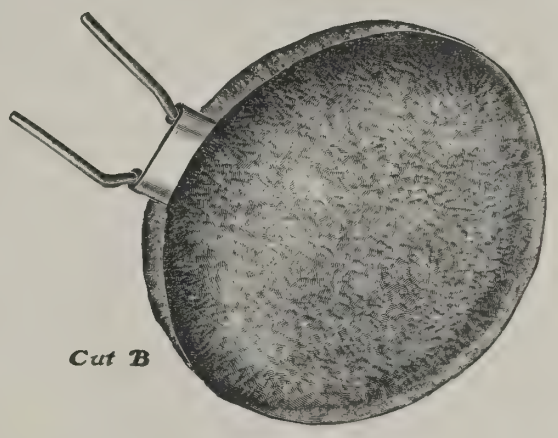
Shows the Chin Rest adjusted to Violin entirely independent of the Shoulder Pad, and may be so used.

CUT E

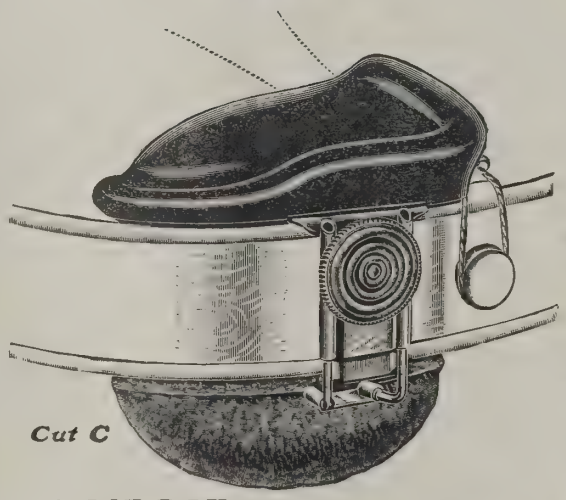
Shows the mechanical construction inside the Chin Rest, and is a help to perfect understanding of adjustment. The adjusting screw shown in cut enables the user to lengthen or shorten the clamp so that Chin Rest may be fastened to any size Violin or Viola.



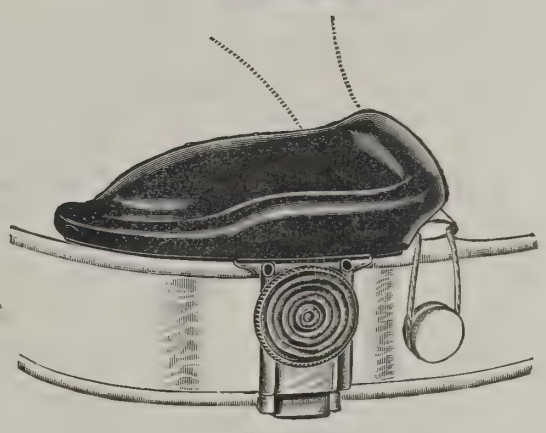
Cut A



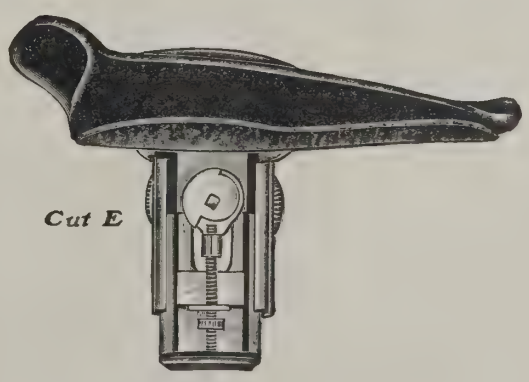
Cut B



Cut C



Cut D



Cut E

POINTS of MERIT

The Chin Rest

First— May be used without Pad.
Second— Can be adjusted to any Violin or Viola.
Third— It is so constructed that it will fit any chin with comfort.
Fourth— The Pad is perfectly made and easily adjusted.
Fifth— The Pad may be removed in no way disturbing the Chin Rest, thus enabling the player to put the Violin into its Case after use without annoyance.
Sixth— The Chin Rest and Pad can be adjusted to any Violin quickly and will rigidly remain in place.
Seventh—The construction of this Chin and Shoulder Rest is so perfect it will last a lifetime.

The Music Students Library

A Series of Educational Text-books Suited to the Requirements of the Average Student

Intervals, Chords, and Ear Training
By JEAN PARKMAN BROWN

The author of this book, feeling that a course in Ear Training cannot be begun too early, has compiled a simple and yet thorough set of exercises and examples in rudimentary harmony for use in conjunction with the study of the piano.

PRICE, post-paid, $1.00

Ear Training for Teacher and Pupil
By C. A. ALCHIN

This work does not aim to take the place of a text-book on harmony, but is designed rather, through training the sense of hearing, to teach the pupil to think in tones, so that he may sing, name, write, and play what he hears; to harmonize melodies at sight, to improvise accompaniments, and to recognize and appreciate not only the melodic effects in music, but the harmonic and rhythmic as well. PRICE, post-paid, $1.00.

English Diction
By LOUIS ARTHUR RUSSELL

This book is intended to establish English in its rightful place as a "Song Language." The author calls attention to the fact that the varieties of vowel and diphthong pronunciation, on account of which foreigners consider English unmusical, are its chief strength and beauty. Musical illustrations are given to show the simplest way of fitting text to tones so as to make the meaning of both clear to the listener. The work is eminently logical and the rules are given in terse, everyday phraseology. PRICE, post-paid, $1.00.

How to Study Kreutzer
By BENJAMIN CUTTER

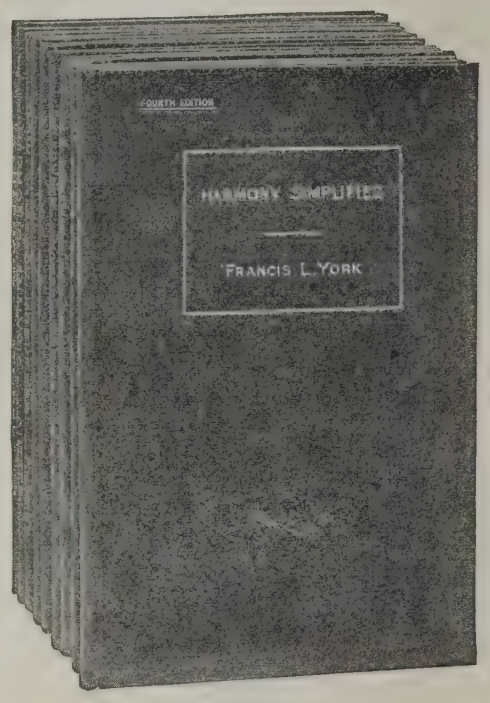
A handbook for the daily use of violin teachers and students. It contains explanations of the left-hand difficulties and their solution, with directions for the systematic acquirement of the various bowings, both firm and bounding. By putting in book form what every teacher discusses and illustrates in the lesson room, the writer explains to all violin players those principles which have made the studies of Kreutzer so justly famous.

PRICE, post-paid, 75 cents.

Harmony Simplified
By FRANCIS L. YORK, M. A.

A practical text-book presenting to the student in a concise manner the fundamental principles of harmony. Non-essentials are omitted. The work is modern in spirit and its many illustrations are from the best sources. In style the book is simple, but direct, explicit, and commendably complete.

PRICE, post-paid, $1.00.



Harmony
By SIR JOHN STAINER

A new edition of this standard work, with the author's latest revisions and an appendix. This is the only edition published in cloth binding. PRICE, post-paid, 75 cents

Lessons in Music Form
By Dr. PERCY GOETSCHIUS

A manual of analysis of all the structural factors and designs employed in musical composition, explaining thoroughly each design or form, from the smallest to the largest. Numerous illustrations are given in the text, which are supplemented by frequent references to classic literature. The book is intended for the general music lover or student, and aims to give not only increased enjoyment and understanding, but the power to interpret with intelligence and authority.

PRICE, post-paid, $1.25.

Burrowes' Piano Primer
Edited and Revised by **FREDERIC FIELD BULLARD**

A new edition of this well-known work. The editor has preserved the original text and contents, as far as possible, but has eliminated antiquated ideas, corrected faulty terminology, and replaced old-fashioned terms by modern ones. The pronunciation of each foreign word is given in the text as it occurs. Several exercises have been transferred from the appendix to the earlier pages, and the scales and arpeggios completed, substituting foreign fingering for the so-called "American" system. It is adapted for either private or class instruction and provides a guide to practice.

PRICE, post-paid, 50 cents.

Harmonic Analysis
By BENJAMIN CUTTER

A book designed primarily for those who have studied harmony and would apply it in their playing, in their teaching, and in their everyday musical life. A careful study of this book teaches one to analyze the harmonic structure of both classic and modern music, and to hear with greater understanding, to read at sight with more facility, and to play or sing with more intelligence. PRICE, post-paid, $1.25.

The Training of Boys' Voices
By CLAUDE ELLSWORTH JOHNSON

A thorough and practical guide to the correct "placing" and training of the boy's voice; a publication of timely significance in view of the increasing tendency on the part of the Protestant Episcopal Church of America to follow the precedent long since set by the Church of England in the employment of the boy choir in preference to that composed of men and women. The author's terminology is devoid of all unnecessary complexity and is at once simple, direct, and helpful. As a text-book, with the addition of many vocal exercises, it is alike applicable for the use of the choirmaster or school-teacher, who has little or no knowledge of the correct method of child-voice training, and the great care to be exercised in avoiding and preventing all bad vocal habits and abuses that oft-times result in the consequent ruin of the voice before maturity. A noteworthy feature contained in the last chapter of the book (which will at once commend itself in solving the puzzle of proper music selection) is an extensive list of sacred and secular music especially written for, or adapted to, the uses of boy choirs and schools. PRICE, post-paid, 75 cents

These books are bound in neat, serviceable cloth. **Copies of any will be sent for examination.**

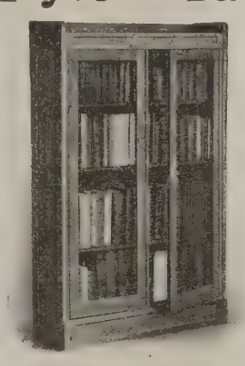
THE SPARRELL PRINT, BOSTON

The L. B. Bookcase
A New Idea



A solid, complete bookcase of five adjustable shelves, built on exquisite lines, and showing no signs of its expansion construction. Yet by the simplest operation, additional units may be attached at will, the result being an equally solid and complete case without the slightest indication of being made up of separate units.

Entirely different from the hideous box unit.

Made in oak and mahogany. Plain or leaded glass doors, or without doors.

Elizabethan Lyrics

Set to music by *E. A. Brown*

A collection of charming musical settings of twenty quaintly characteristic, Elizabethan lyrics. A group of these makes a very effective concert number. . . . . ***Price $1.00***

Fourteen Songs

By *H. N. Redman.* (2 Volumes. 14 Songs in each.)

Each volume contains fourteen (14) high grade songs, and will prove worthy the attention of all singers and vocal teachers. The first volume consists of musical settings of poems by Lytton, Tennyson, Besant, Swinburne, etc. Those of the second volume are by John Boyle O'Reilly, Howells, Lathrop and Keats.

Heavy Paper Covers, Vols. I and II, each, . . . ***75 cents***

28 Selected Songs

By *J. L. Gilbert*

This is the first album of songs by J. L. Gilbert (composer of "Bonnie, Sweet Bessie" and "Not a Sparrow Falleth") ever published. It contains in addition to "Bonnie, Sweet Bessie" (Medium Voice) 7 Scotch Songs, 11 Songs for High Voice, 4 Songs for Medium Voice, and 5 Songs for Low Voice. . . . . ***Price 50 cents***

PUBLISHERS' NOTES

FROM BACH TO BEETHOVEN — *From Bach to Beethoven*, compiled and edited by Clayton Johns, consists of difficult sections and phrases from the masterpieces of pianoforte music. These sections and phrases lend themselves readily to an indefinite number of repetitions without interrupting the flow of the movements from which they are taken. The chief claim of the work is that while possessing all the advantages of purely technical exercises the student is constantly accumulating material which may be applied throughout a course of musical training when the quoted works are taken up as a whole for study. Besides the exercises chosen for their special difficulties a number have been added for the sake of their general usefulness in finger development. The exercises may be practiced in any tempo, thus being available for students of moderate attainments as well as for those more advanced technically.

This work is in preparation. It will be No. 109 of the Ditson Edition, and the price will be $1.50. In advance of publication, however, copies are offered for 60 cents, which includes postage if cash accompanies order.

LITTLE PISCHNA BY BERNARD WOLFF — A fault that may be urged against many exercises for pianoforte study is that too much time is required for the mere learning of notes with comparatively little result in the way of finger improvement. The average student goes through book after book, little realizing that of the time allotted to a certain study but a small portion has been devoted to actual finger training.

In *Der Kleine Pischna* by Bernard Wolff the exercises offer a maximum of finger training with a minimum of note learning. The student, therefore, is able almost immediately to improve his or her fingers without the wear on head and eyes usually attendant upon the study of notes, which, after all, serving only as a basis for finger exercises, have no future value for the pupil.

A new edition of this standard work is in preparation. It will be edited by Felix Fox, who has enhanced its value by adding various sets of fingering and by prescribing practice with varied rhythms and with displaced accents. The book will be No. 57 of the Ditson Edition. The price will be $1.00, but in advance of publication we offer copies for 40 cents, including postage, if cash accompanies order.

THE ART OF VOCALIZATION — The first of the three books for mezzo soprano of Eduardo Marzo's *Art of Vocalization* will appear shortly after this number of THE MUSICIAN. The advance offer will therefore be withdrawn. Copies will be sent for examination on request.

Parts II and III for mezzo soprano are still offered at the special introductory price of 40 cents each for cash with order. This price includes postage. The regular price of each book will be 75 cents. A special offer of the three books for $1.20 will also be made until the publication of Books II and III.

A NEW OPERETTA FOR CHILDREN — The author of *Cinderella in Flower Land*, Marion Loder, has just completed a new operetta which promises to be as successful and interesting. It is called *A Golden Gift*. The characters required are a grown-up person or an older child to represent Father Time and twenty-six or more other children representing the Evening Star, the West Wind, the Hours, Sunbeams, Raindrops, Butterflies, and Bumble Bees.

A rather simple but effective arrangement of the three scenes is suggested in the preface. All the details are also given as to costumes, etc.

The work will be ready in plenty of time to enable day and Sunday-school teachers to prepare it for performance during the fall or holiday season. The price of the operetta will be 40 cents, but until publication copies are offered for 20 cents post-paid, if orders are accompanied by cash.

COMMUNITY MUSIC — In his article on Community Music in the last issue of THE MUSICIAN Mr. Tapper states that the People's Singing Class, the Choral Union, and the Singing School, together with public school music are destined to convert us into a musical people. The same idea has been held by other educators, one of the most prominent of whom is Luther Orlando Emerson.

Mr. Emerson has embodied his method of chorus training into his *Singers' Favorite*. This book contains elementary exercises in notation and voice production, also a large and varied selection of easy choruses, glees, and anthems. The price of the book is 50 cents, post-paid. Copies will be sent for examination on request to persons who are interested in popular education in music.

GRAND RENEWAL OFFERS

THE MUSICIAN and the *Choir and Choral Magazine* both for one year, $1.60.

THE MUSICIAN for one year and the *Art of Vocalization* by Eduardo Marzo, Mezzo Soprano, Books I, II, and III (II and III in press) $2.30.

THE MUSICIAN for one year and any volume of the Musicians Library in paper, $2.25; with any volume of the Musicians Library in cloth, $3.25.

Meyer-Forster's play *Old Heidelberg* is to be given as an opera in Mailand some time during the coming opera season under the title of *O Eddelberga Mia*. It is composed by Ubaldo Paccheirotti. *Tristan und Isolde*, *Gotterdammerung*, *Oberon*, and Richard Strauss's *Salome* are also to be given under the leadership of Toscanni. A new work by Leoncavallo is also being considered.

* *

The *Janko Piano Method* will be taken up as a separate course in the Klindworth-Scharwenka Conservatory in Berlin.

HOME SONGS

NOW IN PRESS THE FINEST EDITION EXTANT

Will be Issued September 15, 1906

IN the course of years different songs, popular and classic, have held the attention of music lovers for a period, only to give way to newer ones as they appeared. Many songs are speedily forgotten, never to be recalled; others seem destined to live indefinitely and pass from one generation to another.

In compiling this volume of "HOME SONGS" the aim was to collect the ever popular songs, especially those inherited by this generation from the preceding. The past is dear to all, and these songs will awaken tender memories in the hearts of many. The younger generation should know the songs their mothers sang and their fathers loved; taking them up in a spirit of curiosity perhaps, they will discover the reason for their long life, and rejoice in finding so charming a link to a past as full of beauty as the days they live in. Not all of the numbers are of the past, however, and a glance at the contents will awaken the interest of all who cherish the home spirit and love the music of the fireside.

The songs are arranged for mixed voices, throughout, and may be sung with or without piano as desired. Included in the long list are ballads of love and adventure, patriotic songs of our own country, many of our best-known hymns, and a goodly representation of rounds, a form of music that furnished healthy amusement in the past and deserves more attention in the present.

The Book contains 120 pages, bound in heavy paper, cloth back. PRICE, 50 CENTS.

SPECIAL INTRODUCTORY OFFER

Until September **15** copies of this book are offered in advance of publication at **25** cents each, post-paid, cash with order. The regular price, thereafter, will be **50** cents.

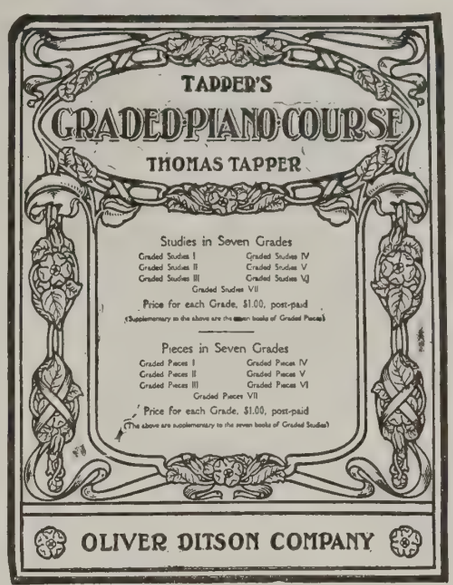
TAPPER'S Graded Course



OLIVER DITSON COMPANY

GRADED STUDIES
SEVEN BOOKS, $1.00 Each

GRADED PIECES
SEVEN BOOKS, $1.00 Each

MANUALS For Student and Teacher
THREE BOOKS, $1.00 Each

THE remarkable success which has attended this course in the short time since the first grades were published, attests to its value as indispensable teaching material. The course is significant in many essential particulars, among them the following: —

1. The material is musical and pleasing.
2. The grading is natural.
3. The Text for teacher and student is ample, clear, and in proper sequence.
4. It is the only Piano Course that instructs in ALL essential lines of music though: Piano, Theory Dictation, Music Form, Melodic and Harmonic Analysis, etc.
5. The music is not hackneyed and is selected from an unusual variety of composers.
6. The Editorial contribution to the books is equally significant, and includes such names as: —

Albert Ross Parsons	Dr. Percy Goetschius
Carlo Buonamici	Jaroslav de Zielinski
Michael Esposito	Isidor Philipp
Moritz Moszkowski	John Orth
Xaver Scharwenka	Mrs. Thomas Tapper
E. R. Kroeger	Felix Fox
Alvah Glover Salmon	Miss Anna Lockwood

The Editor, and many others.

7. The Elementary Grades are a Collection of Pieces and Studies indispensable to every student. The books of each grade provide a liberal music education to the point to which the grade progresses.
8. The advanced Grades do not progress beyond the boundary of attainment possible to the student of talent who has received a thorough fundamental training.

Old Violin Bows

VIOLIN players will find the selection of artistic bows from the Lyon & Healy stock a very easy matter.

No American or European house can exhibit such a numerous collection of rare specimens as are to be found in our present stock.

Our sales of the celebrated Tourte bows are greater than the combined sales of all other American dealers. Order one of the following to-day. They are very exceptional values:

No. 572. Bausch, Leipzig, gold mounted frog.....$40.00

No. 423. Dominque Pecatte, gold mounted tortoise shell frog. Very fine playing stick.....$135.00

No. 539. James Tubbs, gold mounted, round stick.....$75.00

No. 584. Francais Tourte, round stick, chocolate color, magnificent playing bow, good weight...$250.00

Old violin bows are sold for cash, or part cash and monthly payments.

Two or three of these bows will be gladly sent on approval.

Write to-day for a FREE copy of Lyon & Healy's Musical Handbook, fully describing the world's largest stock of violin bows, and thousands of other articles of interest to musicians.

Address, LYON & HEALY, 28 Adams St. CHICAGO

SHAKSPERE SONGS

Compiled and Edited by CHARLES VINCENT

This collection will prove of exceptional interest to vocalists, to musical and Shakspere Clubs, and to all who are familiar with the works of the great playwright.

The contents have been drawn from many sources. The book is divided into four parts, as follows:—

I. Songs mentioned by Shakspere in his plays.
II. Songs possibly sung in the original performances.
III. Settings composed since Shakspere's time to the middle of the nineteenth century.
IV. Recent settings.

The adaptations to the piano of the accompaniments of the older numbers have been made to correspond as nearly as possible with the originals.

Part I contains: "Heart's Ease," mentioned in Romeo and Juliet; "Heigh-ho for a Husband," in Much Ado about Nothing; "Green Sleeves," in the Merry Wives; "Light o'Love," in Two Gentlemen of Verona; and "Farewell Dear Love," "Peg o'Ramsay," and "Three Merry Men," mentioned in Twelfth Night. The second part contains settings by Byrd, Robert Johnson, Dr. John Wilson, Thomas Dallis, and Thomas Morley. The examples given in this part prove that the music written for and performed in the plays of Shakspere's period was refined and artistic in character. The third part includes songs by Purcell, Dr. Arne, Haydn, Linley, Bishop, Schubert, and Rossini. It will be a matter of interest to many to learn that Rossini composed a song to Shakspere's words which can be rendered as effectively in English as in Italian. It was written for the opera "Otello," and is characteristic of the composer. It is also interesting to find that Schumann has set to music one of Shakspere's songs. This is included among the "Recent Settings." Most of the numbers in this section are by contemporary composers. Among the number is a new song by Samuel Coleridge-Taylor.

The volume is one of the Musicians Library and contains a portrait of Shakspere and an introduction by the editor.

Published in two editions, for high voice and for low voice. Price, each in heavy paper, cloth back, $1.50; and in cloth, gilt, $2.50 post-paid.

Half Dollar Choral Series

This series of volumes has been planned to give at a popular price a varied selection of attractive choral music. The contents of each volume have been chosen with care from music of proven acceptability. In no other form can so much desirable music be obtained at the price nor can the contents be duplicated by any other publisher.

FIFTY RESPONSES FOR CHOIRS
Compiled by James L. Gilbert

A new edition of a well-known collection. Several numbers have been replaced with newer and more interesting ones and such numbers as were altered by the original compiler have been restored so as to correspond with the intentions of the composers.

POPULAR ANTHEMS FOR GENERAL USE
Compiled by Hans Lichter

Twenty-two anthems of proven popularity. None of them are beyond the capacity of the average choir. The selection was made by a practical organist and choirmaster.

TWENTY PART-SONGS FOR MEN'S VOICES
Compiled by Hans Lichter

A collection of secular quartets for two tenors and two bases. With the exception of two numbers all may be sung without accompaniment. They are of medium difficulty and suitable for quartet or chorus.

TWENTY PART-SONGS FOR MIXED VOICES
Compiled by H. Clough-Leighter

Twenty secular part-songs for mixed quartet or chorus. Eight of the numbers have piano accompaniment; the remaining twelve may be sung without accompaniment.

TWENTY TRIOS FOR WOMEN'S VOICES
Compiled by H. Clough-Leighter

Twenty secular trios for two sopranos and alto. Fifteen of the numbers have piano accompaniment. Several of the numbers were especially arranged for this collection.

TWENTY QUARTETS FOR WOMEN'S VOICES
Compiled by H. Clough-Leighter

Twenty secular quartets for two sopranos and two altos, many of which were especially arranged for this collection. All of the numbers have piano accompaniments.

Each book, with the exception of the first mentioned, contains from ninety-four to ninety-six pages. The music is, in all cases, printed by transfer from engraved plates.

Price each, 50 cents, post-paid

ELSON'S Music Dictionary

By LOUIS C. ELSON
Professor of Theory of Music at the New England Conservatory of Music

EVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation.* By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rachh-*mahn*-nee-noff.

In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music are the following:

Rules for pronouncing Italian, German, and French.

A list of popular errors and doubtful terms in music.

A list of prominent foreign composers and artists, with their chief works, the pronunciation of their names, and the date of their birth, etc.

A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms, but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.

The book comprises 306 pages and is bound in serviceable cloth covers.

PRICE, POST-PAID, $1.00
Copies sent for examination.

The New Oriental Intermezzo that is a Real Hit

PERSIA Read what the Leading CHICAGO Critics say:

"Scored instantly."—Ivan L. Davis, Colonial Theatre.

"It bears the stamp of true inspiration. Not a commonplace phrase from beginning to end."—E. A. Rivkin, Musical Director, Garrick Theatre.

"I shall be pleased to play it frequently. We have not had anything in a long time that catches on with our audiences as 'Persia' does."
—W. L. Hazen. Musical Director, Drexel Cafe.

"A great number. The broad theme of the Trio is particularly fine."
—Phillip A. Laffey, Musical Director, Majestic Theatre.

"A very effective piece from the pianistic standpoint."
—W. C. E. Seeboeck.

"An unqualified success. The haunting melody of the Trio is hummed or whistled by our patrons when we play it, and we are always asked the name of 'that last thing you played.'"
—Samuel Hershfield, Musical Director, Vogelsang's.

Choir and Choral Magazine

A monthly publication devoted to the music of the church.

The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music
by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

"Mansfeldt Technic"
By HUGO MANSFELDT

A COMPLETE LIBRARY of TECHNICAL EXERCISES

A System of the Most Necessary Daily Exercises to Produce

A Perfect Finger Development In the Shortest Possible Time

It is as useful to the novice as to the advanced student.

It is a concentration of common sense tuition and guarantees perfection in finger-dexterity. All technical problems are given a ready solution in this, the greatest system of technic.

Franz Liszt, eulogized the book in most emphatic terms.

Teachers simply glorify it because of its intelligent and valuable conciseness.

"Mansfeldt Technic" has created more accomplished and masterful pianists since its publication than all the old-time "methods and studies" combined, and accomplished it in such brief time that even connoisseurs of the art are marvelling.

Thousands are now in use by scores of the most noted conservatories and instructors of the world, and within another decade it will be the **only** system of technical exercises recognized among musicians. No other book has met with such a sincere welcome from the guild.

Price: In order to supply an urgent demand for this eminent work in separate sections the publisher is now issuing it in three distinct books — One Dollar each. The three books are also published complete in one volume — Two Dollars and Fifty Cents. Ask your dealer to order one for you on approval.

The Art of Singing

By WILLIAM SHAKESPEARE

This work is a modern exposition of the principles which were practiced and perfected by the Italian masters before the influence of instrumental music caused the study of the voice on its own account to be neglected. Breath control and the production of the voice and registers are dealt with in a thorough and scientific manner and their application illustrated by photographs and exercises.

Published in three volumes.

Public School Music

Northwestern University

THE SCHOOL OF MUSIC, located at Evanston-Chicago, on the shore of Lake Michigan, calls attention to its Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees of Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

Kursheedt Hand Expander

PRICE, $3.50. BY EXPRESS, $3.75

As the endorsements of great pianists and teachers testify, the Hand Expander will, after conscientious practice, abundantly supply nature's deficiencies.

Some students have attempted to stretch the fingers on the piano and the result has usually meant injury to their hands and the instrument. Ivory keys cannot support or stretch the ligaments; no exercise of big chords can be mastered unless the fingers be supple and sufficiently expanded. The Hand Expander will reduce the hours of practice in the case of all students with small hands. By examining the apparatus students and teachers will find that they can put their fingers in any position without the slightest difficulty. Daily use of the Hand Expander will produce in a short time conditions that are astonishing. Fingers may be stretched and curved in almost any position. By developing the reach between the second and fourth finger and between the third and fifth finger, the third or fourth finger will acquire strength and independence if worked in the way mentioned in the directions, and enable the student to play exercises that he could not before attempt. Several specialists have written works about finger gymnastics, but no theories can ever take the place of realities. The Hand Expander is a real invention, endorsed now by a number of the greatest pianists and teachers of the United States. These great artists have not only endorsed the Hand Expander, more than that, they have declared it to be a necessity for not only pianists but for all musicians with small hands and weak fingers. Many schools and studios have adopted the Hand Expander with excellent results.

PATENTED IN THE UNITED STATES, CANADA AND FOREIGN COUNTRIES

E. B. KURSHEEDT, 10 Bleecker Street, New York

Early Italian Piano Music

Edited by M. ESPOSITO

IN the sixteenth century Italy was first in all the arts — in sculpture. in painting, in literature, and in music. Palestrina was called upon to reform church music, and he composed masses of a beauty that has never been equaled. Luca Marenzio composed his madrigals and Monteverde invented the opera. The example of these geniuses was followed by a host of lesser composers; schools for music were founded; the French, Belgian, and Spanish musicians, who one hundred years before had gone to Italy to teach, now came to learn and to admire. Though a great deal of the music written in Italy in the sixteenth century was vocal, instrumental composition was not neglected. At the beginning of the seventeenth century Frescobaldi produced his works for *Organo e Cembalo*, and later on Corelli and Viotti wrote for the violin.

Early Italian Piano Music includes the best instrumental works of the old Italian writers. Such composers as Frescobaldi, Alessandro and Domenico Scarlatti, Durante, Porpora, and Martini are represented.

The collection includes ten Toccatas by Alessandro Scarlatti, which have never been published before.

That the musical inspiration which arose in Italy in the sixteenth century should have been continued far into the eighteenth, shows how strong the instinct must have been, and how excellent the musical tradition. The learning of these masters of the olden time, and their knowledge of music, will astonish those who are not familiar with their compositions.

In view of the strides made by modern composers, one can hardly realize that such music was written at a time when Bach and Handel were still boys, and one hundred years before Beethoven.

Published in the Musicians Library

No. 1. A Merry Fancy. Double Notes and Scales. (2c).. .40
No. 2. Twilight. Wrist Study. (2b).. .40
No. 3. Summertide. Triolet Passages. (2c)..... .40
No. 4. Tripping Fairies. Wrist Study. (2c)..... .40
No. 5. On Stormy Seas. Arpeggio Study. (3a)..... .40
No. 6. Snowflakes. Trill Study. (3a). .40

Op. 52. Two-Voiced Pieces.
No. 1. Sadness. (1c)..... .30
No. 2. Elf Dance. (2a)..... .30
No. 3. Phantom March. (2b)..... .30
No. 4. Forsaken. (2c)..... .30
Rêve Hongrois. Petite Rhapsodie. (2c)... .40

CORNELIUS GURLITT

Four Compositions Selected From Op. 201.
Peasant's Frolic. (1c)..... .30
Venetian Serenade. (2a)..... .30
Song of Victory. (2b)..... .30
Cathedral Echoes. (3a)..... .30

LUDVIG SCHYTTE

Op. 143. Musical Recollections.
No. 1. In the Gipsy Camp. (3a)..... .40
No. 2. A Village Dance. (2c)..... .40
No. 3. A Stormy Day. (3c)..... .40
No. 4. Moonlight Barcarolle. (3a).... .40
No. 5. At the Race. (3b)..... .40
No. 6. Floating Clouds. (3a)..... .40
No. 7. In Exile. (3a)..... .40

BERNHARD WOLFF

Op. 252. No. 1. Lament. (3c)..... .50
No. 2. On the Water. (3c)..... .40
Op. 253. Contention. Rondo. (2b).... .40
Op. 254. No. 1. A Joyous Dance. Staccato etude. (2c)..... .30
No. 2. Gaiety. Staccato etude. (3c).. .40
Op. 255. The Chimes. (3b)..... .40
Op. 256. Devotion. (3a)..... .40

IN PASSING MOODS

Album of Selected
PIANOFORTE PIECES
By EDWARD MacDOWELL
Price, $1.25

Prologue. Alla Tarantella. An Old Love Story. Melody. The Song of the Shepherdess. A Deserted Farm. To the Sea. Danse Andalouse. From a Log Cabin. Epilogue.

THE PUPIL'S SECOND ETUDE ALBUM

35 PIANOFORTE ETUDES
Selected and Arranged in Progressive Order
By FERD. MEYER
Price, $1.00
(A Sequel to the Pupil's First Etude Album)

PIANOFORTE DUETS

W. ALETTER
In Stately Measure. Menuet. (2a)..... .40

CARL BOHM
Op. 357. No. 4. Rosetta. Fantasie-Mazurka. (3c)..... .75
Espagnola. Spanish Dance. (3a)..... .50

CHARLES DENNÉE
Op. 12. No. 3. Rondo Villageois. (2b). .50

MAX FRANKE
Op. 56. No. 5. Harvest Festival. (2c).... .40
Op. 60. Peerless Beauty. (2c)..... .60
Op. 61. Sylphid's Waltz. (2c)..... .65

H. LICHNER
Op. 320. No. 1. Spring Festival. (2c)... .50

C. MORLEY
Op. 99. No. 1. Tea Rose. March. (2a) .40

JOHANNES ZIEGLER
Op. 38. No. 1. The Village Band. Alla Marcia. (2b)..... .40
No. 2. Sweet Remembrance(2a) .40
(Song without words.)

FIFTY MELODIOUS ETUDES

In all the Major and Minor Keys
FOR THE PIANOFORTE
BY
GEORG EGGELING
Op. 122
Two Books, Each 75 Cents

Nothing more useful or practical in the line of third and fourth grade work of its kind is to be found than these fifty etudes, written in all the major and minor keys. All the fifty studies are melodious, many brilliant, and some, in effect, salon pieces of a high order.

Among the special features of these studies may be mentioned the importance attached to careful phrasing and fingering, thorough drill in all the essentials of independent and accurate finger-work, touch, light and shade, emphasis, etc., and fine examples of melody playing with each hand. There is also considerable training in the bravura and strict polyphonic styles.

Forty Easy and Progressive
STUDIES for the VIOLIN
BY
CARL BOHM
Op. 367
Price, $1.00

Within a small compass, the composer here offers an admirable set of technical studies for violin playing in the first position. Though easy, the studies are far from being trivial; on the contrary, they are all eminently useful and practical, and each one illustrates some indispensable feature of the violinist's art.

Beginning with the simplest scale passages and note-by-note progressions, the studies proceed through a great variety of broken chords and passages with irregular skips, including as much chromatic work as is legitimate in first position exercises.

There is also considerable practice in cantabile, light and shade, vibrating, etc. There are no "vain repetitions." Each study is distinct and different in purpose from all the others.

Much attention is paid to the various bowings, with the whole bow, middle, lower half, nut or point, and by the use of many kinds of phrasings, legato and staccato, half-staccato and portamento, alternating legato and staccato, etc., the value of the work cannot be too highly estimated.

RECENT PROGRESS IN EDUCATION IN MUSIC

LEONARD B. McWHOOD

Education in the Fine Arts has been increasingly recognized, during recent years, as an important element, not only desirable, but indispensable, in a complete scheme of general education. This recognition has led, in the case of literature, to the study of language, more and more, from the esthetic standpoint, rather than from the linguistic; in the case of music, to the rapid development of instruction in this art, among colleges and schools — rapid, but still embryonic; and, in the case of the remaining fine arts, to a growing representation in institutions devoted to general education.

The importance of instruction in music, in educational institutions, may be realized more fully, when we consider the fact that such instruction, in its various phases, contributes, on the one hand, to the development of mental power in the student, and presents to him, on the other, material for the enrichment of life itself; that is to say, instruction in music has both a disciplinary and a cultural value. The musician is concerned only with the latter, but the educator, with the former as well — indeed, in some unfortunate instances, with the former, to the exclusion of the latter. The study of music, having therefore both a disciplinary and a cultural value, takes precedence, in this respect, of many other studies, whose value, on the whole, is restricted to only one of these fields.

In courses dealing with the construction of music, the disciplinary value of the study is particularly noticeable. In a course in strict Harmony, for illustration, it is requisite (as much so as in the study of mathematics or of the exact sciences) that the procedures shall be correct, rather than incorrect; but, in addition, it is necessary to select, from many progressions, all of which may be considered correct, in any given case, that one that is most suitable for the occasion. Thus, not only accuracy is developed, in the student, but also the power of discrimination. A collegiate class in Harmony, consisting of nine students, was requested to express its opinion concerning the following question: "Does this course possess as great a disciplinary value as that of any other course in your college career?" The opinions were recorded on ballots, without signatures; eight ballots were received, of which seven were in the affirmative. Two years later, the corresponding class was asked the same question. Of twenty-five students, twenty-two replied; of the replies, sixteen were in the affirmative.

But it is the cultural value of instruction in music, as a part of an educational curriculum, rather than the disciplinary value, in which we are especially interested — or should be. This value is particularly noticeable in the case of courses, of various kinds, in Musical Appreciation; in such courses, the student receives an esthetic impulse that tends to counteract those mundane influences that are omnipresent in our modern life — even in our schemes of education.

During the present year, a noteworthy advance has been made toward the complete and correlated study of music in colleges and schools; that is, the adoption by the College Entrance Examination Board, on April 21, of a provision for examinations in music, along with a statement of requirements in Musical Appreciation, Harmony, Counterpoint, Pianoforte, Voice, and Violin. The Board, which conducts entrance examinations for a large number of colleges and universities in the Eastern section of the country, and, in this way, exercises a powerful control over instruction in colleges and schools, had never before accorded to music the recognition implied in its recent action. The examination in music, will, of course, not be obligatory, being intended only for such students as elect to take it in lieu of an examination in some other subject.

The statement of requirements, as adopted by the College Entrance Examination Board, was prepared by a joint committee representing the Eastern Educational Music Conference (an organization of collegiate teachers and selected secondary teachers, of music in the New England and Middle Atlantic States), and the New England Education League. The committee consisted of four professors of music, one from each of the institutions that already allow entrance credit in music, as follows: From Harvard University, Prof. W. R. Spalding; from Tufts College, Prof. L. R. Lewis; from Smith College, Prof. H. D. Sleeper; from Columbia University, Prof. L. B. McWhood. The requirements prepared by this committee, and adopted by the Examination Board, are, substantially, as follows: —

A — MUSICAL APPRECIATION

(1) a general knowledge of the principal musical forms — song, classic dance, fugue, sonata (all movements), symphony — and of their historical development;

(2) a general knowledge of the lives and environment of at least ten composers, including Bach, Mozart, Beethoven, Schubert, Chopin, and five of the following: Purcell, Handel, Gluck, Haydn, Cherubini, Weber, Rossini, Glinka, Mendelssohn, Schumann, Wagner, Verdi;

(3) familiarity* with certain designated works. The works set for 1907 and 1908 are:—

Bach:	Prelude I and Fugue I from "The Well-tempered Clavichord."
	Gavotte from Sixth Violoncello Suite.
Handel:	Air with Variations ("The Harmonious Blacksmith").
Haydn:	Largo from String Quartet (Op. 74, No. 3).
Mozart:	Overture to "The Magic Flute."
	Symphony in G Minor (entire).
Beethoven:	Sonate Pathétique (Op. 13, entire).
	Larghetto from Second Symphony.
	Allegro con Brio from Fifth Symphony.
Weber:	Overture to "Der Freischütz."
Schubert:	Moment Musical in F Minor (Op. 94, No. 3).
	Song, "The Erl-King."
	Song, "Hark, Hark, the Lark."
Mendelssohn:	Scherzo from "Midsummer Night's Dream."
	"Spinning Song" (Op. 67, No. 4).
Chopin:	Polonaise (Op. 40, No. 1).
	Nocturne (Op. 37, No. 2).
Schumann:	"Aufschwung" (Op. 12, No. 2).
	Song, "Im wunderschönen Monat Mai."
Wagner:	Overture to "Tannhäuser."
	Siegfried's Funeral March, from "Götterdämmerung."

B — HARMONY

(1) the ability to harmonize, in four vocal parts, simple melodies of not fewer than eight measures, in soprano or in bass — these melodies will require a knowledge of triads and inversions, of diatonic seventh chords and inversions, in the major and minor modes; and of modulation, transient or complete, to nearly related keys;

* The test of this familiarity will be conducted by the college or university concerned. In this test the candidate will be expected to identify characteristic portions of the works set, when played by the examiner; and to give intelligent information concerning the form and character of the works themselves. The test will not require ability to perform, nor to read from printed music.

(2) analytical knowledge of ninth chords, all non-harmonic tones, and altered chords (including augmented chords). [Students are encouraged to apply this knowledge in their harmonization.]

It is urgently recommended that systematic ear-training (as to interval, melody, and chord) be a part of the preparation for this examination. Simple exercises in harmonization at the pianoforte are recommended. The student will be expected to have a full knowledge of the rudiments of music, scales, intervals, and staff-notation, including the terms and expression-marks in common use.

C — COUNTERPOINT

Chorals and melodies harmonized, with use of passing and ornamental tones; the several orders of Counterpoint in two, three and four voices, with and without *cantus firmus;* elementary practice in Double Counterpoint; Imitative Counterpoint in the style of the simpler Two-part and Three-Part Inventions and Choral Preludes of Bach; general analytical study of contrapuntal compositions of larger scope, including detailed analysis (both as to harmonic scheme and as to contrapuntal treatment) of not less than ten pages from at least four fugues of Bach's "Well-tempered Clavichord."

There should be some practice with the C clef, in reading and in writing. Familiarity with the alto and tenor clefs is especially desirable.

D — PIANOFORTE
E — VOICE
F — VIOLIN

(1) a knowledge of the rudiments of music, scales, intervals, and staff-notation, including the terms and expression-marks in common use; the ability to analyze the harmony and form of hymn-tunes and simplest pieces for the pianoforte, involving triads and the dominant seventh chord and their inversions, passing tones, and modulation to nearly-related keys; the ability to harmonize, on paper in four vocal parts, melodic fragments involving the use of triads and the dominant seventh chord and their inversions, in major keys;

(2) ability to pass tests in performance and in ear-training, to be conducted by the college or university concerned.

Of these various requirements all are intended for students that wish to become specialists in music with a view, perhaps, to adopting it as a profession; while the requirements in Musical Appreciation are intended, as well, for students that wish to familiarize themselves with music as an element of liberal culture. It is hoped that the latter group of students will, in the course of a few years, include thousands in the schools of the country, into whose lives will enter the culture that an appreciation of music invariably bestows.

The natural result of the action of the College Entrance Examination Board will be the adoption of entrance credit in music, it is believed, by an increasing number of colleges and universities, followed by the development of adequate facilities and courses for the study of music in schools of all grades. These results may not be expected at once, but they seem assured, in a future not overdistant.

With the widespread study of music, particularly in its cultural aspects, will be observed a development of the art itself in this country — a condition long desired, but impossible until the masses of the people are awakened, by education in music, to a proper appreciation of its meaning and value. Then, for the first time, American composers and performers will receive for their efforts, not only recognition, but such financial support as will enable them to devote themselves, fully, to their art; then at last, if ever, will it be possible for this country to present to the world many musicians of the first rank.

But this is not all; for, great as will be the benefit to the art of music, that to the race at large will be even more significant. The creation of an atmosphere of musical culture will imply the elevation of the race, above that which is mundane and sordid, to a plane in which one breathes the pure air of the spirit.

PIANOFORTE PLAYING TESTS

OTTO W. PFEFFERKORN

An exact test, fair and just alike to all candidates for graduation in the art of pianoforte playing, may appear an impossibility. Yet, searching reflection does not altogether justify such a conclusion.

Pupils passing from private teachers to conservatories, or *vice versa*, are, as a rule, usually made to feel that their given grading is wrong — a circumstance doubtless arising from differences in method, in curricula, in individual standards of esthetic value.

Despite all such differences — differences based on honest individual conviction — there are and always must be, certain fixed elemental essentials which no method, curriculum, or art-concept can ignore. And these, at least, are susceptible of a definite and relative numerical valuation.

The goal of an inspiring interpretation can only be reached by perfection of detail.

Broadly speaking, good playing involves the following briefly analyzed elements:—

(*a*) Condition. — This relates to the nervous and muscular state of the body. There should be an entire absence of undue or needlessly prolonged physical tension.

(*b*) Position. — When seated at the keyboard, the body should be held erect, the arms hang loosely, and the hands and fingers shaped in accord with the governing laws of fluent, flexible, and secure action.

(*c*) Action. — The playing movements, whether simple, complex, or compound, presuppose a right "condition" and "position." They should be steady, even, unspasmodic, simple, direct, economical; conserving energy and uniting minimum effort with maximum effect.

(*d*) Tone Quality. — Without beauty of tone, all pianoforte playing is futile. A harsh, "jarring," twanging, "strumming," "thumping," "pounding" clatter of sounds is NOT music — classical or otherwise. The tone should be pearly, round, full, yet soft, and of sympathetic beauty. Essential accentuation need not violate this principle. A "forced" tone is rarely, if ever, necessary.

(*e*) Notes. — The performance of the musical context should be distinct, clear and unmistakable. There should be neither false notes, omitted notes, nor wrong notes sounded conjointly with right notes — faults both of commission and omission.

(*f*) Fingers. — An easy, facile, playable fingering demands thought and proven experiment. All sprawling angularities and needless, inter-ossia strain are wrong. In the fleetest of action the fingers should appear and feel loose, supple, and secure, however intricate the execution.

(*g*) Rhythm. — Rhythm is the back-bone of music It is the principle of order in the magic realm of tones. Invisible, intangible, even inaudible — yet upon it hangs the entire fabric of music. There must be no halting, hurrying, hesitating, stumbling in the measurement of each note's time ratio, but a refined and exact accuracy whose flexible precision at once awakens response.

(*h*) Pedal. — The damper pedal may be called the soul of the pianoforte. Volumes have been written of its use. Many more volumes might be written of its racking abuse. Its proper use is based upon a sensitive perception of harmonic and melodic values, quantitative and qualitative, separately and in combination, and in all dynamic shadings from a whispering pianissimo to a tragic fortissimo.

(*i*) Tempo. — Tempo is NOT synonymous with "time" or "rhythm." It is FIXED when giving the rate of speed with which rhythmic units succeed each other; and VARIABLE in the Accelerando, Ritardando, Tenuto, Fermate, and Rubato. Tradition or the metronome usually affords an approximation of the author's intent.

(*j*) Interpretation. — Here is afforded the means of revealing the native and acquired gifts of talent or genius — all the media of musical expression in the happy blend of intellect and emotion.

These elements, in form, may be presented in diagrammatic form as follows: —

Elements	Excellent	Good	Fair	Deficient
Condition	5	4	3	2
Position	5	4	3	2
Action	5	4	3	2
Tone Quality	15	12	9	6
Notes	10	8	6	4
Fingers	5	4	3	2
Rhythm	15	12	9	6
Pedal	10	8	6	4
Tempo	10	8	6	4
Interpretation	20	16	12	8

The examining committee has here, at least, some systematic plan for numerical evaluation.

In this instance, the ratio, of course, is experimentally empirical, and in consequence it may be open to a nicer mathematical adjustment, both in quality and quantity.

With this scale, however, the successful candidate should, at least, receive a total mark of 70.

Wassily Safonoff, the Russian conductor who was last season in New York, astonished his friends by his capacity to be entertained. He can enjoy more lunches, dinners, and suppers in a day than any foreign celebrity that ever came here. One night the genial Cossack dined and went to the theatre. He went to a formal supper at eleven, remained there until after one and then drove downtown to a reception given by his compatriots. He later went uptown with some of them and at six o'clock the party was taking either a very late supper or an early breakfast in a restaurant on Fourteenth St. This was a typical day for him. But the conductor was on hand bright and prompt at his rehearsal the next morning. He finished in time to go to a lunch and start on a round of afternoon teas.

* *

Clara. — "He says I sing better than any girl he knows. What do you think of that?"

Maud. — "I think he should extend his acquaintance."

* *

"How does Winters manage to keep the wolf from the door?" "He doesn't. He gave violin lessons; but his family said that they preferred the wolf."

THE LESSON CLUB

Conducted by DR. PERCY GOETSCHIUS

A series of How to Do articles, distinctly practical, inspiring, and suggestive. These lessons will continue to appear; the best authorities will contribute them. Any suggestion from readers of THE MUSICIAN which will be of aid to one or to many readers will win our immediate consideration.

"In happy hours, nature appears to us as one with art; art perfected,—the work of genius. And the individual in whom simple tastes and susceptibility to all the great human influences, overpowers the accidents of a local and special culture, is the best critic of art. Though we travel the world over to find the beautiful, we must carry it with us, or we find it not."—EMERSON, *Essay on Art.*

A COURSE IN LISTENING

EDWARD BURLINGAME HILL

IV. THE HARMONIC STANDPOINT

With the acquirement of a more accurate knowledge of intervals comes infallibly a quickened perception of the beauty of melody — a beauty that is sometimes elusive and difficult of definition, but which is extremely tangible, nevertheless. For example, two musical epochs may disagree as to what constitutes a "melodic interval," but the supreme melodics of both will continue to endure, notwithstanding. But it is evident that melody unadorned is incomplete (except under special conditions); it cannot continue to satisfy the ear. The listener demands something *against* the melody, either another melody, or else that firmer support which we term a harmonic background.

We find that an interval may be recognized in two ways,—its component notes may be sounded simultaneously or one after another. So, similarly, we may regard music from two points of view. We may consider it *horizontally* as superimposed melodies, or *perpendicularly* as chords side by side. When the horizontal melodies can be easily traced and differentiated we say that it is written in *strict parts* as a part-song, a composition for wind instruments, or a string quartet (for the most part). When we have a predominance of the perpendicular standpoint, with the chords broken up into arpeggio, running passages, etc., in which, however, there is an obvious regard for the general principles of part-writing, we term it *free style*. By far the greater proportion of piano music is written in this style. Neither the horizontal nor the perpendicular standpoint should exclude the other, for they coexist on terms of friendly equality. In fact, this dual conception of the nature of music is essential to an understanding of the significance both of melody and of harmony. It is impossible to imagine beautiful music in which the several melodic parts (whether for instruments or voices) did not form harmonious chords at their points of rhythmic contact. Also it is inconceivable that a fine sequence of chords could not be shown to conceal equally fine melodic phrases, if the chords were decomposed into their several parts.

The materials from which we build up the harmonic structure are *chords*. Those principally used are *triads* (formed of a fundamental, a third, and a fifth) and chords of the seventh, formed of a fundamental, a third, a fifth, and a seventh).* These may be formed on every degree of the major and minor scale. There are several varieties, according to the character of the interval involved; major, minor, diminished, and augmented triads; major, minor, and diminished chords of the seventh. In addition, every triad is capable of two inversions (different arrangements of their component notes in which the third or the fifth becomes in turn the lower note instead of the fundamental), producing practically independent chords. Also, every chord of the seventh has three inversions (in which the third, fifth, and seventh become alternately the lower note). In this way the harmonic material at our disposal is very much extended. This is not the place for a detailed mention of even the elementary rules of harmony, how chords should follow each other, the treatment of the dissonant interval in chords of the seventh (called *resolution*), the more exceptional chords of the ninth and the eleventh, and their use. But in general it may be said that the principles which govern chord connection, in its various aspects, all spring from consideration of the *horizontal* character of music. Pure harmony is best secured by giving character to the individual parts, by emphasizing the inherent melody in sequences of chords. Thus it is by *diffusion* of the melodic essence that we arrive at the underlying secret of the construction of the harmonic background.

Important as the harmonic element is as a constructive feature in music, it is still more significant from the standpoint of expression. Harmony is an exceedingly valuable adjunct to Rhythm and Melody in determining not only the fundamental character of music, but also its distinctive mood. The harmonic instinct has been evolved not only to give the musical woof firmness and flexibility, but to give it light and shade,—in short, to give it that vitalizing quality which we term color. Interwoven with the purely structural strands are ineradicable threads of color, which make music a subject for poetry, dreams, and idealism, instead of the cool and dispassionate art of the days of Gregorian modes. Harmony, with its constant ebb and flow of consonance and dissonance, has ever been the medium for expression of personality in music. One has only to observe the gradual unfolding of what might be termed the harmonic vocabulary from the serene beauty of the classical epoch of Haydn, Mozart, and Beethoven, through the marvelous on-surge of the courageous romanticists, Schumann, Chopin, Liszt, Berlioz, and Wagner, culminating in the subtle, complicated, and dexterous expressiveness of the harmonic systems used by Richard Strauss, d'Indy, Debussy, or Loeffler. To the close observer, what for want of a better phrase might be called the harmonic idioms of a composer are as characteristic of his individuality and of his art as a whole as his melodic invention. What perfect correspondence between Mozart's melodies and the gracious, naïve harmonies that accompany them! How perfectly Beethoven adapts his harmonic background to the character of each movement in his quartets, sonatas, and symphonies. What could be more totally distinct than the character of the harmonies used by Schumann, Chopin, Brahms, and Wagner? None could confuse their harmonic personalities any more than the student of orchestration would confuse the sound of their respective orchestras. There is only one other artistic trait that is equally personal, and that is the composer's method of developing a musical phrase or theme.

Finally, we come to the fact that clear perception of harmonic character is an intrinsic part of interpretation also; for the composer's individual use of harmony constitutes an important element in his style, which must receive attention in performance with other technical details. In general, the student must make the harmonic structure clear to the listeners. Not only must melodic phrases stand out wherever they occur, but the progressions of voice-parts must be distinct, not only so that their outlines may be recognizable, but so that their contributing part in the musical expressiveness is equally palpable. A cultivation of attention to this phase of listening is absolutely essential. The student should make certain that he does justice to this side of the composer's personality. From the close interrelation between melody and harmony it might be imagined that both influence the actual structure of music in its development of phrase. This subject is so considerable in itself as to require separate treatment.

* There is a decided inconsistency in nomenclature here. Either we should call triads "chords of the fifth" or we should term chords of the seventh "quadrads."

LESSONS IN MODULATION

PERCY GOETSCHIUS, MUS. DOC.

The fundamental law — the law which governs the great majority of modulatory changes — is that the first key should be satisfactorily closed before the new key is entered. There are, of course, exceptions to this rule; there are, naturally, a great many ways of changing the key; just as surely as that the art of music-writing embraces a very wide range of resources, and that the composer who would compel attention and sustain the interest of his hearer, must command all these resources and must even be fertile in inventing new methods. Therefore it may be possible — ultimately — for the student to switch, or even leap, over into the desired key at any point. This is reasonable, and will be demonstrated in due time, but it is still more rational to assume that the difficulties of changing a key are diminished by choosing the moment *when the first key presents a finished appearance.*

Such an impression of conclusion is always felt, more or less strongly, wherever a tonic harmony is touched. The only chord which requires no "resolution," which involves no obligation, which offers no resistance to a movement in any direction, is the tonic chord, — the chord of the key-note; every other chord in a key, simply because it is not the tonic harmony, is more or less restless, because it strives (with its own peculiar degree of urgency) to regain the condition of repose which the tonic harmony possesses by virtue of its position at the centre of rest. Hence, our fundamental rule: —

Make the change of key after some form of the *tonic* harmony (of the first key).

Such a point having been reached in the first key (see the seventh chord, last beat of the second measure, in Ex. 8), it is always possible, and generally very easy, to enter the desired key, — especially a key that is nearly related (by signature) to the preceding one.

But it is important to enter the desired key in the proper manner. As a rule, it must be done through some chord which is *active;* not a chord which is at the centre of rest of the new key, but one which urges in that direction; in other words, not (as a rule) through a tonic harmony, but with some non-tonic chord. For a while the student must disabuse his mind of the delusive impression that he can enter C major (for example) through the chord of C. As implied above, it *may* be done; but unless skilfully handled, such a modulation would be clumsy, abrupt, and unsatisfactory. The chord of C affords the best opportunity of *leaving*, not of entering, C major.

Of the active chords, the best are those of the dominant (fifth scale-step), in any form; either the dominant triad, the dominant 7th, the dominant 9th, or the diminished 7th chord (the chord of the 7th upon the leading tone, peculiar to the minor mode, but equally available in minor and major).

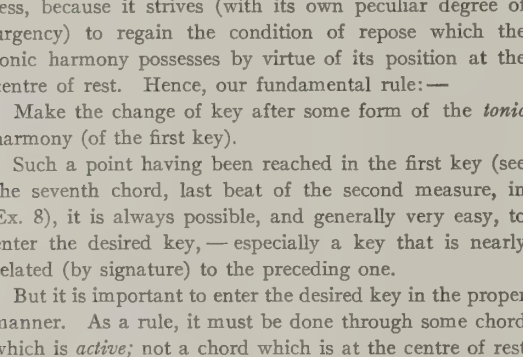
The next best modulating chords are those upon the second and fourth steps of the scale, in any form. These are commonly called the subdominant (or second dominant) chords. Their modulatory importance is based upon the fact that they resolve naturally into the dominant chords, and therefore ensure the desired key.

The complete transition from one key into another is generally made, then, according to the following "fundamental" rule: —

Connect some form of the tonic harmony of the first key with some dominant (or subdominant) chord of the desired key.

For example, the following simple chord successions will effect a modulation (at any point in a sentence) from C major into G major: —

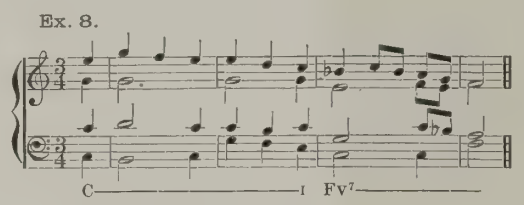
Ex. 7.



These chords may occur on any beat of the measure, and in any measure, — but naturally not too briefly, nor too near either to the beginning or end of the sentence. They may appear in any form, fundamental or inverted, plain or embellished, and they will be preceded and followed by chords which confirm (establish) the two respective keys.

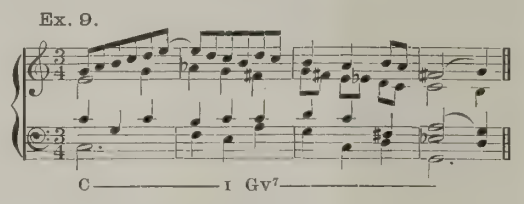
The process is illustrated in the following example, in simple harmonic form (without embellishment), and in strict four-measure phrase form; modulation from C major to F major: —

Ex. 8.



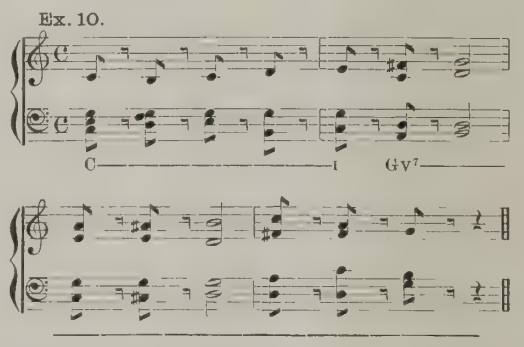
In embellished form, modulating from C major to G major (using the chord succession given in Ex. 7, No. 2): —

Ex. 9.



Or, as this same modulation appears in Beethoven's pianoforte Sonata, Op. 14, No. 2: —

Ex. 10.



At first the student of modulation *must* confine himself to the next-related keys. That is, he should not venture to pass into a new key whose signature differs more than one degree from that of the preceding key. From two sharps (for example) he may pass into three sharps, or into one sharp. The former simply adds one sharp to his signature, the latter takes one sharp away. But it must be remembered that each signature represents both a major and a minor key; hence, there are *five* changes of key possible, without passing beyond a next-related key (or neighboring signature). For example, from two flats (say G minor), thus: —

G minor (2 flats)	into	B flat major (2 flats)
"	"	C minor (3 flats)
"	"	E flat major (3 flats)
"	"	D minor (1 flat)
"	"	F major (1 flat)

In a word, he may pass into the *next higher*, or into the *next lower*, signature, — major or minor.

EXERCISE. — In the present lesson, the student is to experiment with one modulation only; the so-called "dominant" modulation, from any major key to the major key whose key-note is a perfect 5th above. This transition is shown in Ex. 9 and 10, — from C major to G major. The student is to modulate, — in his own manner, but according to the given rules, — from every major key to the major key which lies five scale-steps above; from A to E; from G to D; etc.

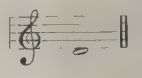
Before doing this, it is commendable to make a complete chord-table, as in Ex. 7, of the possible progressions from the tonic chord of the first key into the various dominant and subdominant chords of the desired key. The more fully this is done, both in writing and at the keyboard, the sooner will the student acquire the necessary familiarity with key-comparison, and modulation.

PRACTICAL ACOUSTICS

DR. S. N. PENFIELD

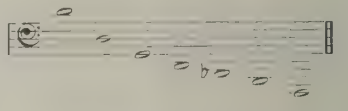
Helmholtz tells us that quality of sound (called by the French *timbre* — by the Germans *klangfarbe*) depends on the number and relative prominence of overtones present. To this must be added that the timbre varies a little with the pitch and the intensity of the tone.

Now how do we analyze such a tone? We hear a musical sound and are usually unaware of its including subordinate tones. The unassisted ear must be very acute to detect these other tones. Octaves above, although present, are so absorbed in the main tones as to be ordinarily unrecognizable; but a 12th or 17th or 19th can often be noticed by the ear, especially from a rather low fundamental. For instance, we will search for D.



First sound it on piano so as to have it fresh in the ear, remembering it, and drawing a bow vigorously across G, open string, of 'cello, leaving the sound to die away, and we can detect this D faintly but clearly sounding with the G, although a 12th above. An expert ear can also hear the B and D next higher with the same fundamental. In some organ stops carelessly voiced, notably a Bourdon, we can plainly hear the 12th included, and in fact sometimes disagreeably prominent.

But we are not dependent on the unassisted ear for this analysis. There are two methods employed which accomplish it for us with exactness and clearness. First, the use of the resonator. We premise the description of this by the following experiment. Take the following list of notes:—



Press down quietly the piano key for the first note, D so that no sound results; hold it; then sing or play with some instrument into the piano the corresponding D tone. Stopping suddenly, the tone returns from the piano. Then take the next note of the example, the D below; press down quietly its key, but sound into the piano the same upper D as before, and the tone will return to the ear as overtone of the key which is held. The third note of example will give the same D as next overtone (12th).

The next will give the 15th, the next the 17th, the next the 19th, and the last the 22d or triple octave. Then press down the damper pedal, so that all wires are free to vibrate; sound the D tone as before and it will return stronger than ever, being given out now by all the wires for which we have before pressed down single keys, as unison or overtones. This explains why the use of the damper pedal (improperly called the loud pedal) actually gives additional body of tone.

The resonator is a hollow, spherical-shaped instrument of metal or glass, with a small nipple tube to insert in the ear and a larger opening in opposite side to admit the tone. It was invented by Helmholtz and improved by Koenig and Dagnin. It has only its own normal pitch. When applied to the ear and a tone sounded by voice or instrument which is precisely at its own pitch, or at a pitch for which this might be an overtone, it will instantly reinforce this tone to the ear. For any other tone it will be mute. For instance, take a resonator which has for its pitch G, second line of treble clef; apply it to the ear; then have the same tone played or sung by another person, and the tone from the resonator will ring into the ear painfully loud. Let the voice or instrument now descend in chromatic scale, and the resonator is mute until G, the octave below, is reached, when the resonator sounds its own proper tone more softly than before. The voice or instrument continues downward without response from the resonator until C (second space of bass), when G rings out again. Once more there is silence from the resonator, but the tone resumes again with G (first line of bass).

It next appears with E♭ (first leger line below), then with C (second leger line below), then with G (fourth space below), then with F, one tone still lower, etc. These tones given out by resonator in order indicated and with a continuous decrescendo, it is recognized as the regular series of overtones, "nature's harmonic series," unison, octave, 12th, 15th, 17th, 19th, 22d, 23d, etc., from the various actual tones which were sung or played.

The absence of the 7th tone of the series will be noted. This is because it does not exist in our chromatic scale. We have said that all these overtones may be thus heard. Actually this depends on the voice or the instrument, for many of the latter have an incomplete list of these overtones, and the presence or absence of these is what the resonator demonstrates. For practical use there should be a resonator for each chromatic tone, and the improvements of Koenig and Dagnin upon the resonator consist in constructing it so that it can be tuned to any given pitch.

The second method of analyzing tones is by means of singing flames. The phenomenon is based upon the well-known fact that a flame as of a blow pipe enclosed in a tube may have its own flutter raised to a musical tone which is the pitch proper to that tube. The quivering of the flames causes the vibration and consequent music. Experiments were made on these singing flames by Chladin and others more than a century ago.

We have not the space, nor is it necessary, to give here a detailed description. Suffice it that under certain conditions a flame may burn quietly in its tube until the normal tone of the tube is sounded by a voice, or otherwise, when the flame itself responds with the same tone. Not only this, but the flame may, under proper conditions, be seen to flare and even jump when a certain tone or overtone is sounded even faintly.

We have here what we may denominate *visible music.* Equipped now with resonators and singing flames, we are prepared to test all musical tones and to detect the presence of all subordinate tones which may be included. Scientists have made this a great study for years, and we give here a little summary of their discoveries and conclusions: —

Overtones have been detected as far as the 24th, or four octaves and a fifth above the fundamental. Some instruments have them in abundance; the human voice in greatest profusion; all stringed instruments are rich in them; all brass and reed instruments have them in varying proportions; organ pipes have few overtones, especially the stopped Diapasons which are nearly free from them, also the flute. The tone of this latter instrument is sweet, but dull.

It is, however, well adapted for arpeggios or for any passages calling for special agility, its lack of positive character not being so observable when the notes are not dwelt upon. In general, the addition of overtones gives life, animation, and color, and their lack produces dulness.

Yet where these overtones are much in evidence, some may be entirely lacking, and those present will vary greatly in their proportionate intensity. It is this variation that mostly gives the special characteristics or timbre to different instruments and even to different voices. Of all the orchestral instruments, perhaps the most characteristic is the clarinet, which alone of all the orchestra has simply the alternate harmonics, 1, 3, 5, 7, etc., of the series. The varying proportions of these overtones in intensity is of course simply infinite.

Some have only one or two, and these of low pitch. Others have two or three high ones and some that are really imperceptible, etc. Yet, in addition to overtones, the quality and clearness and the straightness of fibre of the wood or metal have much to do in giving a clear and beautiful tone to instruments. A violin string with the least little "kink" in it will not sound clear, and this because its harmonic tones are thrown out of proportion so that its tone is not that of a pure major chord. So with a piano string. The wood for body of violin or 'cello or sounding board of a piano must be perfect as to grain and uniform density, to give complete reverberation. The musical world has, during the past few years, taken notice of some famous piano manufacturers running two factories and turning out instruments of different grades and prices. The best cuts of wood (a very few out of any one log) go into the high-priced ones. The rest of the log is not thrown away, but goes into those of lower price. The timbre of wood-wind instruments is too often marred by a trifle whistling sound made by the air on the edge of the opening; that of the violin family by a little scraping of the bow. The hammers also of some pianos, especially near the upper end of keyboard, give a thud sound in addition to the musical tone which is distressing to the critical ear.

The human voice is undoubtedly the most satisfactory musical instrument. Here we have to consider two parts, — first, the vocal cords, constituting the double reed, the rapid vibration (opening and closing) of which gives out the tone with overtones; second, the resonance chambers, mouth, throat, and nasal cavity, thrown into a myriad of different shapes by use of jaws, tongue, lips, palate, etc., which shape, round out, and polish up the tone, and this latter largely by reinforcing the proper overtones which embellish the fundamentals.

It is thus an adjustable resonator. The vocal cords, when absolutely at rest, or when whispering, are relaxed, but when singing or speaking they are instantly drawn tense, so that the breath sets them into vibration. The facility and promptitude with which this tenseness may be varied is simply amazing. The purest voice is one whose vocal cords are absolutely true, especially on the edges, which cannot be in the least serrated. Thus the breath and the vocal cords "push the button," and the resonance chamber "does the rest." A person sings only on the vowel sounds or on the half vowels, such as *l*, *m*, *n*, *r*, and *ng*. On any one of these the singer sets his whole resonance chamber in the position required for such vowel or half vowel, and then retains this while drawing the vocal cords tense enough to give the proper pitch, thus having a complete compass of from one and one half octaves to possibly three and sometimes more. Naturally these tones are somewhat colored by the consonants which precede or follow them, but chiefly these vowel sounds owe their special characteristics to the exact admixture of tones (fundamental and overtones) which the vocal cavity will reinforce.

For example, I sing on some convenient pitch (say G) *oo* as in *boot*. I test this tone with resonator or singing flames for overtones. Recording these, I then sing at same pitch *o* as in *note*, and test with resonator, etc.

Then *a* as in *father;* then *a* as in *fate;* then *e* as in *feet;* likewise the other vowel sounds; and all at same pitch so as to equalize the conditions. The vocal cords have given out the same fundamentals and same overtones, but the special shape of mouth, etc., has favored a different set of these overtones each time so as to bring such set into prominence. The resonator or flames determine the precise admixture of tones for each vowel sound. In this field of investigation researches have not yet gone far enough to give determined and complete data, but we may take the following as generally admitted, — that the tone *ah*, which is given with the freest opening, has the most complete set of overtones, and the higher ones come principally into play; that the tone *oo* has mainly the fundamental (first of series), with a slight 2d and 3d; the tone *o* has a stronger 3d and 4th; the tone *a*, as in *fate*, has a strong 3d with weak 4th and 5th; that *e*, as in *we*, has weak fundamental, strong 2d, intense 4th, and feeble 3d and 5th. Of course these vowels may mingle and shade off into each other, as will the primary colors, so that we may have upwards of sixteen recognized vowel tones, each with its exact proportion of overtones; and different singers will vary these, so that it is and will ever be impossible to make up an exhaustive schedule of these proportions for vowel tones. Upwards of sixteen harmonics may be heard from a clear bass voice on a low note.

We have before stated that every tube or air chamber has its normal pitch. This is true of the mouth in any one position. It is seen in playing the jewsharp, also in whistling, where the variety of pitch is given by the tongue enlarging and contracting the mouth cavity. It follows that with a given position of vocal cavity there will be some one tone at which the voice will best ring out. Here is a point calling for great care and close attention from every ambitious singer, for the necessities of diction and good vocalization often require the delivery of certain vowels with a position of mouth which does not well reinforce the exact pitch required by the music. The voice is an instrument to be in part constructed, and in each case perfected, and then preserved, by its possessor. How important that singers should know about its structure, its physiology, and its hygiene!

Yet how ignorant and reckless many singers are of their priceless possession. Violinists, flutists, harpists, and indeed all players take better care of their instruments than the average singer, and we have for result the immense number of voices breaking down every year, and even at an age when they should be in their prime.

FIRST LESSONS IN FRENCH

A. RHEINGAUER

LESSON I

Il (*elle*) *chante*, he (she) sings or is singing, is the third person singular of the present indicative of *chanter* (to sing). It is formed by adding *e* to *chant*, the radical of *chanter*.

The interrogative form of *il* (*elle*) *chante* is: —

Chante-t-il? Does he sing? Is he singing?

Chante-t-elle? Does she sing? Is she singing?

Une — a, an, before a feminine noun. Ex.: —

Une chanson, a song.

Read and translate

Paul (Marie) chante. Il (elle) chante une chanson. Comment chante-t-il (elle)? Il (elle) chante bien. Qui chante? Que chante-t-il (elle)?

VOCABULARY

To be committed to memory

Paul, Paul; *Marie*, Mary; *chanter*, to sing; *une chanson*, a song; *comment*, how; *bien*, well; *qui*, who? *que*, what?

Translate into French

1. Who is singing? Mary is singing. 2. She sings well. 3. Paul is singing. 4. How does he sing? 5. What is he singing?

LESSON II

Singular	*Plural*
Il, he	*Ils*, they
Elle, she	*Elles*, they

Ils (*elles*) *chantent*, they sing or they are singing, is the third person plural of the present indicative of *chanter*. It is formed by adding *ent* to *chant*, the radical of *chanter*.

The negative conjugation of a French verb requires two words: *ne* and *pas*. *Ne* is placed before the verb *pas* after it. Ex. : —

Il ne chante pas { he does not sing / he is not singing

Ecouter (to listen to) is conjugated like *chanter*. Therefore: —

Elle écoute, she listens or is listening.

In French, adverbs are formed by adding *ment* to adjectives. When the masculine form of an adjective ends in a consonant, *ment* is added to the feminine form of the adjective. Ex.: —

Attentif (masc.), *attentive* (fem.), attentive.

Attentivement, attentively.

Read and translate

Paul et Marie chantent. Louise ne chante pas; elle écoute. Comment écoute-t-elle? Elle écoute attentivement. Chante-t-elle? Non, elle ne chante pas.

VOCABULARY

To be committed to memory

Et, and; *Louise*, Louisa; *écouter*, to listen to; *attentivement*, attentively; *non*, no.

Translate into French

1. Who is singing? 2. Who does not sing? 3. Who is listening? 4. Mary and Louisa are singing. 5. Paul is listening. 6. They sing. 7. They are not singing.

LESSON III

Le (the) before a masculine in the singular. Ex.: *le chant*, (the) singing.

La (the) before a feminine in the singular. Ex.: *la chanson*, the song.

The plural of both *le* and *la* is *les* (the).

The plural of a French noun is formed by adding *s* to the singular. Ex.: —

La chanson, the song; *les chansons*, the songs.

The *feminine* form of many French adjectives does not differ from their *masculine* form. Ex.: *populaire* (masc. and fem.), popular.

The plural of a French adjective is formed by adding *s* to the singular.

The adjective agrees in gender and number with the noun it modifies. Ex.: —

La chanson populaire, the popular song.

Les chansons populaires, the popular songs.

J' takes the place of *je* (I) when the following word begins with a vowel.

L' takes the place of *le* (him, it) or *la* (her, it) under the same circumstances.

The radical of *aimer* (to like) is *aim*.

The first person singular of the present indicative of *aimer* (to like) is formed by adding *e* to the radical, the second person plural by adding *ez*. Therefore: —

J'ame, I like.

Vous aimez, you like.

Object-pronouns precede the verb. Thus: —

Je les écoute, I listen to them.

Read and translate

Aimez-vous le chant? Oui, je l'aime beaucoup. Aimez-vous les chansons populaires? Oui, je les écoute avec plaisir.

VOCABULARY

To be committed to memory

Le chant, (the) singing; *la chanson*, the song; *aimer*, to like; *écouter*, to listen to; *beaucoup*, much, very much; *populaire* (*masc. and fem.*) popular; *avec plaisir*, with pleasure; *le* (l), him or it; *les*, them; *oui*, yes.

Translate into French

1. I like singing. 2. Do you like it? Yes, I like it very much. 3. Who does not like it? 4. I listen to popular songs with pleasure. 5. Do you like them?

LESSON IV

Un = a, an before a masculine noun. Ex.: *un mot*, a word.

Qu' takes the place of *que* before a word beginning with a vowel. Ex.: —

Aussi bien qu' en français, as well as in French.

French adjectives denoting nationality follow the noun they modify. They are written with a small letter. Ex.:

Un mot français, a French word.

There are cases where the article, though needed in English, is omitted in French. Ex.: —

Comme adverbe, as an adverb.

Read and translate

Piano est un mot italien qui s'emploie en francais aussi bien qu'en anglais. Comme adverbe il veut dire *doucement*. Quel est le contraire de l'adverbe *piano?* C'est *forte*.

VOCABULARY

To be committed to memory

Le mot, the word; *l'adverbe*, the adverb; *est*, is; *italien*, Italian; *qui s'emploie*, which is used; *en français*, in French; *en anglais*, in English; *aussi bien que*, as well as; *comme*, as; *il veut dire*, it means; *doucement*, gently, piano; *quel*, what, which; *le contraire*, the opposite; *de*, of; *c'est*, it is.

Translate into French

1. A French word. 2. An English word. 3. In Italian. 4. In French. 5. In English as well as in French. 6. What word? 7. What adverb? 8. What is the opposite of *forte?* The opposite of *forte* is *piano*.

FIRST LESSONS IN GERMAN

F. C. BURKART

LESSON I

The present infinitive of a German verb may be divided into two parts: the stem and the ending. Ex: —

Spiel-en, to play; *tu-n*, to do.

The third person singular of the present indicative adds *t* to the stem. Ex.: —

Er spiel-t, he plays, or he is playing.

Er tu-t, he does, or he is doing.

Nearly all German adjectives may be used as adverbs without being inflected. Ex.: *gut* (adj.) good; *gut* (adv.) well.

Er singt gut, he sings well.

When the subject of a sentence precedes the verb, we have the normal order of words; when the subject follows the verb, we have the inverted order.

Examples for the normal order are: —

Karl (subj.) *spielt* (verb) *Klavier.*
Charles is playing the piano.

Wer (subj.) *spielt* (verb) *Klavier?*
Who is playing the piano?

Examples for the inverted order are: —

Was tut (verb) *Karl* (subj.)?
What is Charles doing?

Spielt (verb) *er* (subj.) *Klavier.*
Is he playing the piano.

Read and translate

Karl spielt Klavier. Er spielt gut. Was tut Karl? Wer spielt Klavier? Wie spielt er?

VOCABULARY

To be committed to memory

Karl, Charles; *spielen*, to play; *Klavier spielen*, to play the piano; *gut* (adj.), good; *gut* (adv.) well; *tun*, to do; *wer*, who; *wie*, how; *was*, what.

Translate into German

1. What is Charles doing? 2. Is he playing? 3. How does he play? 4. Does he play well? 5. Who is playing the piano?

1. The German language has no special verb-form to express progressive action.

2. Common nouns as well as proper nouns begin with a capital letter.

LESSON II

Hilga spielt nicht (literally: Hilga plays not).

Hilga does not play, *or* is not playing.

Sie singt. She sings, *or* she is singing.

When an adjective is preceded by *ein* (a, an) and followed by a neuter noun, it takes the termination *es*. Ex.: —

Ein deutsches Lied, a German song.

Read and translate

Hilga spielt nicht; sie singt. Sie singt ein deutsches Lied. Singt sie gut? Ja, sie singt sehr gut. Was für ein Lied singt sie? Singt Karl auch? Nein, er singt nicht. Was tut er? Er spielt.

VOCABULARY

To be committed to memory

Singen, to sing; *ein Lied*, a song; *deutsch*, German; *ja*, yes; *nein*, no; *nicht*, not; *sehr*, very; *was für*, what kind of; *auch*, also, too.

Translate into German

1. What is Hilga doing? 2. Is she not singing? 3. What is she doing? 4. How does she sing? 5. Who is playing? 6. Is Charles singing a German song?

LESSON III

In a German verb the first person singular of the present indicative adds *e* to the stem, the second adds *en*. Therefore *hören* (to hear) has: —

Ich hör-e, I hear; *Sie hör-en*, you hear.

Sie (you) always begins with a capital; *ich* (I) is written with a small letter, except at the beginning of a sentence.

There are four cases in German: 1) the nominative, 2) the genitive, 3) the dative, and 4) the accusative.

1) answers to the English nominative, 2) to the English possessive case or objective with *of*, 3) to the English objective with *to* or *for*, and 4) to the English objective.

Karl (nom.) *singt*, Charles sings.

Karls (gen.) *Stimme*, Charles' voice.

Ich höre Karl (dat.) *zu*, I listen to Charles.

Ich höre Karl (acc.) *singen*, I hear Charles sing.

Nominative	*Dative*	*Accusative*
Er, he	*ihm*, to him, him	*ihn*, him
Sie, she	*ihr*, to her, her	*sie*, her
Wer, who	*wem*, to whom, whom	*wen*, whom

The prefix of a separable verb is detached in the present, the preterit, and the imperative. *Zuhören* (to listen) is one of the separable compounds. Therefore: —

Ich höre ihm zu, I listen to him. *Zuhören* governs the dative. Example as above.

Read and translate

Ich höre Karl spielen und Hilga singen. Was höre ich Karl tun? Sie hören ihn spielen. Was hört Karl Hilga tun? Er hört sie singen. Ich höre ihm (Karl) und ihr (Hilga) zu. Wem höre ich zu?

Translate into German

1. What do you hear Charles do? I hear him play. 2. What is Hilga doing? She is singing. 3. Does Charles listen to her? 4. To whom are you listening? I am listening to Charles.

LESSON IV

There are three genders in German: the *masculine*, the *feminine*, and the *neuter*.

Der (the) before a masculine in the singular.

Die (the) before a feminine in the singular.

Das (the) before a neuter in the singular.

Es (it) refers to a neuter noun. Ex.: —

Es (meaning *das Wort*) *kommt* . . .

It (meaning *the word*) comes . . .

When a German adjective is used as a noun, it is written with a capital letter. Ex.: —

Nom. *Das Italienische*, the Italian language.
Dat. *Dem Italienischen* (to) the Italian language.

The preposition *aus* (from) governs the dative. Ex.: —

Aus dem Italienischen, from the Italian.
Nom. *Dieselbe Sprache*, the same language.
Dat. *Derselben Sprache*, (to) the same language.
Nom. *Welche Sprache* what language.
Dat. *Welcher Sprache*, (to) what language.

Read and translate

Das Adverb *forte* kommt aus dem Italienischen. *Piano*, das Gegenteil von *forte*, kommt aus derselben Sprache. Aus welcher Sprache kommt das Adverb *piano?* Es kommt aus dem Italienischen.

VOCABULARY

To be committed to memory

Das Adverb, the adverb; kommen, to come; *aus* from; *italienisch*, Italian; *derselbe* (masc.), *dieselbe* (fem.) *dasselbe* (neu.), the same; *die Sprache*, the language; *das Gegenteil*, the opposite; *von*, of; *welcher* (masc.), *welche* (fem.), *welches* (neu.), what, which.

Translate into German

1. The Italian language. 2. What language? 3. From what language? 4. From what language does it (the adverb) come? It comes from the Italian. 5. What is the opposite of *forte?*

"YANKEE DOODLE"

ELIZABETH H. DUNHAM

"Yankee Doodle came to town, a-riding on a pony," so the verses go, but where it came from nobody knows.

Some say that the first people who ever sang it were the Dutch mothers; that no one ever heard it until some boys and girls in Germany, on their way home from school, perhaps, sang it; but those who speak from authority concerning these things say that *nobody* knows who made the tune.

We do know, however, who first played and sang it here in America, and who laughed at us for liking the jolly little jig, and who were also glad enough to go back home on *their* ponies, if they had any, so as not to hear it any more.

It all happened because Columbus discovered America, for then the kings of the Old World began to send men over here to see how much of it they could take and call their own, and after a while our ancestors left their homes across the ocean, and came to America to make new ones.

They dressed very different from the people of to-day, the men wearing knee trousers (such as boys wear now), with long stockings and low shoes with great buckles on them; long coats and cocked hats.

They carried guns, also, but not like those used by our soldiers. They called them muskets, and although they were very heavy to carry and troublesome to load, the men became very skilful in using them, for there were no butchers' or bakers' shops, and they must shoot bears and wolves and wild birds for dinner, and also guard their wives and children from the Indians.

Now the young men who came over had grown old, the boys had taken their places, and little children had been born when France and England began to dispute about their share of American land. England claimed a certain part which France said did not belong to her, and which she should not have; so they sent their soldiers over here to fight about it.

Then the King of England said that our ancestors — the settlers, he called them, — must fight for him because they had come over from England, and were still his lawful subjects.

So they started for the seat of war, wearing their old and ragged clothes, and carrying their rusty and old-fashioned muskets, for they had been very poor all these years, and had no new clothes or weapons.

But these other soldiers of the King, who came over, were very fine appearing. They wore handsome new uniforms; their guns and swords were bright and shining, and they made much sport of their unfortunate comrades, ridiculing their torn and old-fashioned clothes, their marching, and also the old tunes that were played.

Among the officers of these British troops was a Dr. Shuckburgh, who was a surgeon, also a musician, and one who enjoyed playing jokes on other people. Tearing a leaf from his notebook, he quickly wrote on it the notes of *Yankee Doodle* which he must have heard somewhere, but which was unknown to all the others. This he handed to the bandmaster, saying that it was the latest martial music in England, and had become very popular.

Naturally that was untrue, but this band of ragged musicians believed it and played the tune, while the British soldiers laughed and shouted at the joke, but that made little difference with the "Continentals," and they kept on playing *Yankee Doodle*.

Many foolish verses also were written to be sung to the tune, which were all about their ragged clothes and their awkward manners.

Well, the band played *Yankee Doodle*, and the soldiers fought for years, and bye and bye the war was over, but these great-grandfathers of ours were beginning to think that perhaps they did not care so very much to have a king in England anyway, and to have such rude brothers as these fine British soldiers were; but when they said so to the King, he was not willing to let them go, and so there had to be another war, and *Yankee Doodle* was played over and over again, and how do you think these saucy British soldiers felt, when, marching to this same tune, they handed over their swords and the victory to these very same "Yankee Doodle dandies"?

Leoncavallo is at present working on the outline of a Trilogy of the Florentine Renaissance. One part of it is to be dedicated to the Medici, another to Savonarola. He is also busied with a patriotic opera, *The Red Shirt* (in reference to Garibaldi) the scene of action to be placed near the Lake of Garda.

* *

Winkelmann, Wagnerian singer of the Vienna Royal Opera, has said "Farewell" to the rôle of *Tannhäuser* and has gone into retirement. He sang *Parsifal* in Bayreuth as early as 1882, and has many pleasant recollections of the great Bayreuth master. "Wagner," he says, "hated superficiality and striving after effect on the stage. What iron nerves he had! What unheard-of energy! What flaming enthusiasm! Those were charming days."

COMPOSERS' EVENINGS

T. L. RICKABY

The majority of teachers devote their efforts to piano instruction. When special programs are given, only pieces for piano or piano arrangements of orchestral works are used. Now this may seem to be the only way, and is probably not without benefit to the pupils, but very little idea of a composer's real work can be gleaned from an exclusively piano program. In these days almost every important orchestral composition can be obtained for piano duet, or for two pianos. It is difficult to get two pianos together, although not impossible in a town of any consequence; but where this is not practicable, a piano and reed organ make very agreeable music. In fact, for orchestral works these two instruments are really better than two pianos in my estimation, because the sustained notes of the organ more nearly approximate the string and reed sounds of the orchestra. Pieces for piano and organ are not so numerous as for two pianos, but still enough can be found for the purpose intended. In addition, an examination of the catalogs of prominent publishers will reveal the fact that the music of the masters can be had for almost every imaginable combination of instruments. If your town possesses a good amateur violinist, cornetist (I believe the dictionary calls it corneter), and flautist, then an ocean of good music is at your disposal. As a rule, a symphony arranged for piano duet is the best that can be done, and that is better than no symphony. The great symphonies can be procured, however, arranged for a small orchestra with piano, and can be given with good effect. Where this is impracticable, parts of symphonies arranged for violin, second violin, flute, cornet, and double bass are obtainable, and if a piano duet arrangement can be added to this, a highly satisfactory result will ensue.

One of the best combinations consists of piano, violin, 'cello, and reed organ, and considerable music is arranged thus. Some fine music may be found for two pianos, violin, and 'cello. Now it happens that a 'cellist is a *rara avis* in most towns, and unless something can be substituted for this instrument, this combination cannot be employed, but here is where our little used and less understood reed organ comes in. The 'cello part can be given very acceptably on the former unappreciated instrument, and moreover, with it the effect can be heightened considerably by the addition of chords either for crescendos or for a climax. I cannot help calling the attention of any one interested in the subject to the *Home Music* of Breitkopf & Härtel, consisting of orchestral music, arranged for piano, reed organ, string quintet (or quartet), and flute. Even where a 'cello and viola are not available, much of this music can be performed without them; but supposing that these larger combinations are out of the question, there still remains an infinite amount of music to draw from. For instance, with violin, piano, and cornet (where the latter is a good instrument and is played carefully), much satisfactory work is possible. If the cornet is objectionable, as is often the case, there remain these really effective combinations, — two violins and piano, or three violins and piano; or violin, flute, and piano; piano, reed organ, and violin; or piano, four hands, reed organ, and violin. In fact, the difficulty is not to find music, but rather to choose from so much that is good and comparatively easy of accomplishment.

While on the subject of special combinations of instruments, it may not be out of place to mention that while it is next to impossible to have French horns, it is not necessary to deny our audience of the pleasure of a very close approximation of the horn effect. Many manufacturers of band instruments are making one which is a combination of cornet, alto, and horn. They are sold under various names, and, being played by means of three valves, are easy to learn and manipulate. Now I do not pretend to say that two of these "mongrels" will be equal to two horns, but I do insist that they can be played in such a manner as to add a wonderful "body" to any combination of instruments, and add immensely to the effect, and without any of the "blare" which is inseparable from the free use of the cornet-a-piston.

No special program is complete, nor does it fulfil its real objects, unless the composer is represented by some

of his vocal works. Solos are very readily obtainable, but their best vocal work is not written for solo voices, but for chorus. Now, a large chorus is not alway practicable — nor necessary in entertainments other than regular choral concerts, but sixteen voices can do a surprising amount of singing. Note the fact that I do not say sixteen *people*, but sixteen *voices*. There is quite a difference. This makes a chorus that is easy to handle, and a small number is often more enthusiastic than a large number. A body of singers of this description naturally is not adapted to such as *The Heavens are Telling* or the *Hallelujah Chorus*. Concerts are not intended to be mirth provoking.

F. J. HAYDN

At this point an objection might be raised to the effect that an attempt to follow out the above suggestions would require the services of other people besides the teacher and pupils, and would entail much additional work. Nothing of any consequence is accomplished without work, and the teacher who simply gives lessons must not be surprised at being outstripped by others more industrious than he. It pays to work hard. At an ordinary pupils' piano recital it is best for the program to be given by them alone, with possibly a little assistance from the teacher. When a more important event, like a Mozart or a Haydn evening is contemplated, then the larger number of musicians which are directly interested the better. The majority of amateurs like to perform and are anxious to do so, and this tendency should be utilized to the utmost by the wide-awake teacher who believes in missionary work. The trouble with many musicians is, that unless they are the "whole thing," they decline to be anything. They must always be "It." Now, no mistake could be greater or more damaging, and the teacher is blind to his own interests who cannot see the advantage to himself in periodically gathering around him all the available talent at his command. It is a direct advertisement, and exhibits in a good light the teacher's alertness, his ability, his good will, his industry, and his earnestness in the cause of musical advancement. To follow this trail, however, would lead to too great a digression, hence, I will return to the main subject.

The literary part of the special program remains to be spoken of. There is usually an "address," "essay," or "paper" on the life, work, and characteristics of the particular musician chosen. In the most of cases such efforts are either too technical, and so fail to be instructive, or are too poetical and flowery to be other than tiresome to the majority of listeners. A list of mere dates and uninteresting facts is to be avoided. As to the birth of the composer, the year is not sufficient, but the conditions of the time in art and literature must be touched upon, together with some mention of the social and political state of affairs, so as to provide the historical environment rather than the mere day, month, and year. Again, while it would do no harm to state that Haydn wrote eighty-nine symphonies, it is much more important that those chiefly concerned should know just what a symphony is, and that Haydn was the father of this particular art form. It is not absolutely essential that pupils and audience should know that Schubert wrote over eight hundred songs, but it is necessary that they should know that he was the originator of a particular kind of song — the art song; and that one of Schubert's is worth all the popular and maudlin songs that see the light at present in such numbers. The commencement "oration" style should be carefully avoided, and to this end the teacher should attend to this part of the program himself. There are to be found many very beautiful poems on music topics, — some on the composers themselves. Such poems may be read, and will prove a very valuable and welcome addition to a program of the kind under consideration.

THE ROCK BAND

The Till family has recently settled in Bayonne, New Jersey, after giving their Rock Band concerts for many years in this country and in Europe.

The most noticeable feature of their remarkable concert, is an instrument made entirely of rocks. Mr. Till for many years explored the paleozoic rocks of the Cumberland Mountains, England, and at length found a series, which, when struck, produce sounds as various and more accurate than the chords of a grand piano. The rocks are gneiss and hornblende, and were deposited prior to the introduction of life upon the earth, probably 100 million years ago. Mr. Till commenced to collect these stones as an amusement, and by the end of the year he had gathered enough to form an instrument of an octave and a half on which simple airs could be played. The idea of a perfect instrument followed as a natural sequence. William Till and father, Daniel Till, continued to work on it and devoted eleven years in bringing the instrument to its present complete form. The stones are from 6 inches to 4 feet long, arranged on a frame 12 feet long. It has a scale of five octaves. When the instrument was completed the Till family exhibited it in the Crystal Palace, London, England, where the Rock Concerts created a furore as well as receiving endorsements from a number of notable personages. After a tour through Great Britain, they were invited to this country by the Rev. Dr. F. E. Clarke, of Christian Endeavor renown, who secured for them an engagement for one season with the Redpath Lyceum Bureau of Boston. The engagement was most successful. In addition to occasional Rock Band concerts in New York and vicinity the family is now regularly engaged in church work,—Mr. Till as organist and choir-master of the First Reformed Church, Bayonne, where also his daughters, Esther and Mabel, are engaged as soloists. The latter is organist of the Bergen Reformed Church, Jersey City.

THE ROCK BAND

FREDERICK A. WILLIAMS

Frederick A. Williams, a well-known pianist and teacher of Cleveland, Ohio, was born at Oberlin in the same State, in 1869, coming of a musical family. Although showing a predilection for the art at an early age, he did not, however, begin serious study until he was nearly sixteen, receiving his first instruction from his sister, herself a capable musician. Later he studied the piano and organ with James H. Rogers and William H. Sherwood, also harmony and composition with Wilson G. Smith. Some fifteen years ago Mr. Williams located in Cleveland, where he has since resided. During this time he has been active not only as a teacher, but also in the field of composition. His published works for piano are many, the most important of which are: —

Op. 6. Five Pieces (*A Morning Ride, At the Picnic, Moonlight Waltz, Entreaty, Good Night*).
Op. 16. *By the Brook.*
Op. 19. Six Pieces (*Song of the Fairies, Song of the Rover, A Gypsy Dance, Boatman's Song, Rustic Dance, Elsie's Waltz*).
Op. 23. *Valse Serenade.*
Op. 29. Four Pieces (*Playing Tag, Waltz of the Flower Girls, The Jolly Harvesters, March of the Little Soldiers.*)
Op. 40. *Over the Meadows.*
Op. 41. *At the Carnival.*
Op. 42. *The Busy Bee.*
Op. 45. Four Pieces (*The Brooklet, The Happy Plowman, Through the Fields, Shepherd's Song*).
Op. 51. *Butterflies.*
Op. 55. *Jubilee March.*

FREDERICK A. WILLIAMS

Mr. Williams' compositions have acquired an extended reputation among teachers, and are deservedly popular. *Butterflies*, mentioned in the above list of compositions, appears in the Music Supplement of this issue of THE MUSICIAN.

MUSIC IN "MAYFLOWER" DAYS

L. O'CONNELL

Driving to-day through the by-roads of New England, it would seem that no dwelling is too poor or too isolated to contain a musical instrument. There may be tumbling fences, leaking roofs, neglected fields, but there will surely be a piano, or at least a parlor organ. Americans are really a musical people, with a taste unformed, true, but a good taste, sure, under correct cultivation to develop nationally in the right direction.

American love of music dates from the day of arrival of the "Mayflower," when the women who went ashore "gathered driftwood, made a fire, and were not too weary to sing a hymn."

But the "Mayflower," so crowded with tables, chairs, and other furniture (judging from the many articles now shown declared to have made the voyage to the New World in that small vessel), evidently had no room for spinets or virginals. Amid many lists of pots, gridirons, beds, bolsters, silver spoons, pewter dishes, and even bushels of corn, no mention is made of musical instruments.

Our musical history in America begins with the attitude of the Puritans toward the Art. From the hearts of a people in whose eyes a merry laugh was a sin, no cheerful, sweet melody could spring. To the Pilgrim Fathers belongs the responsibility of having for years killed all musical spontaneity and of having prevented the early development in Colonial America of a school of music which would have been absolutely national. The germs of music were among the colonists, but fanaticism killed them, violent antagonism toward a harmless and refining art crushed feeble stirrings of melody, the ascetic habit condemned every pleasant thing as sinful.

The Puritans condemned bear-baiting, not because it tormented the bear, but because it amused the spectators. They objected to music more because it added to happiness than because it was contrary to religion. For years American love of music found sad and stunted expression only in psalmody and hymn singing, the words of many hymns being of an awfulness that to an artistic temperament must have made their performance a martyrdom! It is no wonder that many pious Colonists objected to singing as part of religious worship, when hymns such as the following were frequently sung. The lines foreshadow the fate of Babes and Heretics.

> "They wring their hands, their caitiff hands,
> And gnash their teeth for terror!
> They cry, they roar, for anguish sore,
> And gnaw their tongues for horror!
> But get away, without delay!
> Christ pities not your cry.
> Depart to Hell! There may you yell,
> And roar eternally!"

In the bleak, bare meeting-houses, the singing of psalms by ear was tedious and unmusical, also very uncertain. The congregation had no notes, many had no psalm-books, hence no words. So psalms and hymns were lined out, or, as it was said, "deaconed." A line was read by the deacon, and then sung by the congregation, then another line was read, and so on! A process that sometimes gave rise to misapprehensions.

One cloudy, snowy Sabbath a half blind old deacon, who could scarce see the print of his psalm-book, exclaimed, holding it aslant to the window: "My eyes indeed are very blind!"

The choir thought this to be the first line of a common metre psalm, and promptly sang it, whereupon the deacon complained, "I cannot see at all!"

The enthusiasts in the singing seats chanted forth, "I cannot see at all."

"I really think you are bewitched!" ejaculated the indignant deacon, and the lively choir echoed, "I really think you are bewitched!" whereupon the sorely tried official shouted, "The mischief's in you all!" and sat down in despair, as the singing men and women wailed in nasal unison, "The mischief's in you all!"

The singing of some psalms kept the congregation standing half an hour, and the selection of music was confined to eight or nine tunes. The melody was tortured and twisted, as every unskilful throat saw fit, until the rendition of meeting-house divine praise became a mere confusion of noises. It is written of the singing of a certain congregation that "it sounded like five hundred different tunes roared out at the same time." One minister, after some such performance by his flock, gave out another psalm with the remark, "You must try again, for it is impossible to preach after such singing."

There were no church organs, nor even melodeons, to help keep the singers' voices together. Tunes were set by pitch-pipes, according to the general directions that —

"1. Psalms of Tribulation shall be sung in low voice, and in long measure.

"2. Psalms of Thanksgiving shall be sung with an indifferent voice, neither too loud nor too soft, and neither too swift, nor too slow.

"3. Psalms of Rejoicing shall be sung with loud voice, and in swift, jocund measure."

Psalm-books generally had the music, and the directions for pitching the tune on the page beside the words.

Finally there was an effort to improve church music by the introduction of note-psalmodies for general use by worshipers, but for fifty years this reform met violent opposition from church councils which declared that,

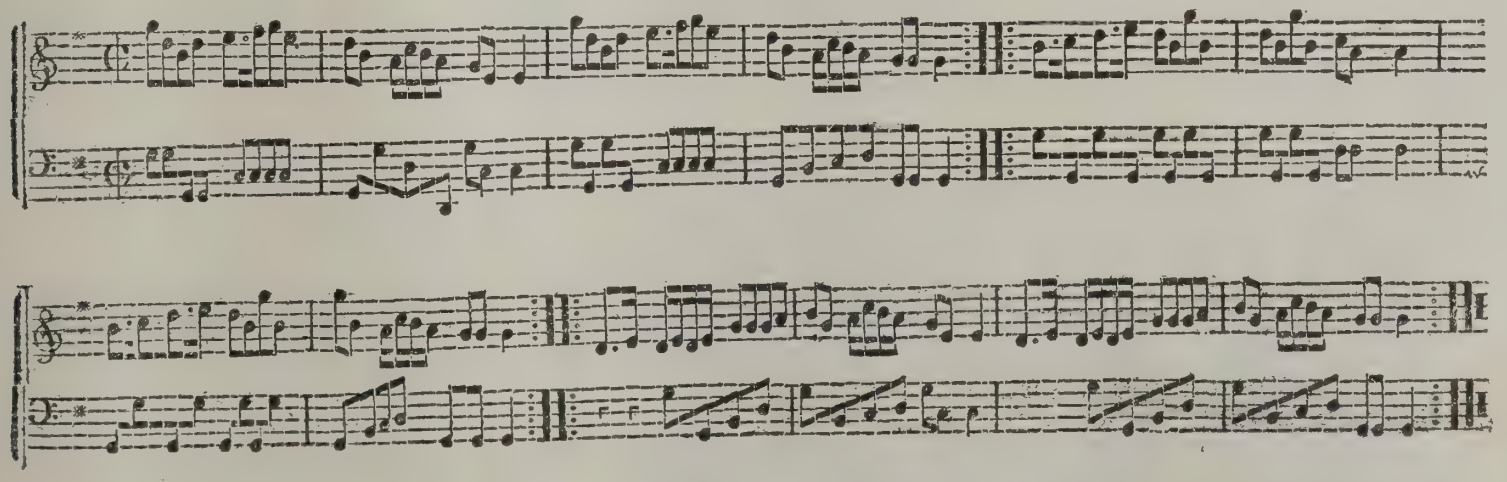
"The new way grieved good men, and caused them to behave disorderly," that "the names of the notes were blasphemous," and that "if so many tunes were introduced, we could never learn them."

To this day traces of the psalm-singing epoch are found in country towns all over our land, in the trashy church and Sunday-school "Hymnals" and "Collections" annually manufactured in enormous quantities.

In spite of all opposition, music books came into general use, and music, "that snare of the devil," was rated as a study in Harvard University very soon after the founding of that institution.

In the quaint old Colonial music books the music notes are square, and heavily printed on coarse, but substantial paper. The vocal score

Boston March.



FROM HOLYOKE'S "INSTRUMENTAL ASSISTANT"

is generally arranged for but two parts. The treble was then sung by men; women sang the second, or tenor. There was no written instrumental accompaniment. The accompanist had to read from the score, or play from a figured bass whenever there was one.

Instruments came into use in Colonial days in the following order:—

The pitch-pipe, the tuning-fork, or brass reed. The violoncello was followed by the flute, hautboy, clarinet, bassoon, violin, and lastly the organ, which, though introduced on the Atlantic Coast before the Revolution, was never used west of the Alleghanies until 1837.

The first church organs built in America appeared about 1752. A newspaper of that time said of one of the instruments:—

"In the purchase of this valuable piece of workmanship the congregation has risen above prejudices which have been suffered too long to cramp the efforts of native genius, and has evinced a disposition to patronize and reward the enterprising artists of their own country in preference to any others."

In the early days of the eighteenth century, a spinet was manufactured in Boston by a Mr. John Harris, and shipped to a purchaser at Newport, R. I.

This spinet, which can still be seen at Newport, has one set of jacks and strings. The hammers have crow-quills which press on brass strings. The price of the instrument was £18 ($90).

Up to this period musical instruments used in Colonial families were chiefly the virginals and treble-viols.

The virginal, named after Queen Elizabeth who said her "virginals enabled her to shun melancholy," was usually played by the younger women. Judge Sewall, the famous witchcraft jurist of Boston, who had a passion for music, writes in his diary about his wife's "virginals."

What tunes could Madam Sewall have been playing on her virginals in 1690, that dark time of fanaticism, of evil imaginings, and witch burnings? No tawdry roundelays, no sinful courantes and minuets, surely! Probably the lady performed the half-dozen long-metre psalm-tunes for which her spouse, the Judge, set the pitch each Sabbath in the meeting-house.

In very early times a few spinets had been brought from Europe to the Colonies, but to the modern ear nothing is more truly ghostly than the tinkling, thin, metallic thrill of a spinet. There is no resonance, no mellowness, no singing quality.

No sound born of later years at all resembles the tone of the spinet, but the susceptible early Americans could and did melt into sentiment and bubble into rhyme over the wiry vibrations. In the later years of Colonial life there was reaction against Puritan asceticism, and playing on the spinet became a fashionable accomplishment.

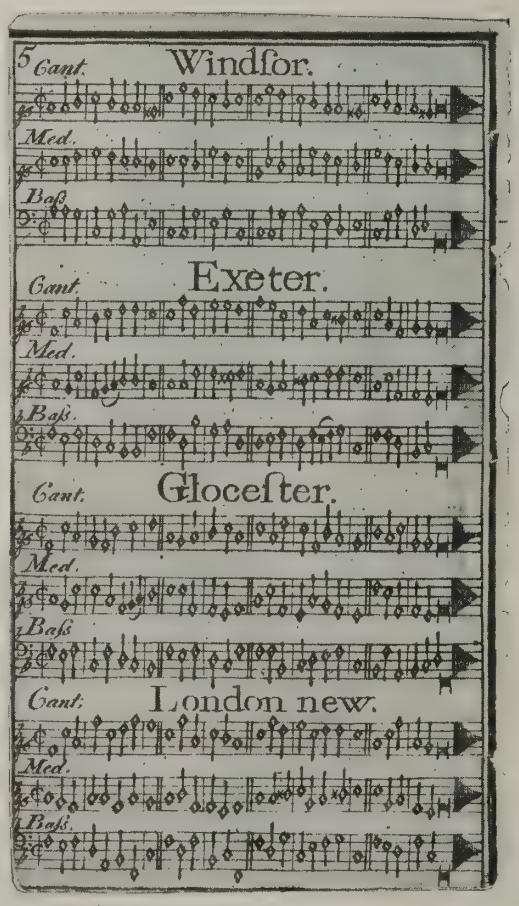
Young ladies in flowered damask gowns and hoop-petticoats and high-heeled shoes, would give their parents and friends pleasant music of evenings after supper, when by the light of green bayberry candles in silver candelabra set upon the little harpsichord, they played and sung such pieces as *Way-worn Traveller, Ma Chère Amie, The Twins of Latuna* or *Selina's Complaint.* On Sunday evenings psalm music, of course, was the rule.

In the southern Colonies, especially in Virginia, music formed a part of every scheme for amusement. Even announcements of racing days were as follows;—

"Twenty horses will run around a three-mile course for a prize of £5. A violin will be played for, by twenty fiddlers, no person to have the liberty of playing unless he bring a fiddle with him. After the prize is won, they are all to play together, each a different tune, and to be treated by the company. A handsome entertainment is prepared for race subscribers, and drums, hautboys, trumpets, etc., be provided to play at said entertainment. A quire of ballads to be sung for, by a number of songsters, all of them to have liquor sufficient to clear their windpipes."

Sheet music began to be advertised for sale in 1768, when the Boston *Chronicle* announced that,—

"The new and favorite Liberty Song, *In Freedom we're Born, etc.*, neatly engraved on Copper-plate, the size of half a sheet of paper, set to music for the voice, and to which is also added,



A FINE EXAMPLE OF EARLY AMERICAN MUSIC ENGRAVING

"A set of notes adapted to the German flute and violin is just published and to be sold at the London Bookstore, King Street, Boston. Price, sixpence, lawful, single, and four shillings, lawful, the dozen."

Music teachers also began to advertise. A Mrs. Von Hagen, who from her own account must have been an extremely competent instructor, tells the ladies of Boston, through the columns of the *Columbian Centinel* (1799), that from her infancy she has studied the science of music, that, at the age of eleven, she performed at the Court of the Hague, with universal applause, and that for several years she had been an organist at the churches of Namur, Vlissingen, etc.

Mrs. Von Hagen, who evidently believed in profuse advertisement, further says:—

"I hope from my theoretic knowledge and successful experience in the science of music to be as fortunate in the progress of my pupils in this town as I have been in the first families in Europe, which is well known to many. Mrs. Von Hagen teaches the theory and practice of music on the harpsichord and pianoforte, with thoroughbass if desired. Also the organ, church music, and lessons in sonates and concertos.

"As motives of delicacy may induce parents to commit the tuition of young ladies in this branch of education to one of their own sex, and the female voice, from its being in unison, is better adapted to teach them singing than that of the other sex, which is an octave below, Mrs. Von Hagen flatters herself that she shall be indulged with their approbation, and the protection of a respectable public.

"The terms of instruction are $5 entrance, and every eight lessons, $8."

Singing schools were very popular in the years preceding the Revolution, and their advertisements also appealed to the supposedly exclusive "delicacy" of Colonial dames and damsels. A certain Samuel Wadsworth begs leave

"To inform the publick, but the female sex in particular, that he has opened a singing-school for their use, to be kept on Tuesday and Friday evenings from six to nine o'clock. If any of the sex are desirous of being instructed in this beautiful science, they shall be instructed in the newest method."

Mr. Wadsworth's advertisement then bubbles into verse.

"Ye Female Sex, I pray draw near!
To Music sweet, pray lend an Ear!
Young Virgins all, with beauteous Voice,
Make Music Harmony your Choice!"

The first "forte-piano" brought to America (1785) was lettered:—

"New Patent.
Astor And Comp'y.
Cornhill, London."

John Jacob Astor, before he came to America, was connected with a brother in London in the sale of musical instruments. No doubt this piano, now in Salem, came from their firm.

The instrument, which is fit for present use, possesses all the essentials of the modern piano, and proves that there have been no vital improvements in piano manufacture for the last hundred years. The action is (for those times) a marvel of mechanical skill. The case is of rosewood and mahogany, curiously inlaid. The keys differ slightly from the modern pattern. The piano is small, 66 inches long, 23½ wide, 33 high. It has six slender legs, square, but tapering toward the bottom. Four are on the front of the piano, each leg surmounted by a handsome brass rosette, set upon the body of the instrument.

At either end, under the piano proper, are small music closets, with doors opening to the front, and shelves with rounded corners.

There are two pedals, one to prolong the notes, the other to increase the volume of sound by

lifting a section of the piano lid near the front, which, when the performer raised and let fall the lid suddenly during the progress of the then popular battle pieces, such as *The Battle of Prague*, produced a much-admired imitation of the firing of cannon.

Before the beginning of the eighteenth century piano playing had become a fashionable accomplishment of fair Americans. One girl writes from New York to a friend:—

"In the morning I am going to look at some piano-fortes. I imagine we shall take one for one hundred and fifty dollars. It has a charming tone, but was not made in this country."

In a later letter the same girl claims:—

"I am learning my twelfth tune! Oh! I almost worship my instrument, it reciprocates my joys and sorrows, and is my bosom companion!"

The first American composer was William Billings who, under the patronage of Governor Samuel Adams, published the *New England Psalm Singer*, and also a "Collection of Anthems, fugues, and psalm tunes, known as original American music."

Billings was a tanner by trade, and his first compositions were chalked out upon leather hides. He was deformed; one leg shorter than the other, one arm slightly withered, and blind of one eye. He was gifted with a stentorian singing voice, roughened by incessant snuff-taking, which rasped his throat.

But our first composer was a typical Colonial Yankee, a mixture of patriotic, religious, and eccentric elements, with a strong infusion of musical ability, and full of conceit.

A wag once said to Billings that he was eager to consult him upon a difficult question in music, which he was sure no one but the Yankee composer could answer. Said Billings:—

"Whatever the question, I pledge myself to solve it, as there is nothing connected with the science that I have not mastered!"

"My question," said the joker, seriously, "affects the whole world, and has never yet been answered, When a man snores in his sleep through two octaves, so that he is heard in every room in his dwelling. do you consider the sounds so produced to be vocal or instrumental music?"

William Billings died in 1800.

COMPOSERS' AUTOGRAPHS

A collection of autographs of celebrated musicians was sold recently at the Hotel Drouot, Paris. Among the most interesting were a page of music by Chopin, which sold for $320; a letter by Berlioz, in which he expressed his admiration for Beethoven and Glück, $30; a letter by Bizet, $6; a letter by Cherubini, $3.50; one by Donizetti addressed to Auguste de Cussy in 1845, $7.50. Then a letter by Gounod, $5; one by Liszt in French, dated Weimar, May 15, 1882, $6. One musical autograph by Rossini, $18; interesting letters by Saint-Saëns, $6; a piece of music by Ambroise Thomas, $9, and a letter by Verdi, $4. One letter by Wagner (June, 1853) sold for $20.

* *

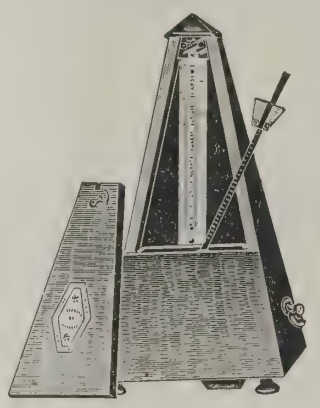
Putnam Griswold, the young American basso, who sang here with the Savage Opera Company in *Parsifal*, is now a member of the company at the Royal Opera House in Berlin.

INDOOR MUSIC IN SEPTEMBER

LOUISE KARR

With September come the last few, glorious days, and then, for most of us, the thoughts of home and work. "Blessings brighten as they take their flight," and, surely, there is nothing jollier in the whole vacation than the last few walks, the few remaining drives, the row on the river, already lonely and deserted. What is more inspiring than marching through the woods at sundown, a whole party together, and singing as they go, all keeping step instinctively, with swinging arms, the body answering in elastic response? We get a touch — a faint touch—of the original *Folksong*, the base of all music — the joyous expression of naïve and youthful life.

* * * * * *



A little experience is worth pages of description, if we get an idea that we are doing what the makers of music did, long ago, in their village dances, and we may be tempted to look up some of the old folk dances when we get home, with directions and descriptions, and try them in the evenings; explaining the symbols in which they are written while we dance. This is part of education now, in some school systems, and it is surprising to see how soon the difficulties of involved rhythms yield to this practical way of building them up from the historic meaning.

* * * * * *

It is easier to think of work with faint longings while still in the country than to get actually well into the swim again when face to face with it on the return to town. We are strong, and feel all the vigor necessary to remove mountains, but O, the habits of work have been sadly broken into by the long, lazy summer; we must do something to get a grip on ourselves, and I believe there is nothing more bracing for the young musician than a few preliminary bouts with the metronome.

* * * * * *

"The *Metronome!*" I hear a scornful chorus say. "That little clicking, mechanical thing! No really *musical* person would recommend playing by that. *That* is just to indicate the tempo." (As if "indicating the tempo" was not something.) "Yes, the metronome," I reply, "the amateur's best friend, the artist's ally, the composer's salvation."

* * * * * *

And now, I must verify my statement. The metronome is first cousin to Duty, and Duty is the "stern daughter of the Voice of God" the poet tells us. We cannot say that Duty is a very attractive personage, but what artist in any line ever came to his full success without making lasting acquaintance with the serious-visaged adviser, and following her orders? The metronome is her understudy in the musical world, the "Musician's Conscience," and if rightfully employed, will be found to cure a large portion of the faults to which the gifted amateur is prone. As I am not writing for artist or composer, I will not enlarge upon its value for them, but I will indicate two or three ways in which the young player or singer may work out of some individual faults by means of this same mechanical, clicking thing.

* * * * * *

All music is founded on rhythm, a truth so self-evident that no one would pretend to question it — but how many amateur players or singers remember it when they are wrestling with the difficulties incidental to mastering a new intricate passage? And how many after they have mastered the passage remember to avoid the stops here and there in the middle of phrases, to read an involved chord and the ritardandos they allowed themselves in order to get all the notes in the runs, when they feel they have learned the composition well enough to present it to the world? Do they not rather give it out with these trifling discrepancies thoroughly worked into the very substance of their presentation? I appeal to many a long-suffering father who knows nothing of music except that he "can tell what he likes" and that he can keep time with his foot to a piece that goes smoothly and does not jerk. This is written for home musicians, but I will not say that there are not many professionals who would not rout with dismay the simple boot pendulum; this fact, however, should not encourage the amateur in his disregard of tempo. The artist makes it according to some supposed right given by his musical "temperament"; the amateur is guided by the difficulties he experiences in learning the notes.

* * * * * *

The player learning new music is quite unconscious of his utter destruction of the tempo; he probably thinks he has a good rhythmic sense — he has learned much about tempo, accent, beats, etc., he knows whole notes, dotted notes, quarters, eighths and sixteenths; but suppose he danced, as hinted at in the first paragraphs of this column, would there not be a revelation to his music sense? It would be a revelation to him of what the whole thing meant, and he would see that he could not break the tempo, even for the most difficult chords and runs that ever were written. Now it is not very easy to dance to modern music — we have wandered a good bit away from the folk song — but what we can do is to set the little metronome up on the piano, wind it, and let it do the dancing for us; there we have the metronome's real use — it gets us back to the ground basis of music, and puts everything in the right proportion.

The good teacher says to the pupil, "Play such and such a passage over slowly, understandingly, never any part faster than you can do the most difficult." He insists on the pupil's doing this *at the lesson*. The good pupil goes home with the fullest intention of following the teacher's advice, later sits at the piano for his practice hour; he starts in as he supposes "very slow," but really twice as fast as he worked under the compelling help from his teacher; his fingers run over the keys with greater velocity than his mind can follow, and suddenly — he comes to that chord that he cannot possibly do without thinking about, and then, he stops — stops as long as he wants to, *and learns the stop*, so that he always makes it at that place. If he had set the metronome going at the pace he actually took when with his teacher, and put his mind carefully to the task, he could do the whole thing smoothly without a break. When the habit of doing the passage smoothly is formed, then the metronome is discarded.

* * * * * *

AFTER THE LESSON*

After learning passage by passage with the metronome nothing can be a finer exercise in freedom, than to play the whole composition to its uncompromising accompaniment — far from tending to the mechanical, it gives the self-control, which frees from that quality — after going through a piece several times in this way, a player can shut the ticker, and play, giving rein to his fancy — then may come the little touches, and the pretty stories that the music calls to his mind; then they will have their true value, when he is not concerned as to whether he can get through this run, or get all the notes into that arpeggio. A young player's ideas of expression are apt to be tinged with the ease or difficulty of the music in question — the difficult passages seem to him to be very mournful and full of pathos, the easy ones, on the contrary, are full of brightness and sunshine.

* * * * * *

Nothing can be better training for *ensemble* playing than working beforehand with the metronome: a pianist who has trained in this way will not be confused by the sound of the other instruments. Often young musicians long for the inspiration of playing with the strings on wood, and the chance comes sometime, and they try with a piece they think they know well, and they find themselves completely routed — the other players seem to them crazy, and the very foundations of things are unsettled; they may not realize this, it shows that they have absolutely no idea of the rhythmic laws, and no *ensemble* music is possible unless it is based on them. Many a fine performer does not have the chance to play often enough with other instruments to learn how by experience, and yet has occasional opportunities that would be of great value if he were in shape to grasp them — the metronome will give him this.

Another advantage of the metronome habit, to those who have to get most of their education in music by experiment at their own pianos, is that using it gives the proportionate values to sonata or arrangement of symphony and opera music for piano. Few amateurs can perform great compositions at anything like the speed they are meant to go, they are apt to play them much slower, and get quite an erroneous impression oftentimes; there is no reason why they should not play them as slowly as they like to get the notes and sequence well in hand, but they should always make a dash in the beginning, at the indicated tempo, and keep it up, whether or no, long enough to grasp the composer's meaning.

In symphonic arrangements, the ordinary player takes the allegros as fast as he can possibly get through them, but much slower than they ought to go, and the adagios a great deal faster than they are marked, thus making a grotesque effect. The same music sounds strange when he hears it given in public, and he has been known to judge certain celebrated artists as playing "without expression" — which means, without his own cherished faults of rhythm.

If any one doubts the truth of this, my advice is, that a new metronome be bought, or the key of the old one hunted up, and that the various statements in the preceding paragraphs be put to the test of practice.

FIRST AND SECOND GRADE WORK

EDITH L. WINN

Pupils who are in the first and second years of study are not able to give tone color to *ensemble* work. Advanced pupils very frequently object to playing *ensemble* works with first grade pupils. I would suggest that in public work the teacher uses the Schmidt Edition (Heilbron) of violin quartets and cover tonal deficiencies by having the four-hand piano edition in connection with the violins. The parts for first violins in such works as the *Marriage of Figaro* by Mozart, and the *Elsenmuhle* by Reisseger are somewhat difficult, but the second, third, and fourth violin parts can be easily played by second year pupils. The teacher can then lead pupils to use rules of orchestral bowing and to play in time. The advanced pupils are also very well satisfied with their part; with the exception of gifted children, very few pupils of the second grade are able to play creditably alone. As all pupils in schools and colleges should be brought forward as soon as expedient for the sake of advancing the interest in a department usually small, it is wise to allow no pupil with a small, thin tone and uncertain intonation to play publicly in solo work. *Ensemble* work gives the pupil confidence, and materially aids his progress; at the same time it does not bore the public by its crudeness. I would, therefore, urge all teachers to start quartet classes for children as early as possible. I usually play the viola in the quartets of Pleyel, Op. 8, Mozart, Op. 38, and Gebauer, Op. 10. A friend of mine plays the 'cello and, in an extremity, I play the 'cello parts which are very easy, and an advanced pupil plays the viola. As most of the quartets mentioned contain chords in the second part, I usually allow two children to play the part, dividing the notes. Sometimes a child with a very good ear is able to play the chords. I teach *ensemble* bowing from the first. I do not care to have more than four in each class. Sometimes we play trios. The Bohm trios are easy. Few violinists are good sight readers. If pupils began *ensemble* work earlier this fault would not be evident later.

The Orchestra

At Commencement and other public occasions it is well to have the entire violin department represented. I have suggested the overtures of the Schmidt Edition for four violins. I usually use four first violins, four seconds, and as many thirds and fourths as possible.

We grade our pupils for the orchestra. The advanced pupils play before several judges, a composition which they have not studied with me. They also read at sight for the judges. The pupil, who has the most ample technique, good bowing and tone, and is the best sight reader, easily obtains the place of concert master. The next best pupil sits at the same desk. The pupil on the inside turns the music. I do not, as in symphony orchestras, ask the concert master to mark the bowing. I always do that carefully myself. My leading first violin, however, is of great aid to me in rehearsing with her section privately. The third best pupil in the list of advanced pupils who try for their orchestra seats is appointed to a position of leader of the second violins, the fourth best to the leadership of the third violins and the fifth best to the leaderships of the fourth violins. I cannot permit all my advanced pupils to play first violin parts. I need reliable players to lead each section. These are responsible for any wrong bowing or mistakes of any kind in their section. Of course, I play each part with each pupil separately, but I have not time to do more than this. My advanced pupils, some of whom are teachers, come to my relief.

In arranging the first violins, as a result of the examination, we usually choose those who have a fine bow arm for the outer violinists. It is very necessary, too, that the second violinists shall observe the rules of correct position. Some second grade pupils in the third and fourth sections are weak as to the bow arm,— in fact, they cannot be trusted to *always* play with a good position, hence we place these in the rear of the orchestra. Occasionally a good pupil who is older than the rest of the class, but who has not an ample technique, consents to play viola rather than be seated with young pupils and be graded with them. Uniform bowing must be preserved, and each pupil must seek to obtain a good orchestral position: the back squarely against the back of the chair, the feet squarely on the floor, the violin held up in position. Even when weary the members of a good symphony orchestra rarely fall into lazy or careless ways of playing. All unnecessary movements of feet and hands should be carefully avoided. Precision, attention to details, and a quick observance of the wish of the conductor are necessary. One of my pupils acts as custodian of the music, another arranges the music stands and chairs in their places. When the time comes to play, the first and fourth section come from the left of the stage and the third and second sections from the right. Each pupil knows his or her place. The music is on the stands, which must be of the right height. There is no confusion and no delay. Sometimes we "double parts" by using the pipe organ. We have also played the Handel concertos for organ and orchestra and I always use the organ with my Bach suites. One can do a great deal more with an orchestra if the wood-wind and brass sections are possible; but if these players are amateurs, it only adds to the responsibility of the director. I like my pupils to feel that a place in the orchestra is worth striving for. In the absence of a large violin section, two pianos must be used, that in a large hall the works played may appear to have volume.

Pupils who are studying the concertos of Viotti, Rode, and Bach find it a delight to play these with a stringed orchestra and piano accompaniment. There are also many short solos like the *Raff Cavatina* and the Bach air on the G string, which can be played with orchestral accompaniment. A good orchestra in a school is a great aid in building up the violin department. It is also a stimulus to pupils who are spurred to work by having occasional public appearances. Each pupil is a part of the orchestra.*

CULTIVATE CHEERFULNESS

Cheerfulness is a habit, just as much as worrying — only it is a good deal pleasanter for yourself and everybody else. Get the habit, then; and the first thing you know the worries will have taken flight. They cannot stand sunshine. In a cheerful atmosphere they find themselves so distinctly "out of it" that they prefer to make themselves scarce. Therefore be cheerful. It may cost you something at first, but it will pay in the end.

* The ensemble pieces — Edition Schmidt, Heilbron — may be played with violin, 'cello, and piano alone, if desired.

BOOK REVIEW

EDMONDSTOUNE DUNCAN ON BAUGHAN'S MUSIC AND MUSICIANS*

I

Charles Lamb once observed that it was a secret well-known to the professors of the Art and Mystery of Criticism, to *insist* upon what they do not find in a man's works, and to *pass over* in silence what they do. Lamb was thinking of letters, but his remark applies with equal force to the critics of music. In pursuit of such a scheme many brilliant writers fail to help advance the art which it is impossible to deny they really profoundly venerate. It would seem that they, who come most regularly in contact with the thing which should elevate and ennoble, are just those who are prone to stagnate into narrowness, if not bitterness. So our critics, from sheer exhaustion in gazing at the portals of heaven, often become blind and denied of the common charity which less favored mortals could boast in abundance. Thus, we may see on every hand, violence, prejudice, if not despicable meanness exhibited by men whose opportunity has been distinctly precious, whose capacity has been considerable, but the net result of whose labors proves abortive and is only short of absolute impotence. These seem hard words, but are they not justifiable?

II

Schumann and Berlioz set so shining an example of the best methods in music criticism that it seems marvellous that so few follow where they led. One thing is certain; the day of the mere music reporter is over. In place of this specious person we have well-educated men on the staffs of all papers that make any pretense to art. The daily papers (in England, at any rate), lead the way; so there is great hope which Mr. Baughan's book increases. It is written with enthusiasm tempered of experience. Logic, too, plays its part; and underlying all the little essays is an indefinable poetic charm which informs and intensifies thought which is both acute and deliberate. Having read all the more important of the articles as they appeared in the *Musical Record*, *Musical Standard*, *Daily News*, etc., it was with no little curiosity that I reread them in book form. From this trying test, Mr. Baughan comes not scathless, but certainly heart-whole. No one will easily find in his pages anything of pettiness, narrowness, or intemperance, to all of which faults newspaper-criticism of the hour is only too liable,—especially at the hands of a ready writer.

III

Mr. Baughan writes in good, terse, nervous English, and his opinions are always worth attention. He can be playful, but he will not stoop to idle jesting; his opinions are robust, but they do not touch upon the reckless; he can be poetic without becoming maudlin, practical without triteness, and dogmatic with no trace of coxcombry. Such a book was wanted. Let us turn to its pages.

There are twenty-nine short essays, the longest of which are devoted to Strauss and Elgar. These latter we need not examine closely since both composers are so fully discussed, day by day, in all papers treating of modern music, that not even Mr. Baughan can impart novelty to the task; unless indeed exception be made of the *title* of an essay on Strauss, who is described as the *Shelley* of Music.

Our author confesses his modesty in the following terms:—

> I can never come close to Nature, and feel her breath on my cheek, without being painfully aware how, as a critic, I encumber the earth. The gossip of the opera-house and concert-room and the splitting of critical straws seem to me then so needless; and, worse than all, so much music will not bear thinking of in the open air. I particularly refer to operas, because they are hopelessly artificial, not only in dramatic form, but also in their emotional content. — (*Some Reactions*, p. 79.)

In another paper Mr. Baughan attempts a definition of the qualities which a critic should possess: —

> He should have deep, musical knowledge, both practical and theoretical, and, in addition to this knowledge, he should possess a sensitive and poetic temperament balanced by keen judgment, and above all, a fine nervous, plastic style of writing. I mean no belittlement of my worthy colleagues of the pen when I say that none of us possess all or even several of these attributes.... We have men amongst us who have the courage of their opinions almost to destructiveness, and those who shun an opinion as they ought to shun a vice, and then we have a sensationalist or two, but the perfect critic we have not. — (*The Battle-cries of Criticism*, p. 87.)

IV

The most fanciful and not the least pleasing of the articles, takes the form of an apologue entitled *The Symphonic Poem*, — a veritable dream-fable, wafted from horn or ivory gate, — as you will. In order to confute Professor Niecks, the shade of Wagner is summoned from the nether confines, and duly appears with Boar-hound and Fafner-motive, — all complete. The shade delivers himself of some trenchant observations on the nature of music generally, and its modern aspect in particular; then, having routed the professor and put the symphonic poem in its proper place, the Hound breaks into a bark resembling the *Walkürenritt* and carries off his master on his back. The fable is well told, and I shall not spoil it with quotation.

In an essay already quoted, we read that "the worship of the monumental," as Nietzsche said, "is the curse of art"; and Mr. Baughan recalls Ben Jonson's dictum* when he adds that, "if I were a composer I would rather write a single song which said something, and said it beautifully, than half the symphonic poems of to-day." There is so much idle talk of technique in these advanced times that one notes with pleasure the following thoughtful observation: "I do not think you can rightly separate technique from thought. The two act, and react one on the other, until the keenest of critics cannot distinguish between them, and this is what I have called the "Technique of Genius." In juxtaposition with the foregoing, take the following passage which deals with the chief technical exponent of to-day: —

> Although Strauss's music affects me as tone-poetry, I cannot listen to any one of his works without moments of irritation. As most composers, with the exception of Wagner, Strauss's æsthetic sense is muddled; on the whole he expresses himself. All that he is, all that he has felt and suffered, all that the world means to him, he has expressed in his music.—(p. 242.)

V

If Mr. Baughan's book be taken as a true record of modern music, it will not be wrong to assume that we are in a state of transition. Music without passion will no longer please, yet the passion can be torn to tatters, to very rags. There must be a return to the modesty of Nature. Thus it is not surprising to discover that Mr. Baughan finds exaggeration and imperfection in the *Ring* itself; nor can we wonder that Tschaikowsky might usefully be allowed some respite and nepenthe. In the estimate of Elgar, highly appreciative as it is, the author is cautiously reserved. Certainly he does not accept the view that here is a great master whom none may challenge, but throughout these critical essays, at which we have merely hinted, Mr. Baughan puts forward his ideas with much persuasive eloquence, and few (even among the critics themselves) can fail to benefit from a perusal of such timely and pregnant utterances.

* Music and Musicians. E. A. Baughan. London, John Lane.

* "I would rather have been the author of the old ballad of Chevy Chase than of all I have ever written."

"THE CITY THAT WAS"

Will Irwin, author of *The City That Was*, has had a wide experience in the Far West. Born in New York State, he was taken by his parents as a baby to Leadville, Colo., in the great mining stampede of 1879. He was brought up in that lively and interesting camp, the last gasp of the old '49 days in the West. Until he entered Stanford University in 1894, he knocked about the West as cowboy, herder, barn-storming actor, and laborer. At Stanford he paid a great deal more attention to "college activities," especially dramatics, than to his Greek; and three weeks before his time for graduation he was dropped, the specific offense being a seditious song of his, which had grown very popular in college, and in which nearly all the college authorities were mentioned. His brother Wallace, the writer of light verse, had similar troubles. In 1899 the Stanford faculty gave Will Irwin a belated degree.

After he left college Irwin plunged into life as sub-editor of the old *Wave*, a publication which never seemed able to do much for itself, but which has been a great seed-ground for writers. Frank Norris, Juliet Wilbur Tompkins, Gelett Burgess, and Jack London all did more or less toward learning their trades on the *Wave*. Those were its dying days; and Irwin's job, for a year, was to write it from cover to cover. In those days it was owned by J. O'Hara Cosgrave. Time has swung half a circle for Cosgrave and Irwin; the former is now managing editor of *Everybody's Magazine*, and the latter managing editor of *McClure's*.

One day the *Wave* rolled back into the ocean of thought. Cosgrave started East, and Irwin went to work as a reporter on the San Francisco *Chronicle*. In a year he was star reporter and special writer on the *Chronicle*, and in another year he was Sunday editor. Two years on that desk, and the New York *Sun* sent for him.

In the meantime he had done a good deal of magazine work, and had collaborated on three books — on *Stanford Stories* with Charles K. Field, and *The Picaroons* and *The Reign of Queen Isyl* with Gelett Burgess.

In the time of the San Francisco disaster, Irwin, then just about to leave the newspaper business, took charge of the *Sun* service. He was working twenty-two hours out of the twenty-four, and worrying meantime, for all his family was somewhere lost in the wreck, when the City editor asked him to take an afternoon and really tell the public something about San Francisco. He sat down at the typewriter, with the copy boy tearing the sheets away from him as he wrote them off, and the first draft of *The City That Was* went to the stereotype room that evening.

ANSWERS TO QUERIES

M. A., Jersey City, N. J

In answer to your query about the English organist Thomas Adams, will say that he was born Sept. 5, 1785, and began the study of music at the age of eleven under Dr. Thos. Busby (1755–1838). His first appointment as organist was in 1802, at the Carlisle Chapel, Lambeth, which position he held until 1814, when he went to St. Paul's, Deptford. Remaining here for twenty years, Adams was appointed, in 1834, organist at St. Dunstan's in the Fields, which position he held until his death on Sept. 15, 1858. Adams was for over twenty-five years called the "Thalberg of the organ," for he excelled most performers of his day in extemporization, both in strict and free style. He was employed frequently by builders to "open" new instruments, and his recitals on these occasions were attended by hundreds who came from far and near to hear them. Adams was also an excellent, if not a distinguished composer. He published numerous pieces for the organ, in the form of interludes, variations, and voluntaries, as well as pianoforte pieces, anthems, and songs, some of which are said to be still in manuscript. There was, if memory serves, an extended account of Thomas Adams and his recitals published in the London *Musical Times* for September, 1899. Possibly you can procure a copy by applying to the publishers, Novello, Ewer & Co., at their New York office, 21 East 17th St.

SONG INTERPRETATION

KARLETON HACKETT

I

THE MUSICIAN with the current number begins a series of papers on Song Interpretation.

It is hoped that these articles will be of practical benefit both to students and singers, and as the singing of the simplest song makes wide demands on the skill and musicianship of the singer, we shall feel free to treat any branch of the art of singing that shall seem needful. Vocal technique, temperament, and musicianship are all so vital to interpretation and their qualities so interwoven that it is useless to try to say which is the most important, or to separate them into distinct departments. To sing any song worth singing in such manner as brings out the meaning requires an excellent foundation in all the essentials of good singing, pure tone, musical feeling, rhythmic accent, and musicianship.

The basis of all these must be instinctive, or there is little value in studying music; but the richest natural gifts are of small practical use until there has been thorough training in the laws of expression. The purpose of these articles aims especially to make clear the laws of artistic interpretation, so we shall assume that the reader has a good foundation in the principles of tone production and musicianship, which means the ability to sing a tone that one would listen to with pleasure, and count four beats to the measure in common time. Without so much there would be nothing on which to build.

Of course, everything in the realm of music can be taught better by personal instruction than by any printed articles, no matter by whom written; but there are some great principles that are true for all time and can be adequately set down in type for those who earnestly desire to learn. The first thing, — the fundamental principle of all musical expression, — is rhythm. Fortunately the rhythmic instinct is practically universal; not, alas, that developed skill that makes an artist, but the original instinct, the raw material. Take a thousand men at random; divide them into companies, and, with comparatively little drilling, they will march in perfect time; let a military band play a march, and almost all within hearing will find their feet moving with the rhythm. Everywhere there is the evidence that this instinct is strong in almost every one of us, and yet musicians are always complaining and, with sorrow must it be admitted, with truth, of the unrhythmic, inaccurate singing of the average singer.

II

Why is this so? Faulty ideals of the pupil, and too often poor teaching. It is not to be expected that the pupil's ideals will be right and true; it is the teacher's business to see to it that the pupil is made to do the right thing, whether he wishes to or not, whether he appreciates the necessity or feels that the teacher is uselessly particular.

Almost all pupils have the desire to interpret the meaning of what they sing, but they fail from two causes, partly because they have not the vocal technique nor the musicianship necessary, but more often because they have nothing in their own minds to which they sincerely endeavor to give utterance.

There may be five or six different thoughts, all more or less nebulous, drifting about in their heads, and between them all they are hopelessly confused, and as they have no clear idea of what they wish to express, they make no meaning at all out of a thing where the meaning may be very simple and obvious.

About many points there is dispute. A certain tone may be good or not good; a tempo may be too fast or too slow; but in regard to one thing there is no question, — is the time correct? Are the quarter notes quarters; the eighths, eighths; and so on? Here is the basis of all interpretation, the one point where there can be no dispute; and yet how inaccurate the singers are and how they fight against the drudgery of learning the thing correctly, just as it is written. Not that they are lacking in rhythmic feeling; over and over again let them sing some song with a marked rhythm, which they have learned by ear from some one who sang it well, and they will start off with a swing that is quite refreshing; but set them to learn a song by themselves, where they receive no help from the accompaniment, and you feel that they are hopeless musical blockheads. Not at all; they have the instinct or they could not sing anything rhythmically; they are merely illustrating the difference between natural instinct and developed skill. If they have not the natural feeling, there is nothing to be done; but the natural feeling is next to worthless without thorough training.

How many young students say: "Play it for me once so that I can get an idea of it," and how much easier it is for the teacher to play it over that the pupil may catch the rhythm and general character by ear, rather than make him dig out the laws by which it was constructed and learn it for himself. But such teaching is no kindness, and is in the long run a woeful time master; for, sooner or later, the pupil must learn for himself or remain always a helpless musical child, and since the thing must be done, the sooner the better, for all concerned. Early habits are powerful agencies; if our first habits were those of thoroughness and accuracy, then we can bless our teachers; if they were careless and incorrect, it is sometimes a lifelong curse.

III

It must be impressed on the young student's mind with sufficient force to last that all the higher ranks of music are absolutely inaccessible to those who are inaccurate and unrhythmic. This is really the most important lesson the student can learn, and if these articles help to bring this fact home, they will not have been written in vain.

Rhythm is the soul of music, and time is the body. You cannot sing the complex music of the modern world nor the noble music of the olden time with freedom, confidence, authority, and rhythm, unless you are a master of time, of the absolute mathematical value of the notes. You may indeed be mathematically accurate and without artistic rhythmic accent, but the opposite is never true; you can never sing with confidence and freedom without accuracy.

IV

After rhythm comes phrasing, and here singers are as much at sea in regard to the laws of good taste as they are apt to be weak in accuracy. The laws of phrasing depend partly on the words, partly on the structure of the music, partly on the singer's breath control and general technique. There are, for instance, innumerable places in all song literature where beautiful effects can be made by long-sustained phrases, if the singer have the skill to sustain the phrase without injuring the beauty of the tone, and yet how completely is this beauty destroyed if he carries a phrase longer than his powers warrant. The tone inevitably becomes labored and unpleasant.

Some sticklers for the letter of the law will say you must carry the phrase through to the end on one breath or you commit an artistic sin; but if by carrying the phrase to the end on one breath you spoil the tone, you have committed just as grievous a sin against art, and you are laying the foundations of all that is bad in singing,— straining, forcing, making impossible that flow of tone on which all beauty depends.

V

The laws of artistic taste are the laws of common sense as well. To carry a long phrase with ease and beauty is the mark of the artist; it is possible only to one who has mastered his instrument. For the young singer to attempt the same phrases is simply foolish; if he carries the phrase as far as he can with ease and then takes another breath, he is on the right track. Then, as he gains in power and control, he can take the longer phrase and sing it, which will mark his advance as an artist; but let him remember that no artistic benefit is attained by straining after something beyond reach. Some of the very worst singing I have ever heard was due directly to sacrificing everything to long phrases; no rhythm, no imagination, poor enunciation, harsh and forced tones, and still the misguided singer prided himself on what he called his "breath control." Good taste, artistic feeling, and common sense, that enables us to tell what is possible and what beyond us, — these are the essentials of an artist. Suppose that by shutting one's eyes to all else and carrying the phrase to the end, the singer gets through, red in the face, but triumphant, — well, what of it? If he had breathed once in the phrase he could have done the whole with ease, could have felt so sure of himself that he could have spoken the words clearly and with meaning, kept the tone pure, and given to his hearers that sense of freedom, of the absence of physical effort, which is the great charm of true singing. "But he broke the phrase in the middle," says some Dry-as-dust. Showed his good taste; for one way he spoiled everything, and the other way he could be said to sing, — which is the better?

We sing by the breath. Fine tone production, good phrasing, confidence, control, everything in the technique of singing depends on a thorough understanding of the use of the breath. Use, not abuse.

These principles are simple; now it remains to put them to practical use. Each month two songs will be taken, one from the classic, the other from the modern *répertoire*, and an attempt will be made, as well as may be done through the printed page, to show how general principles of interpretation are applied to particular cases.

THE VOICE AS AN INDICATOR OF CHARACTER

That distinguished philosopher of antiquity, Socrates, evidently considered that character was, to a certain extent at least, revealed by the voice, for one of his recorded sayings is, "Speak, that I may see you." A modern voice authority gives the opinion that he who stammers is easily angry or as soon pacified, which proves such to be quick and inconstant. A voice thick or harsh in quality indicates one who is malicious, cunning, disdainful.

A coarse voice is indicative of a robust physique, a great talker, a quick temper; a piercing, fine, or weak voice shows timidity, cunning, and quick wit.

An attractive and clear voice reveals the prudent, sincere, and ingenuous, but often the proud and incredulous man; the firm and pleasant voice, the robust, intelligent, and benevolent person. A trembling and weak voice shows timidity and weakness, while great sound and firmness indicate strength, audacity, rashness, and obstinacy. A sharp and rude voice denotes a coarse mind, inferior judgment, and strong appetites, while a habitually hoarse voice indicates untruthfulness and vanity.

A full and sweet voice shows peacefulness, discretion, and self-will; a soft, sweet voice, a peaceable, ingenious, and subtle character. A voice quickly changing from gravity to sharpness, shows quick temper and arrogance.

That each emotion, mood, or passion changes the prevailing voice is well understood by actors and elocutionists; and that each prevailing temperament has a somewhat characteristic manner of speech rather than sound of voice, is a secret of alienists and students of human nature, as well as a matter of observation among people generally.

It might be possible that since the character is revealed by the voice, the cultivation of the voice would react on character; so that the acquisition of the voice of genius and goodness, through systematic training, might tend to produce the qualities which the trained voice would imply.

TOLD TO CHILDREN

"OLD FOLKS AT HOME"

ELIZABETH H. DUNHAM

Hurrah! Puff! Bang! Smoke! It is the Fourth of July in the year of eighteen hundred twenty-six. Flags are flying everywhere, and on the lawn a band is playing *The Star Spangled Banner.*

No one in the house is listening much, however, for they are all so glad to see little Stephen Foster, who has just come into the world to be a song-writer for you and me.

Of course he did not write us any songs that day, for he had to grow and learn many things first.

He brought with him a kind and loving heart, and his soul was so full of music that he could not help letting some of it come out.

While he was a very little boy, he made believe that his sister's guitar was his little piano, and laying it on the floor, would pull at the strings with his fingers, making sweet harmonies, which filled him with delight.

His father was fond of music, also, playing the violin very pleasingly, and as little Stephen listened, the music in his soul grew and made ready to blossom into song, just as the roses bud and blossom in the sunshine.

At eight years of age, he taught himself to play on the flute. When he was a few years older and went away to school, he found that three of his class-mates could also play that instrument, and so he composed a waltz for four flutes, which he and his mates played on Commencement Day.

Have you ever observed that nobody learns to do everything, but that each person does just his own part of the world's work? It is so. The carpenter builds the farmer's house, and the farmer raises the wheat for the carpenter's bread; artists paint pictures for us to admire and authors write books for us to read.

So, while the love of music is in all hearts, not every one knows how to write it, and Stephen Foster was sent into the world to be a composer of folk songs.

Now a folk-song writer is one who creates songs for the people. He makes the words and the music tell of their flowing rivers and babbling brooks; the flowers that bloom in their meadows; their joys; their sorrows; their holidays and their homes to which they go when their day's work is done — all of these things and many others which we cannot see, but feel in our hearts.

So Stephen studies and thinks, and when he is ready, he begins to write his songs. He has invited some of his young friends to form a singing club with him. Twice a week they meet at his house to sing, and you may believe that Stephen's songs were much enjoyed, for many of them became famous afterward.

STEPHEN C. FOSTER

One day Stephen told his brother that he had composed a new song, and that it was to have something about a Southern river in it. He said the name of the river must have only two syllables. Neither he nor his brother could think of one, and so there was nothing to do but to hunt in the geography. Very carefully they looked over the map of the Southern States, saying over the names aloud, until down at the bottom of the map, where Florida is, you know, Stephen spied a little river.

He jumped up from the table, and I wouldn't wonder if he clapped his hands Anyway, he cried out, "That's it! Now just listen to my new song," and the very first line was *Way Down upon the Suwanee River.*

There are folk songs for the boys and girls of Germany, of Scotland, of France, and of many other countries, but *Old Folks at Home* — that was the name of the song — is yours and mine.

To every one who sings it, it is a little mirror. In it he sees his very own home and his own people. He sees himself walk up the street, go in at the door, and hears their happy voices in glad surprise, "Why, here is our dear one home again!"

Thousands and thousands of copies of Stephen Foster's new song were sold, and he was invited to go to New York to live and to write songs.

He went, but he was very homesick and sad there. Everywhere he heard his own songs, but saw only strangers, and he longed for the "old folks at home."

There are many stories of Stephen's kindness and generosity — of how he carried a poor little girl who had been run over in the street, home to her parents — of the two songs which he gave to a friend who sold them for a large sum of money — of his beautiful setter dog about whom he wrote a song — *Old Dog Tray.*

I could tell you of his bravery and courage, too; of how he fought with some ruffians who were ill-treating an old man and of how they cut his face with a cruel knife which left a long, deep scar.

Stephen's whole name was Stephen Collins Foster. He wrote nearly one hundred and sixty songs. They were so simple and modest that people did not see how proud they should have been of them and of the man who wrote them, and nobody noticed when one day he fell ill of a fever in his lonely room in New York.

So America's great folk-song genius passed away on Jan. 13, 1864, but his body was taken home to Pittsburg, Pa., and there, while a band played *Old Folks at Home,* he was laid to rest.

VARIOUS NOTES

At the Berlin Opera, during last season, works by Wagner were played seventy-five times (*Tannhäuser* fourteen); Mozart, twenty-seven (*Figaro* eleven); Lortzing, fourteen; Glück, nine; Meyerbeer, eight; Humperdinck, eight; Weber, seven; Nicolai, seven; Beethoven, six; Kienzl, five; Schillings, four; Cornelius, two; Kummel, one. The French works come in the following order: Auber, twenty-three (*Le Domino noir*, seventeen); Ambroise Thomas, sixteen (*Mignon*); Bizet, twelve (*Carmen*); Gounod, ten; Saint-Saëns, six; Massenet, six; Boïeldieu, four.

* *

Lucile Dauvoin, now of Brussels, but formerly of New York City, has taken the first prize with the highest distinction for the violin in the Royal Conservatory of Music of that city. She was under the instruction of César Thomson.

* *

The British Museum, which is said to have the finest collection of musical manuscripts in the world, will soon publish a catalog of the same. The first volume, which is finished, comprises religious vocal music; the second, which will take a year to complete, will be devoted to vocal music of any class which has not been mentioned in the first volume. The third and last volume will comprise everything connected with instrumental music written for any existing instruments.

* *

The management of the opera at Frankfort-on-the Main has made its annual report. Between July 15, 1905, and June 16, 1906, there have been three hundred evening performances, forty-eight matinées, and six concerts. Eighty different works have appeared, including six operettas, a dramatic legend, and five ballets. Among the first performances are notable *Iphigenia in Tauris*, by Glück; *Les Pêcheurs de Saint Jean*, by Widor; *Frühlingswehen*, by Ernest Reiterer, after Joseph Strauss valses; *L'invitation à la valse*, a ballet founded on the celebrated rondo of that title by Weber; and *Sylvia*, by Leo Delibes.

* *

Louise Ormsby, who recently achieved a brilliant success while on tour with the Boston Festival orchestra, has been engaged to sing in Verdi's *Requiem* at the Worcester Festival, in September.

TREND OF MODERN COMPOSITION

(Read before the New York State Music Teachers' Association)

JAROSLAW DE ZIELINSKI

Modernism! That's the cry we hear on all sides, whether in journalism, literature, painting, or music; we hear the cry in the drawing-room of the millionaire as well as that of the bonnet maker, just as we heard not very long ago the term secession, and prior to that decadence, and before that symbolism or impressionism. Not so very many years ago Schumann was a romanticist, and Raff a modernist; yet both showed something in common in their tendencies, for both represented a sort of reaction of feeling — Schumann against the cold classicism, Raff on the other hand against the brutal objectiveness and cynicism of the naturalists who were already making themselves known here and there.

We know that musical art of the Egyptians first, then of the Greeks, later that of the Middle Ages, grew slowly but steadily, and do not be surprised if I tell you that at Rome, in the time of the early Cæsars, the orchestra of the great Roman theatres was numerically as large if not larger than the ordinary orchestra of to-day; it consisted of flutes, pipes, trumpets, large lyres, bagpipes, gongs, cymbals, castanets, shell cymbals, and foot castanets, in all from thirty to fifty players. Leaving out the centuries that followed, let me stop for a minute with the troubadours, those gifted composers in three-part harmony! The date would be about 1300 and onward. Of course the number of minstrels that were engaged to render a troubadour's composition depended greatly on the size of his purse; but under favorable conditions the instruments represented in the retinue of a troubadour were lutes, vielles, pipes, bagpipes, harps, guitars, psalteries, little organs, tambourines, sackbuts, and rebecks, making in all from forty to fifty or sixty players.

A similar orchestra, with the addition of flutes, oboes, cornets, trombones, violoncellos, and harps, was prominent in 1581 at the marriage of the Duc de Joyeuse, and from that time on the string quartet became an established thing and the wind instrument began to have separate real parts written for them.

Monteverde (1567–1643) first, then Marc Antoine Charpentier (1634–1702), and following him John Sebastian Bach (1685–1740) played each a prominent part in the development of the orchestra, as well as enlarging the form (style) of composition that was prevalent in their respective days.

Palestrina (1515–1594), who was the senior of Monteverde by about forty years, developed four distinct styles of church music: the *a capella*, accompanied, concerted, and the oratorio. The *a capella* style which made Palestrina so famous is ordinarily built on the tones pertaining to plain, and unaccompanied; the accompanied brought into use the organ or a limited number of instruments for the support of voices, while the concerted style employed all the instruments. With the development of different church styles grew the exigencies of antiphonal singing which again evolved gradually the fugue answer, and with evolution of fugal and contrapuntal form came our modern key system, crowding out of use the modal system of Greece and Rome. The same effect that fugal form had upon the modal system, contrapuntal psalmody had on popular song. To give but one example: Little by little the earlier popular song of France was crowded practically out of existence, till a Roman singer, Caccina (1546–1615), rediscovered it toward the end of the sixteenth century. Musicians pooh-pooh'd at it, but the people liked it, particularly the *chansons d'amour* or the *pastourelles*, which were different from the dry, psalm-like, and thoroughly diatonic songs of Flanders.

But, like everything else, this folk song with its fresh clear melody and swinging rhythms, with the trenchant major modes, its strophes and refrains, saw its own decadence inside of a hundred years. Under city influence new texts were wedded to old melodies and the vaudeville went forth into the country, in Germany as well as in France, in Italy as well as in the Low Countries, practically sealing up the development of the folk song.

I remarked that with the evolution of fugal and contrapuntal form the modal system gave way to the key system. Let me tell you now a few words in regard to it: About 1676 there lived at Lisieux, in Normandy, a priest known by the name of Etienne Sache, who published a treatise on all the church tones then in usage. The work discusses the abandonment of the modes derived from the Greeks, and dwells on the recognition of but two modes, the major and minor, giving to ecclesiastic music twenty-four modulations in place of the six Authentic and six Plagal modes which were not susceptible to modulation according to our modern understanding of that word; for modulation, when applied to strict church music, means movement of the melody within the ambitus or extent of a mode, bringing forward prominently the principal notes of that mode.

With the abandonment of the old modes came the development of the key system, and as the minds of the eighteenth century became more independent, the passion of love, and a brooding over the mysteries of existence and the meaning of life found voice suggesting new forms, and aiming after a mastery of chromatic harmony.

With kaleidoscopic speed we see Haydn, Mozart, Gluck, Beethoven, Spontini, Schubert, Weber, Verdi, Wagner, Tschaikowsky pass in review, till our eyes or rather our ears, fasten on Richard Strauss, Germany's latest composer of universal fame, not, however, that we can overlook the musical movement that has been gathering speed in every civilized country on this globe.

Literally speaking, one might say that an army of composers has invaded the realm of musical art to preach in tones by leaving beaten tracks, and creating supposedly new forms, new schools. Whether we listen to a symphony or a symphonic poem, an opera or a cantata, a song or a simple piano piece, they contrive to interest us, and at times even to inspire us! Music, as well as literature, depends upon certain conditions for its fruition, and with new ideas in the air the composer who knows how to affirm his independence discloses fresh points of view to a public satiated with gazing at faint reflections of past masterwork.

We have had followers of Brahms whose mathematical elaborations are dull and heavy, long and necessarily tedious. We have had, and for that matter still have with us, followers of Wagner and Strauss, who revel in the almost continuous employment of an enormous orchestra with a superabundance of brass and percussion, in the frequent climaxes that lead nowhere, not to mention the very harsh harmonies that are but a dismal caricature of the masters whom they would copy. As the theatre would not have them all — for many and most practical reasons — the modern composer has undertaken to follow the glorious example of Hector Berlioz, whose voice was for so long that of one crying in the desert, and unable to outdo Beethoven, this particular class of modern composer has searched high and low for gruesome tales which he has set in the form of symphonic poems, lacking the beauty, melody, or design made plain in Liszt's works of similar style.

* * * * * *

Another school, that of impressionists, repudiates all vain traditions of classic formalism, and giving merely an outline of its conceptions, leaves the rest to one's imagination. Neither is its music any longer vertical but horizontal, the blending of many melodic ideas absolutely free rhythmically from the bar, that abomination handed down to us by the innovators of the seventeenth century. And the result is such as to make us feel grateful for the liberation from this rhythmic anemia, from the worn-out harmonies, or the mixture of complicated sonorities which, no matter how varied, becomes wearisome to an audience.

Then again there exists a style which calculates to dazzle and to create forms of its own; it is very pretty, it attracts the ear of doggerel rhymsters and is called modern "popular" style, but upon close examination, shorn of syncopations and other fantastic devices that are the peculiar ebulitions of limited brains, it shows a lack of solidity, in fact the best name for it is trash. Such composers, let us say for the most part well meaning, think that they are producing something new in art and in form! Unfortunately this attempt at originality, instead of having for basis a knowledge of the architectural art of Palestrina's epoch, or of the expressive art of the great Italian masters who adorned the seventeenth century, reveals a limited conception of form that will become *passé* even faster than Mozart's or Haydn's cadences of closing phrases.

To copy Palestrina, Bach, or Beethoven would be folly, for copying is not creating; and I am happy to say that among the composers of to-day there are many sincere, earnest workers who, with the help of two guides, have undertaken to develop the only road left open by their predecessors; these guides are Science and Conscience. Take, for example, a motet by Vittoria (1540–1608), a choral or a church cantata by John Sebastian Bach, Gluck's *Armida*, Wagner's *Tristan and Isolde*, or a work of still more recent date by Saint-Saëns, d'Indy, or one of the prominent Russian composers, and all that music, regardless of the manner in which it is clothed — a matter that is of no consequence to one of broad intellect — all that music is alive, passionate, *young*, for it all expresses sincerely and emotionally the human soul which never changes, excepting possibly in minor details.

Let me recapitulate. So long as the monodic cantilena predominated, a relative indication of the exact duration of the notes was not needed; rhythm alone reigned supreme. The appearance of polyphony made it necessary to use signs indicating where the different parts would start simultaneously, and so with the ever increasing influence of the mensuralists of the seventeenth century the bar became a sort of periodic demarcation of rhythm, robbing it at the same time of all its freedom and elegance. When in addition to this the function of melodies became also misunderstood, a merry war of words sprang up between Vicenzo Galilei (father of the astronomer) and Zarlino (1517–1590) on the subject of mensural music; this led gradually to a decided change not only in madrigals and church music, but also in chamber music, as well as in dramatic music, the superposed melodic parts of the contrapuntal school being transformed into mere accompaniments. Thus came about the reign of the *basso continuo;* a sort of rude accompaniment built upon a figured bass, admitting all sorts of incorrections on the part of the executant.

This was followed naturally enough by the development of a lot of theories, false in many respects, offered by various harmonists from Jean Philippe Rameau to our present day, and intended mostly to justify systems which only a few have succeeded in presenting in a clear and sensible manner. Adding to the confusion, certain notions extracted from poorly translated works of antiquity gave rise to an absolute parallelism of the two major and minor scales, and you have the result which in composition offers confusion worse confounded.

To those who can disassociate by their sense of hearing the noisy confusion created by a combination of all the strings, clarinets, flutes, six horns, three trombones, three bassoons, and a bass clarinet accompanying a solo violin and solo oboe, from the beautiful undulations of finely intertwined melodies, each one presenting new, characteristic rhythms, and the whole offering a perfect homogeneous *ensemble*, if by your sense of hearing you can separate one from the other, you are opening for yourself a new vista, the vista of a new school, which, having profited by Wagner's teachings, offers freedom from scholastic desuetude, and has for its shining lights César Franck, Duparc, d'Indy, Debussy, Polignac, and many more in Europe, likewise a few in this country, whose efforts to be individual are only in obedience to the fatal law of differentiation which rules societies; such efforts never transgress the primary rules laid down by the old masters.

Let me add, that in the same way as nations, people, civilization, as man himself marches through successive periods of youth, maturity, and old age, never dying but perpetually rejuvenating, so does art in its march through ages. It is one of the incontestible rights of *art*, without qualification, to live *outside of the times*.

LOVE'S LABOR — NOT LOST

JEAN URQUART

The growth of musical clubs has been so quiet and unobtrusive that few of us realize that those of America alone are now a hundred thousand strong.

So the musical census takers tell us.

And no doubt these clubs have been an important factor in raising the musical standard of the land.

The old saying that we get out of a thing precisely what we put into it, applies to all clubs, and is peculiarly adapted to those which undertake to study music.

The clever Sherlock Holmes found his clippings so useful for his everyday work, that those of us who are not so clever can well take pattern.

And the doctrine of scrap-books might be preached with profit in the sanctum of every musical club between the two oceans, — city or country.

The suburban club will find them especially helpful — where the reference library is not.

None are debarred, for it takes no great outlay of either time or money to work successfully through a whole year's program.

And at the end of a busy season the industrious member can point with pride to a tangible and interesting monument of labor well done.

To start with, we may go back to childhood's happy days and invest in a five-cent exercise book with a gay cover.

Then instead of studying only one's own part like a class of idle youngsters with a lot of hated Latin sentences to translate, and an easy-going teacher, try to find out a little something on each club subject.

For if we rest we rust in music even more than in other directions.

To begin at the beginning, we may leave the first two pages for an index of contents.

An index is a handy thing to have, and the absence of one impresses that fact upon a person, more and more.

We will suppose the general subject of the year to be the *Composers of Germany.*

Father Bach is pretty sure to head the list.

A small picture of him may be culled from the highways and byways of literature, back numbers of magazines, etc.

Some of the piano houses issue very attractive advertising booklets, handsomely illustrated with portraits of composers, and of professional musicians.

Ask your friends to help. A friend is no friend that cannot dig up some pictures of musicians. And they are usually very willing to help a good thing along.

We will place our composer's picture at the top, and in the middle of the top of the first page of the scrap-book proper after the index.

Underneath the picture we will place the facsimile of the composer's autograph, if obtainable.

Then will come his dates, and birthplace, neatly written.

Pencil is good, but ink is better, as it does not rub.

Below these it is well to leave a blank line for the sake of appearance.

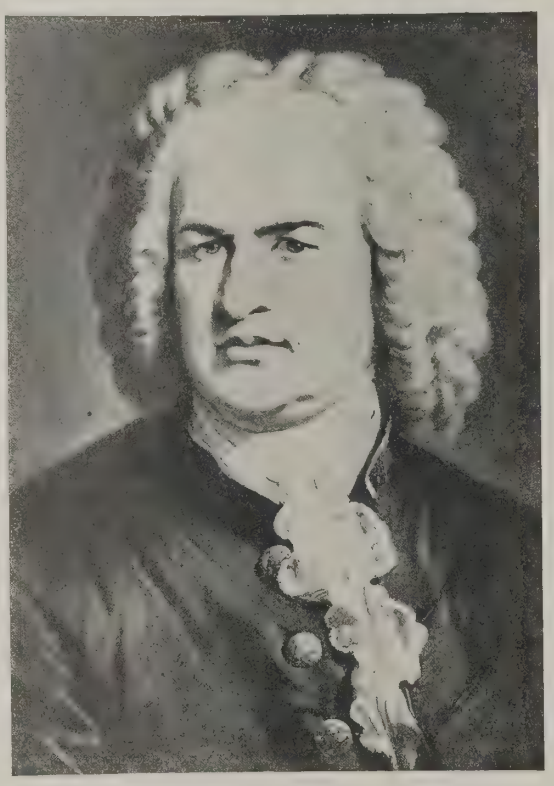
And then, if it is condensed into but a hundred words, write some of the salient facts of his career, and name some of his best-known works.

The thing for which the composer was most noted should have special mention, as the Passion music of Bach, Haydn's Symphonies, and so on.

Lippincott's *Pronouncing Biographical Dictionary* will give facts, and *Who's Who?* will furnish an excellent model in brevity for the timid beginner.

Of course, if we could all own Sir George Grove's *Dictionary of Music and Musicians* we would never need search any farther afield, but "it is very much *ox*pensive," as the Frenchman put it.

It is well to leave at least three pages for short newspaper and magazine clippings; for they will rain down from unexpected places when one begins to save them.



JOHANN SEBASTIAN BACH

If an article is too long, it may be shortened to fit, by carefully preserving the most important sentences.

Most articles are like fruit-trees, anyway — much the better for judicious pruning.

It is a matter of choice how many pages shall be left for addenda of all sorts.

But in any case, try to arrange the space so as to bring the next composer's picture in the same relative position as the first one.

That is, on the right or left side of the book, same height, and so forth.

Of course these things are mere details.

But let us not forget the genius who said that trifles go to make up perfection, — and yet perfection is no trifle.

Besides, attention to these little things make for uniformity in appearance, and gives a business-like look.

The successful scrap-book is not built in a day any more than Rome was.

But there is a joy in the immediate building, and a series of such scrap-books will form a musical reference library in embryo — individual, and unique. For there will be no one — no, not one — that can claim its exact duplicate.

NEW MUSIC BUILDING FOR HARVARD UNIVERSITY

Harvard University is to have a $75,000 house for its musical department, the building to be provided by the Harvard Pierian Sodality. The plans, as prepared by Howells & Stokes of New York, were approved of by the late Prof. Paine.

The building is to stand near the Jefferson laboratory. The sodality will be 100 years old in 1908, and the building will be a memorial of this event, in which all Harvard musical organizations will take part.

A home of its own will be a great improvement upon the quarters the musical department now occupies in Holden chapel.

NOTES

Alice Rhine, one of San Francisco's vocal teachers, who lost everything in the recent fire, is now settled in Seattle, where she has a large class of pupils.

* *

The municipal council of Bâsle has just agreed to the project relative to the construction and maintenance of a municipal theatre and concert hall. It is proposed to erect the new edifice on the same plot where the old building had stood previous to the fire which destroyed it in 1904. The place selected is called Steinenburg, at the corner of the Rue du Theâtre, and it is hoped that the seating capacity will be about eleven hundred. They will call for a popular vote to decide the last question for it seems that a large part of the public desires room for more than the proposed number of spectators.

* *

Pietro Buzzi, director of the Verdi School of Singing of Los Angeles, California, presented a number of his best pupils in recital at Dobinson Auditorium recently.

* *

Theodore Leschetizky is seriously ill in Vienna, and some doubts are expressed for his recovery.

Professor Leschetizky, who is seventy-six years old, has not been as active during the last six months as hitherto, and it has been evident to his friends and admirers that his health is failing. He is being attended by the best physicians, and if there is a chance to save his life he will recover.

* *

Theodore Spiering, the American violinist, will appear twice in Berlin next fall, October 8 and 31, at the Singakademie.

* *

König und Marschalk, a tragic opera by the Danish composer, Peter Heise, has been given in Stuttgart. The work was first produced in September, 1878, at the Royal Theatre in Copenhagen, with such success that it was afterwards performed one hundred times at various Scandinavian theatres. A year after the première the composer died, at the age of forty-nine.

* *

The general assembly of the Colonne Concerts Society of Paris has appointed Pierre Monteux second leader of the orchestra.

* *

Henri Pene du Bois, the music critic of the New York *American*, died suddenly on the steamship "New York," July 27, as he was entering this port. Mr. du Bois, who was forty-seven years old, had also been known favorably as a writer on literature and art.

* *

Fioravanti's old opera, *The Village Singer*, has been "revised" by Wilhelm Kleefeld, and may be produced in Munich next season.

THE CLASS SYSTEM OF TEACHING

EDWARD HALE, A. M.

In a former article upon the class or "Conservatory" system of teaching, I took issue with three of the arguments commonly used in support of it. These were, economy, the allaying of nervousness in playing before others, the broadening of one's acquaintance with musical literature. These arguments might have weight, I said, if the teaching were of a high order; which sounds like a reflection upon the teachers that are doing this work. But I made it plain, I think, that, after all, it is not a question of teacher but system. The system is wrong, pedagogically absurd, and no teaching, of whatever order, can do more than alleviate some of its worst features; it can never be education in any true sense, — training, like that of the gymnasium is all that it can be made to yield. In this connection something further needs to be said.

A close examination of the work and product of our music schools shows that they have frankly accepted the situation and proceed like training schools pure and simple; technique, or instrument composition, or orchestration is the purpose in view. A pupil's exhibition of originality is not tolerated, at least not welcomed, until the routine of technical preparation is accomplished. He brings his teacher some attempt at composition and is asked whether he has been through the course in harmony and counterpoint; and then he is laughed at and advised not to waste his time. Naturally, unless he possesses independence and wisdom beyond the average of the callow and impressionable student, he takes this offhand and superficial deliverance of the teacher to be authoritative and final, and postpones his excursions into the field of the creative indefinitely. Suppose he is a youth of seventeen and spends four years reaching his graduation. At twenty-one the richest and most momentous period his life is behind him forever. The years when his imagination should have taken deep root, those years of lusty, exuberant fancy, when he ought, if ever, to have begun the translation of his thronging impressions into musical forms, are gone. "The vision splendid" is ready to die away; and there is no need for us older folk, at least, to remind ourselves that the common day into which it fades is the kind of day we have to put up with, most of us, for the rest of our lives.

Originality in performance, in interpretation, is likewise frowned upon — what should the mere pupil know of such matters? Tradition — most uncertain thing — or else the conception of the teacher is pressed upon the pupil. The one thing that makes performance telling and delightful is deliberately kept out of it, and what ought to be always a new thing in the world with every new individual, is made inane mimicry. Now, if we may expect this sort of thing from the irresponsible private instructor, we certainly ought not to find it flourishing in what claims to be an educational institution. We look there for the exploitation of educational ideals, not adherence to the discredited.

The upshot of such antiquated and mischievous policy is not merely general futility, but, in numberless instances, the suppression of precious musical gift. A school ought to furnish the very atmosphere where high gifts might find ample nourishment and stimulus and where they would find instant and cordial recognition. I, for my part, have learned through a significant experience to look for the original gift in every pupil, to reverence it when I find it, and to cherish it as the rarest and most delicate of his gifts, — not cherished, the soonest to vanish and leave only a shock behind. Think of the uninspired débris, with well-known names on the title-pages, which loads the shelves of our music stores! What price do you suppose would be cheerfully paid for half a day under twenty?

And how much longer before the music schools will come to recognize that the original gift is everything, and that the capacity for technical facility is only a bad thing, — altogether bad, unless the original gift come to its own? If the schools, and if "professional" musicians do not understand this, there is an intelligent, discriminating class in our public, to be reckoned with sooner or later, that does. And the first and sharpest condemnation will naturally fall upon the schools, which are understood to claim, and actually do claim, to be educational.

In passing to what I believe to be a productive class scheme, I must refer to the final argument used by the advocates of the class: that in it pupils learn how to teach. This might have weight, I repeat, if the teaching could be of a high order. Now, musical education might certainly be of a high order. A teacher that knew his Froebel well might certainly make it so. The class idea must be so modified as to allow of absolutely individual treatment; the teacher can deal with but one pupil at a time, and in his treatment of the individual in hand he must be under no compulsion to consider any other one.

But there is no reason why, as a general thing, other pupils should not be present. Not always present; the teacher will need sometimes to be quite alone with his pupil. The classroom should be large enough to isolate teacher and pupil somewhat from the others, and it should be understood that these others are present only on condition that they in no way embarrass the lesson that is going forward. Of course, at any time, the teacher may call for comment or questions, or even criticism, and without discounting the value of the lesson to the individual pupil, make it greatly serve the class. As the lessons go forward there should be no restriction upon the presence of observers, except that of limited space. A pupil might well be advised now and then to spend many hours there. The plan should avoid, in all respects, the mechanicalness of the conventional class. Under such a régime it might well be urged that a student had a good opportunity to learn the trick of teaching. This would depend, of course, upon how the lessons were conducted. Certainly, in such a classroom, or in any other classroom, no crude, undigested playing should be permitted. In this connection, I or THE MUSICIAN's compositor left some obscurity in the other article. I meant to say that such playing is not only disastrous for the player, but mischievous to the sensitive listener — who wonders with mounting apprehension if she is destined to like harassing and ignominious performance.

The main business of the lesson is the study of "How to Study," and the exploiting of performance is in order only when all the preliminary examination of structure and design and the mastery of the technical difficulties have been completed, and the composition made the pupil's own. Nearly all of this educational process may be conducted successfully under observation. And it is certainly a strong stimulus to the pupil to know that his work is to pass under the inspection of rival pupils. And when performance is the proper subject-matter of the lesson, such an audience as this is worth while playing to.

Now, if my objector still harps upon economy, I reply that such a lesson as this is easily worth two of the other, and a doubled tuition would still be a bargain!

The futility of class-work in harmony and composition has been so overwhelmingly demonstrated in the schools that one can but be amazed at their persistent adherence to it. They seem to have an impression that there is some use in learning the rules of harmony and counterpoint and writing prescribed exercises, *and going no further*. It is an impression dead against all the facts and all the philosophy of education. No phase of education can be instanced, I think, in which the maxims of Froebel find a fairer field. And there is no place in which the ideal class may play a finer rôle. Original work from the very beginning, combined with wisely exploited analysis of masterpieces, preferably of those which the students are at work upon in the other classes,—such analysis has significance and vitality. In our ideal class, where, again, pupils might often be advised to spend a good deal of time, the teacher would, at the piano, examine the compositions brought in.

His effort would be directed primarily to the pupil to whom a given piece belonged, and the analysis would be dictated by the teacher's knowledge of that pupil's needs. But this very succinct aim would give the exercise a peculiar value quite beyond that of any vague, abstract instruction. In the actual composition study, teacher and pupil are once more somewhat alone—sometimes quite alone; but in the class, whatever is worthy is to be performed by the young composer (with assistance if needed); and comment and criticism concerned with this living product has a force and value beyond that of any and all perfunctory exercise work.

In class work of this sort, the studies would be properly coordinated, which is a matter of the utmost importance. In the schools the student takes pianoforte, say, and solfeggio, and harmony, and perhaps "theory." These studies have intimate mutual relations; each ought to aid and illuminate all the others. But in the loosely organized conservatory these relations are wholly overlooked. The piano study derives no assistance from the harmony study, and *vice versa*, and never dreams of the help of the solfeggio. And so throughout the list. The result is a waste of energy prodigious, in the gross, and pathetic. It is of immense importance that young people contemplating music study should know the truth about all this, and the real costliness of the scheme.

If any objector declares again that pupils cannot generally pay the expense of such lessons as these — private instruction rates — I reply that it is a pity that they can pay for the other lessons, which in very fact give them no appreciable return for their money.

The recommendation of the plan I have here outlined, is that others besides myself — and they are competent experimenters —have given it a thorough trial, and we know that it is practical. Any progressive teacher unhampered by traditions or an establishment may test it for himself. I do not believe that, having made a fair trial of its merits, he will return either to purely private teaching or to the "Conservatory" system.

Charles Frohman has commissioned Ivan Caryll to compose the music of a new musical play to be called *Nelly Neil*, which is to be produced next winter. The book and lyrics are to be written by Mr. McLellan.

* *

Julius Stockhausen, the famous Frankfurt singing teacher, celebrated his eightieth birthday in that city, July 22.

* *

The Brahms monument in Vienna, which was to have been unveiled this summer, will not be ready until next spring.

* *

The Match Girl, Enna's opera, based on a Grimm fairy tale, will be produced in Polish at Warsaw this coming season. Other new works that will be heard there then are *The Verdict*, by Moszkowski, and *The Maid of the Glaciers*, by Guziewski.

* *

During the Spanish holidays of *La Covadonga*, September 8, there will be a contest of choruses, comprising a union of all the singing societies of the capital. Each society must consist of at least thirty voices. The singing of *La Vendimea*, by Laurent, is obligatory, but beyond this the societies may select their own numbers. At the close of the function the societies will all unite in singing *Gloria à España*, by Clave. There will be two prizes offered, one of $600 and the other of $300.

FORM GOOD HABITS OF WORK; THEN GOOD WORK IS EASY

O. S. DUNN

I

There is no greater aid to success in all the walks of life than the early formation of good habits of work. "Habit," says Prof. William James, the psychologist, "is the enormous flywheel of society." The flywheel furnishes no power, but it is second in importance only to the engine or the dynamo that does furnish it, for it makes it possible to so apply a given amount of power as to produce the maximum of result with the minimum of wear and tear upon the machinery.

The man without good habits of work is an engine without a flywheel. He constantly is expending his energy to little or no purpose. He fritters away more time and strength in deciding what he shall do next, and how he shall do it than a man with good habits would require for choosing and doing the task. He runs so fast at times, slows down so fast at other times, is so irregular and uncertain in all his movements, that he constantly is breaking down or getting everything out of gear, and expending his energy to no purpose, or to worse than none.

II

Knowledge of Psychology is Valuable

The most important lessons regarding the need for the early acquirements of good habits and the best methods of forming them are taught by psychology. A knowledge of psychology is not regarded generally as helpful in the struggle for material success, but its teachings regarding habit are of the most practical nature, and every worker, and particularly every young worker, should be familiar with them.

We usually think of habit as a mental and moral phenomenon. Psychology shows that at bottom it is a physical fact — a state of the nervous tissues. Water in flowing hollows out a channel for itself. When it flows again, unless diverted it will run in the same channel. Similarly, when an impression from any object causes a nerve current to flow from the part of the human body where the impression is made to the brain and thence outward to the muscles and in consequence some act results the current makes a channel for itself in the substance composing the nervous system.

III

Nerve Current Wears a Channel

Subsequently, when the same impression is made again by the same object, the same nervous current will tend to flow through the same channel and discharge in the same act, and, if a given sensation is caused or permitted by the will frequently to be followed by a given act, the act presently will be performed without the conscious volition of the actor — in other words, will become habitual.

A man usually doesn't think about putting on his shoes or his necktie in the morning. The impression caused by the sight of them discharges automatically in the act of putting them on, while their owner probably is thinking of something entirely different.

Most of the common acts of life are performed in this automatic manner. Every man is a bundle of hundreds of habits — of channels through which nervous currents, if not stopped by the will, promptly discharge into their appropriate acts when extraneous objects cause the sensations by which those acts often have been preceded. Many habits become practically reflex actions. It is fortunate that this is so. If a man always had to stop and study which leg to put into his trousers first, how to handle his knife and fork, what car to take, as he did the first time he performed those acts, he would have no time or energy left in which to attend to the more difficult and important duties of life.

IV

Daily Work a Matter of Habit

Now, it is just as practicable to make the performance of many portions of one's daily work largely or wholly habitual as it is to make walking or putting on one's shoes so, and everybody who is ambitious to attain high success should strive to do this, for it has two great advantages. One is that it saves energy and promotes expertness. A task which is done automatically is easily and usually well done. Secondly, when a man, by the formation of good habits, has acquired such perfect mastery of all the simple regular details of his work that he can attend to them almost without thinking about them, his mind is left free and unwearied to cope at its full power with new and complicated duties as they arise.

V

Habit Guides the Surgeon's Knife

It largely is habit which enables a Morgan or a James J. Hill to transact the enormous amount of business he daily turns off. It no less is habit which unerringly guides Dr. Senn's knife as he performs an amazing number of surgical operations in a day, and does them all better than the average surgeon could do any of them. It is by acquiring good habits that the mechanic becomes the most expert workman in his line.

It is never a question whether one shall form good habits or none. The question always is whether there shall be formed good habits or bad ones. For the one kind or the other, by the action of a law of nature, inevitably will be developed. Fortunately it usually is as easy at the start to form a good habit as a bad one — to set nervous currents to discharging in the right acts as in the wrong ones. It is as easy to get the habit of proceeding directly with the work at hand as of procrastinating about it, of fixing the entire attention upon it as of letting the mind constantly wander off to other things, of doing it carefully and well as of doing it carelessly and ill.

VI

Form Good Habits When Young

Too much stress cannot be laid upon the importance of beginning to form good habits of work when young. The substance composing the nervous system is plastic then, and nerve currents may hollow channels through it where they will. As time passes the nervous tissues harden and it grows more difficult to hollow new channels through them and dam up the old ones — in other words, to form new and break old habits. Personal habits, such as those of gesture, pronunciation, address, usually are fixed before twenty. Business and professional habits usually are irrevocably fixed between twenty and thirty. The man who has not become a fast, steady, capable worker at thirty will have great difficulty in ever becoming one, while the one who has become such a worker at that age usually will always be one.

"Habit a second nature! Habit is ten times nature," said Lord Wellington. There was profound philosophy in this remark, and it was philosophy born of experience, for Wellington, who in childhood was considered such a dunce his own mother could not bear to have him near her, became one of the greatest soldiers, diplomatists, and statesmen of his age by assiduously cultivating the habits of thorough preparation and quick decision.

VII

Carry out Your Good Resolutions

The nervous system which is a bundle of bad habits is its possessor's worst and most inveterate enemy. The nervous system which is a bundle of good habits is it possessor's most faithful and efficient ally. Prof. Bain, Dr. Maudsley, Prof. James, and other psychologists have laid down several scientific rules by strictly adhering to which every man may make his nervous system his ally. Never do repeatedly an act which you would not want to become habitual, for every act is an incipient habit. Seize the first and every opportunity to carry out a good resolution. Make as many useful actions as you can habitual, and when you have begun to try to acquire a good habit, never suffer an exception to it until it has become firmly rooted. In endeavoring to break bad habits don't try to "taper off," but absolutely break them at once. "Keep the faculty of effort alive" by constant exercise. The man who selects intelligently the habits he wishes to form and adheres strictly to these rules may not achieve an eminent success, but he will be much more successful and much happier than if he lets himself drift thoughtlessly and without any regard to consequences. — *Exchange.*

RECITAL PROGRAMS

EDITH L. WINN

The material for recital programs should be chosen with a definite view to the education of pupils as well as the positive enjoyment of hearers.

If an admission fee is asked, the program should, without belittling the work of the teacher, have some definite enjoyment in it for the average hearer. Parents always come to hear their children play, and it is wise to use as many children as possible in the program. I usually have two or three *ensemble* works in which nearly all of my class appear. The Trios of Dancla, Op. 99, No. 1, are very useful, also the Wohlfahrt Duos, the *Prayer* and *Rondo* by David Weber (Jean White Ed.) and the Haydn Minuet (Ed. Schmidt Heilbron—4 violins and piano.)

EDITH L. WINN

One of my advanced pupils plays the viola and I myself play the 'cello in easy quartets, like those of Pleyel, Op. 8, Mazas, Op. 38, and Gebauer, Op. 10. One of my pianist friends asks me why I always introduce these "antiquated" works on recital programs. I answer, because they are the very beginning of quartet work. I can teach phrasing, tone, bowing, and many other things from these works, which will be of great value to the pupils when they hear the great quartets played by the Kneisel or other well-known organizations Any violin teacher can read the viola parts, but I usually train some advanced pupils to play viola. I think that I have had ten lessons in 'cello playing, but these enable me to play such parts in easy quartets, and there are no 'cellists in our vicinity. On taking a position in a college or conservatory it is wise, first of all, to start *ensemble* classes. All pupils cannot be soloists. Then there is the school or college orchestra. We may begin with the Ditson arrangements of *Athalie*, the *Wedding March* of Mendelssohn, the Raff *Cavatina*, and other works for two violins and piano, using the entire available material in the violin department. A little Trio by Moffat, for children, is very useful, also Wohlfahrt's *O Sanctissima*. For more advanced pupils the *Duos Concertante* by Tours and also by Dancla (3 *Petite Symphonies*) are effective. Then there are the Dancla unaccompanied quartets (Op. 178), also a violin quartet by Dont.

The Duos of Pache are very interesting and exceedingly pleasing to an audience. I have observed in the program of foreign conservatories a number of unison works. These are exceedingly useful. A Gavotte by Bach, another by Rameau, and a *Loure* by Bach are very good, also the *Perpetual Motion* (easy suite) by Bohm and *Perpetual Motion in D*, same composer. The Gigue of Edward German from *Much Ado About Nothing* is good, also the *Fourth Hungarian Poem* by Hubay. I do not recommend unison works unless they are easily mastered technically.

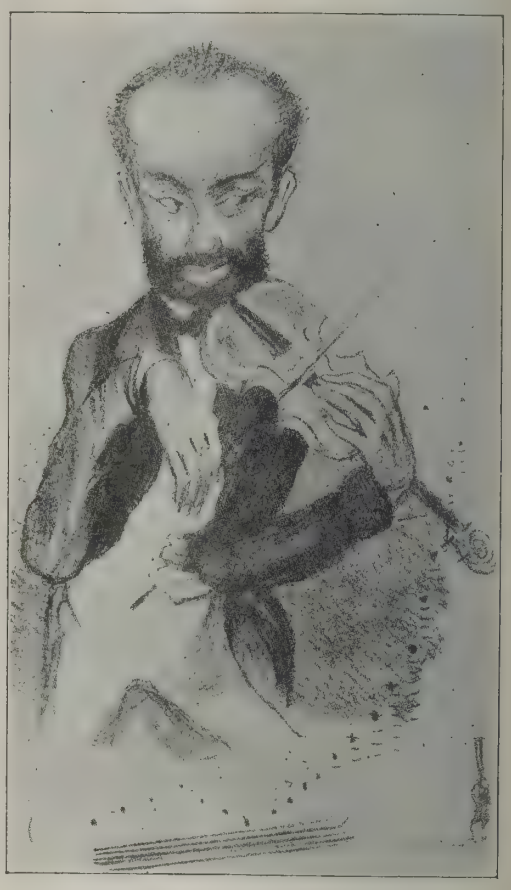
One must not forget the *Spanish Dances* by Moszkowski, the three Dances from *Henry VIII* by Edward German, and the Godard Duos for two violins and piano.

First of all, a recital program should be short. There should be about three *ensemble* numbers. The children should have a place, even if they play in unison the little *Danish Folk Songs* published by Novello, Ewer & Co., or the open string tunes (*Happy Jack* melodies) by Harriet Sawyer. One or two children may play a solo. A Gavotte by Warner, one of the little melodies of Leo Oehmler, or a *Romance*, Op. 27, by Hermann are excellent.

Then there must be a representative of the next grade, and several advanced pupils to end the program, unless a good *ensemble* number brings up the list to ten or twelve numbers. The pieces should be well contrasted: classic and modern. All of them should be played from memory, except long *ensemble* works.

Unison number should always be memorized. There should be some romances and serious works and a few brilliant pieces, like the *Hejrl Kati* of Hubay or his *Hungarian Poems;* the *Caprice* by Ogarew; the *Caprice* by Dessau and a *Mazurka* by Taskine. The *Ballade and Polonaise* by Vieuxtemps is an effective teaching work for advanced pupils, but it must be well done if at all. *The Legende* by Wieniawski and the *Reverie* by Vieuxtemps, for difficult slow numbers, will do. *The Adoration* by Borowski, the *Andante Religioso* by Thomé, and a meditation by Fauconier are easier. For easy concertos I would use those by Seitz and Seybold.

If the class is large, entire concertos need not be played. I use the first movement of the Rode 8th and the first movement of the Viotti 23d concertos. For Sonatas, the easy ones of Schubert and the more difficult Tartini in G minor, the Handel in A major, and the Dvorak Sonatina will answer, I believe, in the yearly recital. It costs much time and energy on the part of the teacher, but it pays in the enthusiasm which it creates among parents, pupils, and friends. The orchestra work is an especially fine feature and pupils should strive for a place in it, the most advanced naturally holding the first seats. Good musicians who cannot play the violin well may help out with the viola. One can easily hire extra 'cellists and double bass players; in this case it is not impossible to play a movement from a Symphony, particularly those of Haydn. The solos, like the Bach A minor Concerto, may also have orchestral accompaniment.



HENRI VIEUXTEMPS.

The violin teacher should play as many of the piano accompaniments as possible, being accustomed to pupils, and they in turn rely upon him. The difficult works may be played by a professional accompanist.

Massenet's latest opera will be entitled *Thérèse*, and the title rôle will be created at Monte Carlo, by Lucy Arbell, in February, 1907, the other chief parts being taken by MM. Clément and Dufranne. Before appearing at Monte Carlo, Mlle. Arbell will be heard in Paris as Persephone, in the *Ariane* of MM. Catulle Mendès and Massenet.

* *

Safonoff will conduct a London Symphony Orchestra concert on May 4 next year, and another upon a date not yet fixed. He is said to be at present enjoying himself at a German watering place, endeavoring to reduce a little of his spare avoirdupois.

* *

Percy Pitt has severed his official connection with the London Queen's Hall Orchestra. Since its foundation he has acted as accompanist and organist to the organization, but his increasing work at Covent Garden has forced him to resign the post. Upon Mr. Pitt's shoulders will devolve the whole of the artistic management of the autumn opera season, for M. Messager will confine his energies to the "grand" season. Mr. Pitt, however, is to continue his partnership with Alfred Kalisch in the musical analysis of the Queen's Hall Orchestra program, according to report.

SPENDTHRIFTS OF VITALITY

MARY ELEANOR O'DONNELL

oo many of us are spendthrifts of vitality. We even sleep tensely. We all need to learn the salutary art of letting go of ourselves.

The woman who braces up against pain is only emphasizing it, squandering thus her nerve force at the very time there is most demand upon it.

It is the strained nerves that are the most sensitive to pain, just as it is the strained listening which is the most sensitive to sounds.

Esthetically speaking, the perfect repose of manner is only a question of conserving vitality.

Many a fine dame instead of healthfully succumbing to the cushions of her carriage, generates, unconsciously, by her taut and tense condition, enough nervous energy to draw the entire vehicle. This is fatiguing and inartistic.

A small engine might be run by the unnecessary and most ungraceful muscular force with which a dainty tea-cup, fan, or a silken sunshade is often grasped.

The power of conserving vitality — that perfect repose so devoutly to be wished for — comes not in an hour, or a day. It is won only by persistent and ofttimes painstaking effort.

The notion that resting can never be a laborious process is strange to those who have never tried it.

Many women who have come to a realizing sense of the necessity for daily routine in their exercise and diet are still blandly unconscious that the muscles may be trained to rest only by the same recurring process by which they are trained to act.

Tense nerves, tense muscles, and tense minds may not be soothed and relaxed by sudden determination any more than flabby ones are made firm by a single resolve and a single set of exercises.

But the rest habit, the energy conserving habit, which is also the beauty habit and the health habit, may be permanently established, if the high pressure women of to-day would only seriously give their minds to it.

There is nothing better than fresh air to quiet the torture of sizzling, sputtering nerves which all spendthrifts of vitality suffer from.

One admires the girl who loves best of anything to discard the pretty fripperies of her kind and get into an old short skirt, a veteran shirtwaist and shabby shoes, and hike away to a first-rate fishing pond, where she immediately gets busy with the line and rod.

Fishing is the sort of sport that gives you an immense craving for a porter-house steak, with German fried potatoes on the side.

It produces that delicious weariness that makes spendthrifts of vitality have an urgent appointment as a Lady Rip Van Winkle and the sleep of the just is no more beautiful or perfect than that enjoyed by these fisher ladies who have spent the day with rod and line.

Those who have never tried the rest of getting up early in the morning and going off on a fishing jaunt aren't on speaking terms with genuinely charming experiences.

The girl with nerves who says she would not care to get up as early as these fishing jaunts require, that she doesn't like to tramp through wet grass, doesn't really deserve to enjoy life so very much.

Plenty of pleasant things are denied the lazy ones of life.

The present reign of right thinking and right beautifying is showing up splendid results. Even the old women are young. The young keep young and the old ones turn time inside out and forge their way back to youngness.

The cheerful, happy person is the one who remains young the longest. The trick is entirely in healthy living and healthy thinking.

We often wonder why it is that children never tire of romping and playing. They go through all the long day on a dead gallop, never resting, never stopping, always busy, continually romping out of doors.

When meal time comes they are there prompt and ready, all primed to eat half-a-dozen pieces of bread and butter. And at night, when they are once asleep, it is for a ten or twelve hour stretch.

It is because they are living a natural existence — not the artificial lazy one which the grown-ups have acquired with their years.

Living in the open air is not a fad. It is a necessity.

The girl who has been cooped up in an office during eleven months of the year, who complains of nerves, should spend her entire vacation at some country place, near a stream of water.

Here she can fish in the early morning hours, near trees, where she can read a helpful book, and, if possible, sleep and eat in the open air.

This hermitage trip is taken every year by a business woman who when she first started it was among the spendthrifts of vitality. It has proved a cure for the many ills which she was heir to.

It is the surest way of winning repose and restfulness for which the average society and business women are vainly striving. — *Exchange.*

GENIUS IS ALWAYS REWARDED

I

"I wish I was rich!" is one of the most commonplace expressions of the whole gamut of human desire. Wealth seems to be the one thing which the vast majority of men and women alike seem most fondly to long for. Given a reasonable degree of health, no bitter disappointment in love, nor special misfortune which weighs down upon the heart and mind, and the average individual will reply, if you ask him his most cherished wish: "I wish to be rich!"

There is a good deal of philosophy and no small instinct of right perception in this individual desire of men for wealth. It is all very well to say that wealth is not the only thing in the world. I am far from indorsing the blatant, vulgar idea, too common, perhaps, among Americans, that "money talks," that "coin is the only thing," or that "If you have money you're all right." You may have millions and yet be the unhappiest man alive. But the average man or woman, when wishing for riches, does not wish for the fortune of a Rothschild or a Rockefeller. Enough wealth is wished for to secure one against painful poverty, or to afford the ease and the gratification of wholesome desire which every man and woman prizes.

II

Not All Worship Money

There are exceptional people who do not care for money. I know a young man, who, if he could make converts to Christianity, would sacrifice for this privilege the wealth of the whole world. I know a young woman who would prefer, above all other things, to be a famous novelist. She would be content to be quite poor if she could have the artistic fame her heart craves. I know a rich man who told me that if he could have the political success of one among fifty of the comparatively poor politicians he knows he would give away his immense business interests. This man is known as a most successful business man, and is believed to be happy because he is rich. He is one of the most discontented men I know. Another immensely rich man, widely known for his gifts to education and religion, would give one of his ears could he, over night, be transformed into an eloquent and scholarly preacher.

And yet, in spite of all this, the general run of men, the majority of the people, would fix their first choice on wealth as the most desirable possession.

To him who wishes to be rich, and who is not fatuous enough to believe that he will one day stumble upon an Aladdin's lamp, one piece of good advice can be given: Do something which large numbers of people will think worthy a reward. In other words, society pays for real or for fancied service. Apart from an Aladdin's lamp, or from a legacy, which amounts to the same thing, society gives nothing for nothing.

This is an irrefragable law of economic life, and you cannot escape it any more than you can lift yourself by your boot straps. Service is the word, from the king to the plowman; and your service is rewarded in precise proportion as it is economically good for your fellow-men.

III

"Unrewarded Genius" a Myth

Many shallow thinkers criticise this position of economic science by calling attention to what they claim is unrewarded genius—Johannes Gutenberg, the inventor of printing — the greatest material and intellectual benefit, perhaps, of all time — was put in jail for debt, and had to flee from the wrath of the ignorant burghers who thought he was dealing in witchcraft. The first user of anæsthetics died poor. The greatest of the first European scientific discoverers were harassed and often put to death by blind governments, and were believed by the people to be limbs of Satan. Innumerable inventors have died poor. Mozart died in virtual want. And the list could be extended *ad infinitum*.

But why was all this the case? Because society refused to reward men who had done for it great, useful, or noble services? Positively no. The men mentioned above had not done a service for society. In fact they did what society, in their day, regarded not as a service but as an evil thing, or a thing of no value. As soon as society grew up to an appreciation of the users of the things they did, society rewarded them with all the return in its power. It gave them monuments and praise. The moment society began to use the works of their genius, the moment their services became actual and not potential, society gave them of its gifts with a free hand.

On the other hand, the services done by the enormously paid capitalists who direct business or manufacture are real and not fancied. We say that So-and-so owns a railroad or a steel plant. Does he? No, he does not. He holds his position just because of his service, and all other capitalists are in the same boat.

Whenever a man does a great service to society, society pays him cash. And it is often the case that society generously pays cash for fancied services, such, for example, as those believed to be rendered by certain insurance officials, whose work could be done by an intelligent office boy. And yet there are many men who will defend the alleged insurance grafters, and not unreasonably, by saying that the offices which they fill should be high salaried for the sake of mere dignity, like the champagne lunches which the Bank of England serves its clerks every day in the year, and all out of the depositors' money. What would the people of this country say if the clerks of the big insurance companies were given banquets in the office just for the style of the thing? Still, there is some good sense in the system, even if the president of the company spends money like water. It shows that the company is "solid as a rock," and the individual policy-holder, like the Bank of England depositor, will not object, will be tickled, in fact, if his own policy is assured him by the system. — *Chicago Tribune.*

NOTES

The first announcement of the twelve Philharmonic concerts next season, in Leipsic under Hans Winderstein, indicates the principal compositions to be produced, also the soloists. The first soloist is the contralto, Mme. Charles Cahier, of New York, followed by pianist Ferruccio Busoni; the tenor Karl Burrian, of the Dresden Opera; 'cellist Gerrard Hekking, of Amsterdam; Richard Burmeister, pianist; the vocalist Ina Wright; Felix Berber and Julius Klengel, in the Brahms double concerto, for violin and 'cello; the Spanish violinist, Joan Manen; pianist, Riccardo Vines; violinist, Alfred Krasselt; baritone, August Kiess, of the Dresden Opera; the pianist, Marie Panthes; 'cellist, Pablo Casals; and Ernst von Possart as recitationist, in the Wildenbruch-Schillings' *Hexenlied* and Schumann's *Manfred.* One concert will be conducted by Sergius Liaponow.

Among the very new or very modern works to be produced are Bruneau's *Sleeping Beauty*, Joan Manen's *Catalonia* symphony and his manuscript concerto for violin, a symphony and a piano concerto by Emanuel Moor, the *King Lear* symphony overture, and entr'acte, by Balakirew, and the sixth symphony, by Gustav Mahler. The series will be played again in the Albert Halle, after some seasons at the hall of the Zoological Garden. The orchestra thus begins its eleventh season under the personal management of its conductor, Hans Winderstein.

HARMONY STUDY

Practically Applied to Reading and Memorizing Music

MRS. D. Y. GRIEB

Learning anything by rote without the understanding is a tedious process, because there is no association of co-related ideas to aid the mind in recalling the things to be remembered. The alphabet as formerly taught to a child was a herculean task. The poor little tots looked so dull and uninterested as they plodded on through twenty-four meaningless characters; but write "dog" or "cat" on the blackboard and see how their faces brighten, because these words convey *ideas* to them.

Is the printed page of music to the student like the alphabet to the child? Are there only notes on the page and corresponding keys on the piano, or are there musical *ideas* to be conveyed?

Instead of notes following each other without to him any logical sequence, the student of harmony finds what corresponds to words, syllables, phrases, and sentences in language; he finds motives, sub-motives, phrases, and sentences; he learns the chords by name, their natural place in composition, and the laws of their progression, just as one learns where to place the nouns, verbs, etc., in the construction of good English. Each measure is analyzed, the melody is found using the tones of the chords with passing notes to carry them hither and thither, while the harmony in the bass proclaims the chords just as a boy writes beneath his drawing "This is a horse."

The student now finds new fields to be explored, to him a hitherto unknown country. He finds that which arouses his attention, appeals to his intellect, and stimulates his ambition. He is ushered into the inner court of the Temple instead of roaming about at the portal. He wonders why he did not *begin* this way instead of the old way which took so much time and effort with such small results.

Why should not the study of harmony begin with the study of music? Even the babies will learn the chords. They will tell you that "sub" means below and "super" above. Here are ideas. Cultivate at the same time the eye, the ear, and the imagination. Tell them the story of the man who first discovered and used the dominant seventh discord; of the opposition this wonderful chord received from the orthodox, and of its final acceptance and use. Let them *hear* it falling from the supertonic into the tonic in a final cadence.

To illustrate more clearly the benefits derived from the study of harmony take the Adagio of Sonata No. 2 by Haydn. In the first measure the harmony in the bass defines the tonic chord; the melody uses the notes of the chord with only two passing notes; the second measure uses the dominant chord, and so on. Go through the movement, analyze each measure and determine the extent of the motives and phrases. In the thirteenth measure, after the transition to D, the harmony in the bass defines the chord of the dominant ninth. In the right hand the melody beginning with G, the seventh of that chord, skips to E, the fifth, runs up to E, an octave, down to A, the root, plays around A, back and forth, with G♯ a passing note, goes to B, the ninth, and ends its career in that measure on E. Now, these stopping places in the rise and fall of the melody are all harmony notes. Through the whole movement this form is carried out in the different chords. The melody rises and falls, rises and falls, up to a harmony note, down to another harmony note, up again like the waves of the ocean. "Thus far shalt thou go and no farther" say the harmony notes. Farther on the original theme with a little change is stated in the key of the relative minor E. Now, the enlightened student does not lose his equilibrium when he meets this first cousin of G major bearing the same name (signature), and besides, he sees the little herald accidental D♯ in the advance.

The student now finds something like law and order in the construction of musical sentences as in language; he begins to *think* musically; his mind is intended in the right direction. "How do you make your discoveries?" some one asked Newton. "By intending my mind," was the reply. So with the mind thus intended discoveries are made. He finds that the bar marks the place for the accented note, and he reads not from bar to bar, but from somewhere between the bars to somewhere between the bars in the next measure. He *plays* this way, not with a perceptible pause at the end of motives, but with a mental pause which may be likened to the slight shading of the voice which cannot be marked by punctuation, but which lends such a charm to spoken language. Each motive appears as a musical thought, a composite part of a musical sentence; the cadences at the end of the sentences call attention to the points of comparative repose, passing notes are distinguished from harmony notes; harmonies follow those harmonies they are wont to follow, transitions usually glide into a related key; discords seek their resolutions — the expectant tones of the dominant fade slowly into the satisfying tones of its resolution — and, as in the beautiful cadence-formulas of Beethoven, over and over again it sings its farewell in ritardo for the final close.

As the works of the masters are thus mentally grasped, ideas of musical form are developed. Each movement, though with its own characteristic form, is in perfect harmony with the others, and the composition now appears as a symmetrical whole — a unity of conception. A perspective is thus gained that no amount of practice alone could give. For the time being the student becomes both composer and interpreter; he sees the workman in his laboratory; the intricacies of his art; his skill in the arrangement of musical ideas, and finally he sees these ideas — the melody — living and breathing in an harmonic and rhythmic atmosphere.

If it is necessary to understand Harmony to compose, why not to interpret? The Marconi messages are sent in every direction through the ether, but they are caught and held captive only by the receivers, which are keyed in sympathy with the transmitter. So the mind of the interpreter must be keyed aright to catch the messages his beautiful tone language conveys. Of course, the esthetics of musical culture is also to be considered, and while analysis may be said to furnish only intellectual perception, still, let the student, while working for the *letter* keep open the windows of his soul, that he may catch the *spirit* of the message also.

> "Let there be many windows in your soul,
> That all the glory of the universe
> May beautify it. . . . Tune your ear
> To all the worldless music of the stars
> And to the voice of nature, and your heart
> Shall turn to truth and goodness as the plant
> Turns to the sun."

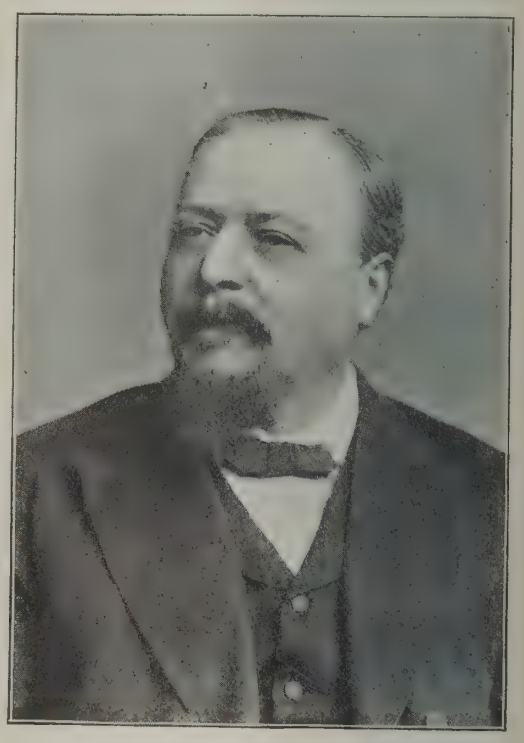
In memorizing, the same principle applies. Take, for example, an arpeggio accompaniment. Each group defines some chord, and is recognized as a familiar instead of an arbitrary succession of notes. Each accidental sharp or flat can be accounted for, and, instead of confusing, serves as a mark of recognition, so that the arpeggio is grasped as a unit, and therefore easily remembered.

One has said, "The secret of good memory is the secret of forming diverse and multiple associations with every fact we care to retain." This is just what the study of harmony does, and not by any trick or legerdemain either, but by a process as natural as that of the child grasping, learning, and putting words together in learning to talk. It furnishes the "diverse and multiple associations," and does for the musician what an understanding of language does for the linguist. One would learn very slowly a succession of words in a language which he does not understand.

A piece is really never mastered until it can be seen, heard, and played mentally. The importance of memory can hardly be overestimated. Let us remember that Mnemosyne was the mother of the Muses, and wherever the goddess presides, Intelligence will be found to be her chief handmaid.

THE LATE CHARLES WELS

Mr. Wels was a prolific composer, and wrote much excellent music in varied forms. His compositions for the ritual of the Roman Catholic Church are deservedly favorites everywhere. Among his more important works, these may be especially mentioned:—



CHARLES WELS

Mass of St. Cecilia, in D.
Third Mass, in E♭.
Fourth Mass, in F.
Fifth Mass, in G. Op. 134.
Ave Regina, in C.
O Salutaris, in F.
Tantum Ergo, in D.
Viderunt and Alleluia.

A brief biography of Mr. Wels appeared in the August issue of The Musician.

Mr. and Mrs. Eben H. Bailey are among the most successful of the many prominent voice specialists resident in Boston. Mr. Bailey has had over twenty years' experience as a choir director, and Mrs. Bailey has long been a leading church choir singer.

* *

At a recent reception and musicale given by the Metaphysical Club at Los Angeles those who participated were Lulu Barker, Mrs. Morgan, Charles Leonard, Alice Crossmann Broughton, and others. A collation was served to members and invited guests.

MARCHESI'S ADVICE TO YOUNG STUDENTS

The following pertinent remarks taken from Mme. Matilde Marchesi's *Ten Singing Lessons* are of especial interest just now in view of the honor Queen Alexandra recently conferred upon the distinguished exponent of vocal art by presenting her with the medal for music, art, and science.

"How shall the education of a child be conducted which from infancy has revealed the possession of an acute ear, a vivacious temperament, and valuable gifts — a sweet voice and one true of pitch; of a child who from morn to eve sings with faultless intonation the melodies it overhears, and prefers sitting at the piano to busying itself with dolls? With due consideration for the bodily health of this gifted little creature its parents, after it has learned the alphabet and is between seven and eight years of age, may give it piano instruction, without, however, constraining it to too constant practice. Then — always with regard for the physique — solfeggio can be commenced, but with the greatest caution; only a compass of ten tones (from C to E) should be allowed.

"When the young girl reaches her twelfth year and the change to womanhood claims all her physical strength, to preserve her voice for the future all singing must be strictly prohibited. Woe to those that disregard this injunction.

"Now that the young girl's lips are temporarily sealed her general education must be commenced. Literature, declamation, history, harmony, the history of music, the French, German, and Italian languages — all these branches of learning must be thoroughly studied. There is no more mistaken notion than implying that an attractive appearance and a beautiful voice are sufficient equipment for an artist. A substantial education facilitates marvelously the study of the art of song; unluckily this most necessary thing is neglected by most young persons undertaking the study of singing."

MUSIC FOR EAST SIDE HOMES

In New York's East Side slum district — to be exact, at Nos. 53 and 55 East Third Street — is a large, old-fashioned house which served admirably as the residence of one of New York's leading families, decades ago. To-day it is the centre of a musical activity, unique in purpose and method. It is the home of the Society of the Music School Settlement, an institution affording the means of musical education to youngsters whose erstwhile nearest approach to the best in the art of harmonies was the automatic "runs" of a street hurdy-gurdy.

Remarkable results have come from the work done in this old building since the society began its work there twelve years ago. East Side residents, ranging in age from seven to twenty years, apply themselves assiduously to the study of various branches of music — not because it is purposed that they shall some day become artists to enchant the music-loving public, but that the refining influences of the art may bring into their lives the order and delicacy of which Ruskin spoke. In this connection Mrs. Howard Mansfield, the president, says: —

"There is a misunderstanding of our aims in the minds of many. Some think that we labor under the delusion that all of our children will one day shine as stars. Far from it. While we know that every child who comes to us loves music, we realize that comparatively few will be able to earn their living by it. These few we mean to help. But the great majority of children do not hope to live by music. They come to us joyfully and faithfully, because they and their parents want music in the home."

In the piano department there are 150 pupils, while the violin department has 100 students. Then there is Emilie Wagner's junior orchestra class of seventeen members. As to its working basis, the Settlement tries to give the best of musical instruction at the lowest figures. Instruction is given at 40 cents an hour, half-hour lessons at 20 cents, quarter-hour lessons at 10 cents. A practice piano may be used for 5 cents a half-hour. Pupil teachers are paid 50 cents an hour. Their average is 18. Fifteen teachers volunteer their services, and eleven professional teachers are engaged.

Four resident workers devote all their time to the young students, and there are social clubs for the pupil teachers, parents, and friends, summer outings, a friendly hold upon families of the pupils, and, in addition, the thorough teaching of a profession always in demand. This can be better understood when one has seen pupils make a fifteen-minute lesson the excuse for a three-hours stay at the school, working in the little rear garden or listening to stories told by some kind soul off in a corner of the concert hall.

NOTES

London has a string quartet of women players — Henriette Schmidt, Marie Rodriguez, Jeane Levine, and Hélène Dolmetsch.

* *

It is rumored that Strauss' opera, *Salome*, will be taken "on the road" this coming season, several European cities being in the itinerary.

* *

The recent Rembrandt festival at Amsterdam inspired these pieces: A symphonic poem, *Saul and David* (after Rembrandt's picture), by Wagenaar of Utrecht; a cantata, with text by Van Moerkerke, music by Diepenbrock and an orchestral prologue by Bernard Zweers.

* *

Rudolf Krasselt, once first 'cellist of the Boston Symphony Orchestra, has been engaged as conductor at the Danzig opera house.

* *

A symphonic prologue to Spitteler's *Hympischer Fruehling*, by the Swiss composer, Walter Courvoisier, has been performed at Mannheim.

* *

Ernest Urehs, the general representative of Steinway & Sons, will have charge of the concert tour of Mr. Josef Lhevinne, the Russian pianist. Mr. Urehs has had much experience in the handling of large musical undertakings. He was an active manager of the New York Arion Society's European tour in 1892, and in 1894 he was in full charge of the great Saengerfest in Madison Square Garden. Mr. Lhevinne will play Rubinstein's concerto in E♭ with most of the leading American orchestras next season. The concerto is seldom played in this country. It was heard in New York about seventeen years ago, and it has been played once in Boston. Mr. Lhevinne chose it for his first appearance in New York last spring.

* *

Autobilhymnos, for chorus and orchestra, by Carlo Gallone, a pupil of Rheinberger, has been performed at Milan.

SONG WITHOUT WORDS

UNDER THE CHESTNUT TREE

The manager and critic stood gazing down on the wealth and fashion in the boxes.

"Ah," whispered the critic, "that is what I call money."

"Yes," replied the manager, as the buzz of conversation came floating up, "and now I know what they mean when they say money talks.'" — *Chicago News.*

* *

First Angel.— "What's the matter with that spirit in seventh heaven?"

Second Angel.—"He complains that the spirit in the sixth heaven won't stop practicing on his harp."—*Brooklyn Life.*

* *

"I think that every young woman should learn to play the piano before she is married."

"That's right. And forget it afterward." —*Cleveland Leader.*

* *

"Pa," asked the small boy at the classic recital, "is that man playin' the pianner while that woman sings her 'accompanist'? "

"No, my son," replied the father, in whose unresponsive plebeian soul the soprano had found no sympathetic answering chord. "That man is her 'accomplice.'"—*Macon Telegraph.*

* *

"Look here," remarked a violinist, resentfully, "you were talking all through my solo."

"O, don't worry about that," said the man addressed, "I assure you I wasn't saying anything that you would particularly want to hear." — *Pell Mell.*

* *

Not Music

Mrs. McDuff.—"This paper says that mice are attracted by music, but I don't believe it."

McDuff. —"Why not?"

Mrs. McDuff. —"Because I never see any mice around when I play the piano."

McDuff. —"Well, that's no reason for doubting the paper's statement."

* *

Sad

"She has a good voice, hasn't she?"

"Yes, but —"

"But what?"

"Well, you see she's got such a big mouth that there's an echo, and that spoils the effect of her songs." — Ted Robinson, *Cleveland Plain Dealer.*

* *

The Better Plan

Mrs. Nextdore.—"My daughter doesn't persevere with her piano practice as she should—"

Mrs. Pepper. — "What?"

Mrs. Nextdore. —"I mean, when she comes to a difficult part I can't make her stop and consider it."

Mrs. Pepper. — "Huh! it would be better to make her considerate and stop." —*Philadelphia Press.*

Even a Whisper

"Aren't the acoustic properties of this opera house magnificent?"

"They certainly are. You can hear every word that's said by the Blank's party four boxes away." — *Brooklyn Life.*

* *

His Fondest Memories

A hard-headed old Pittsburg manufacturer who made his fortune, as he expresses it, "with his coat off," was induced by his daughters to accompany them to a Wagner concert, the first he had ever attended. The next day he happened to meet an acquaintance who had seen him the night before, who asked:—

"I suppose you enjoyed the concert last night, Mr. Brown?"

"Yes; it took me back to the days of my youth," the old man said, with a reminiscent sigh.

"Ah, summer days in the country, girl in a lawn dress, birds singing, and all that?"

"No, the days when I worked in a boiler shop in Scranton."—*Success Magazine.*

* *

"As I watched you dancing," he said, "the thought suddenly came to me that you were a poem set to music." With a hopeless sigh she turned her back on him, for she knew something about poetry, and had made a study of the kinds that are usually set to music. — *Chicago Record Herald.*

* *

"I understand you played a solo at the musical last night."

"No, merely an accompaniment."

"Why, nobody sang."

"True. But everybody talked." — *Louisville Courier-Journal.*

* *

Lady (about to purchase the song *Because*, and desirous of making certain that the hawker has the right version).— "Is it '*Because I love Thee?*'"

Hawker.—"No, lidy. '*Because Gawd Mide Thee Mine.*'" — *Sketch.*

* *

There was a nice fellow named Jenner,
Who sang a phenomenal tenor.
He had little to spend,
So I often would lend
The tenor a ten or a tenner.

* *

Circumstantial Evidence

Editor.— "Have you ever shown this article to an editor before?"

Artist.—"Er — no."

Editor. —"Then how did you get that black eye?"

* *

Chickering. — "Some of the new houses about here are so narrow that a piano cannot be put in."

Bass (excitedly).— "You don't know the rent of the house next door to them, do you?"

* *

"I was just telling my daughter," said Mrs. Noosens, "that it's a shame for her to play the piano on Sunday."

"Huh!" snorted the neighbor, "why did you mention Sunday alone?"—*Philadelphia Ledger.*

An Italian who had been grinding out a wheezy waltz on a hurdy-gurdy went into the corner drug store and asked the clerk if there were any sick folks in the block

"No!" thundered the clerk, "there are not, and if there were I wouldn't tell you."

The Italian backed awkwardly to the door.

"Why did you shout at him like that?" asked a customer. "He didn't mean any harm."

"Didn't he?" said the clerk. "He meant all sorts of harm. That is a pet trick of theirs. They try to find out from the druggists where the sick people live, so they can hustle right down in front of the windows where a man lies ill or dying and grind out tunes till silence is purchased at a liberal figure. Before I got onto their scheme I used to give the desired information, but the neighbors finally got to the point of accusing me of taking a rakeoff, so now I shoo them away."

* *

"And do you like Wagner?" asked the young lady with the piano-flattened fingers.

"I don't know him," replied the country aunt, bluntly.

"Oh, I just adore him! Why I have had several hours with him every day for the last five years."

The country aunt held up her hands. "Gracious! And aren't you married yet?"

* *

Talented

"You say that Mr. Boodles is a musician?"

"Yes," answered the man who makes puns.

"What are his favorite instruments?"

"The loot and the lyre."—*Washington Star.*

* *

Gifted

A Lancashire vicar was asked by the choir to call upon old Betty, who was deaf, but who insisted in joining in the solo of the anthem, and to ask her only to sing in the hymns. He shouted into her ear:—

"Betty, I've been requested to speak to you about your singing." At last she caught the word "singing," and replied:—

"Not to me be the praise, sir; it's a gift." — *San Francisco Argonaut.*

* *

Disagreeable

"Why do you prefer professional singers and elocutionists to amateurs?"

"Because," answered the disagreeable person, "professionals never take you unawares." —*Washington Star.*

* *

After his First Appearance

"Do you think all the critics will roast me in the morning?"

"No. Some of them weren't there." —*Chicago Saturday Evening Herald.*

* *

Opera

In the old days they asked the composer of a comic opera "How did you think of it?" To-day the question is, "Where did you get it?" — *Life.*

NATURAL LAWS IN PIANO TECHNIQUE

MARY WOOD CHASE

PREFACE

It is, at the best, a most difficult and unsatisfactory matter to endeavor to guide the inexperienced student and young teacher, no matter how earnest, by means of written explanations. If the old adage that "actions speak louder than words" is not entirely true, yet illustrated actions, personal supervision and criticism of the results obtained from following the written or spoken word is not only highly desirable but also invaluable. Therefore, the first object in writing the following treatise on Technique was not so much for those who have never thought or worked along these lines, but rather principally to give my own pupils, in a permanent form, a definite guide which should recall clearly to them the beginnings of their study and thus enable them the more surely to take their own first steps in the development of those whom they in turn were to teach. This, it was hoped, to make clear, simple, and logical, in order not only that they might be able to safely and advantageously follow its instructions, but also that it might stimulate in them the power of logical thinking, and thus enable them to continue in independent research rather than slavish imitation. In my own efforts in this direction I am largely indebted to my beloved and highly revered teacher, the late Oscar Raif, through whose keen perception, logical and scientific reasoning, and high and beautiful ideals, the understanding of scientific teaching and the realization of truth in art became indelibly impressed upon my own consciousness. If, through the efforts to keep those under my own instruction, some truth as yet not fully understood is brought at the same time into the minds of other earnest students, the time and thought expended in the preparations of these articles on Technique will not have been wasted.

HAND POSITION

In all art, the natural is superior to the artificial. The mechanism of piano playing has been analyzed, and numberless exercises have been invented for obtaining facility. The results, sometimes beneficial, are often inartistic; but the root of the matter has not been reached. Muscular study has not been thoroughly treated. Intelligent understanding of the muscles which control all movements gives not only conscious control, but also freedom of motion.

EXPERIMENTAL EXERCISES

A. Extend the arm and drop the hand in a relaxed condition from the wrist. (Plate I.) Shut the hand

PLATE I

suddenly with an intense grip. Notice how easily and naturally the hand rises from the wrist. (Plate II.)

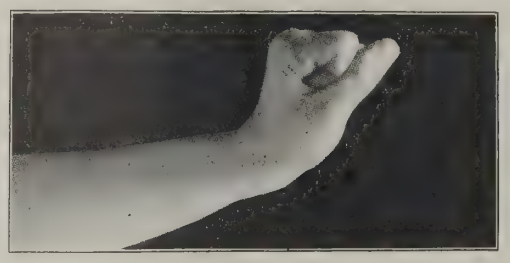


PLATE II

B. Again as at A, but without allowing the hand to rise from its hanging position. (Plate III.)

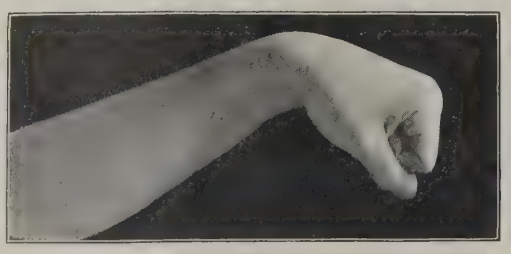

PLATE III

The muscles on the back of the hand will seem strained, and the grip loses much of its intensity.

C. Again as at A, but with the hand on a *level* with the forearm, repeat the grip without allowing the hand to

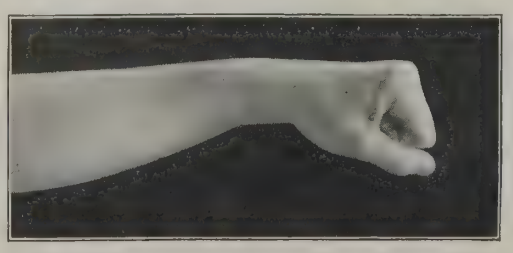

PLATE IV

rise from the wrist. (Plate IV.) This is easier than B, but more difficult than A.

D. Rest the elbow on the table. Throw the hand back from the wrist as at A, but with fingers extended (Plate V.)

PLATE V

Flex each finger separately, endeavoring to obtain the same vigorous muscular action, as when shutting the whole hand. (Plate VI.)

PLATE VI

E. Take position illustrated in Plate I and repeat the flexion of each separate finger. (Plate VII.)

PLATE VII

F. Take position illustrated in Plate IV and flex fingers separately. (Plate VIII.)

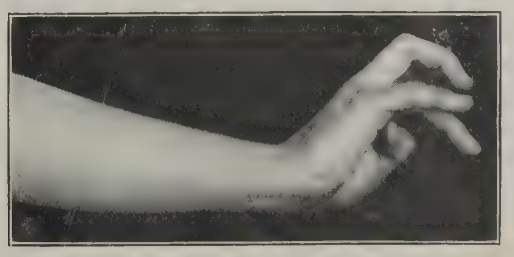

PLATE VIII

G. Lay the arm on the table and repeat as at D.

Properly done, these exercises will prove how greatly superior is the *natural* strength of the hand *raised from the wrist*, or at the keyboard, *with a lowered wrist.**

The individual power of each finger is much increased.

The gain to hands lacking in flexibility is enormous. The weak and unmanageable fourth finger, which in many cases cannot rise above the level of the hand, has, by its elevated position, an equal chance with the others; it needs only the training of its flexor muscles to make it strong and independent. The thumb, also by its close position, gains in speed and lightness.

* Weeping sinews, the bane of so many piano students, are often caused by an unnatural position of the hands. They rarely occur where muscles are strong, but in weak muscles struggling after strength. Such intense strain is often brought to bear upon the back of the hand, by the use of the wrong muscles, that these strained tendons, or weeping sinews result, causing much annoyance and pain. If the hand is held in a normal position, as above described, it will be impossible to cause this condition, as there is no strain in any part. Where, by faulty practice, or by some sudden twist away from the piano, weeping sinews have appeared, the hand may be gradually strengthened and the troublesome lump will finally disappear altogether, if the general system is also at the same time built up and strengthened. In the meantime, the practice, if rightly done, may be continued with impunity.

ANATOMICAL REASONS

The flexor muscles in the palm of the hand, used in finger stroke, pass through the hand and forearm to the elbow, where they are fastened by ligaments to the bones of the forearm. In raising the hand from the wrist these muscles are *extended to their utmost.* They are thus enabled to obtain their *greatest possible contraction.* If less extended, or not at all, as at B and C, the possible contraction is decreased. Like an elastic band, stretched to its utmost, it will contract with its utmost intensity on being released. With less stretching, the power of contraction is lessened or nullified.

POSITION AT THE KEYBOARD

If the hand is raised from the wrist, so as to obtain all possible contraction of the muscles, the forearm, and therefore the wrist, will of necessity be *below* the keyboard. If too high, the finger either *does not reach the keyboard*, no matter how intense the contraction, or else barely reaches it, its force having been expended while still in the air.

POWER

Therefore, to obtain the most powerful tone, the *wrist must be low enough to barely allow room for the thumb to pass between the hand and keys.* This extreme position is necessary only where the greatest contraction is desired, not only to develop a broad tone, but also endurance in the hand muscles.

FINGER POSITION

The finger is swung from the third knuckle, the action being produced by the contraction of the flexors in the palm of the hand. The finger tip should point vertically downward, with the second knuckle the highest point; the upper phalange being about on a line with the hand. In rapid work there is less time to raise the fingers, therefore the *closer* must be the fingers to the keys.

FOREARM SUPPORT AND ARM WEIGHT

Support of the forearm is obtained by sufficient contraction of the biceps to carry the forearm lightly over the keyboard while the forearm muscles remain relaxed. This gives a free, flexible wrist and so-called light arm for soft or rapid playing.

Arm weight is produced by relaxation of all the arm muscles. The weight of the whole arm is thus supported by the finger tip. This should not cause arm motion in playing. While the arm is steadily supported by the fingers being played, the next finger is thrown freely from the knuckle, and receives the weight of the arm as the other rises. This produces a full, rich, sonorous tone, without sharpness or harshness which comes from the stroke pure and simple. It is used in all touches, of whatever dynamic quality, when depth and resonance of tone are desired, even though the tone may be very soft and the passage rapid. For utmost velocity, however, a light arm is necessary.

Until the proper finger action is obtained, the forearm should rest on the table, the arm muscles being relaxed.

HAND CONDITION

Struggling hours of patient, but oftentimes discouraging practice are spent in the effort to acquire surety and fluency, together with breadth of tone without stiffness of muscles. "Relax the wrists!" is the constant cry. Yes, but how? It is much like a Chinese puzzle to many pupils to be told to get weight in the end of the fingers by upper arm efforts or muscular contraction.

By thoroughly understanding the various muscles of the hand and arm, much of the difficulty is overcome. Each member of the body has its opposing sets of muscles,* for flexion, extension, and rotation. The contraction of the flexor or inner muscles moves the member in exactly the opposite direction from the extensor or outer muscles.

* See article on *Muscles* in March MUSICIAN.

STIFFNESS

There can be no stiffness of muscles without simultaneous contraction of opposing muscles.

Like a rope passed through a pulley, if there is equal tension on both ends at once, all effort expenditure is wasted or nullified. If one end is loosened, the other drops of its own weight. If, however, a heavy weight is placed on one end and the other suddenly loosened, the heavy blow resulting therefrom is equal to the weight plus the distance through which it falls.

Raise the finger by contraction of the extensor muscle on the back of the hand. Suddenly contract the flexor in the palm of the hand, at the same instant relaxing the extensor. The contraction of the flexor muscle bears the same relationship to the relaxed extensor as does the weight to the unfastened rope. If the weight is heavy, the blow is great. If the weight is lightened, although the non-resistance of the rope be equal, yet the blow is less. In the finger, the greater the contraction of the flexor, the stronger will be the stroke and fuller the tone produced. If the flexor contraction is lessened, the blow is lighter, and the tone softer or smaller. On the degree of intensity with which the flexor muscles are contracted, together with the absolute and instantaneous relaxation of the extensors, depends the amount of tone. If extensor contraction continues after flexor contraction begins, *stiffness* is the result. On the other hand, if extensor relaxation takes place *before* flexor contraction, the finger is allowed to drop and the tone thereby lessened, inasmuch as the flexor contraction is shortened. Just as would be the lesser blow produced, after partially uncoiling the rope before placing the weight upon it. Take away the weight altogether, release the rope and allow it to drop of its own weight, no blow is produced, the weight being in comparison barely perceptible.

RELAXATION

Herein lies the true principle of the pianissimo; not an effort *not* to make tone; not a holding back or contraction of the extensors; but merely *complete relaxation.* The fingers are first raised by the extensors, then by sudden relaxation are allowed to drop without the slightest contraction of the flexors, the pianissimo tone being produced by the mere weight of the fingers. In the case of a small child's hand, the mere weight of the finger is less than the weight of the key and is therefore insufficient to produce even the smallest tone with pure relaxation, but necessitates more or less contraction. Therefore to obtain the pianissimo, or relaxed condition of the hand, table practice, which until correct hand condition is obtained is helpful to all, is, with children, absolutely necessary for a much longer time. On the other hand, some hands, especially those of boys and men, have fingers so heavy that the relaxed finger produces of its own weight a broad, full tone. In such cases the pianissimo is obtained, not by holding back, but by *lessening the distance* through which the finger is to fall. The greater the distance, the greater will be the accumulated weight.

This finger action is used for all passage work from the most brilliant to the most delicate pianissimo.

The greater the flexor contraction, the louder the tone. A fortissimo condition is purely relative. *It is the greatest possible contraction of the flexors in each individual hand.* A pianissimo condition is *absolute relaxation.* To produce the greatest possible contrast in dynamics of which the *pianoforte* is capable requires the most powerful hand and arm with completely developed muscles under absolute control. To obtain the greatest range of dynamics of which each *pianist* is capable requires the utmost development of the muscles of that individual hand and arm.

VELOCITY

While to obtain the greatest tone possible necessitates raising the hand from the wrist, or, a *low wrist*, on the contrary, the natural position of the hand for *pianissimo* playing is in its natural *relaxed* position, that is, hanging from the wrist. Thus it will be found that all passages requiring broad tone and great endurance may most easily be played with a low wrist, while all requiring great velocity and lightness will be played with the wrist slightly higher than the keyboard.

A SUCCESSION OF MUSICAL SALVOS

Among the amusing experiences of the late canon, Rev. Sir Frederick Gore Ousely, the church composer and organist, was one where he was entertained at a house where he was visiting by a performance of Handel's *Hallelujah Chorus* on three flutes. He was once the guest of an eccentric clergyman who had a mania for musical boxes. On the arrival of Sir Frederick at the vicarage, five or six of these machines, all playing different tunes, were set going as a salvo of welcome.

At the close of a lecture, which he gave in the schoolroom, another musical box turned out the *Hallelujah Chorus.* Yet there was more to follow. On his return to the vicarage the musical box reception was continued. One box was playing in the hall as he entered; another played throughout the dinner in the dining room; and again another after dinner in the drawing-room.

At last came bedtime, when the distracted guest hoped for peace. But lo! another salute was awaiting him at his bedside. On and on it played. At last, when in a delirious nightmare, the listener awoke to hear the thing run down in the midst of an unresolved chord. When the attendant entered in the morning, the box was again wound up and Sir Frederick awoke to hear the resolution of the unresolved chord, and resolved to catch the first train, which would prevent a repetition of such salutations. Fortunately this was before the era of strident talking machines.

THE TUNING OF AN ORCHESTRA TO THE ORGAN PITCH

On the occasion of an oratorio performance, the tuning of the orchestral instruments with the organ is quite a preludial feature. If simply the note "A" is given, with no other chord, a bedlam of sound ensues which is not in keeping with the artistic music which is to follow. This is avoided where the organist gives a strong choral prelude in D minor without wandering into remote keys. This gives two open strings for every stringed instrument, which can be tuned while the prelude is progressing.

The organist will modulate into nearly related keys. G minor will take in the G and D strings, and give the B♭ clarinets their opportunity. Progressing to F major will give the horns and trumpets a chance for their test with the F crooks in, while with a pedal point on C in various suspensions in C and F with the other related keys, the violas and violoncellos will test their C strings, and the entire orchestra be brought into readiness for the overture, without the cacophony which in the past has been so disagreeable a preface to a classic concert. This suggests the composing of several tuning preludes for the organ, to be published for use at oratorios and choral concerts, as well as orchestral church services.

THE MODERN PEDAL CLAVIER

While the American Guild of Organists has adopted the concave and radiating pedal keyboard as a standard, there is considerable opposition to the radiating system among those who prefer the straight pedals. There is a diversity of opinion in regard to the angle of radiation, but not much antagonism to the concave arrangement. The concave system follows the arc of the natural swing of the feet as they are suspended from the knees, as if the centre of the keyboard should be hollowed out. In addition to the concavity, the sharps are also arranged in the form of a horizontal arc, which gives less effort in reaching the extreme lower and higher sharps. It is possible that in due time there will be a compromise which will settle upon the concave system as a standard which all builders will adopt. Organists can be accustomed to any kind of pedal board. The confusion arises in going to pedals which one is not accustomed to, and which renders the pedaling uncertain. Each system has its enthusiastic advocates, and organ builders are always willing to accommodate the organist in the construction of a new organ.

Lessee. — "That sailor's chorus was awful! What was the matter?"

Stage manager. — "The tars couldn't get the right pitch."

The Commonplaces of Vocal Art

A Statement of the Philosophy of Singing from a Modern Viewpoint

Fifth Paper

LOUIS ARTHUR RUSSELL

I

The effort in singing is of a complex nature; the lips, chin, and tongue are in voluntary action, the throat is free from voluntary action or contraction, the chest walls are held freely expanded, the lung tissue expands and contracts within the thorax, the contradictory respiratory muscles are in tension, and the body is held in elastic firmness, carried by the hips, upon free, but firm legs. This broadly defines the outlines of the singing effort. While all of these muscles are attending to special duties, they must do their part in the complex whole, without overtension, producing interfering stiffness. To one who has cultivated independent and combined muscular power, it is not difficult to bring the body into quick response to the will's demands, but to the average student, who knows not himself nor his powers, this complex effort in singing appears a difficult accomplishment.

The attempt to grasp it all at once is folly; to expect automatic control to respond to the call of the will before a clear sense and control of local effort has been established will result in failure, except in a few cases of especially endowed beings.

The process is simple enough to the initiated, for after all, the items are not many, but these specific items of control must be at the will's command, first consciously, then automatically (unconsciously or involuntarily), else the natural tendency toward stiffness and strain will destroy the result. The great efforts of the singer are in the item of breathing, and in the general poise of the body. *The body must take the effort of singing.* It must do the breathing and the controlling of the breath; it must carry all the stress of emotional expression; the throat must be free; the larynx unrestrained by voluntary tension; the mouth must be free to act in quick response to the will. In singing there is no voluntary effort at or above the larynx (except perhaps at the spine, back of the pharynx), which exceeds that of ordinary colloquial speech. Everything of local effort and voluntary muscular tension must be in the body, mainly the respiratory muscles, including the entire walls of the thorax, and this tension must be cultivated through local control to a sub-conscious (involuntary) condition of automatism. The base of all of this effort and consequent power, which is duplex, *i.e.*, propelling force and restraint, is at the waist, reaching at the sides to the hips, upon which the body, supported by the spinal column, rests.

II

The Buoyant Body and Its Poise. — We now understand what is meant by freedom under properly controlled automatic tension, and we know the meaning of buoyancy of body, but these generalities are not sufficient; such questions are constantly asked as, for instance, What to do with the upper chest? What is the correct condition for the abdomen's surface? Do the ribs contract when we sing? Are the muscles of the back interested in breath control and poise of body? To all of these the reply is that the buoyant frame so necessary in singing is in elastic expansion, *everywhere*, from the hips to the collar-bone, yet no part is stiff or strained. The body may be said to rest upon the hips; the abdominal muscles reach up to the diaphragm and the lower ribs, and consequently have much to do with breath control and with poise of body; the viscera within the abdomen are passive, but are disturbed by the movements of the surface walls; hence the abdominal curve will be more or less changed during singing, but it must be distinctly known that there is *no bulging out or flattening* of this surface; the buoyant, expanded body is not properly affected by so violent a contraction of the diaphragm as to press appreciably against the abdominal viscera so as to distend the surface, nor is there ever a requirement in singing for so violent a contraction of the abdominal surface as to flatten it or draw it in. The correct poise of body, however, demands that the *hips be drawn back* to a line directly below the shoulders, and this slightly affects the abdomen by drawing it back with them. This latter fact frequently misleads theorists into a belief that the abdomen should be drawn in by its own contraction. *In the buoyant body* the thoracic cavity is open, the ribs spread, the muscles of the back under the shoulders expand the back walls of the thorax, the chest rises and the diaphragm flattens, opening the thorax downward; all of this occurs in the one complex act, *expansion.*

III

The height of the chest is a vexed question, but is, after all, a simple matter. If the chest be allowed to drop, buoyancy is affected; if held stiffly high, rigidity ensues. *True buoyancy* is never flaccid nor rigid, as has been shown. The exact height of the upheld chest is non-important at the moment of singing, but it is very important that the upper chest walls do not "heave" with each respiratory act, and that it is firmly active, so that the lungs may have free play within the thorax.

IV

The shoulders are thrown back without stiffness; they should always be free enough for all possible movement, though held well back of the front chest line. *The neck* should be firm, free, elastic; carrying the head with dignity, without stiffness. Every part appears to be ready for duty. The breath rushes in through the mouth and throat, into what "*feels*" to the initiated as if it were but a great open space between the ribs down to the "pit of the stomach," where it is gently pressed out by the muscles at the waist, and without action at the upper chest; or if about to sing, we control the breath by the diaphragm and surrounding muscles and allow only such breath to escape as is needed for the tone.

V

The body is now lithe and firm, buoyant and elastic. Every muscle is alert, ready; every part of the body or its members is in its place; free from all stiffness, yet in no way flaccid; relieved from strain, yet active; fully alive and ready for duty. The body is in such a condition as one would assume in warding off a blow; a free, elastic condition of resistance of the force of the blow. The poise of a hound in playful activity shows the muscular condition exactly. Every muscle is in tension, but not a joint or muscle is strained or stiff; the hardy sportsman at his play also shows the condition. Externally this is the condition of joyous health, where the happy spirit is expressed in the firm lines of healthy muscle. *With head erect* on a lithe neck and thrown *slightly* back, with *chest erect*, firm and resisting (the most prominent part of the body in correct poise), *with hips drawn back* to a line with the shoulders, which latter are held back of the line of the collar bone, with abdominal surface drawn back by the poise of the hips, neither indrawn nor distended, but in passive elasticity, and with *arms and legs* absolutely free in agile lightness, the singer is ready for any call of the will; the muscular system is subconsciously differentiated, each muscle or group of muscles free to answer a call to duty without interference from other groups, the spirit speaks through the body. All strain of local effort is off the throat, the breath now takes care of itself, as its controlling muscles also protect the throat, especially the larynx and vocal cords, from all strain. The body is ready to lift a heavy weight, to resist a foe, to run a race, to do any physical or athletic act, or to sing; for this is the condition known as freedom, or, as some say, "natural." It is the result of art; of keen, introspective culture. When we have mastered this condition we can say to ourselves, "Let go," and all else of singing effort will quickly adjust itself if we but train ourselves in correct speech, through keen hearing and a true freedom of the mouth and throat.

The "let go," means let the body go with the thought, it is then not a question of *making* the

physical nature do the thing, it is *allowing* the process to go into automatic action; correct habit has been so positively established upon nature's basic materials and laws, that we may now say that to do rightly is at least *second nature*, as we may say of all confirmed habits of the body or mind, whether they be correct or incorrect.

VI

Coming into Correct Position. — The "coming into position" is now a simple matter. We simply will to sing or to talk as a man or woman should, and *at once*, spontaneously, the whole system responds with a readiness which surprises most novices in the art of correct physical automatism. The intaking of breath seems to do it all, yet we know that the action of the body is an initial effort; the thorax opens through automatic control; at once, simultaneously, the air rushes in, quickly or slowly as we will it to do, and the entire enginery of the muscular system responds, letting go, where not needed and quickly aiding where required, in the one grand result of poise and general singing condition. The militant (may I use the word) position and condition, are due to correct, firm counterpoise, which balances the initial tensions and induces immediate equipoise. Complex as it is, subtle as it is, yet with proper specific training, a very short time, a few days or weeks, will bring about such a controlling power of will as to allow this whole procedure to respond in an instant with automatic precision, to the simple call of the mind, "prepare to sing." As quickly as this is done, so also comes the power of release from all effort, and at another call of the will we can as instantly *devitalize* the body, or any group of its muscles.

This is art, and a delightful one too. Through it we find health, good spirits, the power for usefulness in the world in many ways, and especially *the physical condition which permits good singing.*

VII

The Singer's Sensation (The Fervent Voice).— We hear a great deal about the "Singer's Sensation." It is often treated as a deep mystery; and again, it is called a natural condition within reach of any one's will. The true *"Singer's Sensation"* may as readily be called the sensation of the actor, the public reader or the orator. It is briefly defined, nothing more or less than the "feeling" of the body and its members, just preceding and during the act of emotional expression. Doubtless this sensation is appreciated by the athlete during a contest, although it may be contended that with him the emotional status is on a lower plane than that which controls the singer or the orator.

The writer is of the opinion that all strenuousness of feeling, and emotional intensity which is the sensation of the correctly trained singer may be felt by one who sings without proper physical control, but we will dismiss wrongly induced sensation and speak only of that sensation which is the result of correct automatism. *The "Singer's Sensation"* is one of emotional intensity; it is the spirit speaking through the body, the body assuming the emotional sense generated by the spirit. It is that moment when a thought, a sentiment, is revealed to the consciousness through the mind; the body, the physical nature, feels its thrill and springs into immediate condition for the expression of the thought in words and action. It is that condition of immediate sympathy between brain and muscle, which occurs and "thrills us" as we say, when we suddenly step out into view of a glorious sunset, or a raging tempest. It is of the same physical nature as that sob or sigh of the breath, when suddenly induced by an involuntary emotion.

VIII

With the singer or the orator emotion is more or less assumed, and the sob, or sigh, or laughing is a voluntary dissembling, but physically the cause and result are the same; the thorax opens all around, the diaphragm descends, the breath enters. In the voluntary act the breath is restrained for artistic voice emission, etc.; in the involuntary act the usual process is one of panting; the breath streaming in and out in more or less rapid flow, according to the intensity of the emotion; the sigh of quiet sadness being slow, in rotation; the excited sob or hysterical laugh being often extremely quick; while in children crying, the repeated indrawn sobbing breath frightens the parent, who fears asphyxiation, the inspiratory muscle acting without the counteraction of the expiratory muscle, the balance being for the time lost.

IX

When the true singer begins to express an emotion through the medium of his voice, at once every muscle assumes its proper *condition*, — the lungs inflate, the muscles control the breath, the throat assumes its open freedom, the tongue is free, the chest is in active poise, the muscles of the face smile or take on an expression of seriousness such as fits the sentiment uttered by the voice, the limbs are lithe and free for action if needed (as upon the stage), the body resting freely on the hips, held with elasticity by the spine, the breath filling a deep chest or thorax and seeming to rest upon the waist, the diaphragm and its contributory muscles at the sides and back seeming to hold all the body in free action and elastic control. There is no interfering restraint, everything *helps* the singer in his expression; the thrill is there, the body is as buoyant as that of a child in joyous play, and this condition gives every evidence of a hearty spontaneity which is "catching," immediate *rapport* ensues and the listener is thrilled, as the phrases roll out with clear, full ringing tones as simply, as apparently "artlessly" as if the singer were merely talking of something the thought of which intensified his words, that the listener might know how much they mean. This is what the singer's sensation is; it is heartiness and fervor, it is self-confidence, self-belief, and the result of such a physical condition as will allow him to express a sentiment with complete truthfulness, carrying with it conviction, and seeming to be an expression of the singer's very own being and life. At its best, this is always the result of a culture which gives the singer or orator a complete control over physical processes, to the final result of artistic automatism. This singer's sensation is the true accompaniment of the fervent voice.

WHERE IS THE GREAT ORGAN WHICH WAS IN THE ST. LOUIS EXPOSITION?

"Please tell us, through the columns of THE MUSICIAN, where the large organ which was placed in the St. Louis Exposition is now, and give some particulars in regard to its history."

The great organ which was placed in the St. Louis Exposition was the largest and most complete instrument ever constructed. It had five manuals, one hundred and forty speaking stops, in addition to a hundred or more accessory adjuncts.

It was originally built for the large Convention Hall of Kansas City, Mo., with the privilege of allowing the builders to place it on exhibition at the St. Louis Fair at a rental of $15,000. The contract was closed by Mr. Murray M. Harris, of the Murray M. Harris Organ Company of Los Angeles, Cal., and the interior workmanship of this instrument was of the highest order. Through business changes which were unsatisfactory to Mr. Harris, he withdrew from the concern, and the reorganized company refused to accede to the terms of the original contract with the Kansas City Convention Hall committee, so that at the close of the Exposition in St. Louis there was no place for this wonderful organ. It was taken down and placed in a storage warehouse in St. Louis, where at the present time of writing it remains, awaiting a purchaser. The actual cost of this instrument to the builders was $100,000.

This remarkable instrument had different grouping of stops from the usual way. The original proposition was to devote one manual to Diapason work, one to Flutes, one to Strings, and another to Reeds. Out of the one hundred and forty speaking stops, there was one of 64 ft., four of 32 ft., and twenty-four of 16 ft. There were ninety-nine mechanical appliances. Five manuals controlled seven separate departments. Six of these were in swell boxes, and included some of the pedal stops. One division was entirely stringed-toned, and contained eighteen ranks of pipes, all of pure tin excepting the 16 ft. Contra Bass and 8 ft. Violoncello, which were of wood.

The manuals were fitted with double touch. There were two detached and movable consoles, one containing all claviers and mechanical appliances, the other automatic and controlling devices. There were thirty-six couplers, five tremulants, forty-eight adjustable pistons, and ten pedal movements for expression, and crescendo and diminuendo effects.

The Murray M. Harris Organ Company was merged into the Los Angeles Art Organ Co., which was soon afterwards reorganized and moved to Hoboken, N. J.

Mme. Marcella Sembrich has signed a contract calling for thirty concerts in the United States, beginning in March, 1907.

* *

Walter Rothwell, who conducted Henry W. Savage's *Parsifal* admirably, will conduct *Madame Butterfly*, as produced by Mr. Savage. Mme. Elza Szamosy, of Budapest, will be the leading soprano. Many will be pleased to learn that Adelaide Norwood, who has been studying and singing in Europe for two or three years, will return to America this coming season as a member of Mr. Savage's company. The first performance of *Madame Butterfly* will be at Washington, D. C., October 15. Performances will afterward be given in Baltimore and Boston, and early in November the opera will be produced in New York.

* *

One of the most interesting in the series of artist recitals given at the Chautauqua Institution this summer was that given August 21 by Wm. H. Sherwood, pianist, and Sol Marcosson, violinist. The program included Bach's violin concerto in E major; Studies, Op. 10, No. 11, Op. 25, No. 9, Chopin; *Polish Song* from Op. 74, Chopin-Liszt; Beethoven's E minor Sonata, Op. 90, and violin numbers by Auer and Wilhelmj.

THE ORGAN

Conducted by WM. HORATIO CLARKE

All correspondence regarding all Departments of THE MUSICIAN should be addressed to the Editor as stated on the editorial page. Programs will be welcomed both for this Department and for the CHOIR AND CHORAL MAGAZINE; edited by Thomas Tapper and published by the Oliver Ditson Company. Short articles, of practical nature, choir notes, and anything pertaining to church and to choral music submitted to the Editor will be used if found available.

ORGANISTS IN THEIR RELATION TO THE CLERGY

CHARLES W. PEARCE, MUS. D. CANTAB., F. R. C. O.

I

At first sight it does seem a monstrous anachronism that by English ecclesiastical law the parochial organist is absolutely *unrecognized*. He is neither regarded as an officer of the church, nor as a servant of the parish; and this, forsooth, simply because — in the eyes of the law — the organ itself is looked upon as a "modern introduction into parish churches." How much longer, it may be asked, is legislation to deal only with the dead past, and ignore the living present? This is how the law stands — to quote from an eminent ecclesiastical lawyer: "An organ in a church is the property of the parish, under the control of the minister, in the safe keeping of the church wardens, for the good of the parishioners, and is generally attached to the freehold of the church. The possession of the organ key, therefore, belongs to the minister, and *not* to the church wardens; and the minister, on the appointment of an organist, *usually* entrusts it to his care." But, of course, the minister *need* not so entrust the organ key; he has it well within his power to open the organ before every service, and to lock up the instrument again when the service is over, keeping the key in his pocket at all other times if he chooses to do so. The organist, then, is the *substitute*, or *deputy*, of the parish minister; for it has been proved and decided over and over again in the English Law Courts that the minister has the *sole right* of directing the service, and of determining what portions of it are to be musically rendered, and also settling when the organ shall or shall not be played, even though the organist and choir be paid by the church wardens. Accordingly, the employment of singers or instrumental performers in the church rests entirely with the ministers, who may institute a different method of rendering the service, or prohibit singing or playing altogether, should he think proper to do so — subject, however, to the general controlling power of the "ordinary," or bishop. Nonconformist organists, who officiate in "free" churches, may certainly be disposed to wonder at the fact of their Anglican brethren submitting themselves to such an autocratic system of government; but it is open to doubt if even they have greater freedom, for it is a matter of common experience all the world over that clerical human nature is practically the same under all sorts and conditions of religious organization. Probably any minister or parson who has the fatal gift of making himself disagreeable can conveniently find opportunities for exercising his ill-will, irrespective of the denominational character of his church — Roman or Protestant, Established or Disestablished, Conformist or Nonconformist. Roughly speaking, the organist has to be careful of at least three "rocks ahead," if he is to steer his professional course with safety. These are (1) a mutual want of sympathy, (2) a mutual lack of definite understanding as to the limits of "interference" on the one side and of "duty" on the other, and (3) opposite views as to what may be considered "adequate remuneration" for the said "duty."

II

And first, as to *want of sympathy*. This may be mutual. An organist who fails to grasp the extent of the worry and perplexity of a minister who is working in a large, densely populated parish and has to cope successfully with the poverty, sin, selfishness, and indifference of the people, must not be surprised if the minister does not — at the right moments — fully realize the uphill character of a young musician's professional career, nor altogether appreciate that longing desire to win an honorable reputation, which is, or ought to be, the chief ambition of life. Sometimes, indeed, this want of sympathy is entirely the fault of the clergyman, who does not sufficiently grasp the fact that his organist has a distinctly recognized social position to fill. The late Dr. E. J. Hopkins used to relate an anecdote of a village parson, who, having been "preferred" to the vicarage of an important manufacturing town, observed that his new congregation held their parish organist in considerable esteem, he being a middle-aged musician, who had played the organ at the parish church from his youth up. This circumstance was so strange to the vicar (after his former experience of a carpenter organist, who had always touched his cap when they met in the village) that one day in the vestry-room he couldn't help remarking to one of the church wardens: "I wonder why the people here think so much of Mr. Pedal Pipes; why, they treat him with just as much respect as though he were one of my curates!" "Indeed," said the wrathful organist, when this unfortunate speech was afterwards reported to him, "if I thought I wasn't a great deal better than one of those miserable looking creatures [meaning the curates] I would go and drown myself."

III

Next, there should be a *distinct understanding* between the minister and organist from the very first as to the limits of duties and privileges — how far the organist is to be held responsible for the admission, training, discipline, and dismissal of the choristers; how much time he is to devote weekly to the choir in the preparation of the worship music; what voice he is to have in the selection of music — especially of *new* music — and so on. The organist should also know to what extent he may be allowed the use of the church organ for private practice and lessons, or for public or private recitals; what holidays he may take during the course of the year; and, above all, how much of his duty may be occasionally performed *by deputy*. This last point is the crux of the whole question. For, side by side with the ever growing church duties of an organist, there must be steadily accumulating, year after year, many secular but time-consuming occupations and interests, such as public playing and conducting, practical and theoretical teaching, writing, composing, lecturing, examining (or being examined), etc.; these things *must* be done as long as the present inadequate remuneration for church duty remains in force. The more enlightened clergy and ministers have always recognized this necessity, and have done their utmost to accommodate a valued professional organist by allowing him deputies for the comparatively unimportant items of his church duty, and by generally refraining from making undue demands upon his time. Whenever this has been done, the organist has considered it a point of honor to do his utmost for the church with the limited amount of time at his disposal.

IV

And, lastly, the *financial aspect* of an organist's relation to the clergy may be said to vary in difficulty entirely from the point of view from which it is regarded. There are of course cases in which an organist's stipend is ridiculously small when compared with that of the minister. On the other hand, it is quite a mistake to imagine that invariably clergyman and organist stand to each other in somewhat the same financial relation as Dives did to Lazarus, before the latter was received into Abraham's bosom. They do not. In many respects their financial balance sheets may be presented on very similar lines. The educational equipment for either profession costs a considerable sum of money, and if the minister's income may fluctuate, owing to its dependence more or less upon "pew rents" or upon the voluntary offerings of the congregation, the organist certainly suffers as much or more from the overcrowding of his profession, which annually increases the number of candidates who apply for vacant organ appointments. On the other hand, while the minister is debarred from undertaking secular work outside the duties of his sacred calling, the organist is not so restricted; and it must be confessed that — in England, at any rate — organists' salaries have been substantially augmented during the last half century, a period which marks the inception, development, and influence of the Royal College of Organists. The present writer, for example, receives more than three times the remuneration paid to his predecessor at the beginning of the last century; and his is by no means an isolated case in point.

V

Then, again, it must be remembered that neither parson nor organist ever dreams of embracing his profession for the mere sake of "making money." Were *that* the sole aim and object of life, it would be far better to become a publican, greengrocer, or draper at once: the disappointment would not be so intense. There *is* such a thing as "payment in kind." A musician becomes an organist, because he loves the work and its surroundings, the grandeur of his instrument, the architectural and other beauties of the building in which he is called to work, the dignity of the true ecclesiastical style of church music, and last — but not least — because of the many friends he can make in choir and congregation, and the pleasant intercourse he can enjoy with people of culture and taste, such as are the clergy generally. A young musician becomes an organist, because he is actuated by motives similar to those which produce successful soldiers, sailors, lawyers, doctors, or clergymen: he loves the work, *for the work's sake*, and could not possibly be anything else than an organist, if he

tried. He therefore enters his profession with all his energies braced by hopeful ambition; and however modest and lowly his first appointment may be, he thoroughly does his duty by his church, believing that hard work, honestly and faithfully done, will win for him friends, reputation, and at least a sufficiency of this world's goods. For, although (as Sir George Martin of St. Paul's Cathedral writes) "it may be justly said that the salary which an organist and choirmaster usually receives is quite an inadequate recompense for the work done; yet, we may be sure of this, that those who give unstinted and effective labor will most certainly obtain the best appointments."

VI

Hence, we may perhaps see that after all the non-recognition of English church organists by the ecclesiastical law of the land is not quite as monstrous as it seems at first sight to be. For, manifestly, if an organist's "fixity of tenure" be increased by Episcopal license (as some would suggest), this is extremely likely to act in many ways contrary to that desired by those who wish to see an improvement in his ecclesiastical status. It would probably bind the organist yet more closely to the minister, and it would certainly hinder the former from gaining a better appointment, by increasing the obstacles in "getting off from the *old* love" in time to be "on with the *new*." And, moreover, fixity of tenure would by no means necessarily go hand in hand with increase of income; while it might easily lead to increase of work. That which makes it both necessary and natural that organists and clergy should work together in perfect harmony is the fact that their interests are to a large extent identical. The happiest relation can only be established by the maintenance of mutual sympathy and understanding, and a hearty desire on both sides to labor for the work's sake.

MELODIC SOLO

This is the name of a coupling stop invented by Thomas Casson of London. On touching a tablet or key stop which is marked "melody," the Solo Organ is silenced, all but the highest note of a chord. If another manual be coupled with the solo clavier in this condition, and that clavier be played in harmony, the solo stops will give the melody only, and the manual coupled to it will provide the accompaniment. The arrangement is suitable for other manuals, or for coupling actions only. It provides an enlarged capacity for novel and beautiful effects, and in many cases gives the organist the advantages of a third hand, yet without involving any trouble or the acquisition of special skill.

ADJUSTABLE COMBINATION PEDALS

There is in use a method of Adjustable Combination Pedals in which the action is not encumbered by any exterior accessories. The organist has only the ordinary form of draw-stops and combination pedals to deal with.

In order to disconnect a pedal from the last combination to which it was adjusted, the toe is placed under the pedal and a gentle upward pressure causes it to rise an inch. The foot is then withdrawn, and the pedal falls to its normal position, when it is ready for resetting.

Any combination of stops which it is desired the pedal should next be set to is now arranged, the pedal then is pressed down and allowed to rise to its normal position, which movement adjusts it to that combination, and it will continue in future to bring on that combination until released by the upward movement.

There may be any number of these adjustable pedals, their action being quite independent of each other. The draw stops are free to be moved by hand without in any way interfering with the combination actions. As the combination pedals move the stop knobs, the organist can see what he is doing, and any possible combination can be placed on any pedal. The action may be either pneumatic or mechanical.

"BRINOVUS" AND "BRINGRADUS" ACCESSORIES

These are terms used by Brindley and Foster, organ builders, of Sheffield, Eng., to distinguish their methods from others. Brinovus Key Registers provide a means of registration by ordinary key depression. Each stop has a negative and positive lever. A stop is brought on by pressing a positive lever, and taken off by pressing the negative lever. They occupy the same space as the manual naturals, and are placed either in blocks on either side, or as an additional row of keys above the manuals.

The Brinovus Combination Pistons bring on certain fixed combinations of stops or any selected combination. When a piston knob is touched, any previous combination is negatived, but this previous combination may be restored by touching a negative piston. There is also a compound piston which restores the hand registration, but which does not negative the combination brought on by the piston previously touched. By this means, to a piano or mezzo-forte combination, any register can be added at will and immediately thrown out of action by the retouching of the piston regulating such *p* and *mf* combination.

The Bringradus Pedal brings on the stops in musical sequence in rapid single succession or in groups. It is generally connected with a balanced pedal which enables the organist to obtain the finest grade of tone, as there are indicators which, owing to their design and position, render it impossible for an organist to have any doubt as to the disposition of the stops at any period of his performance.

QUERIES

Too Light Organ Touch

V. R. B. — "I am playing an organ where the touch is so light that I cannot play clean. If I touch an adjacent key by the least rubbing, the notes sound, and in playing in octaves the notes are always blurred. I can only play clean on the Great manual by coupling the Swell keys. Is there any way in which the action can be made heavier?"

Comments. — The organ touch should always be firm and positive so that there will be no danger of blurring. You could have a new set of stiffer manual springs put in by an expert. You could send one of the old ones to an organ builder who would use it as a pattern in making a new set. In old organs the steel springs become rusty and weaken. Modern organs have tempered brass springs, coppered so as not to corrode.

Boy Choristers

M. M. — "Is there any book published on the training of the voices of boys for the service of the church?"

Comments. — *The Training of Boys' Voices*, by Claude Ellsworth Johnson, will give you such information as you desire. It is published by the Oliver Ditson Company, price 75 cents, postpaid.

Electric Motor for Blowing

F. J. J. — "Will you kindly inform me if it is impossible or impracticable to use an electric motor for an organ with only two feeders?"

Comments. — An electric motor can be attached to an organ having two feeders. In the use of the two feeders the blowing lever would have to be attached to a revolving shaft having a pitman or crank motion. As the speed of the motor is very rapid, it would have to be reduced by a series of pulleys with belts. Then there would have to be a rheostat to regulate the speed of the motor by changing the strength of the electric current, as more or less wind would be used. This whole arrangement would be clumsy and expensive.

The best way to apply an electric motor to your organ would be to have a steel fan pressure blower, like the Sturtevant Blower (which is in much use for the purpose), attached directly to the motor shaft with its rapid speed. All that would be needed would be a conductor or wind-trunk, either of metal or wood, communicating directly between the blower and the bellows reservoir, not touching the feeders in any way. A simple gate connected with the top of the reservoir would regulate the wind supply, and the bellows would always be full of wind. The speed of the motor is kept constant, so that there is no need of any rheostat or intervening mechanism. There are now made special fan electric blowers which may be purchased ready for attachment to any organ.

What Improvement can be Made?

A. F. W. — "I am very much interested in all matters which pertain to the pipe organ and gain much information from this department of The Musician. The organ I play has two manuals and twenty-four stops, and as we are about to have it repaired, can you suggest any improvements in the following specification by substituting other stops?

"Great. — 8 Open Diapason; 8 Gamba; 8 Dulciana; 8 Melodia; 4 Octave; 2⅔ Twelfth; 2 Fifteenth.

"Swell. — 16 Bourdon Bass and Treble; 8 Salicional; 8 Æoline; 8 Stopped Diapason; 4 Harmonic Flute; 2 Flautino; 3 Rank Mixture; 8 Oboe and Bassoon.

"Pedal. — 16 Open Diapason; 16 Bourdon. With the usual Couplers and Composition Pedals."

Comments. — The only substitution which is suggested is to put in a 4 ft. Flute d'Amour in place of the Great Twelfth, and an 8 ft. Quintadena in place of the Swell mixture.

OPERA IN NEW YORK

Oscar Hammerstein's New York season of opera, as formally announced by him, will begin November 19 and continue for twenty weeks. Subscription performances will be on Monday, Wednesday, and Friday nights and Saturday matinées. "Popular" performances Saturday evenings. The list of singers include the following: —

Sopranos — Mesdames Arta (Opera, Rotterdam), Mazurini (Opera, Naples), Melba, Tetrazzini (Opera, City of Mexico), and Trentini (Opera, Palermo).

Mezzo-sopranos and contraltos — Mesdames Bressler-Gianoli (Royal Opera, Brussels), De Cisneros (La Scala, Milan), Farnetti (Opera, Naples), Gilbert-Lejeune (Covent Garden, London), and Zaccaria (Opera, Marseilles).

Tenors — MM. Altchevsky (Covent Garden, London), Bassi (Opera, Buenos Ayres), Bonci (stellar engagements only in European capitals), and Dalmores (Royal Opera, Brussels).

Baritones — MM. Ancona (formerly Metropolitan Opera House), Mendolfi (La Scala, Milan), Renaud (Opera Nationale, Paris), and Sammarco (Royal Opera, Madrid).

Basso buffos — MM. Giandi (Teatro Rivoli, Venice) and Gilibert (Covent Garden, London).

Bassos — MM. Brag (Royal Opera, Dresden), Muguinoz (La Scala, Milan), and Edouard de Reszke.

Mr. Hammerstein announces a long list of French and Italian works exclusively, which, like the trade price list, is "subject to change without notice." There are several in the list, either new or unfamiliar from infrequent performances, that may or may not be given as the case may be. The works as announced are as follows, given alphabetically by composers: —

Auber, *Fra Diavolo;* Bellini, *Norma, I Puritani, La Sonnambula;* Bizet, *Carmen;* Donizetti, *Don Pasquale, L'Elisir d'Amore, La Favorita, Lucia di Lammermoor;* Flotow, *Marta;* Gounod, *Faust, Roméo et Juliette;* Halévy, *La Juive;* Leoncavallo, *I Pagliacci;* Mascagni, *Cavalleria Rusticana;* Meyerbeer, *Dinorah, Les Huguenots, Le Prophete;* Mozart, *Don Giovanni, Le Nozze de Figaro;* Puccini, *La Bohème, Tosca;* Rossini, *Il Barbiere di Siviglia;* Thomas, *Mignon;* Verdi, *Aïda, Ernani, Il Trovatore, La Traviata, Rigoletto, Un Ballo in Maschera;* Wagner, *Lohengrin* (in French); Berlioz, *La Damnation de Faust;* Catalani, *Loreley;* Gluck, *Armide.*

THE METECHOTIC SYSTEM OF STOP CONTROL

This is a system of Stop Control introduced in England in 1890. It is a method by which a number of registers are ingeniously arranged to be transferable to different manuals, thereby extending the number of effects and combinations. In connection with this system the inventors have introduced interchangeable pistons, which permit any arranged combination to be registered for future use at the will of the performer.

HIGH ORGAN WIND PRESSURES

The average wind pressure in American and English church organs is three and one half inches as measured by the nemometer. Mr. Robert Hope-Jones, the celebrated English organ builder and inventor, now located in Boston, calls the attention of the Organ Department to an article on high wind pressures, written by him for *The Church Economist*, from which the following extracts are taken: —

"The question of the best wind pressures to be employed for organs is one of such great import to church committees that a word from the chief user of high pressures may not be out of place. Great economy results, both in space and funds, when increased pressures are used; at the same time the quality and musical value of the tone are vastly improved. It is this latter point which many of us deem to be the chief advantage of following nature's treatment.

"Consider that divine instrument — the human voice. No trained singer uses less than thirty-five or forty inches of wind pressure. Employ the lightest possible breath to sing a note, and strain the mouth open to its widest extent, so as to give freedom and power to the tone. Then, as a contrast, almost close the mouth and sing the same note with a pressure of, say, forty inches of wind. To a listener near by, the same power of tone will be produced in each case, but the quality of the first will be ugly, and that of the second beautiful. Moreover, the latter tone will be clearly heard at a distance where the former is inaudible.

"Now, this is an exact illustration of what takes place in the organ. For generations we have neglected nature's teaching. Light pressure has been used, and the necessary power has been sought by widening the mouths of the flue pipes, and by increasing the size of the reeds. Coarseness of tone results. (It is true that if extra wind be forced through an organ of this kind, the coarseness will be increased, but we must not condemn high wind pressure because some builders fail to use it rightly.)

"There was recently shown in St. Patrick's Cathedral, New York, a model containing ten pipes, voiced on twenty-five inches of wind. The mellow beauty of tone attained was so remarkable that these ten pipes sounding together blended into a chord that filled the great building more satisfactorily than the whole of the four-manual organ standing alongside in the gallery.

"The ethereal Orchestral Oboe at Worcester Cathedral, England, stands upon twenty inches of wind. The Diapasons there are on ten-inch pressure, and are widely known for their soft and mellow, though all-pervading tone. The writer has voiced some of his English work on fifty inches wind pressure, and finds that the higher he goes the more musical is the tone produced.

"A skylark rises and, pouring out his continuous melody, soars upward and upward, till finally lost to sight. Yet there comes down to earth every note of the beautiful song. That tiny little bird, using over five hundred inches of wind pressure, is spreading his music upward, downward, and on all sides, through an immense sphere, and who shall say that any of the light pressure organs yield tones approaching in sweetness the song of the lark?"

New York Organ Builders of the Last Century

B. S. U. — "As an old organ subscriber of The Musician, could you inform me when James Hall started to build pipe organs in New York; also, was there not a Thomas Hall building organs in New York? When did he establish business, and was he related to James Hall? When was the firm of Hall, Lebagh & Co. established in that city, and did Labagh ever build organs under his own name?"

Comments. — The James Hall of whom you inquire was the Hall of the music firm of Firth & Hall, and he imported some English organ builders and attempted to build organs in the early part of the nineteenth century. One of the first instruments he built was intended for Trinity Church in New York City, but for some reason it was not placed there, but in St. John's Church, Varick Street, and was used there for many years. He only built a few organs, as these men soon entered business for themselves.

The Thomas Hall whom you mention was no relative to James Hall. He was an organ builder who learned his trade in Philadelphia, and went to New York in 1820 and built a few organs. He then went with his brother-in-law, Henry Erben, as a voicer. In a few years afterward he again started in business with Labagh, under the firm name of Hall & Labagh. This partnership continued until his death, about the year 1868. The firm was then continued as Labagh & Kemp, Mr. Kemp having been the voicer for some years before Mr. Hall's death. Both Labagh & Kemp died within a short time of each other, and the business was discontinued in 1892.

An Exceptional Instance

A. J. B. — "I notice in a recent article in The Musician that you do not approve of having an organ built with blank spaces for the further insertion of stops. Perhaps it will be of interest to know that the organ which I play was built in 1894, and blanks were left for Pedal, 16 ft. Violone, 16 ft. Trombone, and 8 ft. Flute, and also the Choir 16 ft. Contra Gamba. These blanks have all been filled during the past year by the efforts of the Young Ladies' Mission Circle. We never should have had these four stops if the blanks had not been left."

Comments. — Your experience in having blank slides filled with intended stops is an exception to the general rule, and is probably owing to your personal influence and persistent efforts. But there are many organs where there have been changes of organists who have had no interest in attempting to raise the funds to meet the requisite expenses, which are greater always than they would have been at the time of construction.

What is a Pedalier?

A. L. B. — "In the Organ Department of The Musician, in one of the numbers on the same page as an article on *Exhaustion*, I saw mentioned a Pedalier. Will you kindly tell me what it is, how used, and about what the price would be?"

Comments. — A Pedalier is a complete set of organ pedals, either with its own independent bass strings, to be used in connection with a pianoforte for pedal practice, or consists of an attachment of a set of organ pedals to any pianoforte applied by makers who make a special department of this kind of work, the price for such an addition ranging from $50 to $75. A number of years ago there were two firms in Boston who included in their catalogs a special Pedalier for organ practice. The attachment affords excellent opportunities in the home for pedal preparation, especially in the winter season, when the churches are too cold for organ work during the week.

The best instrument which has been offered for this purpose is a Two-manual Organist's Piano, with radiating and concave pedals. Its advantages are: The position of the player is the same as at an organ. The relative distances between the manuals, the seat, and the player being those adopted by the Royal College of Organists for their new organ. There being two manuals, organists can practice music requiring two keyboards just as they desire to play it at an organ. The utility of the instrument as a pianoforte is not impaired, the manuals having seven octaves, while the silencing stop renders the disturbing element of daily practicing almost inaudible outside the room. The cost is said to be but little more than an ordinary piano. The proprietors of this useful Pedalier are The Vincent Music Co., 60 Berners Street, London, W., England.

Suggestions from an Organ Builder

E. H.

In an article entitled *An Organ Builder's Complaint*, published in the May number of The Musician, the writer has called attention to a point which has been noted by all who are engaged in the building of organs, and that is, the lack of courtesy displayed by average committees. There is another matter to which this writer does not allude, and for which the organ builders themselves are largely to blame, and that is, the extremely low price at which organs are built.

It is a fact well known by all builders of fine organs that the compensation in the "coin of the realm" is far less than it should be, considering the amount of hard work and study; for every organ is, or should be, a work in itself, and different from every other, not only because of its size and form but because the acoustic conditions of the room in which it is to stand invariably differ.

The artistic side of organ building very rarely receives consideration by the prospective purchaser, but it is looked upon entirely as a manufacture, and the builder who will quote the largest number of pipes for a given price, is very apt to receive the preference, regardless of the artistic quality of his work.

As was said above, the builders themselves are largely responsible for the low prices. If the builders would confer together, agreeing upon a compensation which would be sufficient to allow them to produce the best quality, and leave a margin for their own subsistence meanwhile, it would be decidedly beneficial to both parties, — to the society purchasing, because they would get a finer instrument than it is possible to produce at the price usually paid; and the builder, enabling him to gain his livelihood by his work. This is a matter which vitally interests all builders of good organs, and I think that it would be beneficial to the art if others would give an expression of their opinion on this subject.

Leathering an Open Diapason

W. H. P.

In a recent number of The Musician you requested me to relate my own experience in leathering an Open Diapason, and I send you a sample of the leather used, which you will see is a soft brown leather finished on one side. With this material the pipes from tenor C up to the highest octave were leathered, the pipes below being front speaking pipes.

It is certainly a wonderful improvement, and I could not ask a finer tone. It is rich, resonant, full, and bold, yet with a velvety smoothness that is very satisfying to the ear. The difference in tone between the inside and front pipes is considerable, and while not offensive in ordinary playing, is quickly noted when running over the keys one by one.

The suggestion was first made to me by a man who was in this town putting up a new organ. He leathered one pipe, and it brought out the tone so well that he and I completed the work. Of course I would not advise an organist to attempt this improvement unless he is a good tuner, and had been accustomed to regulating the tone of organ pipes.

The organ is located in our beautiful Masonic Temple and is designed especially for the work it has to do. It is used as reverently as it could be in any church, and is doing its part to uplift men, and I try to reach the hearts of my listeners and make them hear the music as I feel it.

A son of the pianist and composer Johann Nepomuk Hummel has just died at the age of eighty-five. He was Charles Hummel, who lived in Weimar. In that city his father died in 1837, and his mother, *née* Elizabeth Roeckel, in 1883. The latter, who early in life had been an opera singer, was born in 1739, and lived to the age of ninety.

* *

Max Reger, whose *Sinfonietta* was one of the most widely discussed novelties of the past season in Germany, has completed another work of symphonic dimensions, a serenade in four movements.

NAPOLEON'S BOOKS

The library which Napoleon carried out with him to Egypt in 1798 is probably a true reflection of his mental makeup. It included thirteen volumes of arts and sciences; forty volumes of geography and travel, among which the *Voyages of Captain Cook* is conspicuous; one hundred and twenty-five historical works, ancient, medieval, and modern; forty volumes of poetry, the chief among which were Homer, Virgil, Tasso, Ariosto, Ossian, and Voltaire's *Henriade*, twenty volumes of the masterpieces of the French stage; the Old and New Testaments; the Koran; the Vedas; some works on mythology; and, for fiction, a few novels of Voltaire, Rousseau's *Nouvelle Héloïse*, Goethe's *Werther*, and forty English novels in translation. Professor Sloane says that Napoleon's sister Caroline added a copy of Bacon's *Essays*, Madame de Staël's *De l'Influence des Passions*, which had just been published, and Mercier's *Visions Philosophiques*.

In 1808 Napoleon formed the idea of having a traveling library, in order to make his hours of intellectual recreation independent of the exigencies of a campaign or the delays of a courier. Obviously such a collection of books would have to be selected with great care, that the library might be a portable one, and consequently the minute instructions as to its care are, as it were, a picture of his mind.

The proposed library was to form about a thousand volumes. The books were to be of small duodecimo size, printed in good type, and without margins in order to save space. They were to be bound in morocco, with flexible covers and limp backs. The boxes for their conveyance were to be covered with leather and lined with green velvet, and were to average sixty volumes apiece, in two rows, like the shelves in a library. A catalog was to accompany them, so arranged that the Emperor could readily find any desired volume. The distribution of subjects was as follows: Forty volumes on religion; forty of epic poetry; forty of the drama; sixty volumes of other poetry; sixty volumes of history, and one hundred novels. "In order to complete the quota," ran the instructions, "the balance shall be made up of historical memoirs." Among the religious works were the Old and New Testaments and the Koran, works on church history, including some upon the Lutheran and the Calvinist movements. The epics included Homer, Lucian, Tasso, the *Henriade*, and so forth; the drama, selected tragedies of Corneille, Racine, and Voltaire. Comedy Napoleon could not endure; "not a word of Molière," he says. The history included some good chronological works, standard histories of France, like that of Mably, Machiavelli's *Discourses on Livy*, some of Voltaire's historical writings, Montesquieu's *Esprit des Lois*, and a French translation of Gibbon. Among the novels were the *Nouvelle Héloïse*, Le Sage's *Contes*, and French versions of Richardson's and Fielding's works. Indeed, of English fiction Napoleon was very fond. — *Atlantic Monthly.*

CAMILLE SAINT-SAËNS IN AMERICA

It is whispered that the forthcoming visit of Camille Saint-Saëns to this country next winter will not, after all, be the first he has ever paid to New York. The distinguished French composer, according to testimony of very positive witnesses, slipped into the city incognito several years ago on a steamer from the South and remained concealed in a French hotel until the departure of one of the liners for Paris. Saint-Saëns for some years past has had the disappearing habit. He suddenly drops out of his accustomed Paris sphere and does not come back for several months. Sometimes he turns up in the Canary Islands, sometimes in Morocco's most unfrequented parts. The newspapers make vague allusions to these excursions, which at one time alarmed his friends. Saint-Saëns is older now, and has curbed, to some extent, his disposition to wander in strange quarters of the world. While returning from one of these trips, however, he landed in New York, preserved a strict incognito, and rarely went out of the hotel on University Place, where he was recognized and addressed by name by some French musicians who happened to be there at the time and explained to the landlord what a distinguished stranger he was sheltering.

THE PLACE OF MUSIC AMONG THE ARTS

E. L., in *Musical America*, says:—

"The sense of hearing may be considered the most subjective of the senses, for with no other sense is there connected a creative action. We see, because such is the nature of the eye, and without the act of seeing, there would be no sight. But if we hear, do we necessarily utter sounds? The sense of hearing is the only one which has a complementary faculty — that of speech, and that faculty may be said to be the subjective side of the objective sensation of hearing. Now, as speech is the formulative outcome of the sensation of hearing as acted upon by the creative volition, so music is merely a continuance of that speech, penetrating realms which speech has not the power to enter. This explains the superiority of music over the sister arts from the standpoint of physical sensation.

"Let us now compare it with the decorative arts, painting and sculpture, and the word-arts, poetry and the drama. The difference is one more of degree than kind, for all art is the outcome of sensation.

"The decorative arts appeal to but one sense — that of sight. Of necessity they are limited. A picture may suggest other and beautiful thoughts, but the imagination cannot stray far. It is brought back by the very definiteness and permanency of the originating impulse. Poetry goes farther, for a word is not so definite as a picture or statue; that is to say, there is a broader fringe of subtlety about the outline of each word-picture — what we call the connation of the word. The difference is merely one of subtlety and outlook for the imagination.

"Because poetry and the drama have their origin in speech, they come nearest to music in potency; indeed, the closest approach of any art form to music, in subtlety, is the drama; but, although the play appeals to sight as well as hearing, and should for that reason be more powerful, it does not affect us as does music, for the simple reason, again, that it is limited; that it does not present so wide a horizon to the eye of the imagination.

"If music consisted of melody, merely, its scope would be as limited as that of language, for it would be held down to the plane of the definitely outlined; that is, each melody would have definite limitations, such as those, let us say, of each sentence, but once add harmony to your melody and see what a vista of unexplored fairy lands lies open; for harmony may be said to be the setting — the comment and explanation of the melody. It is to melody what the connation is to the word.

"It has been argued that a really great drama will always remain great, and will appeal to us because it portrays human nature, and that always remains the same, and that the "fashion" changes so in music that the favorite of one generation may be the laughing-stock of the next. True, but is that comparing equal things? Is it not taking the best of one art and comparing it with the worst of another? Do we laugh at Bach? Is Beethoven considered a trifler? Do our hearts remain untouched by the sweetness and sincerity of Purcell's *Drink to Me Only with Thine Eyes?*

"Music is only in its infancy. While the lines of the other arts have fallen in their rightful places, we have not yet discovered what position music is to hold; we do not yet know the extent of the influence it may have on our lives, and this because music has not yet discovered itself."

KARL LAUTENSCHLAEGER

Karl Lautenschlaeger, who built the new stage of the Metropolitan Opera House, New York City, and with Emil Fuchs produced *Parsifal* at the same theatre, died on June 30 in Munich. It was he who carried into effect Richard Wagner's ideas about the moving forest in the first act of *Parsifal* and the destruction of Klingsor's castle in the second act when the opera was first performed at Bayreuth. Mr. Conried brought him here from the Court Theatre in Munich when he decided on the production of Wagner's work. When Lautenschlaeger was employed as technical director of the Court Theatre at Munich he designed all the effects for the performances of opera which were given for the sole pleasure of Ludwig of Bavaria. It was at this production of *Parsifal* that Lautenschlaeger invented the apparatus which was later used at Bayreuth. He had his first lessons in stage mechanism from Karl Brandt, a noted German stage technician, who gained renown for the performances at the Court Theatre of Darmstadt. He succeeded his principal and was later called to Riga and Stuttgart before he settled at the Court Theatre in Munich in 1880. He was there for twelve years and since that time had traveled through different countries in Europe, building stages in the principal theatres. His greatest achievement was the revolving stage of the Munich Theatre, and he also built the new stage of the Prinz Regent Theatre in Munich. He recently designed a new stage for the Wagner operas at Covent Garden and designed the present stage at the Imperial Opera House in Vienna. If he had lived, he would probably have returned to this country to install the stage at the New Theatre. He was sixty-three at the time of his death.

MR. PADEREWSKI AND AMERICA

Whether or not New York hears Mr. Paderewski next winter depends now entirely on when he finishes the symphony on which he has been at work for the last year. He had expected to have it completed by the first of October, in time to come here and make a tour with the Boston Symphony Orchestra as the soloist of the concerts, playing his own symphony. He has been longer at the work than he expected, and it is now practically certain that he will not be able to come here before the first of January.

The Colonne Orchestra of Paris is to visit Berlin this month to hold a Beethoven-Berlioz Festival. The Lamoureux Orchestra, under Chevillard, has planned a visit to Germany this fall, to begin in Berlin early in October, which will extend to Dresden, Leipsic, Frankfort a. M., Mannheim, Hanover, and Hamburg.

WILLIAM H. NYE

William H. Nye, who for many years was a valued employee of the Oliver Ditson Company, died at his residence in Somerville, Mass., June 15th last. He had been suffering from acute melancholia for some years and for over a year previous to his death had practically relinquished active business.

Mr. Nye was a native of New Bedford, Mass., and he received his education in the public schools of that historic city. After his graduation from the high school he came to Boston, and entered the employ of White-Smith & Perry, music publishers, now the White-Smith Publishing Co.

After a few years he gave up his position for one more advantageous, with Louis Goullaud, another Boston publisher, and was a salesman with this house until it was absorbed by the Oliver Ditson Company. Mr. Nye continued in the retail department of the latter house until his death, and during his long association became well known to musicians and teachers everywhere, for he was most genial in his disposition and was most companion able in every way. He was a musician of more than average ability, being also a *connoisseur* in dramatic matters, possessing a large acquaintance with members of the theatrical profession.

NOTES

A new auditorium, which will cost $300,000, is to be built in Indianapolis, Ind., before June, 1907, when the National Sängerfest will be held here. It was, in fact, principally for the convenience of the German singing societies that the city council hurried the appropriation through at its meeting last week.

The new structure, which will be erected on the present site of Tomlinson Hall, will be of imposing dimensions and style; architects of recognized ability and judgment will be instructed to draw up plans. Special attention will be given to making the hall in every respect well adapted to musical purposes.

The building, the expense of which will be assumed entirely by the city, is to be divided into two large rooms, which may be used separately or thrown together, as may be required. It will be christened Tomlinson Auditorium, in honor of the man who donated the present concert hall

The Germans of the city are planning many forms o, entertainment for the societies that will assemble here next June, and it is confidently expected that the festival will be one of the most successful in the history of this country. Some of the strongest German choruses in the United States have their home here in the fine building bearing the name of "Das Deutsche Haus."

* *

An interesting bas-relief of Mozart has just been discovered. It is a face modelled in the last century by Leonard Posch, a contemporary of Mozart, and who lived in Vienna after the latter's death and established himself later in Berlin, where he died in 1831. An artist living in Berlin found among Posch's works, which were entirely forgotten since his death, the face of Mozart and also the mold, which had not been destroyed. The new portrait will be reproduced by gravure and published.

* *

Concerts given under the auspices of the Washington College of Music next season will include recitals by Edgar Priest, Felix Garziglia, Harold Eisenberg, Clara Drew, Samuel M. Fabian, Sydney Llody Wrightson, Ysaye, Rosenthal, and Nordica.

* *

Sarasate is said to have refused an offer of $40,000, to give a series of ten concerts in New York City.

Much interest is being manifested in every part of the country in the Edward MacDowell fund instituted by the Mendelssohn Glee Club of New York City, and the committee having the matter in charge is much encouraged. Sub-committees are being organized in the different cities to carry on the local work, and efforts are being made to reach every person interested in Mr. MacDowell or his music.

As the sums sent in have not been as large as desirable, another appeal has been issued. The committee suggests that music teachers send to the secretary the names and addresses of such of their pupils as are likely to take an interest in this fund. All communications should be addressed to Allan Robinson, Secretary, 60 Wall St., New York City.

* *

Emil Christian Horneman, a Danish composer born in 1841 in Copenhagen, died there a short time ago. His father, Jean-Ole-Emil Horneman (1809–1870), made a great reputation for himself as author of popular melodies and especially the one entitled *The Valiant Soldier*, which had an enormous success. Christian Horneman followed in his father's footsteps, but he wrote besides popular songs an *Ouverture Heroïque*, and other overtures and an opera *Aladin*, of which he wrote the libretto as well. This work was produced in Copenhagen in 1888.

* *

Arrangements have been concluded for the San Carlo Opera Company of Naples to give again an autumn season of grand opera in Italian at Covent Garden. Mesdames Melba and Giachetti, it is reported, have been engaged, and the company will be strengthened by the engagement of well-known artists from the leading opera houses in Italy.

The *répertoire* will include the operas *Aïda*, *Andrea Chenier*, *Bohème*, *Ballo in Maschera*, *Carmen*, *Don Giovanni*, *Fedora*, *Faust*, *Gioconda*, *Lorelei*, *Mefistofeles*, *Madame Butterfly*, *Manon Lescaut*, *Rigoletto*, *Tosca*, and *Traviata*.

The season will be for eight weeks, from October 4, and the conductor will be Signor Mugnone.

At its conclusion a season of German opera will begin which will continue almost until the time for the spring season to open.

* *

The author of many ballets, Franz Gaul, is dead in Vienna at the age of sixty-five. He acquired a great reputation in 1885 with a ballet *Valses Viennoises*, the music for which was written, or rather arranged, by Joseph Bayer. Gaul wrote several ballets, most of them in collaboration.

CLEVELAND WOMEN OFFER SCHOLARSHIP

The Women's Philharmonic Society has recently announced a scholarship to be given by the society, that includes instrumental and vocal sight reading, harmony, violin, elocution, and drama. The following conditions must be observed by the applicants before the scholarship is awarded: —

1. Applicants shall appear before the committee having the work in charge, and demonstrate their ability.

2. Those applicants whose talents warrant a scholar ship must furnish satisfactory evidence of their financial need.

3. The applicants who have been selected by the committee must draw by lot for the scholarships.

4. The applicants must perform for the professor offering the scholarships and agree to conform to the conditions specified by him. He is to have the privilege of accepting or refusing to receive the applicants.

5. Candidates who have been accepted must become members of the Women's Philharmonic Society.

The applicants for the scholarships will be examined during October. Mrs. Harry Rosenbaum is chairman of the committee in charge.

* *

Elizabeth Muller-Osten, interpreter of Japanese music has been granted the Japanese Red Cross medal by the Japanese Red Cross Society in Tokio in recognition of her artistic activity in the interests of that society.

BARGAINS IN USED WEBER PIANOS

The operatic artists of the great Conried Metropolitan Opera Company returned a number of Weber Upright Pianos to Lyon & Healy; also the recent moving period in Chicago resulted in a number of rented Weber Uprights being returned; in addition to this all of the Weber Uprights taken in exchange for several months past have recently been overhauled in Lyon & Healy's factory and sent to the Warerooms for sale.

The result of these three sources of supply is that Lyon & Healy are now holding a great Weber sale.

Every one knows that the Weber is one of the finest pianos in the world, by many it is preferred to any other. So this Weber sale affords to music lovers a chance to secure a magnificent piano at about the price usually paid for an ordinary instrument. Any one who is interested in a fine piano should not hesitate to write to Lyon & Healy about these Webers. A great many different styles are included in this offering.

Easy monthly payments will be accepted from responsible persons who do not care to pay all cash.

Write to-day to Lyon & Healy for their price list of Weber and other pianos slightly used, that figure in their special thirty-day offer, 28 Adams Street, Chicago.

PIANO TEACHERS AND MUSICIANS

Of what real service is your special knowledge of music if the vehicle of expression is faulty or defective?

To give adequate voice to your own compositions or the works of others the tone and touch of your piano must be perfect.

Perfect tone and touch cannot be produced unless the piano action is scientifically constructed, with every adjustment exact.

Every Piano containing a
STRAUCH BROS. PIANO ACTION
Yields Perfect Tone and Perfect Touch

It is preferred for and used only in high-grade pianos, being scientifically constructed by the "Strauch System" from the best materials and by the most competent workmen. Insist on having a "Strauch Action" and see that you get it. (The name is stamped on the rail.)

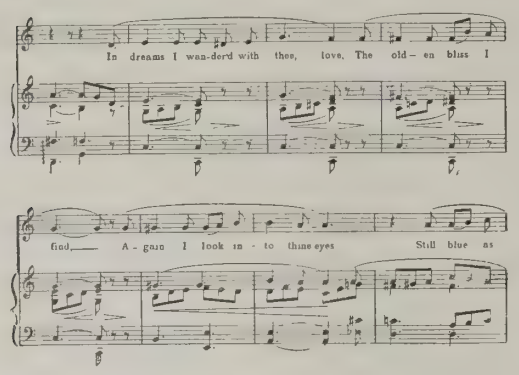
STRAUCH BROS.
30 Tenth Avenue, New York

NEW MUSIC

J. C. Bartlett.

In Dreams I wandered with Thee. High voice in C (d to *g*). Also for medium voice in B♭, and for low voice in A♭..... .60

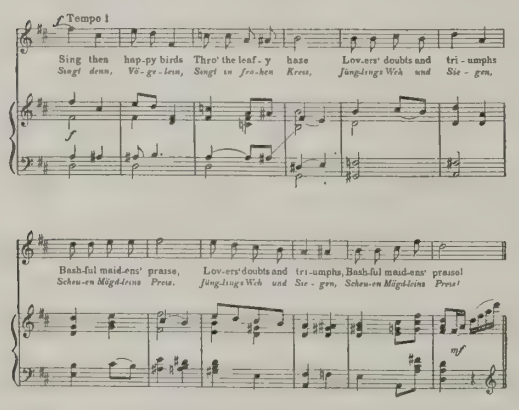
The warmth and tender sentiment of the verses find expression in music of flowing melodic line, and easy but effective modulation. The composer has been successful in writing music which, while pleasing to the average listener, is of a quality to interest the more critical. The touch of melancholy in the song is not displeasing, and may be made the basis of an interpretation emotionally moving. A change to 4-4 meter for the final page is in accord with its broader style and heightened expression. The accompaniment is not difficult, but a careful performance will produce excellent effects. Words by E. B. Currier.



Robert Coverley.

Little Corn-Flower (*Die Kaiserblume*). High voice in D (E to F♯ or *a*)..... .60

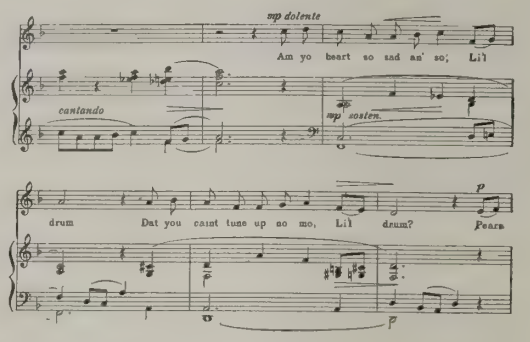
This dainty lyric has a lightness of touch and a grace of style which lend themselves admirably to the display of the average high voice. It is in strophic form, and there are three stanzas, of which the middle one is slightly varied. The piano part is easy and allows the singer the complete freedom necessary to tell the pretty story of the words with fluency, proper emphasis and effective phrasing. In addition to the English text there is a German translation. Words by Mary Frances Goessmann.



M. B. Willis.

Li'l Drum. Medium voice in F (c to D or F)..... .60

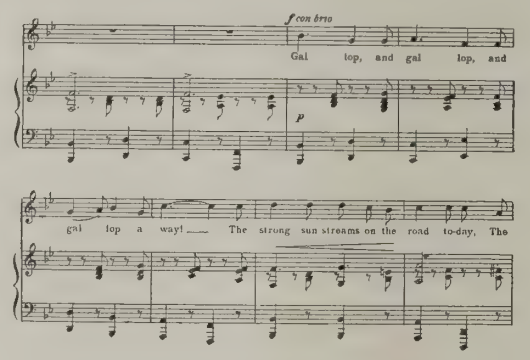
The simple verses, couched in unobtrusive dialect, have a natural and touching pathos whose appeal is irresistible — the "li'l drum" silent, because the little hands which were wont to beat it have been stilled. The musical setting is delightful and shows genuine feeling and power of interpretation. A short episode in the minor relieves the strophic form and gives expression to a heightened emotion. The singer will find the cue to a rendering of the song in the spirit of the words which must be clearly and expressively enunciated. They are by Herbert Flansburgh.



N. Clifford Page.

A Girl in Every Port. Medium voice in C (c to F) .60

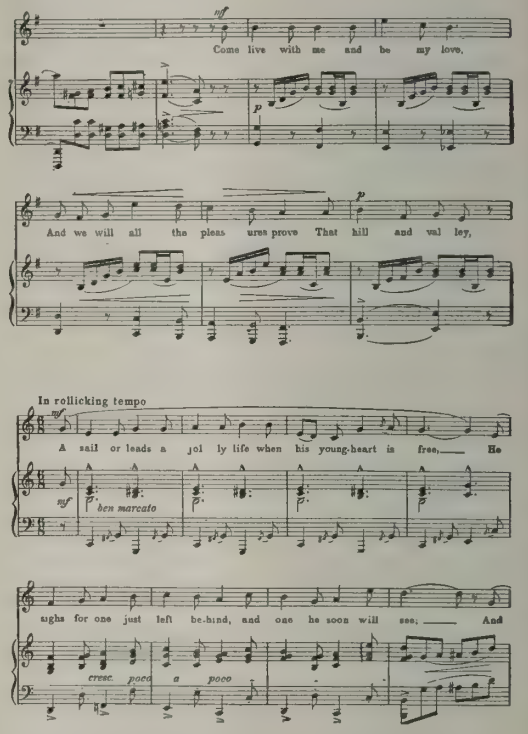
The fickle nature of the jolly sailor-lad is proverbial: here is a cheery hearty song that tells of the victims to his winning ways. There is rollicking rhythm, breezy atmosphere and spirited melody in the three verses and refrain. The song is well-made and singable — very effective for a baritone or high bass, and the words by J. Stevenson are pleasing clean and bright. Altogether a song of unusual merit in the class of good-natured lyrics.



Rubin Goldmark.

The Passionate Shepherd to His Love. High voice in G (d to a). Also for low voice in E♭..... .75

In this fine and musicianly setting of Christopher Marlowe's verses the impetuous spirit of a young lover finds expression in the swift movement and flow of the song, which, though modified by the changes in the thought of the words, never loses its underlying momentum. The song is well-planned and constructed, and, notwithstanding its generous dimensions, is not lengthy, while the effect of brilliance in both vocal and pianistic phrase wins a great effect. The splendid sweep of the phrase at "Then live with me and be my love," repeated at the close, a whole tone higher, forms the natural climax of the song.



Harry Rowe Shelley.

The Ride. Low voice in B♭ (c to E♭). Also for high voice in D..... 1.00

In songs, one no longer confounds length with merit, but as a partial consequence it is difficult to find among modern songs those which have both wide sweep and interest. In this excellent lyric by Mr. Shelley, so full of dash, rhythm and good cheer, the concert singer has a number of some length, yet coherent and with interest well-sustained, and quite worthy of forming the backbone of a song program. It has the advantage of a convenient range and singable phrases, with many a fine virile point of climax. Words by Anna Alice Chapin.

SELECTION BY THE DEAF MUTES' QUARTET
From *Puck*. Copyright, 1906. By Permission

THE MUSIC IN THIS NUMBER

Butterflies. Op. 51. Frederick A. Williams.

A study for piano to develop a fluent, firm technique and general independence between the hands. The first period consists of a melody in rapid right-hand passages, with a simple harmonic accompaniment in broken chords. After sixteen measures the initial theme appears an octave higher, varied, and with considerable elaboration. Another period will be noticed where the left hand has rapid fluent passages, sometimes melodic, but generally suggesting merely the fundamental harmony, the right hand playing attendant chords in varying intervals. The second period in the dominant of the first key (E♭) shows a right-hand melody more or less staccato, the sixteenth groups alternating between the hands. The piece ends with a return to the first theme, which appears in slight variation. The time is rapid, vivacious, and to prove effective the pianist should play it with a firm, elastic touch, accurate rhythm, together with grace and ease of manner. A short biography of the composer will be found on another page of this issue.

Enchantment. Robert E. Austin.

A slow waltz, preceded by an introduction of twenty-four measures. The first period has the melody, slow and sustained in the right hand, which also furnishes a portion of the attending accompaniment. A firm, singing legato is essential. The second page introduces an episode C major, faster in time, more animated, and in fine contrast to what precedes. Observe the accented chords in the right hand. These are important, as the character of this section is dependent upon their proper performance. The *trio* is in E♭, a key remotely related to the original key of G. The sustained right-hand melody suggests somewhat that of the first section, but here it often appears in octaves as well as alternating between the F and G clefs. A ten-measure modulation through G minor to its tonic major brings a return to the first subject, which is but slightly varied, with the closing measures much animated and brilliant. The rhythm should always be well marked and the time generally strict, excepting as indicated.

Pomponette. W. Aletter.

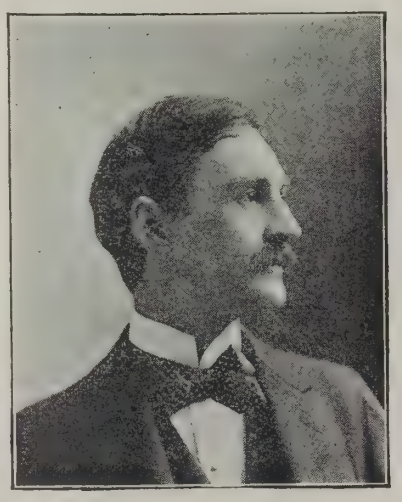
A short *Intermezzo* for piano, in moderate time, with motion. There is a light rapid staccato melody in the right hand, with the left hand employing a simple harmonic bass. This is followed by a new period in G major, and its chief characteristic is its syncopation, which is most effective, and should be carefully studied. In the *Trio*, F major, also appears the "misplaced accent" feature, which is, however, to be played quietly, with much expression. The whole piece is an interesting example, the employment of syncopation, without any suggestion of the so-called "ragtime" effects. The observant student will also find many other characteristics of artistic value.

Dreaming. Gerrit Smith.

The composer has also furnished his own text, which is brief, but expressive and strongly romantic. Effective for contralto or baritone, if sung with a broad, full tone, and in true, expressive manner. The accompaniment generally reenforces the voice portion, and written for the most part in full chords, serves as a firm background for the singer, if the pianist is careful to produce a sustained, singing legato.

Li'l Drum. M. B. Willis.

The text, by Herbert Flansburg, is a kind of a plantation soliloquy, and expressive of a phase of thought common in the Southern negro. The singer should have some familiarity will the negro dialect in order to give this song its proper interpretation. The accompaniment is ingeniously conceived and adds to the musical picture greatly. The wide chords in arpeggio should be practiced considerably that they may be played softly, and with ease. Both pedals are suggested for these chords, as well as for other measures, as for example in brace four, second page. In fact, the pianist can study this accompaniment considerably in many ways with beneficial results.



DR. GERRIT SMITH

Could Roses Speak. Charles Wakefield Cadman.

This is the first of two songs, the composer's Op. 26. The text, by George R. Rose, is expressive in its romantic spirit, and the musical setting, while not difficult, is conceived in a manner that heightens greatly the mood of the poem. The singer will not find many intricacies in the way of intervals or key changes. The subject is brief and repeated, and with careful study in expression can make this song a most successful number in the repertory. The pianist will find many full chord passages and some wide arpeggios in the left hand, which require practice, that they may be played with precision, quietly, yet with a full, sustained tone. The pedal must be used in such measures as the last in third brace, first page, where the fundamental bass is expressed by a grace note.

In an interesting article on Weber by Gehrmann, printed in No. 18 of *Die Musik*, there is an invaluable extract from a letter written by that pathfinder to Kapellmeister Praeger of Leipsic: "There is no slow movement in which there are not passages calling for a faster pace. There is no presto which does not, on the contrary, demand a retarding in various places, to prevent the impression from being spoiled by precipitation." When Richard Wagner wrote his essay *On Conducting*, on which this same doctrine forms the central idea, there was a great outcry among the pedants; but at present the whole musical world (excepting the amusing academic critics) has accepted the doctrine of Weber and Wagner as the cardinal point in musical expression.

CULTIVATION OF A LOVE FOR CHAMBER MUSIC

W. FRANCIS GATES

As a test for the depth of professed love for music any one holds or claims, there may be proposed an analysis of his enjoyment in that particular division of the tone-art known as chamber music. One may be attracted to the opera by its gorgeousness of investure, by its plot and its acting, as well as by its music. He may be drawn to a symphony concert by the wealth of instrumentation there displayed, but the appreciation for that stricter division called chamber music will prove a right for one to classify himself as an ardent disciple of the art.

Chamber music is perhaps the least popular form. It is music in its most serious phase, — not tone at play, but tone at work. I have spoken of the opera; this calls to the aid of music all the sister arts; and if one accepts Wagner's theories, there is found a combination of the best that all art has to say, — the best poetry, the best painting, the best dancing, as well as the best music.

In the field of orchestral music the composer is a tone painter, with no limitations as to the variety of color. He may lay them on with a lavish hand and with the most sensitive ear for combinations of tint and gradations. The whole world of instrumentation is his to use, and frequently this very gorgeousness of coloration, glitter, and sparkle scores to hide barrenness of melodic thought, or logical creative power.

But, in chamber music, such extraneous features are absent. Here music comes nearer its basic elements, and enjoyment in the various subdivisions of this style must be based on an understanding of musical form — on music *per se*. This term is used to designate music participated in by few instruments, and consequently is better adapted to a small room than to a large, — to a chamber, rather than to a large hall.

The form most often used is that of a sonata, which is *caviar* to the general mind for the reason that it is a logical form developed on certain well-defined rules of procedure, — a form embodying the result of deep thought as well as immediate inspiration, and consequently one that requires too much knowledge of the subject as well as mental application for its appreciation to be widespread.

This term, "chamber music," came into use at the beginning of the seventeenth century, and at that time was applied to a vocal solo, with string accompaniment; while the name is still appropriate to that arrangement, the modern use of the term is to specify music written for from three to ten instruments, though performance of music for from six to ten is a rarity.

After the vocal form mentioned came sets of dances and suites, and from all these was evolved the sonata for several instruments, which form, or some modification of it, is still the accepted vehicle for the thoughts of composers who write for this moderate number of instruments.

It is not my purpose to further elaborate on the ramifications of the sonata form or its application in chamber music, but simply to call the attention of the student of music to the fact that a knowledge of and an enjoyment in music of this style is a test of the right of a person to the desired title, "musician." The two styles of concert that attract the smallest audiences are the organ recital and the quartet concert, for the reason stated above of the very intellectuality of the musical offerings therein found. While there is perhaps a valid excuse for the general public not paying its money to hear music it does not understand, there is no such excuse for the musician, professional amateur, or student. Next to the symphony there is no field in which the great composers have created their best efforts as that of chamber music, and to neglect it is as serious an omission as for the aspiring dramatist to omit the study of Shakespeare.

The student should embrace every opportunity to hear trio and quartet concerts, and, if possible, should study the works to be played before he hears the performance. There may be but a limited number that have this opportunity, but these, through the music libraries in the large cities, have a rare opportunity. Others may obtain much benefit from a study of the piano arrangements of the works in sonata form found in the many standard editions now within the reach of all.

FRESH AIR

Do you ever stop to think whether or not you are neglecting to take advantage of that universal commodity, fresh air, whether you are giving the respiratory organs their full allowance of oxygen, or whether you are lazily allowing the lungs to lapse into a state where they inhale just enough air to satisfy the demands of the body?

Strange though it may seem, by a roundabout system of logic, the woman who breathes deep and well is the woman whose personality is most likely to charm. The quantity of air we take into our lungs may affect our personalities more than we suspect.

The deep-breathing woman, full-chested and endowed with spirit, has a sparkle in her eye and a glow in her cheek that bespeak health. She is a bright, vivacious, healthy, one might almost say a wholesome, creature—good to look at, good to talk to.

Through deep breathing we gain health because some physical effort is necessary to promote exertion of the muscles that control the lungs. With health of body comes health of mind—a clear mental grasp of things, ready repartee, facility for entertaining and making one's self generally agreeable. Therefore cultivate the deep breathing habit.

Take long breaths wherever you go. On the street when walking, at home by an open window, in the car, anywhere, everywhere. Let the oxygen penetrate deeply, and fill out all the little dormant cells. Help the lungs to forget their languid custom of taking and inhaling half breaths, and to do this arouse yourself into a more energetic way of living.

The woman of sedentary habits can choose no better time for inaugurating the new régime of breathing than her vacation term. Long walks through woods and fields or a tramp through hilly country will awaken the vitalities and do more toward bringing about a condition of healthful rest than many days of idle porch lounging.

Throw the chest out, straighten the shoulders and walk with a free, swinging gait. Let every breath be a deep one, and as you are breathing have the thought "Fresh air" in mind.

SOME REMARKABLE RANGES IN VOICES

One day early in 1770, a card was sent in to a famous singer, then fulfilling an engagement at the Opera House at Parma. The card was that of a capellmeister from a town beyond the Alps; his pencilled memorandum indicated that he was accompanied by his son. In due course both were admitted, for the soprano had heard of them, the former as a musician of prominence and the latter as an infant prodigy. The boy, a lad of fourteen, was small for his years, insignificant in appearance and had nothing to distinguish him from other boys except his eyes, which in moments of excitement flashed and sparkled, often giving the only indication that aught unusual was passing in his mind.

Willing to oblige the child, the soprano consented to give an exhibition of her power and sang a few notes in his presence to show what she could do. Father and son thanked the good-humored singer for her politeness and withdrew to make way for other callers. That night the boy wrote a letter to his sister, in which he jotted down the few notes sung by the obliging soprano. The letter was preserved, and to the chance meeting and the letter it called forth the singer owed her fame, for to oblige a boy she sang the highest notes ever recorded as uttered by the human voice,—B, an octave above what is commonly known as high B.

The boy was Mozart, the singer the great Agujari.

The record for the second highest note is held by Jenny Lind. One of her concert tours brought her to Cincinnati, where unfortunately not a hall or a church was large enough to accommodate the audience, so a pork-packing house was cleared, a portion fenced off as a dressing room, and the seats sold at auction. The first was bought by a tailor. To do honor to this lover of music, the citizens of the city had an arch erected over the seat on which he squatted, legs crossed under him.

When the singers arrived at the hall they were horrified by the odor. The gentlemen of the party wished to turn back, but Jenny Lind said: "No, we have promised to give a concert and we shall do it." Then suppressing her disgust with the aid of humor and a handkerchief saturated with perfume, she went on the stage. The concert closed with *O, gioga che si senti* from *Lucia di Lammermoor*. Just before the conclusion of the aria the songstress burst into one of those cadenzas for which she was so justly famous. A member of her party jotted down the notes, and showed her his notation upon their return to the hotel. As far as she could remember it was correct; its highest note, G, being second only to those sung by Agujari.

The sopranos of the present can also bear favorable comparison with any of those mentioned, save the first two. The voice of Melba easily reaches E♭ on the third line above the stave; Nordica attains C♯, Calvé sings B♭, Gadski sings to D. Eames and Sembrich each easily attain E above, only two notes below the highest note of Lind and four below that of Agujari. Emma Abbot, when at her best, sang to D; Yaw exceeds even this, while Patti, with a voice of no great power, but of extraordinary flexibility and pathos, attained F, one note below the highest of Lind, and it is probable that when at their best each of these could sing one or two notes above her recorded scale.

NOTES

Among the papers of the musician Bizet was found an unpublished opera, bearing the title *Don Procopio*. The theme is comic, and is based on the confusion which results from a similarity of names. The libretto is by an unknown Italian author, and to this the author of *Carmen* has written a masterpiece of comic music graceful, melodious, and full of genial inspiration. The work will be given for the first time next March at Monte Carlo, and the Italian rights have been secured by Ricordi, who will present it soon in one of the large Italian theatres.

* *

The graduating exercises of the Sickner Conservatory of Music, took place in the First Presbyterian Church, Wichita, Kansas, June 12–13. Two very attractive programs were presented; the first being presented by Ada Julia Sickner, assisted by Dorothy Emmert, reader and Laura A. Sickner, pianist. The second was a miscellaneous program by the graduating class.

Although well known in Spain and Spanish South America, the name of Tomas Breton was unknown in Italy until the last Sonzogno competition, when its bearer was summoned from Spain by Sonzogno to act on the jury. It was then learned that he was the director of the Madrid Conservatory, and had written several operas; and now his opera *Dolores* has met with much success in Milan, where it was produced in January. This work had its first hearing in 1895 at Madrid, where its success was enormous.

Tomas Breton was born at Salamanca in the fifties, of very humble parents. As a boy he studied the violin, and at the age of eight played in an orchestra in his native city. Continuing his studies at Milan, he carried off the prize for composition, and won the scholarship at the Academy of Rome. He has written a number of popular songs, and several operas, the prelude to his first opera, *Guzman and Bueno*, being still heard in concerts.

* *

The annual Commencement concert of the Sherwood Music School of Chicago, was given June 14. There were ten numbers to the program which included excerpts from piano concertos by Beethoven, Hiller, Mendelssohn, Saint-Saëns, Liszt, Rubinstein, MacDowell and others.

* *

A ladies' orchestra has been formed in Salt Lake City by Professor Pedersen. The members of the new organization are Olive Shepherd, Mary Rogawsky, Nellie Brown, Lena Levy, Bessie Barnett, Georgie Young, Maud Weimer, Margaret W. Wright, Rosa Brown, and Eva Dunyon.

* *

The Royal Philharmonic Academy at Bologne is holding a competition for a string quartet (two violins, viola, and violoncello), and offers 1000 lire; and states that all composers, Italians as well as foreigners, can compete. The competition closes on 31st of October, 1906.

* *

Leon Van Vliet, the well-known Boston 'cellist, will have charge of the music at Wentworth Hall, Jackson. N. H., again this season. This is the thirteenth season in which Mr. Van Vliet has furnished music for this fashionable hostelry.

* *

Andrea Gailhard, son of the director of the Paris Opera, will shortly have his opera *Amaryllis*, the libretto by Adenis, performed in Turin. Gailhard won the grand prize offered for fugue by the Paris Conservatoire not long ago.

* *

The Norfolk Interstate Branch of the Western Conservatory of Music held its tenth annual Commencement concert in Norfolk, Neb., July 12. A lengthy but varied and interesting program was presented.

* *

The firm of Sonzogno, in Milan, recently offered two prizes of 25,000 and 10,000 lire respectively for two opera librettos. The contest closed January 21, with 565 works submitted.

* *

Gorlitz, Germany, is to have a new music hall to cost $200,000, which will seat two thousand auditors, one hundred and twenty musicians, and eight hundred singers

* *

Max Schillings' music drama, *Moloch*, is to be the first novelty to be presented at the Vienna Royal Opera House. It will be followed by Erlanger's *Polish Jew*.

* *

Dr. Florence Ziegfield has engaged Ernesto Consolo, a European pianist, to succeed Waldemar Lütschg at the Chicago College of Music.

What Kreisler and Kubelik say:

Dear Mr. Reindahl:
The two violins made by you, I have tried and have found them very beautiful. I believe they are the best among new violins made.
The varnish, in particular, is superb. The tone and speaking quality are of a correspondingly high order.
FRITZ KREISLER.

Endorsed by Jan Kubelik

This is the reproduction of a special Violin ordered by the famous Emile Sauret.

In casting about for your music supplies for the coming season, bear in mind the publications of

CLAYTON F. SUMMY CO.
CHICAGO

OUR catalog, if not one of the largest is certainly one of the most usable, because of the practical and educational value of its contents. The piano portion contains a goodly number of teaching pieces of an original or characteristic nature; this is particularly true of the children's pieces in the elementary and easy grades of difficulty. The excellence of our catalog in this respect is widely recognized. Our song catalog is also full of attractive and desirable numbers. We also have a good choir music catalog, most of which is available for the average choir. We publish some notably successful and important text-books, and instruction books for the education of the child in music.

If your dealer does not supply you with our publications, write to us direct. We will send them on sale to all responsible parties.

We are general dealers in music of the better class, giving special attention to teachers' trade. Perhaps our terms and system of concessions would be of interest to you for your general orders. Write for catalog.

The Music Students Library

A Series of Educational Text-books Suited to the Requirements of the Average Student

Intervals, Chords, and Ear Training
By JEAN PARKMAN BROWN

The author of this book, feeling that a course in Ear Training cannot be begun too early, has compiled a simple and yet thorough set of exercises and examples in rudimentary harmony for use in conjunction with the study of the piano.

PRICE, post-paid, $1.00.

Ear Training for Teacher and Pupil
By C. A. ALCHIN

This work does not aim to take the place of a text-book on harmony, but is designed rather, through training the sense of hearing, to teach the pupil to think in tones, so that he may sing, name, write, and play what he hears; to harmonize melodies at sight, to improvise accompaniments, and to recognize and appreciate not only the melodic effects in music, but the harmonic and rhythmic as well. PRICE, post-paid, $1.00.

English Diction
By LOUIS ARTHUR RUSSELL

This book is intended to establish English in its rightful place as a "Song Language." The author calls attention to the fact that the varieties of vowel and diphthong pronunciation, on account of which foreigners consider English unmusical, are its chief strength and beauty. Musical illustrations are given to show the simplest way of fitting text to tones so as to make the meaning of both clear to the listener. The work is eminently logical and the rules are given in terse, everyday phraseology. PRICE, post-paid, $1.00.

How to Study Kreutzer
By BENJAMIN CUTTER

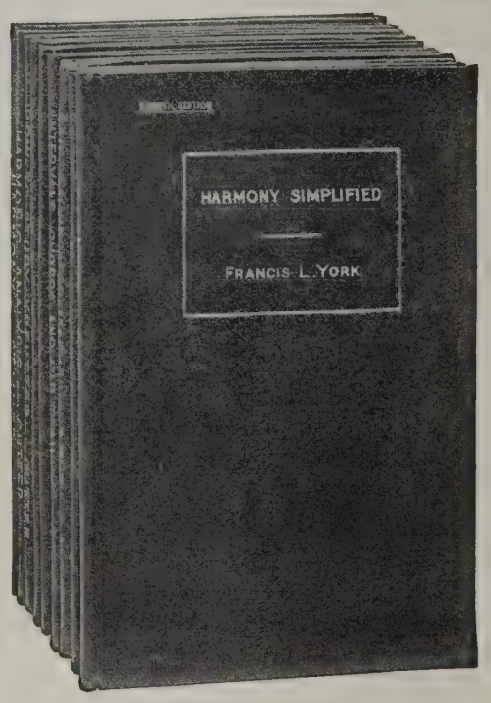
A handbook for the daily use of violin teachers and students. It contains explanations of the left-hand difficulties and their solution, with directions for the systematic acquirement of the various bowings, both firm and bounding. By putting in book form what every teacher discusses and illustrates in the lesson room, the writer explains to all violin players those principles which have made the studies of Kreutzer so justly famous.

PRICE, post-paid, 75 cents.

Harmony Simplified
By FRANCIS L. YORK, M. A.

A practical text-book presenting to the student in a concise manner the fundamental principles of harmony. Non-essentials are omitted. The work is modern in spirit and its many illustrations are from the best sources. In style the book is simple, but direct, explicit, and commendably complete.

PRICE, post-paid, $1.00.



Harmony
By SIR JOHN STAINER

A new edition of this standard work, with the author's latest revisions and an appendix. This is the only edition published in cloth binding. PRICE, post-paid, 75 cents

Lessons in Music Form
By Dr. PERCY GOETSCHIUS

A manual of analysis of all the structural factors and designs employed in musical composition, explaining thoroughly each design or form, from the smallest to the largest. Numerous illustrations are given in the text, which are supplemented by frequent references to classic literature. The book is intended for the general music lover or student, and aims to give not only increased enjoyment and understanding, but the power to interpret with intelligence and authority.

PRICE, post-paid, $1.25.

Burrowes' Piano Primer
Edited and Revised by FREDERIC FIELD BULLARD

A new edition of this well-known work. The editor has preserved the original text and contents, as far as possible, but has eliminated antiquated ideas, corrected faulty terminology, and replaced old-fashioned terms by modern ones. The pronunciation of each foreign word is given in the text as it occurs. Several exercises have been transferred from the appendix to the earlier pages, and the scales and arpeggios completed, substituting foreign fingering for the so-called "American" system. It is adapted for either private or class instruction and provides a guide to practice.

PRICE, post-paid, 50 cents.

Harmonic Analysis
By BENJAMIN CUTTER

A book designed primarily for those who have studied harmony and would apply it in their playing, in their teaching, and in their everyday musical life. A careful study of this book teaches one to analyze the harmonic structure of both classic and modern music, and to hear with greater understanding, to read at sight with more facility, and to play or sing with more intelligence. PRICE, post-paid, $1.25.

The Training of Boys' Voices
By CLAUDE ELLSWORTH JOHNSON

A thorough and practical guide to the correct "placing" and training of the boy's voice; a publication of timely significance in view of the increasing tendency on the part of the Protestant Episcopal Church of America to follow the precedent long since set by the Church of England in the employment of the boy choir. A noteworthy feature contained in the last chapter of the book is an extensive list of sacred and secular music especially written for, or adapted to, the uses of boy choirs and schools. PRICE, post-paid, 75 cents.

These books are bound in neat, serviceable cloth. **Copies of any will be sent for examination.**

Secular Songs

HIGH VOICE — PRICE

HUSS, HENRY HOLDEN
My World. [C] [E to *ab*] 40
A short song of decided merit and originality, harmonically interesting.

SCHUBERT, FRANZ
Litany for the Feast of All Souls. (Litanei auf das Fest Aller Seelen.) [G♭] [E♭ to *g*♭] 30
Superior new edition of this beautiful classic with a meritorious English version.

SMITH, GERRIT
Dreaming. [D♭] [E to F] 40
A delicate mood-picture, melodious and appealing.

WARREN, RICHARD HENRY
When the Birds go North Again. [E min.] [d# to E] ... 40
A lovely thought expressed in verse, to which interpretive and attractive music is united. Short and not difficult.

MEDIUM VOICE

LOWITZ, W. W.
His Favorite Flower. [C] [d to E or *g*] 50
A bright little song in light vein, very taking and melodious, with agreeable words.

RICH, MARIE
My Rose of Yester-e'en. [D] [b to E or F#] 40
In simple folk song character, both words and music having a pleasing pathos.

SCHUBERT, FRANZ
Litany for the Feast of All Souls. (Litanei auf das Fest Aller Seelen.) [E♭] [c to E♭] 30
(See above.)

TEES, JOSEPH M.
Pouts and Smiles. [E♭] [d to F] 60
A dainty song of childhood morals, to be sung to children or taught to them.

LOW VOICE

ASHFORD, ROBERT
Dreamy Days. [F] [c to D] Spring song in winter. 50
New key of a song which possesses simple lyric beauty of folk song character.

BARTLETT, J. C.
Come to Me, Sweetheart. [C] [b to E] 50
An impassioned song, which flows swiftly and brilliantly.

Secular Songs—Continued

PRICE

COWLES, EUGENE
Forgotten. [E♭] [b♭ to C] 50
New key, suited to low voices, of this justly popular sentimental song.

HUSS, HENRY HOLDEN
My World. [A♭] [c to E] 40
(See above.)

SCHUBERT, FRANZ
Litany for the Feast of All Souls. (Litanei auf das Fest Aller Seelen) [D♭] [b♭ to D♭] 30
(See above.)

SMITH, GERRIT
Dreaming. [B] [c# to D#] 40
(See above.)

SMITH, H. WAKEFIELD
Lucky Four-leaf Clover. [E♭] [b♭ to D or F] 60
A bright "good-luck" story, in melodious setting, already successful for high voice.
Roses. [E] [b to C#] 60
A song of pleasing sentiment, vocally effective.

WARREN, RICHARD HENRY
When the Birds go North Again. [C min.] [b to C] .. 40
(See above.)

WEBBER, CHARLES F.
Constancy. [D♭] [b♭ to D♭] 50
The simplicity, directness, and winning melody of this little song are potent factors in its success.

Piano Solos

OEHMLER, LEO
Dreaming Lily (Traümende Lilie.) Op. 56. [F] [II-III] 50
Melodious cantabile in the left hand, a brighter theme for the right, alternate through this attractive piece.

PIECZONKA, A.
Tarantella. [C] [III-IV] 60
Lively and piquant dance-form containing useful finger work.

SUDDS, W. F.
Just for the Fun of It. (Rondo Caprice) Op. 308. [E♭] [III] 50
A delightful recreative piece, playable, vigorous and freshly melodious.

WILM, NICOLAI VON
Teasing (Neckereien). Op. 12, No. 5. [C] [III] ... 30
Musicianly and well made. Especially attractive for its grade.

Mandolin Orchestra Music

ENGELMANN, H.
Forget-Me-Nots. (Idyl.) Arr. by H. F. Odell.
Popular piano-piece, excellently arranged.

OCTAVO MUSIC

PRICE

Anthems for Mixed Voices

DUNCAN, EDMONDSTOUNE
No. 11,526. **Come unto Me** 12
Musicianly short anthem, churchly and devotional in style.

Sacred Part-song for Men's Voices

GAUL, HARVEY B.
No. 11,544. **Grant, We Beseech Thee** 10
Short useful number in dignified style, and well scored for the voices.

Part-song for Mixed Voices

FORD, JAMES S.
No. 11,490. **Slumberland** 10
Melodious, with freely moving parts, and an independent piano accompaniment.

Part-song for Men's Voices

ANDREWS, ADDISON F.
No. 11,548. **A Broken Chord** 08
In the style of a sentimental serenade, but containing an amusing surprise at the close.

NEW BOOKS

Music Students Library

STAINER, JOHN
Harmony. (With an Appendix containing 100 Graduated Exercises.) .....
A standard theoretical work in convenient form.

DITSON EDITION

LOW, JOSEF
No. 77. **Tone Pictures.** Op. 191. Books I and II 1.00
Edited by Heinrich Kiehl.
Primo part on five notes, useful as rhythmic studies, and to awaken musical feeling and expression.

SCHMITT, ALOYS
No. 80. **Preparatory Exercises for Obtaining Independence and Equality in the Action of the Fingers.** Op. 16a 25
(With Preface by Thomas Tapper.)
Purely technical material of undoubted value.

SCHUMANN, ROBERT
No. 81. **Fantasy-Pieces.** (Phantasiestücke) Op. 12. 50
(Edited by Xaver Scharwenka.) With Introduction by Charles Fonteyn Manney.
Superb edition, authoritatively edited, of a classic piano work.

The Half Dollar Music Series

Twelve Flute Solos. (Medium Grade.) .....
With Piano Accompaniments.
A collection of well-chosen numbers from various sources.

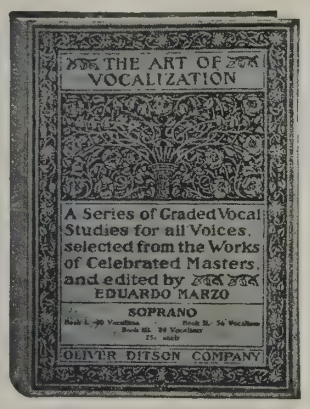
The Art of Vocalization

A Graded Course *of* Vocalises *for* Soprano

Compiled and Edited by

EDUARDO MARZO



THE purpose of this Course is to place in progressive and systematic order before the teacher and pupil the best vocalises by the best masters. It covers the entire range of vocalization. While not intended for beginners, it contains all that is required for the complete study of the vocal art.

The vocalises have been selected from the works of Alary, Aprile, Brambilla, Bordogni, Concone, Crescentini, Lablache, Lamperti, Marchesi, Nava, Paer, Panofka, Panseron, Savinelli, Sieber, and others. Each number has been chosen not only for its intrinsic merit, but also because of its pedagogical value.

Each set of vocalises covering a special difficulty is preceded by a page of the exercise which they illustrate. Special instructions are given for practicing scales, arpeggios, grace notes, the mordent, detached notes, syncopation, trills, etc. None of the vocalises are transpositions. Each is in its original key, and was written especially for the soprano voice. The order of progression has been carefully arranged so that the vocalises may be taken up consecutively.

The course does not pretend to teach singing without the aid of a teacher. It merely places in view all the best material that can be gathered for the study of vocalization.

BOOK I. 40 VOCALISES

THESE FOUR PICTURES IN COLORS FREE

Do not confuse these with cheap pictures. They sell at Art Stores for 50 cents each.

TO every reader of this periodical who loves nature and animals and outdoor life, we will send without charge four beautiful pictures, which sell at retail for 50 cents each. These pictures are wonderful examples of the art of color photography, being printed on heavy plate paper by the most improved process. Framed at moderate cost they will make splendid decorations for den or cozy corner, or they can be used just as they are in any room of the house. The subjects represented are such as will appeal to nature lovers generally. Exact size of pictures, 10½ x 7½ inches.

Why We Make This Offer

The object of this offer is to acquaint you with our new "Library of Natural History" which has recently been published, after years of labor and at an enormous expense. It is the only work of its kind in existence illustrated from actual photographs, of which it contains over 2,000, besides many full-page plates showing birds and animals in their natural colors. Every living creature on the earth—animal and man—is described and pictured in this Library. In many cases special expeditions armed with cameras and dry plates had to be sent to foreign lands to secure the photographs from which the illustrations were made. The work is not technical or dry, but teems with the most interesting and instructive stories of animal life, told by famous naturalists and explorers. Over 2,000,000 copies have already been sold in Germany and England.

No Obligation

Your application for the pictures imposes no obligation to purchase the library. We will forward the pictures, together with a description of the books, by mail postpaid. You will not be bothered by agents or canvassers; this Society transacts all its business by correspondence.

As an evidence of good faith, enclose 10 cents (stamps or silver) for postage and wrapping. This will be refunded if you request it after examining the pictures. Mail the accompanying coupon promptly, as the supply of pictures is limited, and this advertisement will not appear again.

The University Society, 78 Fifth Avenue, NEW YORK CITY

CUT THIS OUT

The UNIVERSITY SOCIETY, New York

Please send me, postpaid, the four pictures you offer, together with a description of the "Library of Natural History." I enclose 10 cents for postage and wrapping, which you agree to refund if I am not perfectly satisfied. It is understood that the sending of this coupon does not in any way bind me to buy anything. A NEW BOOK ON SINGING

The Art of the Singer

Practical Hints about Vocal Technics and Style

By W. J. HENDERSON

Author of "What is Good Music," "The Orchestra and Orchestral Music," etc.

12mo, $1.25 net Postage Extra

¶ The author has made special and searching investigations into the records of the sixteenth, seventeenth, and eighteenth centuries; has made many experiments with voices; has observed the methods of many teachers; has heard and studied the famous singers of the past quarter-century; and has obtained from some of them valuable instruction.

¶ He is specially indebted to Mesdames Nordica and Sembrich for important information and for practical demonstrations the greatest by M. Jean De Reszke.

¶ The volume will interest the teacher, student, and lover of singing, as it is the matured result of twenty-five years of careful study, by a music-critic of the highest reputation.

Charles Scribner's Sons

153-157 FIFTH AVENUE, NEW YORK

The Awakening of Helena Richie

By MARGARET DELAND

¶ "A perfect book," declares the NEW YORK TIMES. "Everybody is reading THE AWAKENING OF HELENA RICHIE now. It is *the* novel of the Summer."

¶ "Such work as this is bound to endure, must endure," says the PROVIDENCE JOURNAL. It shows how good American fiction can be. The story charms insistently from the first page, but presently it flashes out into a tremendous drama, catching the reader in its onward sweep and holding him enthralled to the end.

Illustrations by Walter Appleton Clark. Price $1.50

BUCHANAN'S WIFE

By JUSTUS MILES FORMAN

¶ The story remains poised over a situation dramatic and unique until the thrilling climax comes with a rush of surprise. A more dramatic story, with the outcome of a woman's fight for love held in breathless suspense, it would be difficult to imagine.

Illustrated Price $1.50

FRANKLIN SQUARE NEW YORK

A System of Fundamental Technics

FOR MODERN PIANO PLAYING

By WILLIAM MASON, Mus. Doc.

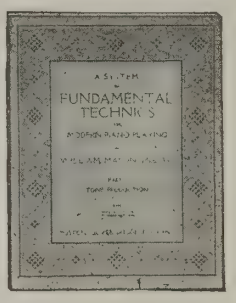
Revised and Enlarged by W. S. B. MATHEWS

PART ONE.—Tone Production

Including Two-finger Exercises with Octaves, Bravura, Chords, and the Use of the Pedals

PART TWO.—Principles and Material for Passage Practice

Containing Dr. Mason's Celebrated Method of Scales and Arpeggios, the Application of Rhythm and Metre, and the Principles for Developing Velocity



DR. WILLIAM MASON'S "System of Fundamental Piano Technics" comprises the net results of a century of evolution in the art of piano playing and piano pedagogy. It is founded upon the advances made by the older technicians, such as Clementi, Tomaschek, Dreyschock, and others. Taking the operative part of their innovations, Dr. Mason, during fifty years of active work as artist and teacher, has superimposed upon their material and processes the various missing elements for completing the command of the piano in all the directions of modern playing. He is the inventor of an easy method of diversifying all kinds of passage practice and of imparting to this usually dry part of piano study many of the qualities of musical creation. His rhythmic devices educate the player as well as improve the playing. His two methods of velocity are radical and never failing. His method of octaves, when superimposed upon the education of the hand in the manifold forms of the two-finger exercise, reduces this part of the technic to easy dimensions without sacrificing completeness. The most important feature of the Mason System is the emphasis placed upon Tone Production, the mechanism of producing and Vitalizing Piano tones for every possible demand in artistic playing.

This revised edition of the "Mason Fundamental Piano Technics," contains all the practical exercises which were in the first edition, together with the following additions:

A Complete Restatement of Tone Production, for Melody, Passages, Chords, Octaves, Bravura, and the Artistic Uses of the Pedal.

In short, a complete apparatus for piano expression. The subject of Chords, previously neglected by technicians, although of the utmost artistic importance, is here taken up anew and so handled that the teacher, by following directions, will be able to impart to pupils a rich, melodious, and beautiful control of chords and harmonic coloring. Any student who will build up the tone production through the various single-finger forms, through double touches to chords and octaves, will arrive at an elastic, full, and commanding tonal control of the instrument. The object of the present arrangement of the material and subjects has been to bring out more clearly the interdependence of parts in the system, and to prepare a more progressive order of arriving at maturity in this division of technics.

The Work Contains Thirty-eight Illustrations Showing Every Position of the Hand in Playing

Price of Parts I. and II., Each, in Paper, $1.00
Complete in Cloth, $2.00, Post-paid

Leason's Accent - Metronome

Twenty-five years ago the only METRONOMES to be had were manufactured in France, and it was not unusual for Teachers and Pupils to pay $10.00 each for Metronomes without bell, and $12.00 each for Metronomes with bell, the prices being practically prohibitive, and consequently the wits of many manufacturers were set at work devising plans to cheapen the prices, through economies in their manufacture, or invent new process of manufacture, with the result that while Metronomes retained their old forms, the qualities were not improved, and gradually, as labor and machinery invented by Americans came more and more into use, the prices for the regulation Metronomes were reduced, and the qualities were very materially reduced, because of the expense connected with proper adjustment.

To-day a Metronome that equals any manufactured in Europe can be bought, without bell, for $2.50, and with bell for $3.50.

They are good METRONOMES, but it has been left for us to place upon the market the

LEASON'S ACCENT-METRONOME

which is, without question, the most perfect device ever invented, and we herewith mention a few of its good points:

1 It is a perfect Metronome.

2 It is not affected by heat or cold.

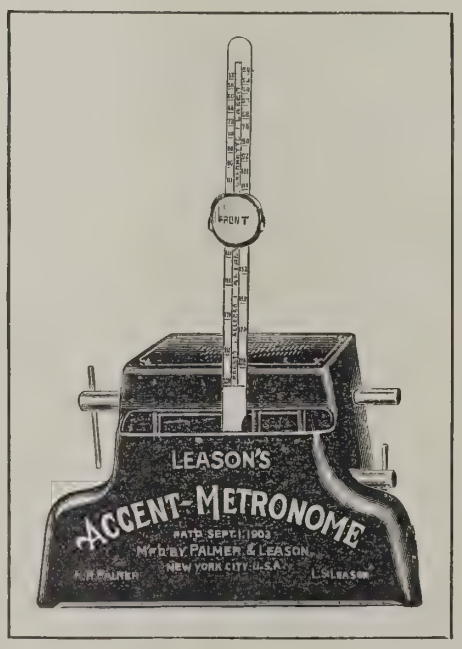
3 It is made to last.

4 It will not wear out.

5 It is never out of order.

6 It is simple, solid, and substantial.

7 It is made entirely of metal.



8 It is perfectly adjusted by skilled mechanics

9 Its strokes, while sufficiently loud, are not unpleasant to a sensitive ear.

10 It manifests the measures by strong and modified strokes.

11 The strong strokes take the place of the bell in ordinary Metronomes.

12 It accents the several groups of measures, viz.: Duple, Triple, Quadruple, and Sextuple, without a bell.

13 The ordinary strokes and the accented strokes are of the same tonal quality.

14 There are no vibrations, as in the old-fashioned Metronome, which continue after the hearing of the loud stroke.

Elizabethan Lyrics

SET TO MUSIC BY *E. A. Brown*

A collection of charming musical settings of twenty quaintly characteristic, Elizabethan lyrics. A group of these makes a very effective concert number. . . . . ***Price $1.00***

Fourteen Songs

BY *H. N. Redman.* (2 VOLUMES. 14 SONGS IN EACH.)

Each volume contains fourteen (14) high grade songs, and will prove worthy the attention of all singers and vocal teachers. The first volume consists of musical settings of poems by Lytton, Tennyson, Besant, Swinburne, etc. Those of the second volume are by John Boyle O'Reilly, Howells, Lathrop and Keats.

Heavy Paper Covers, Vols. I and II, each, . . ***75 cents***

28 Selected Songs

BY *J. L. Gilbert*

This is the first album of songs by J. L. Gilbert (composer of "Bonnie, Sweet Bessie" and "Not a Sparrow Falleth") ever published. It contains in addition to "Bonnie, Sweet Bessie" (Medium Voice) 7 Scotch Songs, 11 Songs for High Voice, 4 Songs for Medium Voice, and 5 Songs for Low Voice. . . . . ***Price 50 cents***

A MONTHLY PUBLICATION
THOMAS TAPPER, Editor

PUBLISHED BY
OLIVER DITSON COMPANY

SUBSCRIPTION PRICE

SINGLE COPY.....$ .15
PER YEAR..... 1.50

Free of Postage in the United States, Canada, and Mexico.
Foreign Postage, per Year, 72 Cents.

The entire contents of this Magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

DISCONTINUANCE.—IF YOU WISH THE MUSICIAN STOPPED, AN EXPLICIT NOTICE MUST BE SENT US BY LETTER; OTHERWISE IT WILL BE CONTINUED. ALL ARREARAGES MUST BE PAID.

Subscriptions to this publication are not discontinued at expiration unless so ordered by the subscriber. The courts invariably hold a subscriber responsible to the publisher for the subscription price of all papers received until the paper is paid for in full up to date and ordered discontinued.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor, MR. THOMAS TAPPER.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 18th of the month.

All REMITTANCES should be addressed and made payable to

OLIVER DITSON COMPANY
Publishers of THE MUSICIAN,
Ditson Building, 150 Tremont Street, BOSTON, MASS.

PUBLISHERS' NOTES

BETWEEN OURSELVES — In the past three years no expense has been spared to make THE MUSICIAN the best and most up-to-date musical periodical in the world. The letter press represents the highest standard of workmanship. The same process is employed in printing the music supplement as in our sheet music editions. The half-tone reproductions of photographs are the work of skilled artists. The paper used is of a uniform high quality.

So much for the mechanical part of the magazine.

A glance at the contents for the past year will prove that the best-known musicians and writers, not only of this country but also of Europe, have been included among its contributors. Do not let us be misunderstood, however, as believing that the mere payment of high prices for the matter that goes into THE MUSICIAN necessarily brings it up to a correspondingly high standard. It requires something more than this; it requires eternal vigilance, thought, alertness, and limitless patience. All these we are applying to THE MUSICIAN, and shall continue to apply in larger and still larger measure.

Most persons like to know about music even if they have not been trained as musicians. They like to be able to talk familiarly about it, to listen intelligently to it, and above all, to understand it. A new composer or conductor, what he looks like, and if a foreigner the pronunciation of his name; a new opera, a new book on music; and practical information by authorities on all subjects connected with music study and music teaching are interesting to every person who loves and patronizes music. The unusual profusion of illustrations in THE MUSICIAN makes the reader familiar with every person or article of importance in music. In wealth of practical, useful suggestion it is unsurpassed.

THE MUSICIAN for the year 1906 is the best existing example of a periodical publication devoted to music. Nevertheless, we have by no means reached the ideal at which we are aiming. For the year 1907 THE MUSICIAN will be better still. You will be interested to note

A FEW FEATURES FOR 1907

THE VOICE. A series of practical lessons to begin in January, 1907, by one of the greatest teachers.
William Shakespeare, London

THE NATURAL LAWS OF PIANO TECHNIQUE. A profusely illustrated series of practical lessons by
Mary Wood Chase, Chicago

LETTERS TO MUSIC TEACHERS. Dealing with the essential fundamental principles of piano education.
W. S. B. Mathews, Chicago

A SERIES OF ARTICLES ON MUSIC IN FRANCE. The Chanson, and many other interesting phases, by the Librarian of the Paris Conservatory.
Julien Tiersot, Paris Conservatory

MUSIC IN EUROPE. A comprehensive monthly letter, which keeps the reader *au courant* with the leading music activities of Europe.
Orton Bradley, London

MUSIC THEORY. A varied series of articles by eminent specialists under the general editorship of
Dr. Percy Goetschius, New York

COMMUNITY MUSIC. What music is doing in American towns and cities as a distinct social factor.
The Editor

A REPERTOIRE OF SONGS. With practical lessons.
Karlton Hackett, Chicago

THE BEST PIANO MUSIC. Lists of the best teaching pieces in the various grades. *The Editor*

LESSONS IN GERMAN. LESSONS IN FRENCH. (This series is especially devoted to the vocabulary of music.) *F. C. Burkart, and A. Rheingauer, Boston*

THE MUSIC PORTRAITS OF THE CROSBY-BROWN COLLECTION. (Metropolitan Art Museum)
Frank H. Marling, New York

LESSONS IN AMERICAN MUSICAL HISTORY. Being interesting chapters in various phases of American music. *Henry E. Krehbiel, New York*

A SERIES OF LETTERS OF ROBERT FRANZ. (Hitherto unpublished) *Carl Armbruster, London*

A SERIES OF ARTICLES ON THE ART OF PIANO PEDAGOGICS *F. H. Morton, Auckland, N. Z.*

MODERN PIANO COMPOSERS AND THEIR WORKS
E. B. Hill, Boston

Each issue will contain at least twenty-four, and many issues thirty-two, pages of standard and recent vocal and instrumental music.

The following endorsement of THE MUSICIAN is by F. H. Shepard, Orange, N. J.:—

"I am very glad to endorse THE MUSICIAN most heartily. I like it for many reasons: It brings music into relation with life: it presents the educational side of music in the most modern manner, giving a true picture of the best teaching methods; in bringing out the plan of "music in relation to the community," it touches my own views as to the true office of music, and places the profession upon a distinctly higher level; in the departments, some of the strongest men in the profession are giving us their best ideas and methods — an inspiration to teacher and pupil alike, in which I wish every pupil to share; and containing an excellent selection of music for sight playing and *répertoire*. To be in touch with THE MUSICIAN is to broaden one's musicianship, and to keep abreast with modern thought in all that pertains to our professional life.

TAPPER'S GRADED COURSE — Jaroslaw de Zielinski says of it: "The work of a Thinker and not a Tinker." And just here is the secret of its success. It is well thought out.

It is the only Piano Course that instructs in *all* essential lines of music thought: Piano, Theory, Dictation, Music Form, Melodic and Harmonic Analysis, etc.

The long-delayed Teachers' Manuals, Numbers 1, 2, and 3, and *Studies and Pieces*, Grades six and seven, are promised during October.

We apologize for the unavoidable delay, which means that better and more painstaking work has been done by the Editor, thus giving his best thought and endeavor. The work might have been tinkered into shape in shorter time, but it has been finished with the same care that was shown in the early grades.

Until publication those who have not already done so, may order the unpublished numbers at 30 cents per copy, postage paid. If a charge is made on our books, the postage will be extra.

CLASSIFIED ADVERTISEMENTS — In the November MUSICIAN will be inaugurated a department for classified advertisements. The cost of four lines is $1.00, and of each extra line, 25 cents. Four-line advertisements in six consecutive issues will cost $5.00, and larger advertisements in proportion.

The classified Department will enable advertisers to try THE MUSICIAN at an extremely low cost. Teachers, schools, and conservatories will be able to carry a permanent announcement or to notify their friends and prospective patrons of any special plans for the approaching seasons, changes of address, etc. Dealers in musical instruments can take advantage of the Classified advertisements to offer special bargains, such as a second-hand piano, organ, or clavier.

The Classified Department will be especially valuable for announcing the publication of new books and music, thus assuring a wide introduction in the shortest space of time.

THE MUSIC SUPPLEMENT — In the next issue the music supplement of THE MUSICIAN will contain thirty-two instead of twenty-four pages of music. The thirty-two page supplement will be given oftener in future than in the past. We hope to give it at least six times during the year. The active teaching season will have the benefit of the larger supplement. This, as in the past, will be printed from the same plates, and by the same process as our regular sheet music editions. We would call the attention of readers particularly to the fact that the compositions which appear are given in their entirety, and are not mutilated or abbreviated to the slightest extent.

THE ART OF VOCALIZATION — Though not so penetrating as the soprano, the alto voice, like the mezzo-soprano, surpasses it often in tenderness and volume; and even, which is more remarkable, in flexibility.

Some of our modern altos have certainly equaled, and perhaps surpassed, vocalists of every other class. As examples of singers, in the full acceptation of the term, the names of Grassini, Pisaroni, Brambilla, Alboni, have become historical. In later days, Trebelli-Bettini, Annie Louise Cary, Scalchi, Schumann-Heink, and others, too numerous to mention, are glorious illustrations of the alto voice.

Contrary to the prevailing opinion that the alto voice is best fitted, if not only fitted, for church and sustained singing, it is desirable to have the fortunate possessors of this voice cultivate as much fluency as the soprano or mezzo-soprano. With a complete mastery of the Art of Vocalization, added to its natural fulness, strength, and depth, the possibilities of the alto voice are certainly beyond those of any other.

The three books for alto of Eduardo Marzo's *Art of Vocalization* comprise a complete course for the training of the alto voice. These books are in preparation, and will appear at an early date. The price of each book will be 75 cents, but in advance of publication we offer them for 40 cents each. This price includes the cost of transportation when cash accompanies orders.

LITTLE PISCHNA — To obtain the greatest benefit from *Little Pischna*, the instructor should determine carefully which exercises offer the greatest number of difficulties, and then interest the pupil by explaining the various methods of practice for each one, thereby in time succeeding in influencing him to court difficulties rather than to shun them. Those exercises which are more or less repetitions of earlier numbers may be omitted, except in cases where omissions involve too great a jump from what has been already acquired.

The editor of the present edition has supplied for each exercise a number of ways of practicing. Some or all of these may be used by each pupil, and they may also suggest to the teacher other ways. Care has been taken, however, to avoid over editing, as the work is one for scarcely more than advanced elementary students.

Little Pischna, by Bernard Wolff, edited by Felix Fox, will be number 57 in the Ditson Edition. The price will be $1.00, but in advance of publication we offer copies for 40 cents, which includes postage if orders are accompanied by cash.

THE MUSICIANS LIBRARY — A library not only for musicians, but for all who believe in music, and who cherish musical ideals. It is designed to include the masterpieces of song and piano music; to gather into a uniform series of volumes the best work of the best composers in the best possible form.

Each volume is carefully edited by an authority who is at the same time an enthusiast on the subject or composer represented.

Each volume contains the best obtainable portrait of the composer or composers whose works are contained therein.

Each volume is enriched by an elaborate critical introduction, possessing genuine literary quality.

With the music is given, as far as known, the date of the composition, and the contents, when possible, are arranged chronologically.

The various song volumes are issued in two editions, one for high voice and one for low voice, — thus bringing the best song literature within the reach of all. Whenever possible the original key is named.

In the songs by foreign composers the original texts are in all cases given. Great pains have been taken to secure faithful translations that fit the music and have literary worth.

The music pages are uniformly of full folio size, and are printed on specially made paper.

The volumes are artistically bound in paper with cloth back, and also in full cloth, gilt. These cloth-bound volumes are eminently desirable for library use and as gifts.

That the typography engraving, accuracy, and artistic *ensemble* of the volumes be of the highest excellence, neither care nor expense has been spared.

No lover of music should be without these matchless volumes.

See advertisement on page 518. This seal in large size found on every volume of the Musician's Library.

ATTENTION, VOCAL TEACHERS — "Are you a voice teacher? Then form a People's Chorus, without voice tests, without requirements as to knowledge of music, admit old and young, make a nominal charge only, give simple voice culture in the mass in addition to the instruction in sight singing, teach the expression of something in addition to words and pitches, and learn the joy of coming close to the lives of the people — the self-respecting, earnest working public, who have ideals, but who otherwise are unable to follow them.

"Let me say that in personal power, in your standing as a citizen and a musician, you will increase in tremendous measure through community work. We can be better citizens through a higher idealism in music. This I consider the supreme office of music, to take its place as the most vital factor in the training of the higher qualities of the individual, and in the elevation of the community, — truly the greatest idealism in music."

The foregoing is from an article entitled *Idealism in Music*, by F. H. Shepard, in THE MUSICIAN for August. It was read at Geneva, N. Y. (New York State Music Teachers' Association), June, 1906.

If you have not read it, we hope you will do so at once.

Note what Mr. Shepard says: "Admit old and young, make a nominal charge only. If you charge 10 cents for each person each night, you will find a very pretty total will result at the end of the season. Feel free to correspond with the Editor about Community Music at any time.

It will interest many to know that Mr. Shepard will use the coming season in his People's Chorus a book entitled *Singers' Favorite*. We recommend it highly. Send for a copy. Price 50 cents, postage paid. Discounts in quantities.

WHO'S WHO AMONG PERIODICALS — In making up your club list for 1907 we advise you to consult *Who's Who Among Periodicals*. We will send a copy to any address, postage paid, upon request.

Attention is called to the fact that all of our publications can be obtained of the local dealer in your own town. We ask you to insist that the name *Oliver Ditson Company* appears on the title page of each piece of music and music book desired. Our editions are always full and complete, and not shortened or mutilated in any way. If you fail to secure at home what you desire, order of us without delay.

DITSON EDITION — Be sure to read the advertisement of the *Ditson Edition* on page 3 of cover, and note carefully the introduction offer. This offer positively expires November 1, when the regular price will be charged. We want every one to understand and appreciate this remarkable offer and to become acquainted with the *Ditson Edition*. Remember that it was planned upon the principle of "Not how cheap, but how good." It stands to-day without a peer.

MR. ALVAH GLOVER SALMON, Pianist (of Boston) Lecture Recitals (Russian Music), subject-matter obtained in Moscow and St. Petersburg. Tour now booking for New England, Middle West, and Southern States. For full information address C. W. Thompson & Company, A and B Park St., Boston, Mass.

Mr. James W. Pierce, formerly of the Academy of Sciences Building, San Francisco, is now located at 341 Blanchard Music and Art Building, Los Angeles, Cal.

The revised edition of Volume II of the *Virgil Clavier Method* will be ready October 15.

LYON & HEALY "OWN-MAKE" Solo Trumpet $50. TO $100.

(NEW MODEL)

THIS is the solo trumpet which is being widely adopted as a substitute for the cornet in band and orchestra. Quite a distinction exists between the Solo Trumpet and the "Trumpet Model Cornet." All cornet lines are abandoned in our "New Model," and we have an instrument of the greatest percentage of taper of any band instrument made.

Players everywhere have marveled at the Solo Trumpet's wonderful ease of blowing, as well as its perfect blending with string and reed instruments, and remarkable carrying power.

The New Model Solo Trumpet has an instantaneous change to A, which does not require changing the mouth or set pieces.

Sold for cash or installments.

Order one to-day on FREE trial, to be returned at our expense if not perfectly satisfactory.

Write for a FREE copy of Lyon & Healy's Musical Handbook, fully describing the New Model Solo Trumpet, and thousands of other articles of interest to musicians. Address

Educational Value

THE MOST VALUABLE TEXT-BOOK OF MUSICAL HISTORY IN THE ENGLISH LANGUAGE

HISTORY OF MUSIC

By W. J. BALTZELL

PRICE, $1.75

A Text-book for Classes A Manual for Private Reading
For Colleges, Conservatories, and Clubs

Comprehensive—Concise—Practical

A History of Music brought up to date, arranged in lessons of suitable length so that two can easily be prepared every week, with helps for teachers and students, questions on the lessons, review outlines, topics for essays, tables, and complete indexes, including pronunciation of names. Copiously illustrated. Each lesson has a number of paragraph heads, giving an outline for study and review.

SELECTED "CZERNY" STUDIES

A GRADED COURSE

Edited, Annotated, Explained, Fingered by
EMIL LIEBLING

In Three Books Grades II to VI
90 CENTS EACH

A new and valuable addition to the educational literature of the pianoforte. A graded course in Czerny, with copious annotations and explanatory text of the most careful and exact character, both as regards fingering and phrasing and technical and musical interpretation. This work represents a careful sifting and selection from the entire works of Czerny. The editorial work has been done by one of America's eminent and most successful teachers. Volume I begins at about Grade II and Volume III ends at about Grade VI. The grading is very close throughout. No greater technician than Czerny ever lived, and this course offers a valuable and condensed compendium of his very best work. The various studies are in all styles and cover every department of piano technic.

STANDARD COMPOSITIONS

For the Piano

Vol. I—First Grade.....Price, 50 cents

Graded and Compiled by
W. S. B. MATHEWS

To be used in connection with Mathews' Standard Graded Course of Studies and all other graded courses.

One of a new series in which there will be at least six volumes at a uniform price. There are thirty-one pieces in the first volume. All the pieces have been thoroughly tested in actual teaching and have genuine educational qualities.

HANDEL ALBUM

A collection of favorite pieces for the Piano, with Portrait and Biographical Sketch

Selected and Edited by
THEO. PRESSER

Price, 60 cents

Handel, in our opinion, has never been fully appreciated by the American teaching public. The overwhelming genius of Bach has rather thrown Handel in the shade, yet for technical, and at the same time interesting work, Handel is to be preferred. This volume can be taken instead of either Bach's "Inventions" or "Little Preludes," and the pupil will derive just as much benefit and at the same time experience more pleasure.

IN PRESS

Gurlitt Album of Piano Music.
Exercises in the Synthetic Method of Vocalization. F. W. Root.
Standard Concert Etudes for the Piano.
Piano Tuning, Regulating, and Repairing. Fischer.
Easy Dance Album for Piano.

Complete Catalogs sent free on Application. To Responsible Teachers we will send on Examination any of our Publications at Special Prices.

Mail Orders Solicited and Filled to All Parts of the Country.

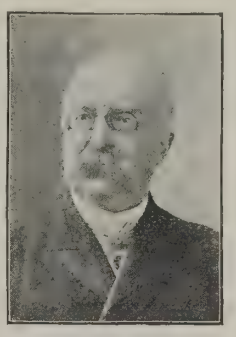
ELSON'S

Music Dictionary

By LOUIS C. ELSON

Professor of Theory of Music at the New England Conservatory of Music



EVER since Tinctor, about 1475, wrote the first music dictionary there has been an endless succession of books dealing with musical definitions. This is but natural and proper since the musical art is constantly changing. A music dictionary, unless frequently revised, easily drops behind the times.

There are no obsolete terms in Elson's Music Dictionary, but every necessary word is included *with its pronunciation*. By pronunciation is meant a phonetic spelling in the English language, not merely accent marks. This applies as well to composers' names, for instance: Rachmaninoff = Rachh-*mahn*-nee-noff.

In addition to 289 pages containing the definitions and pronunciations of all the terms and signs that are used in modern music are the following:

Rules for pronouncing Italian, German, and French.

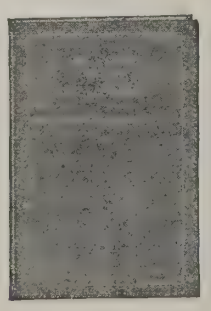
A list of popular errors and doubtful terms in music.

A list of prominent foreign composers and artists, with their chief works, the pronunciation of their names, and the date of their birth, etc.

A short vocabulary of English musical terms with their Italian equivalents.

The rules for pronunciation will enable the student to pronounce not only the musical terms, but every word in either of the three languages.

Such terms as "Pitch," "Sonata," "Temperament," "Turn," "Scale," "Organ," "Notation," "Form," "Key," etc., are explained at length. In some cases from three to four pages are devoted to a single word. On important subjects full bibliographical references are given.



The book comprises 306 pages and is bound in serviceable cloth covers.

PRICE, POST-PAID, $1.00

Copies sent for examination.

Reed Organ Selections for Church Use

Compiled and Edited by HANS LICHTER

When, as is frequently the case, a church is provided with only a reed organ, the selecting of a sufficient variety of attractive and appropriate solos is not easy of accomplishment. Piano music is commonly used for such purposes. Even pieces for the reed organ are frequently arranged so as to be adaptable to the piano on the one hand or the pipe organ on the other.

REED ORGAN SELECTIONS FOR CHURCH USE

Compiled and Edited by Hans Lichter

will contain thirty pieces by nineteen composers. These are intended especially and only for the reed organ. A copy should be in the possession of the organist of every small church and of every teacher of the reed organ.

Price, post-paid 50 cents. Copies sent for examination

Choir and Choral Magazine

A monthly publication devoted to the music of the church.

The important place occupied by church music to-day makes apparent the necessity of a thorough knowledge of the conditions whereby the best results may be accomplished by those engaged in its performance. It is the choirmaster's privilege to bring within the influence of music many who cannot be reached otherwise, and to guide the public taste towards a more intelligent appreciation of the best of music.

THE CHOIR AND CHORAL MAGAZINE has been established five years, and has proved invaluable in giving suggestions and advice to those interested in this branch of musical art. The choirmaster, confined as he is by his duties, will be able to keep in touch with his fellow-workers by reading its pages. It also contains practical helps in the form of articles on all phases of choir and choral work by able writers. Special programs are given, and important choral works described, so that directors can form an intelligent opinion regarding them.

In the coming year we shall endeavor to make THE CHOIR AND CHORAL MAGAZINE even more acceptable than ever. Some of the contributors whose articles will be included are: Thomas Tapper, Frederic S. Law, Ronald M. Grant, Ernest Douglas, Jean Urquhardt, H. J. Storer, William Reed, Harry Hale Pike, George A. Burdett, W. S. B. Mathews, and H. E. Krehbiel.

Each Issue Contains from Twelve to Twenty-four Pages of Sacred Music

by leading composers selected from our latest publications. This alone represents in value many times the cost of the magazine, and will help solve the problem of providing new anthems.

OLIVER DITSON COMPANY, BOSTON

"Mansfeldt Technic"

By HUGO MANSFELDT

A COMPLETE LIBRARY of TECHNICAL EXERCISES

A System of the Most Necessary Daily Exercises to Produce

A Perfect Finger Development In the Shortest Possible Time

It is as useful to the novice as to the advanced student.

It is a concentration of common sense tuition and guarantees perfection in finger-dexterity. All technical problems are given a ready solution in this, the greatest system of technic.

Franz Liszt, eulogized the book in most emphatic terms.

Teachers simply glorify it because of its intelligent and valuable conciseness.

"Mansfeldt Technic" has created more accomplished and masterful pianists since its publication than all the old-time "methods and studies" combined, and accomplished it in such brief time that even connoisseurs of the art are marvelling.

Thousands are now in use by scores of the most noted conservatories and instructors of the world, and within another decade it will be the **only** system of technical exercises recognized among musicians. No other book has met with such a sincere welcome from the guild.

Price: In order to supply an urgent demand for this eminent work in separate sections the publisher is now issuing it in three distinct books — One Dollar each. The three books are also published complete in one volume — Two Dollars and Fifty Cents. Ask your dealer to order one for you on approval.

NOT LONGER.

THE NATIONAL CONSERVATORY OF MUSIC OF AMERICA — 47-49 West 25th Street New York

WASSILI SAFONOFF, Director

THE President and founder of the National Conservatory (which was chartered in 1891 by special act of Congress), Mrs. Jeannette M. Thurber, has been so fortunate as to secure a worthy successor of the eminent composer, Dr. Dvorak, in its directorship — WASSILI SAFONOFF, for more than a decade Director of the Moscow Conservatory, and recently engaged as the sole conductor of the New York Philharmonic Orchestra. **Mr. Safonoff** will teach at the **National Conservatory** advanced **classes** in the **interpretation** of **pianoforte compositions.** He will **conduct** the **Conservatory Orchestra** (a feeder of the leading American orchestras), and he will have a **class for conductors** the only one of its kind. Besides **Mr. Safonoff** the artistic faculty includes **Adele Margulies, Leopold Lichtenberg, Eugene Dufriche, Leo Schulz, Henry T. Finck, Max Spicker, Chas. Heinroth,** and nearly fifty other well-known teachers of singing and playing in New York. Instruction is given in all branches of the art: **Opera, oratorio, concert, voice, organ, piano, violin,** and **all orchestral instruments;** also **theory, harmony, composition** and **history of music.**

Public School Music

Northwestern University

THE SCHOOL OF MUSIC, located at Evanston-Chicago, on the shore of Lake Michigan, calls attention to its Department of Public School Music. The course includes certain subjects selected from its long established theoretical courses, practical public school music methods under a thoroughly trained and experienced specialist, and observation of actual work among children in the public schools of Evanston. Opportunity is offered for other studies in College, Academy, and Music School. The environment is perfect, and social advantages superior.

THE SCHOOL OF MUSIC numbering 89 students in 1892, has grown to over 500. Its courses lead to University degrees or Graduate in Music and Bachelor of Music. A thorough Preparatory Department is maintained. Send for catalog.

FLETCHER MUSIC METHOD

SIMPLEX AND KINDERGARTEN

THIS System places the study of music on a truly psychological and educational basis; hence the drudgery is eliminated, and the pupils develop naturally and artistically, learning to express themselves, not merely to be copyists.

The System has the indorsement at home and abroad of many of the best musicians and educators, such as Dr. Wm. Mason, Dr. William Cummings, London; Dr. Hugo Riemann, Leipsic; Dr. Gerritt Smith, Dr. Anagnos, Franklin Taylor, John Orth, Dr. Lyman Abbott, Thomas Tapper.

Send for circular and read the letters of indorsement from these and many more prominent musicians; also the letters from teachers who have given the method a practical trial of from two to seven years. Address,

Mrs. Fletcher-Copp, 107 Thorndike Street, Brookline, Mass.

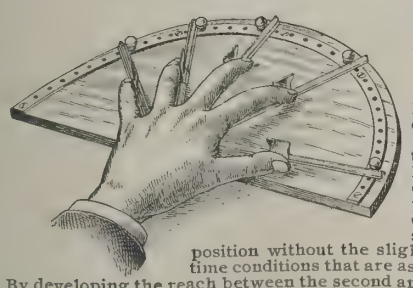
Many of the volumes are to be had in handsome and durable full cloth bindings.



Kursheedt Hand Expander

PRICE, $3.50. BY EXPRESS, $3.75

As the endorsements of great pianists and teachers testify, the Hand Expander will, after conscientious practice, abundantly supply nature's deficiencies.

Some students have attempted to stretch the fingers on the piano and the result has usually meant injury to their hands and the instrument. Ivory keys cannot support or stretch the ligaments; no exercise of big chords can be mastered unless the fingers be supple and sufficiently expanded. The Hand Expander will reduce the hours of practice in the case of all students with small hands. By examining the apparatus students and teachers will find that they can put their fingers in any position without the slightest difficulty. Daily use of the Hand Expander will produce in a short time conditions that are astonishing. Fingers may be stretched and curved in almost any position. By developing the reach between the second and fourth finger and between the third and fifth finger, the third or fourth finger will acquire strength and independence if worked in the way mentioned in the directions, and enable the student to play exercises that he could not before attempt. Several specialists have written works about finger gymnastics, but no theories can ever take the place of realities. The Hand Expander is a real invention, endorsed now by a number of the greatest pianists and teachers of the United States. These great artists have not only endorsed the Hand Expander, more than that, they have declared it to be a necessity for not only pianists but for all musicians with small hands and weak fingers. Many schools and studios have adopted the Hand Expander with excellent results.

PATENTED IN THE UNITED STATES, CANADA AND FOREIGN COUNTRIES

E. B. KURSHEEDT, *10 Bleecker Street, New York*

The School of the Piano Pedal

By W. S. B. MATHEWS

THE pedals of the pianoforte are a vital part of the tone controlling mechanism, since they add to the tonal effect elements which cannot be put there from the keyboard. Composers since Chopin have not written the notes in all instances as they mean to sound, but as the hands have to play them. The remainder is left to the uncertain indication of an occasional "ped" here and there in the music.

Artistic pedaling, therefore, is not only a question of making the playing sound better, but often of bringing out an idea, which, but for the pedal, would not be heard at all. Pedaling is an art requiring as careful and systematic study as scale-work, arpeggios, or any element of the technique. Fine playing is impossible without pedals.

The School of the Piano Pedal by W. S. B. Mathews contains complete explanations of the best usage of the pedal. The work is fully illustrated by many original studies and by numerous selections from Bach, Beethoven, Heller, Liszt, Tchaikovsky, Schumann, and Chopin. The studies range in difficulty from the second to the fifth grades. The work is particularly rich in easy pieces of fine quality. Mrs. Blanche Dingley-Mathews' valuable co-operation has made the work especially practical for use with children.

Now Ready

NEW ORGAN COMPOSITIONS

Three Pieces by Harvey B. Gaul

Festival March in F 60

Chant du Matin (Morning Song) . . .50

Chant du Soir (Evening Song) . . .50

Organists of good ability who make a practice of adding to their repertoires new numbers of special worth will welcome these three by Gaul.

The Festival March in F is elaborate enough to make a good recital number, and yet sufficiently churchly in its spirit to be an excellent postlude.

The Morning Song is an effective song without words, a notable addition to the list of good things for offertory and special services.

The tender spirit and sweet harmonies of the **Chant du Soir** will always win for it the appreciation of not only organists, but also of those who listen.

Two Numbers by W. D. Armstrong

have become favorites with organists all over the country

THE PUPIL'S SECOND ETUDE ALBUM

35 PIANOFORTE ETUDES

Selected and Arranged in Progressive Order

By FERD. MEYER

Price, $1.00

This volume is a sequel to **The Pupil's First Etude Album,** which has been received with so much favor by piano teachers. The former book began with the simplest studies and progressed gradually through the field covered by the first and second grades. This second album takes up the instruction at that point and advances through the third and well into the fourth grade.

In this volume, as in the previous one, selections have been made with excellent judgment, from the modern works of Arthur Foote, Gurlitt, Wolff, Eggeling, Schytte, Esipoff, Franke, Harthan, Lynes, Parlow, Chwatal, Strelezki and some of the older writers, namely, Czerny, Kalkbrenner, Bach, etc. They deal with a great variety of technic, including scales, octaves, arpeggios, trills, staccato, phrasing, cantabile, irregular rhythms, double notes, pedalling, velocity, and clearness of touch.

J. W. BISCHOFF

COMPOSERS' EVENINGS

T. L. RICKABY

Some general phases of this interesting subject have been treated in the two previous chapters and nothing now remains, but the actual programs themselves. The composers to whom I have found it most profitable to devote special programs are Bach, Handel, Haydn, Mozart, Schubert, Mendelssohn and Beethoven. In the case of the first two, I would suggest they divide an evening between them. The result will be a program better balanced with respect to vocal and instrumental numbers. The following may be accepted as a model: —

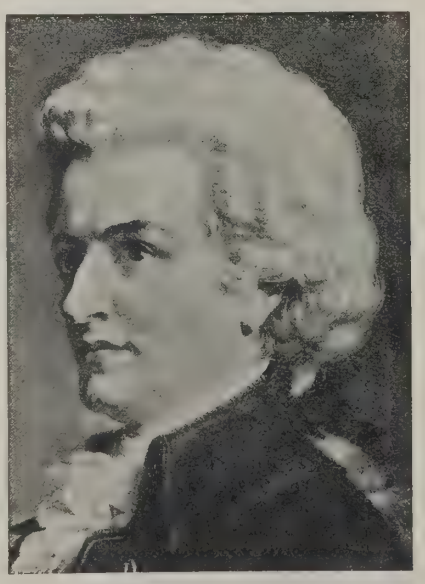
Piano Duet. First organ concerto.....*Handel*
Prelude and Fugue, E♭.....*Bach*
Angels Ever Bright and Fair. Soprano.....*Handel*
Largo in G. Two violins, organ, and piano.....*Handel*
My Heart ever Faithful. Soprano.....*Bach*
"Harmonious Blacksmith." Piano solo.....*Handel*
Gavotte in G minor. Violin and piano.....*Bach*
Minuet (*Sampson*). Two violins and piano.....*Handel*
Waft Her Angels (*Jephtha*). Soprano.....*Handel*
Loure. ('Cello Suite.) Piano solo.....*Bach*
I Know that My Redeemer Liveth (*Messiah*). Soprano .....*Handel*
Prelude in C. (*W. K. T.*, No. 1.) Arrangement by Gounod for voice, violin, piano, and organ.... *Bach*

This program can, of course, be varied by the addition or substitution of the inventions, gavottes, or the preludes and fugues, if the players are advanced enough. Further, there are arrangements for four hands and transcriptions of Bach's concertos and other works. Gounod has arranged the second prelude similarly to the first. The arias *He shall feed his flock* and *O had I Jubel's Lyre* could be used. In fact, two fine programs could be framed from the works of these composers, without making any great technical demands on the performers.

In case of Mozart we can improve somewhat on the above, both as regards greater choice of material and as to the various qualities that go towards making a musical program interesting to the average audience. Mozart's music is melodious and easily comprehended; hence appeals more readily to a greater number of people. The following program will prove very interesting and instructive: —

Minuet in E. Piano, six hands.
Andante Minuet and Rondo. Violin and piano.
The Violet. Soprano.
Rondo in D. Piano solo.
Magic Flute. Excerpts arranged for piano, organ, and violin.
Turkish March. Piano, four hands and three violins.
Voi che Sapete. (Silently blending.) Soprano.
Priest's March. Piano, 4 hands, organ and violin.
Andante (Eighth Quartet). Three violins and piano.
Fantasia, C minor. Piano solo.
Calm is the Glassy Ocean. Trio. Female Voices.
Sonnet, "Mozart's Grave." Reading.
Symphony. (One movement.) Piano, four hands, organ, and violin.

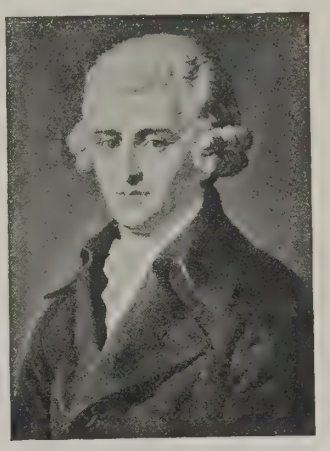
For a Haydn program we have quite an abundance of material — much of it easy and well within the powers of ambitious pupils. The following program could not fail to please an audience and at the same time it is sufficiently representative to be instructive and interesting to music students. There are Haydn albums, from which piano solos may be selected if those given are considered



WOLFGANG AMADEUS MOZART

hackneyed. Most of Haydn's trios and quartets are arranged for piano four hands, and there are two other minuets arranged for piano six hands. If a teacher has the material and cares for that sort of thing, the *Kinder Symphony* for piano, two voices, two violins, and toys is quite a novelty.

Symphony. (Military.) Piano, four hands, and organ.
Serenade in C. Violin and piano.
Gypsy Rondo Piano solo.
My Mother Bids Me bind My Hair. Soprano.
Themes from Symphonies. Arrangement for piano, four hands, organ, and violin.



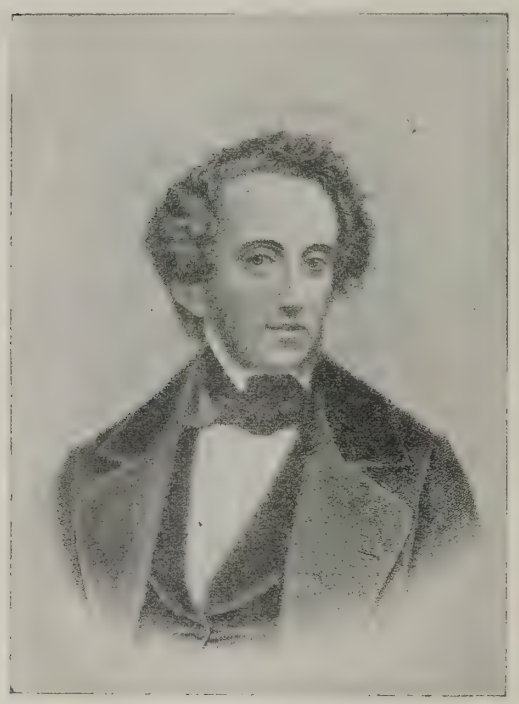
JOSEPH HAYDN

Moto Perpetual. Piano solo.
Serenade. Male voices.
Minuet. (Symphony B.) Piano, six hands. (Arr. by Herbert.)
Sonata, E♭. (One movement.) Piano solo.
With Verdure Clad (*Creation*). Soprano.
Andante. (Seventy-seventh Symphony.) Violin and piano.
(This is the well-known Hymn to the Emperor.)
Andante. (Surprise Symphony.) Piano and three violins.

Mendelssohn is practically a modern composer, and his music is more "grateful" to the majority of people than that of any of the composers already spoken of. The subjoined list of pieces would make a very acceptable and characteristic program: —

Symphony. (Italian.) (One movement.) Piano, four hands.
(*a*) Spring Song. } Piano Solo.
(*b*) Spinning Song. }
But the Lord is Mindful. Contralto solo.
War March (*Athalia*). Piano, organ, and violin.
I Would that My Love. Part-song. Female voices.
Overture (*Ruy Blas*). Piano, four hands.
Nocturne. (*M. N. D.*) Piano, four hands.
Nocturne. (*M. N. D.*) Piano, four hands, violin, and organ.
Lift Thine Eyes. Trio. Female voices.
Wedding March. (*M. N. D.*) Piano, six hands.
On Wings of Music. Soprano.
Rondo Cappricioso. (Op. 14.) Piano solo.
Symphony (*Reformation*). (Last movement.) Piano, four hands.

It must not be forgotten that nearly all the symphonies, trios, quartets, and concertos are arranged for piano four hands, to which it is easy (and very effective), to add an organ part. No violin solo occurs on the above program, but many of Mendelssohn's *Songs without Words* are arranged for violin and piano, and many themes from larger orchestral works can be had arranged this way. For piano solos, his scherzos and caprices are available, and for vocal numbers his two and four part songs offer abundant choice. Of course, if the players are available, a Mendelssohn program ought to have a movement from his piano or violin concertos, but it may not be practicable, and an enjoyable and valuable evening is possible without any of the larger numbers.



FELIX MENDELSSOHN-BARTHOLDY

Schubert is best known by, and is heard at his best in, his songs. Yet his compositions cover a very wide field and there is no difficulty in framing a fine program of comparatively easy music.

Symphony in C. Piano, four hands.
Serenade in D minor. Soprano.
Impromptu in A♭. Piano solo.
Moment Musical. Violin and piano.
Entr'acte (*Rosamonde*). Two violins and piano.
March Militaire. Piano, four hands, violin, and organ.
To Sing on the Water. Soprano.
Impromptu, E minor. Piano solo.
March Heroique, C minor. Piano, four hands, violin, and organ.
Ave Maria. Contralto. Solo.
Symphony, B minor. (Unfinished.) Piano, four hands.

One more program remains for our consideration here, viz., one devoted to Beethoven. It is far from easy to give an adequate program of his works, because the best compositions of this master are most emphatically beyond the average student. Still the numbers given on the following program are not difficult, and with the possible exception of the violin sonata none of them are beyond accomplishment by earnest musicians who have ambition and industry, in addition to some skill:—

Symphony, No. 1. Piano, four hands.
Romance in F. Violin and piano.
Nel Cor Piu Variations. Piano solo.
The Wild Rose. Soprano solo.
Sonata Pathetique. Op. 13. Piano solo.

FRANZ SCHUBERT

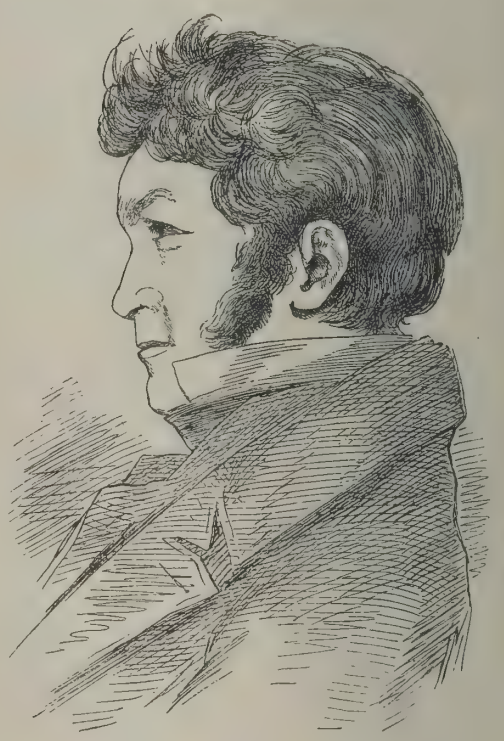
Sonata in F. Violin and piano.
Know'st Thou the Land? Soprano solo.
Sonata. Op. 27, No. 2. Piano solo.
Adelaide. Soprano solo.
Symphony No. 5. Piano, four hands, and organ.

In the Beethoven edition of the London *Musical Times*, a poem on the composer is given, and it is worth a place on a program such as we are considering. In the Mozart edition of the

L. VAN BEETHOVEN

same magazine may be found several beautiful verses which, if read, would make a pleasant addition to a Mozart program. In the last program it is not intended to play the whole of the symphonies nor sonatas, but one movement only. It is a mistake to make a program too long, yet this mistake is more frequently made than any other. A half tone "cut" costs very little money and a picture of the composer should grace the first page of the program, which should contain also appropriate quotations referring to music generally, or to the particular musician under consideration. For instance, a Schubert program might contain his epitaph (by the poet Grilparzer), a verse on Schubert's music by George Eliot, and a quotation from his own letters regarding his compositions. Such passages are peculiarly beautiful and appropriate, and they have a decidedly good effect educationally, no less than esthetically.

My subject has become long drawn out, and more space has been consumed than was at first intended, but my enthusiasm and belief in the particular branch of a teacher's work must be my excuse. Concerts of this kind have been the source of much pleasure and profit to many people. From a general educational standpoint, there is nothing that can successfully take their place. As a source of inspiration to a student



BEETHOVEN
(Julius Schnorr)

they are indispensable. As hinted at in the beginning, the topic is not new, having already received treatment by others. At the same time, special evenings devoted to the works of one great writer are not given as frequently as their importance would warrant. It is sincerely hoped that the present effort will not fail to impress many teachers with the beauty and the utility of such programs, and that in the future the lives and works of these great tone poets will receive greater attention from us who know them so well, and it will follow that in course of time, so far as the general public is concerned, Bach, Handel, Haydn, Mozart, Mendelssohn, Schubert and Beethoven will be much more than they are at present — vague, traditional names and nothing more.

THE TEACHER'S FORUM

THE PSYCHOLOGIC ELEMENT IN TEACHING

FRANCIS H. MORTON

In the days gone by I suppose very few, if indeed any, of the vast army of music teachers had the faintest conception of a question involving metaphysics entering into every department of their teaching. Even in this otherwise enlightened age, there is not more than, say, one per cent of them all who intelligently recognize such an element in a system of tuition. Why this is so is hard to say, because a teacher who is at all up-to-date and progressive can avail of numbers of valuable books and journals which will aid in perfecting, as far as may be, any system of instruction employed. That is to say, there are certain facts fundamental to all methods in teaching. The method that embodies the greatest number of these fundamental truths will therefore be the most enlightened, effective, enjoyable, and progressive.

I think that perhaps the real reason of the deplorable and widespread ignorance regarding the psychologic element in teaching the pianoforte — or other instrument — lies in the failure of professors of all but high intelligence and originality to appreciate the fact that teaching is primarily mental; the action of mind upon mind, reason upon reason. Teachers in general have a fund of knowledge which it is their duty, and, let us hope, their pleasure, to impart to pupils. They are satisfied if they do but know one way of imparting such knowledge, and if pupils chance along who are not amenable to that method, so much the worse for them.

Yet there are some, teachers by the grace of God, who do seem to have an admirable facility in imparting instruction to all and sundry, and manage to get away from routine, seeking for themselves light in a region commonly shrouded in darkness and difficulty, and who finally, after testing their methods, ideas, and theories, vouchsafe some information as authors to those who will diligently read, mark, and inwardly digest what is set forth in such literature.

In this connection it is easy to see the great and good work done by musical magazines, the best of which have on their contributing staff the acutest minds and most fertile originality a whole nation can produce. We cannot doubt that the mightiest factor in the world-wide spread of the most inspired Gospel of Music is the first-class musical journal.

I have often thought that the same generous spirit of "give and take" pervades the ranks of the contributors as should exist between a more or less advanced student and the teacher. If a writer has a good idea, he does not selfishly keep it to himself, but presents it to all for their perusal. But he finds his recompense in what is presented for *his* inspection by other writers.

FRANCIS H. MORTON

Though this is seemingly far from our present theme, there is nevertheless a strong psychic trait here, for the edification of teachers as well as writers of music. If a teacher withholds that which would greatly aid a pupil, through fear of such information spreading out of his immediate circle, he does both himself and the pupil injustice, inasmuch as his mind, by continued pondering on the treasured discovery or information, inhibits the output of mental energy and force that would have brought him additional information and research. Then, too, the pupil feels there is something lacking to aid his progress, and very likely has a lurking suspicion that the teacher could help, as he has in the past, if he would. Thus there is a tendency that places in jeopardy that frank exchange of ideas and thoughts that marked their intercourse at lessons in days gone by.

Perhaps the teacher even has a morbid dread that by giving the necessary information the pupil may really become as proficient as he; that he cannot permit — perish the thought! What a pity an otherwise excellent teacher should so limit himself and his noble work! For by degrees this insidious idea will permeate the instruction given in lower grades, until maybe the solid structure of his former teaching is undermined.

In considering the psychological element in teaching, it should be borne in mind that an instructor has various ways of influencing the one beside him. To begin with, there is verbal work to be done of the utmost importance. A very common fault is that of permitting the voice to assume a monotonous tone. When this occurs, the pupil will almost invariably detect a lack of vitality, and any mental alertness manifested will in time succumb to the deadening influence of the teacher's style. Emphasis laid on certain important words in each sentence and tasteful modulation of the voice would so remedy matters that it would be an easy and natural process for a pupil to respond to this teaching, and remember most of what would be otherwise completely forgotten.

The psychic reason for this is that what is automatically given forth will be automatically received.

Therefore when a teacher, by necessary emphasis and suitable vocal modulation, adds the quality of intellectual interest to his discourse, the student, by the sympathetic force of the teacher, will be aroused to a similar mental attitude, and be correspondingly benefited thereby.

THOSE MINOR SCALES

FREDERIC S. LAW

Most teachers find the minor scale a disturbing element in their work. The idea of the major scale dragging a relative minor after it like a distorted shadow is a bewildering one to most pupils on account of the contradictions involved. Why, they ask, does the minor scale change its form in two or three puzzling ways? — why does it not have a signature of its own, so that it may be recognized? — why must we hear it in order to be able to distinguish it?

There are two ways of regarding the minor mode: first, as a thoroughly independent one; second, as a modified form of its relative major. The first view is generally maintained by instrumentalists, the second by vocalists.

I declare unhesitatingly for the second point of view, not only from mental effect, as the tonic-sol-faists call it, but because of the ease and simplicity of explaining its anomalies. I fail to see how a key can be said to be independent in the sense that a major key undoubtedly is when its intervals can be shifted about, as shown by the various forms of the minor scale; when it continually exhibits a tendency to dissolve into its relative major. That the minor scale is in essence a modification of its relative major seems to me clear, theoretically speaking; that in practice the composer, from the standpoint of convenience, treats it as an independent form, is readily seen. Modern music demands a fixed tonality; hence in the great majority of ultimate changes from minor to major the same key-note is retained, though the transition from a minor key to its parallel major invariably strikes the ear as being more abrupt than one to its relative major. The very feeling of an easily shifted centre of gravity so characteristic of the minor mode is a strong factor in its artistic use; it pictures the sombre, the uncertain — while the major expresses confidence, assurance, triumph. It was this impression of doubtful tonality that led a child to reply, when asked if she could distinguish between major and

minor: "Yes; when it doesn't sound quite right, then I know it's minor."

In teaching the minor scales I find that the following explanation never fails in giving a distinct understanding of their nature and formation. Even young children have no difficulty in putting them together theoretically and in playing them on the piano after the formulæ therein furnished.

More than two thousand years ago the Greeks had a number of different modes where we have but two — major and minor. The scales of these modes began on the degrees of our major scale and had various names, *e.g.*, Ionian, Dorian, Phrygian, etc. The Ionian ran from C to C, the Dorian from D to D, the Phrygian from E to E, and so on. Since no accidentals were employed, it will be seen that these varying scales were in reality pieces, so to speak, of the same scale. They were retained, with modifications, for many centuries by the Church, but, with the exception of the present major (Ionian) and its relative minor (Eolian), gradually fell out of use. The natural or primitive minor scale is a scale formed in this way, beginning on the sixth degree of the major (hence called its relative major) and proceeding without chromatic alteration, as from A to A in the key of C. It is thus said to be the relative minor of the major key which contains all of its tones. The effect of the major second, or whole step, between the seventh and eighth degrees, however, was so unsatisfactory to modern ears that the seventh was raised a half step, thus giving the scale a leading tone, *i.e.*, a tone leading conclusively into the tonic, or key-note, and emphasizing its importance as the generating tone of the key, the point of repose. This form with the raised seventh is known as the harmonic or true minor scale — the only one recognized in harmony. Its effect is strong, but rugged, owing to the wide interval (augmented second) which this sharping of the seventh necessarily made between six and seven. To smooth this over and to make the minor scale easier of execution, especially to singers, the sixth was also sharped, and thus the first step to the melodic minor scale was taken. But it was soon found that another step was necessary. In ascending the scale was perceived to be minor as soon as the third was heard: in descending, however, the first five tones are the same as the parallel major (*i.e.*, the major key having the same tonic), so that the sixth tone came as a disagreeable shock to the ear, which in such case instinctively expects the major, or raised, third. In order to avoid this unpleasant effect the natural minor scale was taken in the descending scale; and thus we have the melodic minor scale, with major sixth and seventh ascending and minor sixth and seventh descending,—in its nature a compromise; smoother, but weaker than the true harmonic minor. It may also descend according to the harmonic formula, *i.e.*, with a major seventh and a minor sixth. In a composition by Liszt, the name of which escapes me, these two forms are used in one and the same scale—a long, descending passage, in which each octave changes from natural to harmonic and *vice versa;* in other words, one octave is played in the natural form and the succeeding one in the harmonic form, which in the next octave changes to the natural form, and so on. When delivered with the requisite bravura it is difficult for any but the most practiced ear to detect the variations in the successive octaves. Such a liberty could hardly be taken in a major key.

The so-called Hungarian scale may also be mentioned in this connection. It is an intensified harmonic minor scale; the fourth and seventh are both sharped, *e.g.*, A, B, C, D♯, E, F, G♯, A. See William Mason's *Romance Etude* — which, as some one justly remarks, is more etude than romance — for a practical application of this scale.

Thus it is seen that there are several forms of the minor scale, varying from each other in different points, but all agreeing in one essential,— that of being built on a minor third; that is, the third is a minor third (a step and a half) from its tonic instead of a major third (two whole steps), as in the case of the major scale. Therefore the correct answer to the question which so often puzzles pupils, What is the difference between a major scale and a minor scale? is: A major scale has a major third, a minor scale has a minor third. The same definition holds good with chords.

A serious difficulty with the minor mode is the lack of a definite signature by which it can be readily recognized. This difficulty does not exist, of course, for the experienced musician, but it perplexes the novice not a little. It has been proposed to meet it by adding to the signature of the relative major a sharp or a natural, indicating the raised leading tone of the minor. This has not met with acceptance, for the very good reason that if adopted it would lead to greater complexity and obscurity. The sharped seventh of the minor mode is by no means invariable, as we have seen; besides, the proposed signature would result in apparent contradictions. The signature for C minor, for instance, would be either the two flats — E and A, or three — B, E, and A, followed by a natural, cancelling the flat on B. I remember seeing a song by Bruckner bearing such a signature to indicate the Hungarian minor, but it was far from being a simplification of that peculiar mode or an aid in reading the key. The training of the ear to distinguish the minor effect from that of the major and of the eye to discover the raised leading tone, the fifth of the apparent signature, are two of the most practical devices to gain the end in view.

To recapitulate: Every major scale has a relative minor scale bearing the same signature, the key-note of which is on the sixth of its relative major. The principal forms of the minor scale are:—

I. Natural minor; no accidentals.

II. Harmonic minor; seventh sharped.

III. Melodic minor; sixth and seventh sharped ascending, natural minor descending, *i.e.*, the accidentals contradicted; sometimes harmonic minor descending.

In teaching let the pupil first play a major scale, then its relative minor in the three forms — natural, harmonic, and melodic. Have him listen attentively to the effect of each, and by the time he has gone through all the keys in this way he will be prepared to write them out in the chromatically altered forms — harmonic and melodic. It is understood, of course, that the major scales have previously been written, so that the student has a knowledge of all the signatures. This is best done by giving him all the tones used as key-notes, enharmonic as well as chromatic, *e.g.*, C, C♯, D♭, D, E♭, etc., — fifteen in all — and having them formed by accidentals without signature. The minor scales are necessarily written with signatures and accidentals used to effect the changes indicated in the above formulæ. It will be seen that this requires complete understanding of all chromatic characters used to raise and lower pitches with their proper contradictions — the double flat excepted — in itself an admirable theoretical drill.

PREDIGESTED THOUGHTS EASY TO ASSIMILATE

THALEON BLAKE

Hope is all right, yet alone it never made a musician. The same can be said of high ideals, with more pointedness, because students too often judge of what their future success ought to be by considering the altitude of their ideals. The plainer, commoner virtues are the real bringers-about of success; for instance, perseverance, industry, resolution, and sobriety both of passions and of appetites.

* * * * * *

A teacher who constantly sharpens his intellect to probe the ignorance of others, and cannot be convinced of possessing deficiencies himself, is rapidly approaching the limit of his usefulness. *Study self* — give part of each day to self-examination.

* * * * * *

Almost all of the great spirits of history were in the habit of communing with themselves. Introspection, retrospection, revolving their projects over and over, alone with their privatest minds. Solitude not only favors intimacy with our spiritual powers, but is essential to any true acquaintance. Be alone, and think — the secret consciousness never flatters, never cajoles, never lies, never bears false witness to vanity. A strong mind must look within frequently; a common one ought to.

* * * * * *

A man who had attended a musician's convention was extolling American musicians. The things not seen impressed him most favorably. "The majority of the men looked like well-dressed, well-mannered gentlemen of more materialistic callings." He should have taken some of them for prosperous business men but for the badges which they wore. This is very high praise, indeed. Long hair and a nervous, distracted look may show a man to be an artist, but such mannerisms are more apt to prove a man to be a freak.

* * * * * *

If I were to pen a thousand letters to young men and women, I should ever insist on the great need to them of literature. If this be a hobby, let it be a hobby: I should be proud to ride it. And it often afflicts me to sadness to discover the lamentable ignorance concerning literature which obtains among practically all art students, an ignorance of which they are not unaware. Why should one who yearns to succeed in some special field of artistic endeavor be so absurdly credulous as to imagine that he can measure the full extent and depth of his talent by ignoring the sister arts which also worship beauty? Why should any novice be permitted by the guardians of his talent to develop so one-sidedly? Diversified interests intensify rather than dissipate true love for our specialty.

Rudolph Aronson has opened negotiations with Siegfried Wagner at Bayreuth for the season of 1907–1908 for a series of orchestral concerts in America, and he has also procured from Maëstro Leoncavallo the rights for the initial production in America of that composer's *La jeunesse de Figaro* an *opera-buffa*, the libretto by Victorien Sardou.

THE COMMONPLACES OF VOCAL ART—A STATEMENT OF THE PHILOSOPHY OF SINGING FROM A MODERN VIEW-POINT

LOUIS ARTHUR RUSSELL

Nature *vs.* Art

Many think that the condition, explained in last issue, is a matter of natural, almost functional action; but it must be borne in mind that the artist has to assume the emotion at least in the initiative of its expression, even though he may finally "enter so into his subject" as to be, as we say, "carried away" by it, in which case it may be somewhat natural, but the more nearly natural the singer or orator becomes, the more likely is he to forget his art, and in this latter case all sorts of accidents are likely to happen, destroying the art work. Even automatism, though never so infallibly established, needs mental control, else at least one item of expression in art, *i.e.*, quality of tone, is sure to be sacrificed. In ordinary life one who is lamenting a lost love, bewailing a perfidious friend, or uttering anathema over a foe, is unlikely to do so in what we would call beautiful tone; on the contrary, the deeper, or at least the more intense the emotion, the more ugly is the voice likely to come from the throat; while with the singer, except in moments when he discards song and lapses into unrestrained shouting or screaming for some dramatic phrase, *in which he wishes to display abject loss of self-restraint*, his greatest care must be that *his voice be allowed its beauty of tone*, and herein enters a subtle thought regarding automatism, which may be expressed as follows: *While automatism controls the local details of art, the mind, perfectly poised under the most strenuous emotional strain, must ever have a calm and infallible control over the automatism, i.e.*, over the complete mechanism! Herein does art find its plane beyond nature's basic laws, and herein does mankind exceed the limitations of the brute. Man can control his impulses and so manipulate the means of expression as to make them express his will rather than his emotions.

The Emotional Effort and Its Source of Power

Intensity of emotional expression is effected by the muscles of the waist and of the back, particularly the diaphragm, which latter, being the strongest muscle of the body, carries its greatest burdens. Emotional expression is the result of force. This force must be counterpoised, else it will fail in expression; it will overstep itself — will "splutter," as we say; the voice will over-blow, and instead of coherent words and sentences, we stammer, mispronounce, jumble the words, and emit disagreeable, often ridiculous sounds, and cut outrageous capers with grimaces, all showing that the emotion has had no "balance wheel"; it "falls over itself," and where intense and serious feeling was to be expressed, the result is generally ludicrous, though sometimes very serious in result; for uncontrolled emotion (passion, hysteria, etc.) results in serious physical accidents, even to the point of death. The singer who attempts to express deep emotion without control of counterpoise will always do something abnormal and ridiculous; every muscle shows the strain, — the face grows red, the eyes seem "a bursting," the limbs stiffen, the neck grows rigid, and the veins stand out in ridges, while the throat will stiffen and fix itself relentlessly. If the climacteric tones come at all from the throat, they are of that quality we know as pinched and throaty, altogether making the singer's efforts painful to the listener, and the great probability is that the voice will not stand the strain, but will "break" upon the high tones.

All this is due to lack of equipoise. For every correct muscular effort there must be a counterpoise, an effort making the balance which supports the process; thus, the inspiratory muscles resist the contraction of the expiratory muscles in all true vocal effort, preventing undue breath pressure against the vocal cords. The more acute (higher) tones, when sung with full power, also require the resisting force of counterpoise at the waist, for otherwise too great a pressure of breath is thrown upon the vocal cords. *All local effort* at the throat is to be avoided; the more powerful or higher the tone and the more intense the emotion, the greater is the requirement for counterpoise at the waist; *the effort, the muscular tension, being down, away from the throat*, which must retain the same freedom as in ordinary speech, as must also the other parts of the organs of speech, — the tongue, jaw, and lips.

Involuntary (Functional) *vs.* Voluntary Effort

While it is difficult to determine many of the centres of automatic action in the singing process, such as are really under mental control, though cultivated to a state of subconscious habit, there are a few centres of activity the processes of which seem to be almost functional and are surely involuntary and free from any local controlling effort whatever.

I know that my views on this subject are among the vocal heresies, but I feel confident that readers with a perfect control of freedom and of equipoise, a keen ear, and as keen power of introspection, all of which conditions must obtain to make an authoritative investigator; any such, I say, will surely learn to know that *all vowel making* is (should be) an involuntary act so far as local muscular control is concerned.

It is already generally admitted that the condition, position, and action of the larynx, in which are the vocal cords and of course the glottis, are involuntary, so much so as to be almost functional in their action when allowed perfect freedom from local muscular tension, either directly ordered by the will, or due to lack of power to "let go."

Breath management for singing or speech is a voluntary act, — first, in its cultivation for art purposes by direct local control; finally by automatic control. *Poise of body* is also a voluntary act, — first, by direct control; then through automatism. The correct condition of *the organs of speech*, the various parts of the mouth and upper throat, etc. (excepting the larynx), are really brought about by voluntary effort, though in some items this is more reflex than direct.

Reflex Tension

By reflex tension, or reflex action, we mean such processes as occur through the direct control of some part or parts away from the centre of action in question. Thus in the artist singer, the opening of the back mouth has grown to be a reflex action, due to the voluntary expansion of the body for breath, and could we induce with the student a perfect freedom of the muscles of the throat and neck at once with a control of the buoyant, firm body, there would be no need ever to teach him to "open his throat," as we say; for this condition is a sure reflex of the correct poise of the body, combined with a correct breathing process and a freedom of all muscles of the neck.

The natural, functional "yawn" exemplifies this. This yawning effort or process offers an excellent opportunity for the study of reflex action, as between the body and the throat.

The Throat and the Spine

And this brings us to a rather deep subject, and one upon which there is much of contrary opinion; *i.e.*, the connection between the condition of the spine and the action of the throat and back mouth.

I shall not attempt to enter into any deep technical explanation of this, but will briefly state the condition. The relations existing between the spinal column and the tissue all about the pharynx, the back surface of which lies practically against the spinal column, are but faintly understood; but that there is a close sympathetic relation between the spinal column with its surrounding muscles, at the back of the neck, and the muscles of the upper throat and back mouth, is certain. The student finds great assistance in bringing about the singer's poise and the singer's sensation when he recognizes this fact, and in his earlier study of muscular control seeks to realize what appears to be a reflex influence upon the throat and mouth, especially upon the soft palate (the uvula particularly), through or from the condition of the spinal muscles.

In yawning, the cervical (neck) vertebræ assume an almost rigid condition, the surrounding muscular tissue contracting very appreciably; through reflex or sympathetic muscular action the soft palate is affected, and rises as high as possible. If we *let go the strain*, the extreme tension of the involuntary yawn, we still have the active influence of the spinal column and the muscles mentioned; but now in what we know as elastic freedom the fauces still remains open, but not in stiffness, the mouth spaces are free and open, allowing for proper exit of the tone as well as for resonance.

Many of the automatic processes at work in singing may be looked upon as reflex, but the condition in these cases is of no particular importance, since they are cultivated locally, and in the final result the automatism carries the specific processes on without attention of the will.

"Let go" while "holding On"

When the student clearly understands the distinction between the voluntary and the involuntary efforts in singing, it will be a very simple problem to learn that we "let go" of those parts which act involuntarily, while we, subconsciously as to the local items and consciously as to the complex process, control (mildly hold on) to the automatic process. Thus we "let go" the throat completely, letting it act as free from our will as if its work were functional; at the same time we control the body, willing it into a certain poise, and we will the back mouth and pharynx to remain open. We "let go" all muscles not in actual requirement, and hold under control such as are needed. We say, however, that practically no part is "let go" to the condition of flaccidity.

The Floating Chin

The floating chin and free tongue are constant watchwords of the new school of vocal culture. The tongue will easily hang free if the general buoyancy of body and a free throat be maintained, but the floating chin is perhaps a more difficult accomplishment. However, this is a simple thing for one who has mastered the thought of relaxation and elastic freedom. *The chin drops down and backward* (the floor seeming to drop into the neck), and hangs there as free and floating as if it had no muscular connection with the other parts of the head. From this inert (or seemingly so) condition it responds upon call to do its part of the singing process, but it must *never stiffen* nor must it ever *interfere*, as is its wont, with the duties of the tongue. If its floor (really the floor of the mouth) stiffens, it affects the freedom of the throat and the larynx and impedes the process of vowel making within the mouth. The whole front surface of the neck and throat from the under jaw bone to the collar bone must be free (feeling soft to the touch); when any part of this surface stiffens (hardens), it affects the intrinsic involuntary muscles of the throat and mouth, and interferes with the freedom of the larynx (and vocal cords). *In enunciation and articulation* the chin has very little to do, and should *never interfere* in the articulation of the tongue consonants. *Try reading aloud* from a book or newspaper with the

teeth together, or if the teeth be too closely set together, place the thickness of a match between them, and notice how little chin action is required in articulation. Cultivate the loose back-dropping, floating chin; it aids the whole oral process and also the freedom of throat.

The Open Throat

When the chin is "*floating*," the *tongue* in elastic freedom, the *soft palate* in active condition (upraised through reflex tension, not locally strained), the *back mouth and throat* will open as we take breath into the lungs. There is much of importance in the sensation of *downward* opening, as if the throat dropped open, down into the neck and chest. This downward opening should prevail from the lips through the entire mouth to the larynx. The tendency to spread the mouth sidewise (crosswise) at any point (lips included) is wrong; it induces stiffness of the muscles, leading also to white, thin tone; while the feeling of downward opening, with broadening at the throat and chest, gives breadth to the tone, and by adding a more sombre hue, the whole character of the voice is made more serious, more artistic. The chin drops downward and backward in floating looseness; the tongue likewise hangs limp in the open throat. Mr. E. J. Meyer in his latest work has aptly expressed this thus — the mouth open "O" rather than " ○."

The Training of the Tongue

Among the many errors of teaching which have so long stood in the way of singers' advancement in art is the thought that correct vowel making is a matter of lip shaping. I have elsewhere entered largely into the discussion of this subject,* and will here only make the statement that vowels are made in the mouth behind the lips, and practically by the mid and back tongue, the lips having nothing to do with the *vowel color*, although some vowels find their focus *at* the lips. *Every shade of vowel color can be readily made and should always be made without interference of the lips.* On the contrary, however, the tongue should be trained to a perfect freedom, so that those infinitely small variations of inner mouth shapes which are primarily due to the position of the tongue, and which give vowel color to speech, may be at the instantaneous call of the will. The tongue is the most neglected of the parts of the apparatus of speech, and when not neglected entirely, it is generally wrongly treated by the singing master and student.

Where can one find vocal students who are not struggling to "*hold the tongue flat.*" Every conceivable device is used to bring about this almost impossible condition, and were it possible, *the condition is not correct.* The absolutely flat back or flat top tongue is practicable only when pronouncing *ah*; all other vowels require other conditions of the tongue. The tongue must be trained to a condition of freedom, not to a condition of flatness, for the flat tongue, except for *ah*, is a stiff tongue, and what we must have for free vowel speaking is a perfectly free tongue, which can shape itself automatically in song as in colloquial speech for all vowels. For this the mid and back tongue need special processes of training, which processes must tend to loosen the thicker parts of this member, and free it not only from the back mouth and throat, but also from the sympathetic action of the lower jaw, which is ever offering its unneeded assistance; and at last the tongue must be so free at the thicker posterior parts as to allow these thicker sections to act unimpeded in vowel making, while the tip surface is engaged in articulating the lingual consonants.

The use of coins or spoon backs to hold the tongue flat is a most pernicious process. *The tongue must be taught to act*, and never should be restrained in any such mechanical way as these or their like. Every shade of vocal color can be easily and properly sounded with the tip tongue held gently between the teeth, and with the lips loosely separated and motionless. An experiment along this line will prove at once the condition of freedom or stiffness of the tongue, which is a most essential condition.

A stiff tongue, whether flat or "humped," will do more to induce a throaty, non-resonant tone than almost any other false condition; furthermore, such a condition never allows distinct articulation or enunciation. If we look well after the back tongue, the tip tongue will take care of itself.

The Open Mouth

We are told that the mouth must be open, and indeed it must; but a great error is often fallen into by the idea that the chin must be dropped extremely. This is not the fact, and its doing is often the cause of inartistic tone quality. The *open throat and back mouth* must be the care of the student; here at the line of and back of the pillars of the fauces is where we want the freely wide-open space, and we should have control over this condition whether the front mouth at the lips and teeth be wide open or close together. The front mouth at the teeth should be loosely open, from three eighths to half an inch, or more in some cases.

However, in practicing for color and for diction, it is well to experiment with the teeth together and also with them far apart (the chin dropped low), so that finally the "middle ground," so often mentioned, and with which is found the greatest freedom and the greatest variety of power, may become the habitual condition.

Some singers find an extremely wide open front mouth an aid in singing the highest tones in coloratura passages; but usually a very open front mouth induces a pinched, closed throat and back mouth. The practice with words for the open throat will be quicker in results if done frequently with the teeth fixed loosely together, making as little as possible of motion with the lips.*

* *English Diction for Singers and Speakers.*

WOMAN'S GREAT FIELD IN THE MUSICAL LIFE

W. FRANCIS GATES

Notwithstanding the fact that woman has had a certain handicap in musical matters, she has furnished the great body of musical amateurs, without which the professional artistic world would have a sorry time of it. In past ages the feminine portion of society had its scope confined to the duties of the household. The woman of the past could cook, sew, and generally look well to the ways of her household, although deprived of the enlightening assistance of a woman's club. Her educational outlook was narrow, yet there is a qualification to be added to this, for the very confinement to home gave opportunity for a study of the arts that the men of those times did not possess.

Later, she came to have enlarged musical opportunities, for the girl always received music lessons, to the exclusion of the boy, and was expected to be musical, while the latter was not, but in our own times, she is thoroughly "emancipated"; she attends the same colleges as her brothers, engages in the same occupations, and enters the same professions.

Woman is welcomed as a performer and is given equal opportunity of representation on programs with the male composers. This leads to the questions, — has she made the most of her opportunities? Is her best field in composition, or is it, rather, in that of a general dissemination of musical interest?

Truly, she has been called the queen of the home; but unsatisfied with this field, as the arts and sciences became open to her, she took a prominent place in literature. In the business world woman has, in some instances, paralleled the successes of men. Why does she not succeed as well in music as in literature? The qualifications are largely the same and some of the requirements are identical. While man has for ages been occupied with war and business, she has remained at home with her virginals and her piano. Certainly this should count for something.

In our own day, the boy is sent to school or the business college, enters the store or the shop, while the girl is placed on the piano seat, — irrespective of which of the two has the musical talent. The underlying reason of all this is that man is expected to become a money getter, and woman a money spender.

From her girlhood days the woman is the one who has the most of that *sine qua non* for musical study and composition — leisure time. The busy man, even though he have the inclination, cannot throw himself into a musical mood in the few moments he has to himself each day. Many women work as hard and as long as the men, but on the other hand, many are idle all day long.

Few women, compared with the great army of men, are in a business life. The great majority have several hours a day at their disposal for such pursuits as they care to follow. I emphasize this point to show that woman in general has time to practice an art, has time to compose music, provided she has the ability. The result of woman's nature, environment, and training is that she is "impressionable, emotional, communicative." A large proportion also have the particular mental elements that go for musical ability, strong sense of tune, time, rhythm, harmony.

On the other hand, the temperament of the average man of the Anglo-Saxon races is unemotional, less impressionable, retiring rather than communicative, modest as to exploiting his own sentiments and emotions. He is square-cut, matter of fact, absorbed in his business, owing to the pressure for money getting. Few can be successful business men through the day and in the evening throw off all taint of the shop or office and metamorphose into the artist.

By this, it will be brought to mind that woman excels man in three essentials, — temperament, opportunity, and musical education. There are a thousand times more women studying and practicing music than men; yes, ten thousand. What, then, is the reason that but a mere handful have achieved more than perhaps an honorary mention? Is it too much to say that the reason is in the narrowness of the view which women take of the musical life and in their propensity to "dabble"?

To put deep emotion into music, one must first have the emotions. To affect a listener deeply, one must first feel deeply; that is, one must have experience in life, must have received its hard knocks as well as its coddlings. To conceive great music one must have heard the creations of the masters in music; to obtain broad ideas, one must travel, observe, meet humanity — not sit at home and practice finger exercises.

By the nature and requirements and purposes of her sex, woman is shut off from much of this active turmoil and rougher experience of life. She has not so deep passions as the artistic man. Her life is more tranquil. She does not, because of her specialized nature and nerve sensitiveness, stand continuous application as well as man.

She is endowed with her own nature, her own walk in life, her "sphere," to use a rather obnoxious word. It is truly her own; man cannot invade it; would not be a success if he did. Woman produces that mainspring that moves the musical world and keeps it in motion — the great body of musical amateurs,— for without this impetus the musical spirit of the world would soon become practically dead. She keeps music alive in the home; she starts her children on the right path that leads to musical righteousness.

Woman, then, has her great mission in the musical world. Though it is not so spectacular as that of man, it is equally necessary. It is as important to have the audience as to have the artist. The one is the complement of the other.

From this it is easy to infer that while woman has done little that is great in composition she is no less filling her place in the economy of musical things. She has not the breadth of experience that makes eminent composers; she has not the continuous application; she enjoys music not as an art life, but as an art pleasure.

Perhaps, when woman becomes so fully "emancipated" that she will need careful examination to distinguish her from a man, she may then equal him in all the requisites for greatness in composition. But will not man pay a great price for his new-woman-composer? Is not she who makes music a part of the home attractions preferable to the successful composer who perchance has lost the homeliness, the sympathy for husband and child, by the absorption into art life which success in this sphere demands?

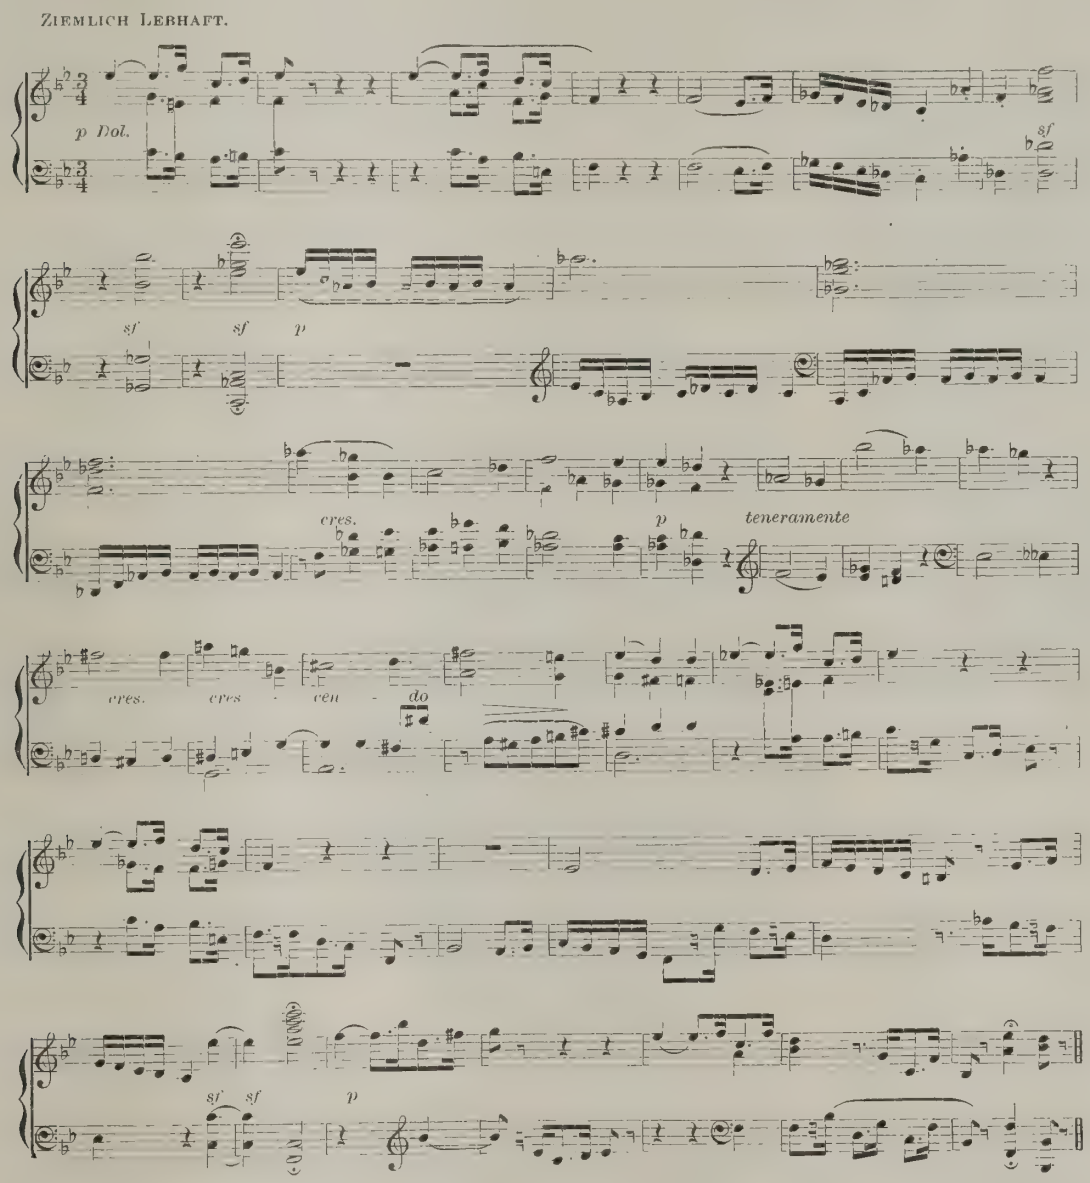
* See *English Diction for Singers* by the author of this paper. Ditson Co.)

A CURIOUS BEETHOVEN MANUSCRIPT

In the *Berliner Allgemeine Musik-Zeitung*, Vol. 1, No. 49, 1824, was published a composition by Beethoven with the title "Aŭf Aŭfforderung geschrieben Nachmittags am 14ten August, 1818, von Beethoven." ("Written by request on the 14th August, 1818, by Beethoven") which is mentioned in the book by Adolf Bernhard Marx, *Life and Works of Ludwig van Beethoven* by and by from the depth of the creative genius and quickly disappearing again, electrical — not lightning yet or like thunder rumbling in the distance. It is not his destination to leave the world like a demon with lightning and thunder — but it is a riddle — boldly given — and the answer is: 'Beethoven!"

Submitting these lines to our esteemed readers, we beg of them to examine the piece carefully, vivace. B major; thirty-nine measures, with portrait of Beethoven (*en pied*). Berlin. Schlesinger: "Interesting because in a few measures are proved the characteristic peculiarities (*in nuce*) of the third period of the Beethoven style [continuing the development of a spirit which will be understood by the coming generation]."

Mentioned also is the composition in Nottebohm: *Thematical List of Printed Works of Lud-*



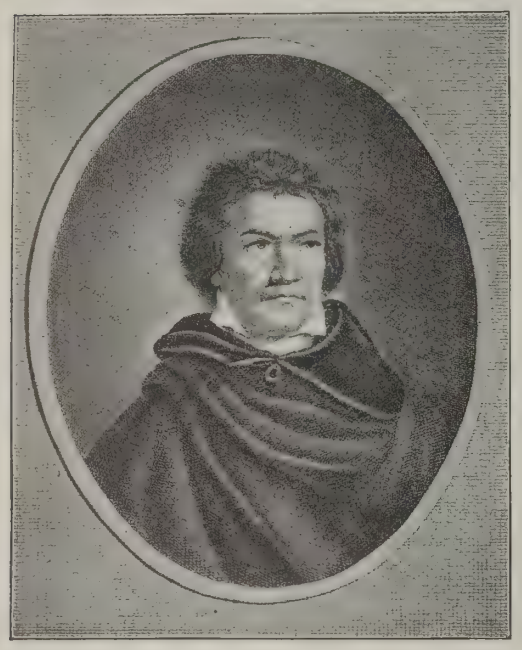
(Berlin, 1878, p. 75), where he says, after treating the so-called *Bagatelles* by Beethoven, as follows: "Much more significant is a small composition by Beethoven, which he wrote on the 14th August, 1818, in the Album of the eminent pianiste Szimanowska by request, *i.e.*, in the moment, printed in No. 49 of the *Berliner Allgemeine Musik-Zeitung*, 1824, later published under the title, *Dernière pensée musicale de Beethoven*, Berlin, by Schlesinger. The whole piece," says Marx, "has only forty measures throughout invention of a moment; everything in it is striking, scintillating spirit, not composed yet in mind, but developing that they may form their own judgment of it and the value of the five opinions mentioned on page 486, keeping in mind, as Sir George Grove concludes, "that Beethoven speaks a language no one has spoken before and treats of things no one has dreamed of before, yet it seems as though he were speaking of matters long familiar in one's mother tongue; as though he touched upon emotions one has lived through in some former existence."

A different explanation is given by Lenz about the little composition in his critical catalog of the complete works of Beethoven, Vol. IV, p. 364: *Dernière pensée de Beethoven* (*pour piano*). Poco *wig van Beethoven*, p. 152, called *Little Piece for Piano*, B major, and in Grove's *Dictionary of Music and Musicians*, 6th ed., p. 273, No. 173.

As this composition is very rare, I expect the readers of The Musician would perhaps enjoy to play and to examine the true copy of it as printed 1824 in the *Berliner Musik-Zeitung*, in which is also added an amusing story about the little piece by some correspondent, perhaps the editor Mr. Marx himself, which, translated from the German, we give as follows: —

" During my visit at the castle Baumgarten, near Prague, I was one day resting in the garden

when my attention was drawn to two young ladies seated on a bench near me, engaged in a lively conversation and examining some papers. I noticed that the papers seemed too large for ladies' correspondence, though too small for fashion magazines. While they were thus occupied, a little boy came running up to them, crying: 'Papa, papa has arrived!' The young women immediately gathered up the papers and hurried away. A minute later, noticing a loose sheet beneath the bench, I reached down to get it and at once recognized a musical composition in the unmistakable handwriting of Beethoven. But the young women soon returned and were overjoyed upon seeing the paper in my hand. One



L. VAN BEETHOVEN (AN UNCOMMON PORTRAIT)
(From an engraving by A. Brückner)

of them — with a face that was beautiful and dark-complexioned, told me that the piece was composed for a lady — entirely a stranger to Beethoven — who had gone to him and insisted upon his composing something for her. The fair speaker went on and told me how she had gotten the composition from the latter for examination. 'I was,' she continued, 'in a controversy with my friend here' — I turned and noticed a beautiful blonde — 'I was very severe with her, because she could not understand why I did not weep while reading those lines.' 'Please don't exaggerate,' cried the other. 'I was only disappointed because you seemed not to comprehend the high spirit of genius, expressing his deep thoughts in these short lines.' Then addressing me, she continued, 'You are apparently an artist, sir, and if so, can probably understand how the genial composer was disturbed and angry at the insistence of his bold intruder. Evidently he was greatly wrought up, but was trying to collect his distracted thoughts — can't you imagine him delivering the sheet of paper to the lady and saying, while endeavoring goodnaturedly to hide an ironical smile: "Your request is responsible for these musical lines!" ' Here the other, laughing merrily, broke in with, 'But, Clara, can't you see how the divine poet-musician and peerless hermit of Vienna expressed his melancholy sadness and how with a significant sigh he handed the paper to the intruder?' Then addressing me, she went on: 'Is it not admirable, how my friend is suffering with him?' I replied that I would not venture to pronounce judgment at such short notice and that one's temperament would naturally influence one's decision. I volunteered to submit the matter to competent judges, thus obtaining, as a reward for my shrewd proposal, a copy of the valuable manuscript. I took the piece to five musicians, telling them nothing beyond the fact that Beethoven had composed it at the request of a young lady. The piece was played twice without any comment, and then without reading the music the following five opinions were delivered. They are given literally, just as they were hastily written:

I

"Beethoven expresses first in a few measures the inconvenience caused by the request of a lady to write something for her in the album, but considering the situation, concluded to liberate himself from the intruder and showing his politeness to the lady, says at last: I always get annoyed by the fair sex.

II

"Beethoven, embarrassed at the request of a perfect stranger, quickly determined to express his meaning that she is an intruder, though still yielding, to oblige a young lady.

III

"What shall I write? I am thinking and musing — but I can think of nothing. Please take my good will for granted and accept the warm feeling expressed in the few lines.

IV

"Do you expect the genius to be at your command? Please let me alone! I see very well the fine web you have woven around me. I wished I could destroy it! but still feel inclined to yield! Is it not the aspiration of the soul for the melodies floating in the distance and attracting it irresistibly? My ardent desire is to receive and associate with those melodies! Although a perfect stranger but still connected by the relation of the soul — do you understand me?

V

"So then you want me to compose something! All right! I will do so. You great people always think it is only necessary to give orders, that your patronizing smile will be our delight and promotion! But listen! How far higher is the standing of the artist, the genius! who rules the world and you with it. Everything, even the most holy things, are open to him — and love! Do you know, what is love? Do you? See now, there is a composition for you — take it!

The Boston *Globe* recently held a voting contest for the purpose of determining the tastes of the Boston public. The readers of the paper were asked to designate twelve selections most pleasing to them. Thousands responded to the invitation and from the selections submitted the following program was evolved, the figures being the number of "votes" received for each selection: Intermezzo, *Cavalleria Rusticana*, Mascagni, 5879; overture, *William Tell*, Rossini, 5865; overture, *Tannhäuser*, Wagner, 5858; fantasie, from *Carmen*, Bizet, 5838; *Dixie*, Emmett, 5811; selections from *Faust*, Gounod, 5784; *Miserere* from *Il Trovatore*, Verdi, 5776; *Spring Song*, Mendelssohn, 5754; overture, *Poet and Peasant*, Suppe, 5746; *Second Hungarian Rhapsody*, Liszt, 5740; *Blue Danube Waltz*, Strauss, 5736; selections from *Lohengrin*, Wagner, 5732.

NOTES

William Harper, the well-known baritone, opened his season early in September at Ocean Grove, N J., singing *Elijah*, the rôle which more than any other has served to place him among the greatest of American oratorio singers. Mr. Harper is planning a tour of the South and middle West.

* *

Rudolph Aronson has signed with Wagenhals and Kemper for a series of International Popular Concerts on the lines of the London Ballad and Promenade Concerts, at the Astor Theatre, beginning November 11, next, when four of Mr. Aronson's European artists will make their initial appearances in New York.

Despite repeated announcements that David Bispham would hereafter devote himself exclusively to opera, arrangements have been completed for him to continue until Christmas under the direction of Loudon G. Charlton. Early in January Bispham will make his operatic début as star of *The Vicar of Wakefield*, by Lisa Lehmann.

* *

Following is a program given in honor of William Jennings Bryan at the Castle of Trevano, Lugano, Switzerland, on August 4, under the direction of Louis Lombard of New York: —

1. The Star Spangled Banner.
2. Moto Perpetuo, Op. 2. Solo played all the first violins. Guido Pelizzari, former violin soloist of the Milan Scala, Concertmeister..... *Nicolo Paganini*
3. Largo..... *G. F. Handel*
4. Adagio from Quartet No. 1..... *L. van Beethoven*
5. (*a*) The Lakes of Lombardy, Op. 37 } *Louis Lombard*
   (*b*) Cubana, Op. 36..... }

* *

Dr. Otto Neitzel, pianist, critic, and composer, who comes to America early in October for a series of lecture recitals on the works of great piano composers, has a life story that reads like a page of the old romances. Otto Neitzel, the son of a village musician in the little town of Falkenberg, near the borders of Pomerania, early exhibited the precocity of youthful genius. His father, the local organist, sought means to introduce the child to the musical circles of Berlin, after having himself conducted his boy's musical education so far as limited prospective allowed. At the age of eight the child was presented to Taubert and to Grell, then the great Berlin authorities in the realm of music.

Little Neitzel, who had never received the least instruction in harmony or composition, was by the sheer genius of his rich musical endowment enabled to perform difficult musical exercises. He received flattering testimonials from Grell, Taubert, and Reis. Later, the child attracted the attention of Carl Loewe, a celebrated writer of songs, whose protection proved of the greatest value and assistance.

Dr. Neitzel will give his lecture recital on musical interpretation in the principal American cities. His program includes a discussion of the meaning of pianistic masterpieces which he illustrates in his own inimitable manner.

* *

Three tours are planned this season for the New York Symphony Orchestra under Walter Damrosch. The famous organization, which is now under the management of Loudon G. Charlton, will start on tour early in October, visiting the larger cities of the middle West with the full complement of seventy-four men and with well-known soloists. The second trip will be a short one — probably for a fortnight in January, the New York season allowing but little time away from the metropolis. In the spring, however, there will be an extended festival tour which will give the Southern cities particularly an opportunity of hearing this splendidly equipped orchestra.

MUSIC HISTORY

(A Graduating Minimum)

W. S. B. MATHEWS

In American music schools, conservatories, colleges, and in private study, the subject of music history occupies a variety of positions, indicating very plainly that nothing is yet established concerning this subject of study, as to how it ought to be carried on, and the lines it ought to follow, in order to produce practical results in musical culture. As the subject is one which has occupied the attention of the writer for many years, I may be pardoned for suggesting certain modifications in existing applications of this study, likely, in my opinion, to lead to better results than we usually get.

As to the variety of positions now held by this study the one most prevalent is that of entire neglect — the vast majority of private students, as well as those of the seminaries, colleges, and music schools, giving it no attention whatever. This is absurd on the face of it; for no matter how little a school may know in definitely formulated knowledge upon a purely literary view of the art to which it is supposed to be devoted, it must at least have cultivation enough to regard the art of music as something intensely interesting to all who have capacity for it, interesting more intensely in proportion to the amount of capacity they have, and an art felt in some way to stand in a curiously intimate relation to the inner life.

Whether music makes people who love it and deal with it moral or immoral, whether it conduces to readiness in other studies or the reverse, whether a man will be a better citizen for having musical culture, a better husband, better wife — all these questions remain among the undetermined; yet all agree that in some way the art of music stands in a peculiarly confidential relation to all who have ears to hear it.

It is also plain enough, as soon as we think of it, that a student might accumulate an untold wealth of historical data in music, such as the dates when composers were born and died, the names of some of their most important works, and the like, and derive from the accumulation no musical culture whatever. How does this come? Simply because it is not a question of a composer being born in such a year and dying in such a year; but of a musical genius of certain endowments, which later comers have recognized as new with him (although prepared by heredity and environment); which endowments combine to give his music a world-wide currency — in other words, tend to make it universally significant and weighty, to all who have the necessary musical cultivation to weigh properly this that he has composed.

Hence, while the personal standpoint is not only plausible and inviting, but even necessary in taking up the progress of the art of music, it finally comes out away from the question of mere dates and times, and becomes a question of qualities, of significance, of the feeling of what the man wrote, the taste of it to the human ear — the cultivated musical ear, the universal ear — for music is an art which does not have to be translated in passing from one nation to another — all civilized peoples being affected by music in similar manners, differing in degree according to the individual aptitudes and cultivation of the listeners. It is plain therefore that music goes deeper than words, and touches something in that great under world of humanity where the Unconscious still holds sway.

Music is also a curious study to the psychologist, because while it operates through the usual hearing apparatus, it appeals to refinements of sensation and great acquired capacities for remembering tonal successions, comparing them and following them out to their logical conclusions, amounting in its net result to a sort of universal language of intercommunication, representation, expressions. It would be a matter of great interest to follow out the steps through which these musical capacities have been developed, and such an inquiry would carry us along a very central path in the history of music. And this will some day be done.

Here I am reminded of some very curious psychological experiments recently conducted by a professor, in which he undertook to call in question the pitches of the degrees of the musical scale, by testing individuals with the intonation of different intervals to see whether they liked them better as the musical authorities say they ought to be or at a slightly higher or lower pitch or compass. Naturally there is nothing in a question like this. While musical progress has been terribly slow, it has been pretty sure; and the scales we now have are logical developments in a way from certain elementary harmonic combinations of exact mathematical determination, no more admitting of being put to vote as to their rightness or unrightness than the question whether twice two is precisely four or a trifle more or a trifle less; according to the sensitive preferences of the listener. If the women were called in to vote upon even the mathematical question, many of them

W. S. B. MATHEWS

would very justly take the ground that to a right-minded woman of sympathetic temperament it really makes no difference whether twice two is four or three and ninety hundredths — or any other esthetic deduction or addition to a beggarly unity. We have passed the time when mathematical or chemical equivalents are put to vote accord ing to the sensations of uncultivated observers. We know that they cannot be. So also it is in music.

The ground trouble with our musical history, where we have it now, is that it is too unrelated to the remainder of the culture. Music stands for something. What is this something? Did you ever try to get a definition of music from a circle of graduate students? If not, try it the next time you have the chance. One will say "a matter of notes"; another that "music is tone," and so on. But of reasonable definition you will get nothing. Suppose you do get a definition of it as "the fine art which by means of tones and tonal forms addresses the soul and heart of man through the ears," and then we go on to try and find out how much of this fine art the graduate student understands. It will almost invariably be found that this graduate cannot follow a simple harmonic phrase to tell certainly the order of succession in key; often can not distinguish between major and minor effects, in short, has no ability to follow musical discourse, in the sense of being able to repeat a sentence which has just been spoken, as any listener can repeat a spoken sentence in a language he knows. In other words, a musical house has been built upon the sands. Whatever noble and distinguished music has been taken up to play or to analyze, has been studied by means of the eye and not by the ear; yet the ear is the musical organ just as truly as the eye is the organ for the plastic arts.

Therefore it is plain that to set a body of students at mastering certain histories of art and certain statements of relative eminence between creative masters, at a stage in their progress when as yet they are not able to distinguish by ear between one composer and another, or even between one epoch and another, is to have skipped over several links in a chain. Inasmuch as the tonal substance of music is innately harmonic, and melodic only as subject to harmony and as in a way an afterthought, it is plain that before we are ready to talk about Bach, Beethoven, Schumann, Wagner, as standing for certain radically different types of musical discourse (certain radically different styles in music), we must first learn to know our styles by ear. Otherwise we are like those who criticize painting, depending upon the annotations to tell us which is the horse, which the house, and which the maiden in the picture.

In other words, although harmony is now almost universally studied by serious students, and counterpoint and fugue frequently studied, neither one is generally carried so far as to reach the ear; yet nobody really knows a fugue intimately who cannot write it out from hearing, provided he can get his instalments short enough to carry in his ear and memory.

Modern music for the pianoforte, — and I speak of this because it is the form of music most generally pursued and easiest to perfect, owing to the profusion of helps one may have, such as cheap copies of music, pianolas to repeat difficult works, many recitals and like, — modern music for the pianoforte rests upon a very few types of style and form. When one knows the fugue, the variation, the sonata, he knows practically the substance of everything the great genius will employ in his moments when he is most expert and least hampered; and if we add to these forms the *Song without Words*, the fantasia, and a few dance forms, we have most that remains. But so far as I know there is no school which brings the student ear into contact with the studies in musical form.

Then when we have the typical forms we ought to have the horizon line of great composers who bound the continent of music. Now the composer story is one with almost innumerable elements. Any of our musical histories contains the names and dates of hundreds of composers who in reality did not make one hair white or black in music, but held down chairs, got themselves elected to the learned societies, and the like, and then decently died and were buried, except when musical history resists the disintegrating processes of nature. What we want first is a skeleton of musical history, a broad skeleton; then a perspective plan of schools, proceeding to closer knowledge.

For instance, suppose that we start out to understand the great leading lines of modern music. Modern music has all been written since A.D. 1700, two centuries covers the ground. It is true that in a way the century before 1700 was very important as preparation; but while they built the staging and worked upon it, it was Bach and Handel, with Rameau and Scarlatti, who produced the first works which still endure — with the exception of a very few unusually fortunate compositions of the earlier composers still possible as examples of quaintness and promise.

Now since 1700 the great central line of music comes down by way of Bach, Handel, Haydn, Mozart, Beethoven, Schubert, Mendelssohn, Weber, Schumann, Chopin, Liszt, Wagner, Brahms — and who else? If we add, it will be Tschaikovsky most likely. Should we desire to impart to this list greater variety, we might

insert after Haydn the name of Gluck, after Beethoven the name of Berlioz, after Weber the name of Marschner, and also, perhaps, the four great Italian representatives, Donizetti, Bellini, Rossini, and Verdi. With this list, we are already *au courant* with the substance of musical history, provided we add to our history a practical knowledge of the representative works of the masters in detail.

As an example of the opposite course from what I am proposing, I will mention a lengthy examination paper in musical history I looked through last year, which occupied so much time in getting ready for modern art, that of the musical history which comes right down to the music we study there was hardly a word. Or look in the musical history itself. Look at the subject of French opera. Out of all the names there, such as Rameau, Lulli, Gretry, Boieldieu, and the like, how many are actually operative now? Very few.

At all events, it is quite certain that the list of composers given above covers those whom it is most desirable for musical students to thoroughly understand, and to understand them by hearing, by sympathetic hearing, loving hearing. And this means after the history as such, or better along with it, the study of their works as literature, first as personal creations, with the glow of the the hero saga in full illumination; and later the study of the literature in its closer relations and dependencies. Among other things I would expect such a study to accomplish, would be to explode that curious notion that Haydn perfected the pianoforte sonata; or that Mozart did, and Beethoven accepted it. Nobody perfected it. It never was perfected. Every great genius who has composed things that it has pleased him to name "sonatas," has done it a little differently, more or less according to the degree of his personal creative power.

The playing machines are going to promote this sort of study very much indeed, because while they are not very sensitive (poor machines), they do play the notes, and you can have the tones in the proper time without wearing out your soul over the finger work. And while any piece well played by a living musical soul is worth many very large pieces machinely ground out, there are times when the machine does a very filling job.

And the long and the short of the story is, that the compass of musical history, affording what I would call a respectable minimum for graduation, should comprise not only the main facts about the composers above mentioned, but also an intimate study of their music, from the standpoint of the genius of each composer and the standpoint of the influence of each composer upon his successors. This is the kind of first-aid knowledge we ought to have.

After this I would very much like that general grasp of the entire study which I have traced in my history, with that fulness of detail upon certain ancient developments. And still later, if one cared to make a specialty of the study, I would add all the schools of opera, the progress of symphony, and the latest developments, the national schools, and the like. Such are the possibilities of this many-sided and widely illuminating study.

The vital principle of all is that what we call musical in history is or should be a history of Music; and to accomplish culture, or even to promote culture, it must begin from the musical standpoint, and go on in the same line. The history of music is the history of the principal steps through which mankind has arrived at instruments of tonal richness, has learned to increase the powers of hearing by practice, and eventually has arrived at a point where the musical successions and combinations of tones begin to speak to the deeper feelings of man, to afford him expression, especially to give expression to that great underworld of surging soul, into which as yet words have entered but passingly and but a little way. Music is therefore one of the richest human documents we have; and the capacity for music one of the most specialized capacities we have; and the composers we call great are those whose genius for tones and tonal logic, added to their great personalities and temperaments, enabled them to open to mankind this vast world of the beautiful.

MELODY TOUCH

MARY WOOD CHASE

In playing a flowing melody, melodic passage, or accompaniment melodic in character, the tone produced must be free from all percussion. The most beautiful tones are those which most nearly approach the tones of the violin or singing voice in their pure singing legato. There is no stroke, but rather a pressure of the keys. An interesting experiment was made by Oscar Raif with a piece of smoked glass placed vertically so that a pin inserted in the hammer of an upright piano action would scratch a line on the glass. A quick, sharp blow produced a crooked, irregular line, while with slow, deliberate pressure, the line was straight. This experiment was made with various pianists and students. In every case, the quick blow, producing the irregular or angular line, was made by those with metallic, unsympathetic touches, while the reverse was true of those possessed of a naturally beautiful tone.

The harsh tone, produced by a sharp, sudden blow or stroke, is caused by the almost simultaneous subdivision of the string into all its parts. Even the smallest and most dissonant of its overtones appear so nearly with the fundamental that a jangling, harsh sound, instead of a sweet, musical tone is produced, the effect being decidedly unpleasant to the musical ear.

On the other hand, by a slower subdivision of the string, a gradual reinforcement of the fundamental by its nearest overtones produces a fuller, richer, and more singing tone quality. A beautiful tone is therefore the result of proper muscular conditions and can be cultivated by every one, old or young. The naturally beautiful tone may remain more beautiful than the most perfectly cultivated tone, though without an acquired conscious control the student possessing a natural singing touch might lose some of its original beauty in striving for brilliancy and power.

The pressure or melody touch calls into play both the flexor and extensor muscles, though differing from the stroke in their use.

In the *stroke*, the extensors are first contracted to lift the finger, then immediately relaxed when the finger is dropped, either with or without weight or flexor contraction. In the *pressure* touch the fingers are not allowed to drop. They are *pulled down* by the flexors, with a steady *resistance* of the extensor muscles. If, at any point in the descent of the finger, the extensors are suddenly relaxed, the result will be a blow instead of pressure, even though less heavy because coming from a lesser distance. In the pressure touch, the greater the contraction of the flexors, together with the resistance of the extensors,* the broader will be the tone. For less tone, less contraction and resistance is needed, but there must obviously be a slight contraction for even the most pianissimo tone.

Ball of Finger

In the pressure touch another set of muscles is also brought into play; namely, the extensor and flexor muscles of the first and second phalanges of the fingers. These are often overlooked by great artists, who use the same finger action as for all passage work, plus the resistance of the extensors in the *back* of the hand. The tone produced thereby is a negatively good tone, not sharp and brilliant, but also not the luscious singing tone natural to some and highly cultivated by others. In melodic work, each of the extensor muscles in both the back of the hand and fingers should be contracted to raise the finger with the tip nearly parallel with the key, though still curved, instead of pointing vertically downward. The corresponding flexors obtain the pressure by pulling the finger in at each joint with a steady motion, until the base of the finger presses the key down. The weight of the arm is again of utmost importance. The result will be a singing tone of breadth, depth, and velvety quality.

To illustrate: relax the arm so that the weight rests on the supporting finger, raise the next finger high from the tip (Plate VI). Imagine a strong elastic band fastened

PLATE VI

to the tip of this finger and stretched to the back of the wrist; pull the finger down with strong, *continuous* contraction of the flexors, until the key is pressed (Plate VII). A full, round, singing tone will be the result.

The greater the control and strength or perfect development of these muscles, the fuller, rounder, and more beautiful will the tone become, a tone capable of a range from the tenderest pianissimo to the most passionate fortissimo, but always beautiful.

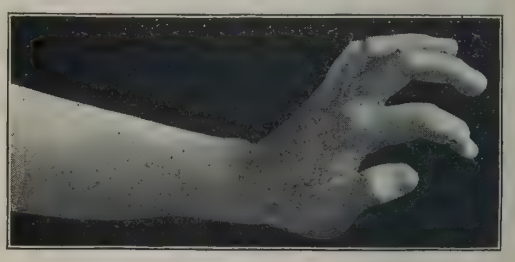


PLATE VII

Thumb Action

If the foregoing ideas of muscular control and exercise have been properly understood, there will be little difficulty regarding the thumb. This clumsiest finger of the hand has double work to do; not only to drop either by stroke or pressure in its natural five-finger position, but to take its place *under* the hand, ready to play after any of the fingers.

PLATE VIII

Like all of the other fingers it must be *curved* at its first joint and raised high, with the thumb muscle between the thumb and hand. This muscle is used to raise the thumb as are the extensors on the back of the hand in raising the fingers. The principle of relaxation, instantaneous or gradual, of this thumb extensor muscle, is the same for either thumb stroke or pressure as with the fingers. To

* If the extensor resistance is too great, the flexor contraction is so nullified as to produce a weak, uncertain tone, and stiffened conditions are the result.

nb into readiness to play after the other ..ding right hand or descending left hand), ..xor thumb muscle is contracted so as to bring ..b underneath the fourth or fifth finger and ..ing the hand (Plate VIII).

It will thus be seen that if the hand is held straight with the keyboard, the thumb cannot reach its key without extreme effort, unless the wrist is turned out. Therefore to save time and extra motion, *the hand should be kept turned out from the wrist.* This will keep the *thumb always over its key* (Plate IX). For the thumb stroke, when thus under the hand, the thumb *extensor* muscle is used. This it will be noticed is precisely the opposite principle from both finger strokes, and also the thumb stroke in five-finger position.

PLATE IX

THUMB RELAXATION

As the thumb is the heaviest finger, and also by reason of its position under the hand it most naturally tends toward stiff conditions, the greatest importance lies in developing *lightness of stroke.* For this, the same methods are used as with the fingers; *no contraction of the extensor* (in the other fingers, the flexors), but simply the *complete* and *instantaneous relaxation* of the *flexor* muscle, which has been contracted to raise the thumb up under the fourth finger. When this muscle is relaxed, the thumb drops with its own *natural weight* upon the key, and carries the key down with it, producing a pianissimo tone. If the hand has been held level, not tipped toward the fifth finger, the thumb will drop with the *tip of the nail* on the edge of the key with the *first joint well curved* (Plate IX).

The greatest tendency and the one which clings longer than all the other thumb faults is the contraction of the extensor muscle in the *middle* phalange of the thumb (Plate X), thus straightening the thumb in its misplaced endeavor to be of service and help the flexor to perform its very simple work of relaxation. When the thumb is under proper control, it is as though one had discovered a long-sought Truth, so simple and free do all the motions become.

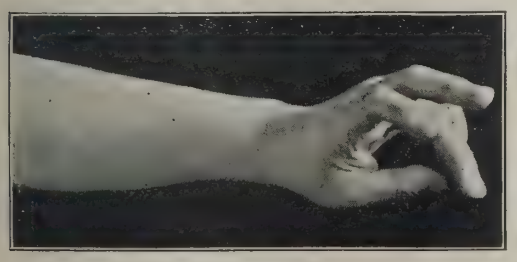

PLATE X

PASSING OF THE HAND

The difficulty of passing the hand over the thumb, contrary to passing the thumb under the hand (conditions

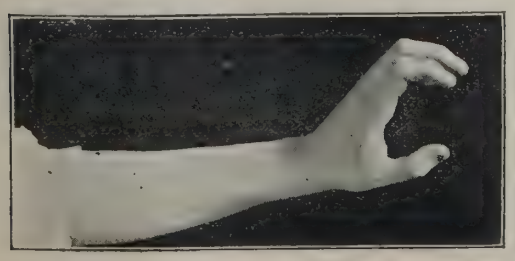

PLATE XI

which occur in all passage work of scale or arpeggio character), calls into play the *same flexor thumb muscle,* which draws the thumb under the hand. *In the thumb action, the hand remains stationary, the thumb moving under; the reverse is true, when the hand passes over.* In the latter case the *thumb* remains stationary (Plate XI), but the *hand is drawn into place* by the contraction of the *same* flexor muscle (Plate XII). Care must be taken to keep the thumb curved, as a straight thumb means the contracted extensors of second and third phalange, or stiffness, caused by resistance to the necessary contraction of the flexor which draws the thumb under, or the thumb over.

If the hand is straight with the keyboard, the fourth finger will have to move the distance of four keys to its next position.

Place the left hand over the five keys from F to C, with the thumb on C. The fourth finger being over G, must in ascending pass to D, a distance of four keys, while the finger can scarcely reach D without turning the wrist. If, however, the wrist is kept turned slightly outward, the fourth finger is brought over B by gradual contraction of the thumb muscle, while the second and third fingers are being played, making a distance of only two, instead of four keys to be traversed, with the added advantage of no intervening wrist motion. and also of easily reaching the key.

PLATE XII

The conclusion is natural that a more fluent and even scale and arpeggio can be played by a slightly outward curved wrist, the arm moving out and in from the elbow freely without resistance, as the hand passes up and down the keyboard.

TOUCH

The principal touches are *legato, staccato,* and *portamento,* with subdivisions of *legatissimo* and *non-legato, mezzo staccato* and *staccatissimo, marcato,* and *vibrato.*

LEGATO means bound together, the tones touching like pearls strung together, neither run into each other, overlapping, nor yet detached or separated. *The vibration of one set of strings must continue until the next commence to vibrate.* So long as a key is held down, the strings which have been set in motion by the hammer belonging to that key will vibrate in unison.

A key, a hammer, three strings, and a damper are the mechanical combination for tone production in the modern pianoforte. As the key is pressed down, the damper rises, leaving the strings free to vibrate. The depression of the key also throws the hammer against the strings, setting them in vibration. The hammer, after striking the strings, flies back, allowing the strings, from which the damper has been removed, to vibrate. If the tone is to be shortened, the key, released, allows the damper to fall on the strings. This stops all vibration. In this way, if one key is held *down,* and the damper *up, until the next key is pressed,* or until the next strings are set in vibration, the result is tones bound together, or in musical terminology, *legato.* Therefore the legato touch is necessarily the finger action which holds down one key until the next is played. If the first key is held over the second, two sets of strings are vibrating simultaneously, or overlapped. On the contrary, if one key rises before the next one is played, the damper of the first stops the vibration of its set of strings before the next begin to vibrate, and the tones are therefore detached. It is thus clear that the *one finger must rise as the next one falls.* If it rises before, the tone will be detached, no matter how slightly; if it holds over the other, the tones will be overlapped.

SUBDIVISION OF LEGATO

The two subdivisions of legato are LEGATISSIMO, or clinging to one key after the other is pressed, that is, overlapped or very much bound together, and NON-LEGATO, or not bound together, raising one finger before the next is played. In non-legato the finger remains on the key until just before the next is played, detaching, but not taking away, half or more of the value of the note.

The signs used for these three tone qualities are for *legato* ⌒; for *legatissimo,* either notes of overlapping values, or the abbreviation, *legatiss. Non-legato* is frequently represented by notes without a slur or by the word *non-legato.* Composers and editors are, however, sometimes negligent by omitting slurs from legato passages, so that the character of both composition and passage in question must frequently be taken into consideration, to determine the degree of legato desired.

(To be continued)

GET INTERESTED

W. F. GATES

With many young people work is synonymous with drudgery. Every task is a Sisyphian load to be shirked if it may, and carried if it must. The reason that work thus becomes drudgery is that there is not with the labor that saving salt of interest. As a matter of philosophic fact, the one thing that makes life worth the living is work, and the abnormal individual who has no pleasure in the creation of anything under the heavens, save his own species, has not the right of life.

Interest in work is the element that keeps it from being drudgery. Why do thousands of wealthy men labor at their businesses and professions after a competence has been obtained? Because of the enjoyment they have in obtaining results, the satisfaction in each day's occupations and successes.

All the great composers, with possibly one exception — Rossini — have continued their work to the edge of the grave. While poverty was a spur in younger days, doubtless wealth would have made little difference in maturity. Several achieved a fair degree of wealth, but they knew no drudgery. Love for the art had extracted the sting.

In this, the lesson for the student is easy to find. If one can get up a personal regard, so to speak, for each task that comes before one, the lubricant is supplied that will keep the wheels moving until the task is conquered. Love for work is seldom carried to too great an extreme. That is an extreme that most people do not have to fear.

There is a modern bit of slang that says, "Get busy." A better one would be, "Get Interested!" Then the matter of being busy will take care of itself. For the student who is interested will find no lack of work or of desire to conquer his tasks. If necessary, create the interest by artificial methods. The wise teacher will do that and the wise pupil will help him. Soon there will be no necessity of extraneous aids. Work is its own cure, if but the matter of enthusiasm be present.

Get interested!

SHALL I KEEP MY PROGRAMS?

J. L. PRICE

There are few musicians, amateur or professional, who have not had moments of deep despondency, wondering how many persons in the average audience really understand what they are hearing, — a state of attention produced by that often-heard remark, "I like music, but I can't remember the names of things." One can see that this grievance is not altogether groundless if he remembers how often he is surprised at the ignorance of competent performers regarding the literature of any instrument but their own. The singer does not feel obliged to know who wrote for the 'cello or the organ; the pianist, if not an accompanist, does not see why he should know violin music, or, for that matter, orchestra music, except as related to the accompaniment of piano concertos. If the case stands thus among musicians, what must it be amongst the laity? Very deplorable, indeed, one is compelled to say, when an intelligent woman tells you that a talented kinsman of hers is composing something for string quartet, "a concerto, she thinks it is." This is as bad as calling an etching a water-color, or a statue a bas-relief, and yet it is the sort of thing that is done every day.

Obviously there should be a remedy, and that remedy is to be found easiest in the printed program, — in the question so often heard in the gilt foyer after the concert, "Shall I keep my program?"

The solution of the difficulty lies in the proper use of the program. No program is so long that it cannot be assimilated by an average mind in the pauses of a concert which are usually spent in the study of adjacent millinery. The range of concert music is not so wide, thanks to the demand for music at once serious and pleasing, that programs do not begin to repeat themselves in a very short time. Any violinist will tell you how put to it he is for variety of solos to suit in his tour of the "provinces." If the average concert-goer, who may be assumed to attend from twelve to twenty concerts a season, reads his program carefully, he need not be surprised on reading such items as Concerto in D minor, Wieniawski, or Ballade in Ab, Chopin, to remember that he has heard that concerto or ballade before, and with a little effort to recall the place and performer.

Two or three years of such practice should make one fairly well acquainted with the staples of concert music, and less likely to call a sonata a symphony or an overture a string quartet.

A very natural objection to this plan is raised by people who say they cannot "tell one tune from another." This is not so serious as it seems, for those who can carry a sheaf of definite melodies away from a concert are very few. There are more, perhaps, for whom, after an interval of a day or two, these melodies sort themselves out; but even these keep only a small proportion. Only now and then, in the case of a man whose profession is music do we hear of one who, like a great piano teacher, went home after hearing Liszt's *Dies Irae* and "played all he could remember of it." One cannot expect to remember such complicated harmony and rhythms unless a professional: if he does remember, it is probably an accident. He is more likely not to. But it is surprising how soon, if one remembers the name of a piece of music, he will recognize the sounds, if he has ever heard it before.

Granted, however, the case of him who actually can *not* "tell one tune from another." There is still a means of recognition.

There is an enormous amount of symbolism in music. And the mind has, I think, an instinctive tendency to visualize sounds. A man who makes no pretense of understanding music said not long ago that the passage in the *Pathetique* Symphony of Tschaikowski, where the bassoons sound "Ba-a-a-a!" made him instantly think of a man who had bitten into the core of life, found it rotten and was rejecting it. This is surely an adequate enough interpretation for a layman. To use the same symphony for another illustration; it is easy to compare a long crescendo of violin tones, a higher, tenser strain, to the approach of madness. The strain becomes intolerable, holds an instant too long, then, as if something had snapped inside the brain, there is a downward howl of violins and madness reigns in the wood-wind. If you will recall the melody to which Liza Lehman has set the quatrain,—

"Strange, is it not, of all the myriads who
Before us pass the door of darkness through,
Not one returns to tell us of the road
Which to discover we must travel too!"

it will be to remember that the lilt of the rhythm sounds disagreeably like a taunt; as if some one had maliciously put the unanswerable question, and sneered, "What are you going to say to this?" This sort of interpretation, any such means of identifying compositions, is bound to be a purely personal matter, for as Tolstoy has pointed out, it will scarcely be the same for two persons, or even the same for the same person twice in succession, though one will remember the picture he had at the last hearing. In its simplest manifestation, this means of remembering compositions may amount to no more than that a Chopin nocturne may mean to one a strip of moonlighted water and a rocking boat, or it may reach to the dignity of philosophical conceptions in a Beethoven symphony. It is, nevertheless, a mental pigeonhole by which we may recognize compositions once heard.

If concert-goers would attend to a few such details, soloists and orchestras might soon be performing to much more appreciative and enlightened audiences, might feel a much closer bond of sympathy and understanding with the public, and be more generously rewarded for the toil and sacrifices of their profession.

"Sonata Tragica"

(To E. A. MacD*)

J. D. LOGAN

Dreamer in tones, whose mellifluous music wrought,
As Connla's Harp in Keltic days of yore,
With captive spell, must we hark nevermore
The melody thy wistful spirit caught
From land and sea and sky and every spot
Of Beauty ineluctable, before
The dumb, obscure, appalling Night closed o'er
Thy senses' pearly ports and left thee naught
Save vacant visitings? Ah, Dreamer, though
The gods have veiled thine effluent phantasy,
We are thy homagers, forever thrall
To thy sweet song and music magical
Of winsome Woodland voices, and the low,
Sad, poignant pulsings of the far-off opal Sea!

*It was the very Greeklike belief of MacDowell that nothing is so sublimely awful as "to heighten the darkness of tragedy by making it follow closely on the heels of triumph." This he has accomplished in his first Sonata (*Tragica*), and fate has ironically transposed to the life of its composer the cruel and tragic drama of his own music. — JAMES HUNEKER.

A SOUTHERN SINGER

The voice of Will S. Hays, the sweetest singer of Southern songs, is nearing the time that it will be hushed forever. On January 29 he celebrated the seventy-fourth anniversary of his birth, says the St. Louis *Republic*.

There is in the entire Southland, perhaps, no better-known man than Col. Will S. Hays, the veteran river editor of the Louisville *Courier-Journal*, and friend of every man, woman, and child in the Blue Grass State.

From the pen of this gifted man flowed such famous melodies of the olden time as *Mollie Darling*, *Keep in de Middle ob de Road*, *Shamus O'Brien*, *Evangeline*, *Old-fashioned Roses are Sweetest*, *Nora O'Neill*, *Little Old Log Cabin in the Lane*, *I'll remember You*, *Love*, *in My Prayers*, and a multitude of others that are still sung in every land where there is a written language.

"Every one of my songs," said Colonel Hays, "means something. There was a reason for its being written. Of course *Mollie Darling* had the greatest vogue. There was a time when it was sung everywhere in America, and I have heard it in England, France, Germany, Italy, and Spain.

"There is a very pretty little story connected with the writing of this song, if you care to hear it.

"I was taken very ill with pneumonia at Pittsburg.

"My attendant was an Irish girl named Mollie. She was a bright, sparkling, rosy-cheeked creature, just from the Emerald Isle, and she never seemed to weary of ministering to my wants. A hallman on the same floor was an Irishman, named Pat. It was not long until I learned they were sweethearts.

"One evening the doctor told me if I were real good, the next morning he would be willing for me to leave my bed and go down to dinner. I was delighted, for I longed to see the river, and hear the splash of the buckets as they doused into the waters. It was dark, but the lights were not lit, and the door of my room was open. Directly in front of my door was a big, deep window, and in this Mollie and Pat were sitting. They thought me asleep, and I suppose I ought to have been.

"I heard Pat whisper, 'Do you love me, Mollie darlin'?' Mollie made no reply, and only nestled closer. 'Let your answer be a kiss,' whispered Pat.

"There was a slight scuffle in the window, and then they went away. But all through that night the words kept running through my mind, 'Do you love me, Mollie darling? Let your answer be a kiss.' I was still weak and nervous, as would have been expected of a man who had been as sick as I was. Then I began to hum the very same tune that countless thousands have since hummed and sung.

"In the morning Pat assisted me to dress, and then Mollie came in to tidy up the room a bit. I sat down at the washstand, and scribbled off the song in its entirety, music and all, as I had composed it in bed. I said nothing to Pat and Mollie. They took me down to breakfast, and all the old river men and my other friends were glad to see me. Then as we arose to leave the table I asked them to step into the parlor, and specially requested that Pat and Mollie, who had been so good to me, go with us. I said I longed to sing and play something and I wanted them to hear it.

"Everybody went along, and I sat at the piano and played and sang *Mollie Darling*. It made a hit with the company, and everybody crowded about to congratulate me. The last was Mollie. She leaned over my shoulder, her face as red as the rose, and whispered, 'An' did yez hear th' answer I gev him?'

"At New York I had no trouble in disposing of the songs I had written, and was standing talking to the proprietor about the batch I thought I would be able to grind out for the next season. A poor old Irish woman entered, begging money with which to bury her dead child. It was a pitiful story, and I turned to the proprietor and suggested that he give me $25 for *Mollie Darling*. I played it over for him and he agreed. I passed the money over to the old woman, and she showered blessings upon me, and said she hoped the song would be under the special patronage of all the saints.

"The song was published and it lay upon the shelf till I came next year. The publisher remarked that I had sold him something like a gold brick. This touched my pride. I knew the song had merit, and I resolved that my judgment should be vindicated. A famous minstrel was playing at one of the theatres. He had sung some of my songs and we were good friends. I asked him as a special favor to sing *Mollie Darling*. He did so, and I led the orchestra.

"Within a week the entire edition had been sold, and there were so many orders for it that it was put on the press again. Everybody on the street was whistling it. Since then, millions of copies have been sold, and the publisher made a fortune out of that one song. I did not get a cent out of it."

A LETTER TO A YOUNG MUSICIAN

W. D. ARMSTRONG

Position at the Piano

The much-discussed question as to whether one should use a chair or stool depends upon conditions: you have doubtless observed that nearly all the great pianists use a chair. When the whole compass of the instrument is demanded, a stool is not satisfactory; you feel that you must be securely and firmly seated. The stool and bench are necessary articles of furniture—the latter is especially useful in duet playing; but in solo work you will preferably use a chair. Then the back has the sensation that there is something to support it, and you may lean against it when practicing. All the comfort you can get while going through your daily technique will be of great value to you. There are piano chairs made with a spiral screw and adjustable back which answer the purpose admirably.

Years ago, when your grandmother played, there was quite a ceremonial gone through with. She usually played in the evening, just at dusk. For the young people in the neighborhood it was a sort of dress occasion. All arrayed in their best clothes, they quietly took seats in the parlor. Not a word was said, not even a whisper; it would disturb the performer, and above all, it would be a breach of etiquette. The dear old lady had to be fixed just so,—there was the brown silk dress, the arrangement of the curls about her forehead, and a certain ring placed on a certain finger. Then she would screw the stool up high, be seated, draw the elbows up to the waist as tightly as possible, hands and wrists stiff; and not the slightest motion of her body would there be. To-day we have gone to the other extreme, relaxation and devitalization, in order that the most difficult music may be played with the least amount of vital force.

A young lady was very anxious to have the late Hans von Bülow hear her play, so he set the time for her to come. She selected a rather easy number for her first effort, and got through with it in fairly good style, but made a tremendous amount of work of it. Von Bülow in his brusque way said, after listening attentively, "Fräulein, you play the easiest pieces with the greatest of difficulty."

Physical culture has done much toward developing bodily control. When you come to play in public you will be taught how to make your stage entrances, and seat yourself at the instrument gracefully.

It would be well if you observed this important fact at the outset, and try walking across the room easily and naturally. When at the piano raise the arms to the height of the shoulders, letting them fall, perfectly relaxed, to the sides, then raise the hands, letting them fall in the lap. Further, as you are inclined to hold the head rather erect, it might be well to feel the same freedom in the neck. This rule will help you much. *Avoid all stiffness.* Anton Rubinstein said, "There are no harsh tones in music."

The most graceful line is a curve, and the strongest form of masonry is the arch, so you are advised to keep on the tips of the fingers for both grace and strength. The thumb demands a somewhat different position, having the function of a pivot, supporting the hand while it crosses. When you come to play octaves, you will then keep it curved toward the first finger, that is, if you have a wide stretch, so that you will not strike more than the one key.

In the time of the old masters—Buxtehude, Bach, and their predecessors—the thumb and little fingers were not used. When playing on the very first keyboards attached to organs, the keys were broad, some four to six inches; the performers struck them with the fists. Later on the flat hand was used, and finally the five fingers. So you see we have progressed from what was most awkward and clumsy to that which is most graceful and artistic. The following are some of the opinions of the world's greatest teachers and musicians:—

To obtain great execution, combined with fulness and variety of tone, all stiffness must be avoided; suppleness of the wrist, and elasticity in the pliancy of the fingers is indispensable. — Sigismund Thalberg.

We must play with the fingers bent, and the sinews free from all stiffness. — Emanuel Bach.

If we hold our fingers stretched outward, so as to be almost straight; or, if we play with our nails, we shall draw but little tone from the instrument. We must strike the key with the fleshy part of the tips of the fingers; the hand held in its most natural position.—Kalkbrenner.

Unbecoming habits should be carefully avoided, as holding the face too close to the book, biting the lips, nodding the head to mark the time, opening or distorting the mouth; as they are prejudicial to health, and contrary to gracefulness of demeanor. — J. N. Hummel.

The player should possess such control over his fingers as enables him, by the weight and pressure of their extremities, to produce every shade and gradation of tone, from the most delicate to the most powerful. — I. Moscheles.

THE LIFE OF BELLS

Comparatively few people know that ringing a bell ruins it. That is, a bell has a definite length of life, and after so many blows will break. A 900 pound bell, struck blows of 178 foot pounds of force, broke after 11,000 blows. A 4,000 pound bell broke after 18,000 blows of 350 foot pounds force. A steel composition bell weighing 1,000 pounds broke after twenty-four blows of 150 foot pounds, but its makers said it was calculated for a lighter blow.—*Korea Daily News*.

ANSWERS TO QUERIES

Mrs. T. J. W., Douglasville, Tex.

1. There is no species of measure that is affected to a greater degree by the tempo, than is 6–8 measure. In slow tempo (as, for instance, in the Largo movement of Beethoven's *Seventh Sonata*), it is a pure example of *triple rhythm*, with three distinct beats in each group — precisely like 3–8 measure; there are, of course, two of these 3–8 groups in each measure, and therefore there is an accent upon the first and fourth beats; but each eighth note is a full "count," and the metronome mark refers to these beats. In rapid tempo, on the other hand, 6–8 measure is really a *duple rhythm*, representing two beats (quarter notes), divided into triplets; it is fundamentally 2–4 measure. An example of this kind occurs in the last movement of Beethoven's *Third Sonata*. The rapidity of the tempo reduces the two "accents" of 6–8 measures to the two fundamental beats of 2–4 measure; the metronome marks should properly refer to these two triplet-quarters, and they generally do. In the same manner, 9–8 measure is very likely to contain three fundamental quarter beats (3–4 measure) divided into triplets; and 12–8 a similar triplet division of 4–4 measure. Compare Mendelssohn's *Songs without Words*, No. 26, with Nos. 19, 17, 13, and 7; also compare No. 3 with Nos. 18 and 21, and compare No. 6 with No. 2; also compare No. 22 with No. 28, and both with the Adagio movement of Beethoven's *Eleventh Sonata* (Op. 22). The composer frequently resorts to this expedient of writing 2–4 measure under the mask of 6–8, or 3–4 as 9–8, simply to save the trouble of marking the triplets; but the player must be able to detect the subterfuge, and interpret accordingly.

2. In "phrasing" a melodic sentence in 6–8 measure, it is extremely unlikely that each group of three eighth notes would be detached; surely not unless there were definite indications, not only in the manner of slurring, but in the character of the piece. As a rule, composers place the slurs so hastily and carelessly that they are not to be relied upon; the player should be so familiar with the structural conditions (the "form") of music, that he can depend upon his own judgment and experience in determining the correct phrasing and fulfilling the composer's real intention.

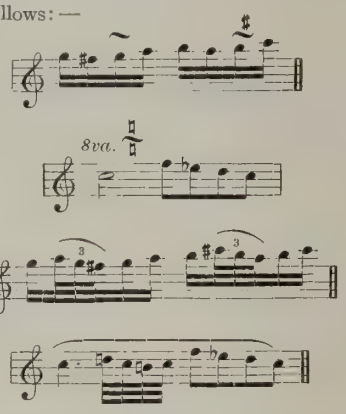
3. It is not an invariable rule that the last note in a phrase is to be played staccato. There are no "invariable rules," especially not in music, whose laws and distinctions are so infinitely subtile, and whose contents so imaginative and flexible. It is necessary, surely, to present a clear impression of the structure, and to render the author's purpose as intelligible and convincing as possible; and it is, therefore, a law of interpretation that the cadences must be made recognizable. This is usually done by detaching the end of a phrase, or section of any kind, from the beginning of the following one; but whether this is to be done by shortening the final tone of each member or by some other means more delicate and discriminating, — only the cultivated judgment of the player can decide.

M. F. McC., Buffalo, N. Y.

In order to remove the confusion that has arisen in your mind by two contradictory definitions of the "large half step," let us take this simple view of the case. There is no doubt of the fact that F♯ lies a trifle *lower* than G♭. Now, if you calculate the distance upward from the tone F, which interval will be the larger — the chromatic half step from F to F♯, or the diatonic half step from F to G♭? The answer to this is the answer to your query. It is evident that the chromatic half step is the smaller of the wo.

Teacher, Toronto, Can.

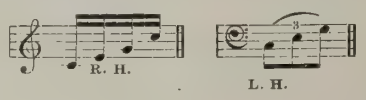
The passages from Beethoven's rondo are generally played as follows: —



J. F. W., Ashland, N. Y.

1. The information you seek concerning the compass and tone of the pianoforte about 1840 is given in detail in Grove's *Dictionary*. There, or in any history of the pianoforte (Fillmore's, Weitzmann's, etc.) you will find more complete answer than can be given here.

2. The eighth *Prelude* of Chopin contains, throughout, a rhythm of three notes against four. This is, naturally, a somewhat difficult combination, — which can scarcely be acquired by calculation, — as two notes against three can. The best, and probably the only, way is to drill each hand separately, very thoroughly. Play the following figures with alternate hands: —

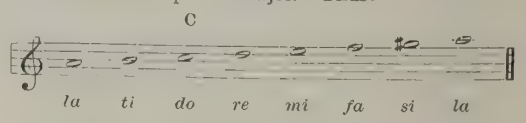


Play four beats of the first figure with the right hand, then four beats of the second figure with the left hand, — using the metronome (about 92), so as to obtain absolutely uniform beats. After doing this about eight times, play each figure only two beats, and then only one beat; and finally play the two together. Gradually quicken the tempo. Also reverse the figures, giving the triplet group to the right hand. When you have learned to combine the figures, you will be able to practice the *Prelude*, thus: —

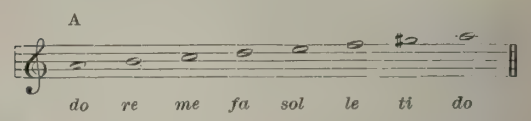
Practice each hand separately, counting eighth notes ("one-and"); use different rates of speed, but preferably rapid tempo. Do not attack the second measure until you are perfectly sure of the first one. Finally, play it as it is written, holding the first and seventh thirty-second note in the right hand.

T. R., Portland, Me.

It has always been customary, until very recent years, to use the same syllables for the major and its relative minor scale, — for example, for C major and A minor. That is, the first step of A minor is called La, with reference to the sixth step of C major. Thus: —



But recently attempts have been made to establish the correct theoretical relation between major and minor, and to use Do uniformly for every first step, whether the scale is major or minor. Thus, for A minor: —



It is very difficult, indeed, to determine which of these is the best; probably it will have to be left to thorough practical tests. There is absolutely no doubt about the relation between A minor and A major; they have the same key-note, and are, consequently, exactly the same key. The minor scale contains a purely external alteration of the major (the lowering of the third and sixth scale steps), that affects what might be called the color ("mode"), but not the frame or body of the key. A minor *is* A major; it has, in reality, no more to do with C major than with any other of its related major keys. Its intimacy with C major is owing merely to its close *resemblance* to the latter. But this resemblance is of great importance, practically considered, simply because it gives the vast untutored multitude of music lovers (the legion of superficially cultivated amateurs) a very convenient and reliable clue to the problem of key-relation; it enables them to perform, at least, one change of key with ease, and thus throws a ray of light upon the difficult process of modulation as a whole. This is so significant an aid that it may be unwise, and may prove to be impossible (for a time, at least), to take it away from the music student, by insisting upon the correct theoretical manner.

It is not "right" to begin A minor with the syllable La, and use the C major series of syllables for the A minor scale; but it is such a help to the weak and helpless that it is possibly "wiser" to do it. The theoretically correct method may, in time, be found to be just as easy as the prevalent La method; it may be that we older musicians find the latter easier, merely because we learned the solmization of minor in that way, and cannot easily unlearn it.

It is sometimes argued that the Do method for minor is not desirable because it inflects Mi to Me (third step). This argument is valueless, because some of the C major syllables have to be modified for A minor in every case, excepting only in the descending melodic form. For the correct seventh step of minor (G♯), the inflection Sol-Si is necessary; and for the raised sixth step (F♯) Fa becomes Fi.

THUS SPAKE RICHARD STRAUSS

Some of Richard Strauss's remarks at a rehearsal of his sensational opera, *Salomé*, at Prague, have been put on record by a member of the orchestra and printed in the Leipziger *Nachrichten*. At one place he stopped the orchestra and said to the players: —

"Gentlemen, that must sound very sweet — must smack, as it were. Imagine yourself eating a luscious pear which actually melts on the tongue."

Such moments, however, were rare. On the whole, he showed that he regarded the orchestra as the prime factor.

"No consideration for the singers! In this opera there is no consideration," he explained at one place. The passage was repeated more vigorously. Then came a place where the trombones and trumpets added to the din. Again Strauss interrupted them: —

"Children," he said, "that is too gentle. We want wild beasts here. This is no civilized music; it is music which must crash. Go to the zoo and listen to the wild beasts there. That's the way it must sound." — *Musical America.*

Ellen Terry has written the following bit of sentiment to the students of the Leeds Dramatic College: "I have been asked to say a word to you. If I say one word, it will be 'Work.' If it were two words, I should say, 'Be patient,' and if it were three words, 'Don't be vain.'"

EDWARD LLOYD

J. PERSSE-SMITH, MUS. DOC.

To write a full account of the musical career of Mr. Edward Lloyd would practically mean the compilation of a history of British music belonging to the last thirty-five years. This task, however interesting in itself it might be, is quite outside the scope of the undertaking which I have in hand. I shall endeavor to confine my monologue on the greatest English tenor of this generation to what I know of his personality, and of his position and achievements in the realm of his art.

It is a truism to reiterate the dictum that "opportunity comes to every one." But if an additional instance were required in order to confirm the veracity of that ancient saw, such could indeed be well found in the circumstances which opened the door of fame to the subject of this article.

The stewards of the Gloucester Festival of 1871 were hastily summoned to meet, just two days before the opening of the celebration. The notice was marked *most urgent*. In haste, accordingly, from all points of the compass, those responsible for the success of the undertaking rushed at the bidding of their secretary, to be dumbfounded by the news that (the late) Mr. Sims Reeves had, at the last moment, declared his unwillingness to undertake the solo tenor music of the *Matthew Passion*. What was to be done? The part, as every one knows, is impossible to an ordinary singer, and the Festival, of which the *Passion* was the *pièce de résistance*, was to begin in two days! Presently a gentleman spoke. He said that he had attended service on the previous Sunday at St. Andrew's, Wells St., London, and that he had heard a solo tenor who, he thought, had the very voice for the rôle in question. The speaker happened to be a person generally regarded as a reliable judge in matters musical, and the immediate result of his remarks was the despatch of a lengthy telegram to (the late) Sir Joseph Barnby (then choirmaster at Sir Andrew's), asking him for the *name and address of his tenor soloist*. That gentleman at once sent the desired information. As a consequence the following telegraphic correspondence took place: —

"MR. EDWARD LLOYD: —

"Can you undertake all principal tenor music for entire Gloucester Festival; if so, state terms.

"THE SECRETARY, *The Close, Gloucester.*"

In a very short time came this reply: —

"FESTIVAL SECRETARY, *The Close, Gloucester:* —

"Shall be happy to undertake all principal tenor music for entire festival. Terms, thirty guineas."

What happened at that historic Festival is matter of musical history. Edward Lloyd came, was heard, and conquered.

The reign of Sims Reeves as an indispensable was over; and his supercession on the occasion by his younger and more gifted rival appears to have been the first phase of his decadence.

The effects as regards Edward Lloyd were immediate and astounding. Press and public were of one mind as regards the merits of the new tenor, and literally within a week his fortune was made. This was but the beginning of a career of success, which has probably never been equaled and certainly has never been surpassed by any singer of British birth. For more than thirty years he has appeared at all the leading festivals and concerts of the better class; and his unique position may be safely said to be well deserved. His voice is of most pure tenor quality, enormous in range (extending easily to the C), of light timbre, but of extraordinary carrying power. He is infallible as a musician; and I do not think that the slightest "slip" was ever recorded against him.

To those who have heard Edward Lloyd sing, my description of his voice will be perhaps fairly well recognized. But Edward Lloyd, the man, is not such a familiar figure. In contradistinction to most other vocalists he possesses a most attractive individualism. Perhaps his most salient characteristic is a sort of sturdy independence quite unusual in an artist. He was once "commanded" to sing before the late Queen at Windsor. He curtly telegraphed to Her Majesty's majordomo: "Terms, fifty guineas." Of course he was never "commanded" again.

In spite of all his success and the flattery he has received, he remains what he was originally, — a quiet, unaffected English gentleman, modest, sensible, and eminently business-like. He has a very lively sense of humor, and whenever he came to sing in Dublin under my conductorship, his first remark was always, "Any new stories, Joe?" On one of these occasions we were holding the orchestral rehearsal for the *Faust* of Berlioz. At one point of the score the composer makes use of a weird instrument called the tam-tam (the sound of which reminds one of a cross between a frying-pan and a tin kettle). The player thereof came in late, but apologizing, said that "it would be all right at the concert." Edward Lloyd thereupon whispered to me, "To-night it will not be tam-tam, but you will say damn-damn."

Speaking of him from the conductor's standpoint, I never met a singer (except Charles Santley) as anxious to secure a perfect artistic result at rehearsals. Repetition is no trouble to him, and a conductor could have no more valuable ally than the great tenor. On one occasion we were rehearsing the well-known *Cujus Animam*. I whispered to Lloyd, "Just hum this; I do not want to tire you out." He answered, "I should like us to do it as we shall in the evening," and he thereupon sang out as though for his life.

Edward Lloyd has now occupied the public attention for nearly forty years. A few years ago he temporarily retired. The old fascination, however, came upon him and he returned to the platform. When asked his reason for so doing, he laconically explained that "Pig-breeding was much more of an art than singing." His "staying power" is to be accounted for by the fact that he has lived carefully, regularly, and conscientiously. He is a most moderate smoker, drinks nothing stronger than beer, and is quite a bigot in regard to the matter of retiring to bed at eleven every night, and at ten when not fulfilling an engagement. On one occasion in Dublin he gave serious offence to the then chairman of the Dublin Musical Society, Sir Richard Sankey, by refusing an invitation to supper after a concert. Even Sir Arthur Sullivan (the conductor for the nonce) appealed to him in vain. On the other hand, in his own beautiful house at Tulse Hill, London, he was always the soul of hospitality; and his private generosity is as great as it is *little known*, or spoken about.

Edward Lloyd presents all the physical attributes that one looks for in a singer. Of medium height, with a broad, deep chest, and an appearance of perfect health and strength, he might be mistaken for a first-rate oarsman, or Rugby quarterback; and it is difficult to detect in the outward man any traces of the sixty and odd years that have passed — oh, so lightly! — over his head. We are still looking longingly for the man who is destined to replace him; and that man, whoever he may be, will have a very arduous task before him. Let us hope that he will prove equal to it. — *The Violin.*

SENTENCE SERMONS

Slander is the coward's sword.

Little sins open the doors to large ones.

Activity is the best amen to any prayer.

Things unreal are foes to righteousness.

The best way to win men to God is to be a man.

The currency of kindness is cash in any country.

Suspicion is the substitute of the slothful for vigilance.

The Bible is a good time card, but a man makes a mistake when he tries to use it for a ticket.

No man is called to the glory of dragon slaying until he has learned to do the little kindly deeds. — HENRY F. COPE *in Chicago Tribune.*

IN THE MORNING

Having always arisen in a state of buoyant health — unless I had done something the night before to deserve a worse fate — I have been disagreeably surprised recently to learn how many human beings there are who arise with a disgust for themselves and the world, a distaste for all human society, and a positive grouch against everything in general.

Needless to say, such a condition is neither healthy nor normal. Sleep ought to rest one completely. If you arise without a feeling of having rested, you have been overtaxing yourself. If the condition has been going on long, it means that you have never had the strength essential for the performance of your duties, which are consequently tiring you beyond your powers of recuperation.

It may be that you did not as a child inherit or acquire the needful strength for the world's work. It may be that you were not properly nourished as a child or that you have not been eating proper food since. Food fads must be responsible for a great deal of misery and dyspepsia for a great deal more.

I know of one person whom nature distinctly intended to be fat, who made life miserable for years by trying to keep thin. At last an acute attack of illness taught him that he had better be fat, and he has been better and fatter from that moment.

Some rules will do a great deal. Be certain, first of all, that you sleep quite enough. Many a person has accumulated a set of regular habits, including fixed hours for rising and going to bed, which deny him proper rest. It is better to sleep too long than too little, no matter what the moralists, from Mother Goose up, have to say.

When you arise take a sponge bath as cool as you can bear it with entire comfort. This will do wonders for your circulation. Then seek the open air where it is as pure as possible and take deep inhalations of it for minutes at a time.

If possible, combine this with a walk before breakfast. Then eat enough; don't be satisfied with mere alleviation of the pangs of hunger, but eat enough to enable you to do your work properly until luncheon time. The walk will not only give you an appetite, but better your digestion.

At luncheon, if your work is sedentary, and after business hours are over, spend as much time as possible in the open air. Sleep with all the air you can get into your room. — WALLACE RICE *in Chicago Tribune.*

Spontini's once famous opera *La Vestale*, was revived at the fêtes of Béziers, August 26–28. There was also a celebration in that city September 2, in honor of Saint-Saëns' seventy-first birthday, in which the composer took part, together with violinist Johannes Wolf and pianist Louis Diemer.

* *

The Thomas Orchestra will give a Beethoven anniversary concert in Chicago next season, on which occasion Josef Lehvinne will play the piano concerto in E♭, Op. 73.

MUSIC AT THE UNIVERSITY OF CALIFORNIA

Dr. J. Fred Wolle, professor of music at the University of California and director of the University Orchestra (of fifty-two performers), has given a series of concerts during the summer at the Greek Theatre. The following program is illustrative of the series: —

Overture: Nature ..... *Dvorak*
Pastoral ..... *Bach*
Symphony: In the Forest ..... *Raff*
Evening in the Mountains ..... } *Grieg*
At the Cradle ..... }
Overture: Spring ..... *Goldmark*

The orchestra has its string quartet known as the Minetti Quartet. This organization has also given concerts at the Greek Theatre. The program of its first concert follows: —

1 Quartet in C major ..... *Mozart*
2 (*a*) Serenade ..... *Haydn*
(*b*) Traumerei ..... *Schumann*
(*c*) Minuet ..... *Boccherini*
3 Quartet in D minor, Op. 75 ..... *Bazzini*

The University of California has placed its music department in the hands of a man who dreams and accomplishes. And we possess another notable music centre in America.

CORRESPONDENCE

The article entitled *The Music of the Israelites,* in the August MUSICIAN, was written by Alexander Henneman, of St. Louis.

* *

A LETTER FROM NEW SOUTH WALES

Our music-educative methods are totally dissimilar to your undoubted schemes (Tapper's *Course,* etc.). The English and Local Music Colleges (examinations) are very prominent and play a great part in destroying the music trade. For instance, there are nine boards operating, and the music of each candidate must be purchased in book form for each grade with the respective college imprimatur. Just imagine the thousands that pass (chiefly girls) and teach for pocket money at a miserable fee! Then there is a strong class that give virtuoso pieces to mere children. Concerts exhibiting this madness are of frequent occurrence. The clipping enclosed is one of the latest and will bear me out. Imagine Liszt's *Ninth Rhapsody,* and Tschaikowski's *Concerto* played by children.

To the Australian's ideas (which are well welded to the above) America is associated with ragtime and an extraordinary prejudice exists. My opinion is that with your (American) grand forward movement and galaxy of artists you must within a few years well-nigh rule mankind (musically). After reading your columns and in conversation about music, when Professor Paine, Chadwick, and others are mentioned, they think I am joking. From this picture you will perceive that it is economy to the hilt to live.

THE CLIPPING

"A number of wonderful child-prodigies appeared. There was Miss Vera Dickerson (second piano, Miss Dickerson), a child with flaxen curls and tiny hands, who somehow played a Liszt *Hungarian Fantasia* so as both to amaze and amuse—a prodigiously precocious little pianist. Master Tuckwell, the smallest boy we have seen on a music-stool, apparently three years of age, who played Gottschalk's *Last Hope* like a musical box liable to 'run down.' Miss Betty Tuckwell, probably six or seven (the ages should be stated on the program), who proved capable of playing a Chopin *Impromptu* correctly and with expression; Miss Hazel Doyle, an older girl, whose aptitude for the instrument was shown in Saint-Saëns' Etude No. 6, *En forme de Valse;* and Miss R. Wolstenholme, an advanced student, who showed executive talent in a transcription of Saint-Saëns' weird *Danse Maccabre.* All these clever young people were cheered to the echo."

GRADING VIOLIN PUPILS

The following query from a reader of THE MUSICIAN will undoubtedly interest many other readers. Opinions upon this question will be welcomed.

Editor of THE MUSICIAN:—

In your opinion, is it advisable to *grade* violin pupils similar to public school methods as is done in other studies, I believe, in some Seminaries and Conservatories?

When this is done, how should the work be adjusted or divided? What do you advise as the first instruction book to be used with the average beginner, and should not the pupil be ready for Kayser at the end of two years, the work to be continuous and pupil to practice not less than an hour a day?

A somewhat detailed answer will be much appreciated. I am an old teacher, but feel the need of new ideas.

Thanking you in advance,
VIOLIN TEACHER.

* *

Editor of THE MUSICIAN:—

Dear Sir: In the June MUSICIAN I see mentioned a want for an American Anthem.

If any Eastern Society offers a prize for a National Song will you please let me know?

DRAMATIC EDUCATION SOCIETY

F. R. Benson, of whose endeavors in producing the Shakespearean plays at Stratford-on-Avon the New York *Evening Telegram* has printed an account, sends from London the prospectus of his Dramatic Revival Society, the ultimate hope of which is to make of Stratford a sort of Beyreuth, where once a year the pilgrims may come to hear the rarely heard plays of the master.

The following is the prospectus: —

Object 1. —To facilitate and encourage amateur dramatic representations throughout the country, especially in villages by the villagers themselves, in schools by the scholars, for purposes of education and recreation.

Object 2. — To establish a central office for the purpose of

(*a*) Keeping records of all amateur dramatic societies and their performances.

(*b*) Collecting for its members information as to plays, acting versions, scenery, dresses, music etc., and assisting in procuring the same at a reasonable cost.

(*c*) Putting its members into communication with suitable professional artists and coaches, whenever their assistance might be desired.

In this way it is hoped that the society will be able to do much

(*a*) To provide instructive and intellectual recreation for rural districts.

(*b*) To popularize among the English people the dramatic masterpieces of all times and countries.

(*c*) To assist in the revival and production of mysterie, moralite, lyrical and poetical plays.

(*d*) To encourage dramatic experiments of untried authors.

THE MENACE OF MECHANICAL MUSIC

JOHN PHILIP SOUSA*

Sweeping across the country with the speed of a transient fashion in slang or Panama hats, political war cries, or popular novels, comes now the mechanical device to sing for us a song or play for us a piano, in substitute for human skill, intelligence, and soul. Only by harking back to the day of the roller skate or the bicycle craze, when sports of admitted utility ran to extravagance and virtual madness, can we find a parallel to the way in which these ingenious instruments have invaded every community in the land. And if we turn from this comparison in pure mechanics to another which may fairly claim a similar proportion of music in its soul, we may observe the English sparrow, which, introduced and welcomed in all innocence, lost no time in multiplying itself to the dignity of a pest, to the destruction of numberless native song birds, and the invariable regret of those who did not stop to think in time.

On a matter upon which I feel so deeply, and which I consider so far-reaching, I am quite willing to be reckoned an alarmist, admittedly swayed in part by personal interest, as well as by the impending harm to American musical art. I foresee a marked deterioration in American music and musical taste, an interruption in the musical development of the country, and a host of other injuries to music in its artistic manifestations, by virtue — or rather by vice — of the multiplication of the various music-reproducing machines. When I add to this that I myself and every other popular composer are victims of a serious infringement on our clear moral rights in our own work, I but offer a second reason why the facts and conditions should be made clear to every one, alike in the interest of musical art and of fair play.

It cannot be denied that the owners and inventors have shown wonderful aggressiveness and ingenuity in developing and exploiting these remarkable devices. Their mechanism has been steadily and marvelously improved, and they have come into very extensive use. And it must be admitted that where families lack time or inclination to acquire musical technique, and to hear public performances, the best of these machines supply a certain amount of satisfaction and pleasure.

But heretofore the whole course of music, from its first day to this, has been along the line of making it the expression of soul states; in other words, of pouring into it soul. Wagner, representing the climax of this movement, declared again and again, "I will not write even one measure of music that is not thoroughly sincere."

From the days when the mathematical and mechanical were paramount in music, the struggle has been bitter and incessant for the sway of the emotional and the soulful. And now, in this, the twentieth century, come these talking and playing machines, and offer again to reduce the expression of music to a mathematical system of megaphones, wheels, cogs, disks, cylinders, and all manner of revolving things, which are as like real art as the marble statue of Eve is like her beautiful, living, breathing daughters.

Away back in the fifteenth and sixteenth centuries rebellion had its start against musical automatics, Palestrina proving in his compositions that music is life, not mathematics; and Luther showing, in his sublime hymns for congregational use and in his adaptations of secular melody for the church, that music could be made the pouring out of the souls of the many in one grand, eternal song. From the days of these pioneers, all great workers in the musical vineyard have given their best powers to the development of fruit, ever finer and more luscious, and in the doing have brought their art near and nearer to the emotional life of man.

The nightingale's song is delightful because the nightingale herself gives it forth. The boy with a penny whistle and glass of water may give an excellent imitation, but let him persist, he is sent to bed as a nuisance. Thunder inspires awe in its connection with nature, but two lusty bass drummers can drive you mad by what might be called a fair reproduction of Jove's prerogative. I doubt if a dramatist could be inspired to write a tragedy by witnessing the mournful development and dénouement of *Punch and Judy;* or an actress improve her delineation of heroic character by hearing the sobs of a Parisian doll. Was Garner led to study language and manners of the orang-outang and his kin by watching the antics of a monkey-on-a-stick?

It is the living, breathing example alone that is valuable to the student and can set into motion his creative and performing abilities. The ingenuity of a phonograph's mechanism may incite the inventive genius to its improvement, but I could not imagine that a performance by it would ever inspire embryotic Mendelssohns, Beethovens, Mozarts, and Wagners to the acquirement of technical skill, or to the grasp of human possibilities in the art.

Elson, in his *History of American Music,* says: "The true beginnings of American music — seeds that finally grew into a harvest of native composition — must be sought in a field almost as unpromising as that of the Indian music itself — the rigid, narrow, and often commonplace psalm-singing of New England."

It pays to Tip

Jean Gerardy, the well-known 'cellist, at a dinner in Philadelphia praised American wit.

"You are all witty," he said. "From your millionaire down to your gamin you are quick, nimble, and sparkling in retort.

"Your gamins' wit is sometimes cruel. It caused a friend of mine to flush and mutter an oath one day last week in New York.

"My friend, in a hurry to catch a train, ran out of his hotel toward a cab, and a ragged little boy opened the cab door for him and handed in his valise.

"He gave the boy nothing. In his hurry, you see, he forgot.

"The disappointed urchin smiled sourly, and called this order to the driver: —

"'Nearest poorhouse, cabby.'"

* *

Cause and Effect

Child (pointing at conductor). — "Mama, why does he strike that woman?"

Mother. — "But he is not striking her."

Child (pointing at singer). — "Then why does she screech so?" — *Musik für Alle.*

* *

Made Him Welcome — Not.

Joe. — "I'm afraid Miss Hinton doesn't appreciate my company."

Fred. — "What reason have you for thinking such is the case?"

Joe. — "Why, every time I call she plays *Home, Sweet Home* on the piano before I have been in the parlor ten minutes." — *Punch.*

Pride

Several of the most popular singers receive the same fee from the companies that manufacture the talking machines that are so popular nowadays. The highest sum is $2000 yearly as a retainer and a large share of the gross receipts from the sale of the records. All records of the noted singers sell for the same price. But an agent came to the company the other day with a strange request from a prima donna.

"Madame wants to know," he explained, "whether or not you won't raise the price of her records just a little higher than any of the others. You can make it only a quarter more if you like, because it is not on account of the money. She only wants them higher that the public may know they cost more than any other singer's."

Strangely enough, this appeal was not granted. — *Musical America.*

* *

Post Mortem

At a prominent conservatory in Chicago one of the questions put at a recent examination was, "What is a dirge?" and one boy wrote as answer, "A song a man sings when he is dead."

* *

There's a Reason

It is said that musical composers live longer than persons engaged in any other occupation.

Yes, they get used to their music, but other people cannot.

* *

Bad Weather

Sally Schreecher (at the piano). — "I'm afloat! I'm afloat!"

Her Father. — "By Jove! You'd soon be capsized if you were met by such a squall as that." — *Tatler.*

* *

Favorite Songs

Miss Skreecher. — "What sort of songs do you like best, Mr. Suphrer?"

Mr. Suphrer. — "The songs of the seventeenth century."

Miss S. — "How odd! Why do you prefer them?"

Mr. S. — "Because nobody ever sings 'em nowadays." — *Cleveland Leader.*

* *

Mixed

Bowles. — "His wife is very accomplished. She can cook or play a piano with equal facility."

Baly. — "That is an accomplishment! I never heard of any one cooking a piano."

* *

Five Dollars a Seat

Hix. — "Did the grand opera make you weep?"

Dix. — "No. I did my weeping at the box office when I bought my tickets."

* *

Humor of Whittier, Quaker

The poet Whittier was color blind and unable to distinguish red from green. One day, when out walking with a friend and deeply engaged in conversation, Mr. Whittier approached too near for safety to a place where blasting was going on.

The danger signal was shown, but neither Friend noticed it until a workman, violently waving his arms and shouting, leaped before them and warned them back.

"I didn't see the flag at all," said Mr. Whittier's companion.

"I saw it," rejoined the poet, with a twinkle in his eye, "but I thought it was in honor of St. Patrick — thee knows my defect. I can't tell Erin from explosions, except by the harp!" — *Youth's Companion*

* *

Natural Conclusion

"It's my daughter," said Mrs. Nexdore, "who plays the piano. You've heard her?"

"Well," replied Mrs. Newcome, with great self-restraint, "I've heard the piano."

"Yes, my daughter Mary is very musical."

"Ah! you have two daughters, then?" — *Catholic Standard and Times.*

* *

Acme of Saddest Sounds

The saddest words of tongue or pen
Can only make me laugh;
I do not weep until I hear
My neighbor's phonograph.

* *

At the Musical

Miss Steele Ayres (the composer.) — "Do you know the *Barber of Seville?*"

Mr. R. Agthyme (who writes coon songs). — "No. I shave myself."

* *

How True

Teacher. — "How many kinds of poetry are there?"

Pupil. — "Three."

Teacher. — "What are they?"

Pupil. — "Lyric, dramatic, and epidemic." — *Cleveland Leader.*

* *

A Drawing Card

"I am going to open a new theatre, and I wonder what announcement I ought to hang up at the door to attract the public?"

"You might try: 'Admittance free.'" — *Translated for Tales from Le Rive.*

* *

Not for Him

First Actor. — "I thought your next tour was to have been through South Africa."

Second Actor. — "It was, but the company struck. One of them had read that an ostrich egg often weighs two or three pounds." — *Life.*

* *

The Musical Union.

Mother. — "Nellie, why didn't you practice your piano lesson? I said I'd pay you five cents an hour for it."

Nellie. — "Because papa gives me ten cents an hour for whirling around on the stool without making any noise."

* *

Musical Note

Modern Composer. — "Have you heard my latest one-act opera?"

Friend. — "Not yet. Comic?"

Modern Composer. — "No; baby grand." — *Puck.*

* *

We Trust the Latter

"Miss Jingleby is either very grouchy or very considerate of one's feelings — I don't know which."

"Two widely different propositions, I should say."

"I don't know. I asked her to sing for me, and she absolutely refused." — *Cleveland Leader.*

THE-CROSBY BROWN COLLECTION OF MUSICIANS' PORTRAITS IN THE METROPOLITAN MUSEUM OF ART, NEW YORK

FRANK H. MARLING

One of the most remarkable collections of portraits of musicians in the world is to be found in the Metropolitan Museum of Art. It is the gift to the museum of Mrs. John Crosby-Brown, whose magnificent collection of musical instruments was described in part by the writer in THE MUSICIAN a few months ago. The number of pictures is close upon four hundred, but there are among them no ordinary or conventional specimens. With the exception of a photograph of Sir John Stainer, donated by Lady Stainer, they consist entirely of engravings, etchings, and lithographs. Many of the engravings are rare and of unusual beauty, embracing examples of the choicest works of such masters of the delicate art as Bartolozzi, Edelinck, St. Aubin, and others. They have been selected from a large mass of available material with admirable judgment, the controlling ideas of the donor being the artistic interest of the prints and the representative character of the subjects. The collection is therefore exceedingly interesting and valuable from an historical point of view, as the whole story of the art for over four hundred years past is traversed in its succession of the portraits of its devoted followers.

There is in most of us a more or less active sentiment of hero worship. Whether it is logical and dignified or not, we like to see the features of those who have made a stir in the world, either in person, or through the medium of the picture. It is a help to the student to know what "the masters" looked like, and it is a perfectly natural and laudable curiosity which is satisfied by such a rich and fascinating roll of musical worthies as this. As we go on from one to another portrait, through the various epochs of the art, coming every now and then to one of the great giants of the past, we gain a freshened interest in its story and a heightened impression of the attractiveness and varied character of its many-sided development. Not the least interesting feature is the record of the changes of costumes in the successive generations of musicians, which the portraits so graphically present. The quaint old wigs and picturesque habiliments of the early days are faithfully reproduced, showing the gradual evolution of dress throughout the centuries until it reaches our own comparatively prosaic and conventional day. The collection is unusually catholic and comprehensive in its scope, for we find included composers of every school, singers, instrumentalists, and all kinds of performers of both sexes, and of all nationalities, and last but not least, musical theorists, critics, and writers. And it is also a reflection of both the great and the humble, in music world-renowned composers like Bach or Beethoven elbowing persons of their day who have long since been forgotten by the busy world. It is a pleasure to mention here the very useful handbook or catalog to the collection, compiled under the direction of the donor, by Miss Clara Buffum. This was the outcome of a remark of a visitor who on looking over the pictures was overheard to exclaim: "How I wish I knew something about these people!"

This person doubtless expressed the feeling of many visitors, and the handbook is for these an invaluable companion to the collection. The present writer is greatly indebted to it in the preparation of these articles, and gladly acknowledges that without it they would have been very difficult to write. It was not an easy task for its compiler to strike the happy medium between too long accounts of the musicians for practical purposes and those which would be too brief for adequate information; but it has been successfully accomplished, and it is gratifying to know that distinguished foreign scholars, whose expert knowledge of the subject gives high value to their critical opinion, have expressed their approval of its skilful editing. None but those who have done similar work know how much time, painstaking research, and study are needed to set forth the information in its proper form. It is indeed a kind of musical biographical discovery in concise form, and as it sold for a small sum, it is well worth owning, even if the purchaser can never visit the museum. It would be extremely difficult to form such a choice collection as this at the present time, as a considerable number of the portraits would be sought for in vain. During its formation a diligent and persistent search was carried on in European and American print shops, especially for those which were necessary to fill gaps in the collection, nearly all of which were happily secured. More need hardly be said to prove that in this collection we have something of great moment and interest for the music lover, and one well worthy of the detailed description which these articles propose to give of it. Many who cannot visit the museum will be deeply interested to hear of its contents, and to examine the reproductions of its treasures which will be displayed each month in the pages of THE MUSICIAN. In the museum the pictures are mounted on hinged frames all attached to a central column, and can thus be most conveniently consulted by the visitors. They are arranged in chronological order, so the description in these paper will follow the same plan.

No. 1. JOSQUIN DESPRES

It is fitting that the first portrait of the collection should be that of Josquin Despres, generally accepted as the leading composer of the fifteenth century, one of the most famous masters of the great Netherland school, and the immediate predecessor in musical history of Lasso and Palestrina. The portrait shows a smooth-shaven, somewhat ascetic monkish face, surmounted by an Eastern-looking turban or hood. This picture originally appeared in a book published by Peter Opmeere at Old Antwerp in 1591, and is supposed to have been a copy of an old picture of the composer in the cathedral church of St. Gudule, in Brussels, which no longer exists. It was afterward reproduced in Van der Straeten's *La Musique aux Pays-Bas*, published in Brussels in 1867. A copy of this volume is in the Newberry Library in Chicago. The inscription underneath is "Josquinus Pratensis," a Latinized form of his name, which is given in several different ways by the historians of the period. Despres is called by a noted American critic "the first real genius in the history of modern music." The best account of him is that written by F. J. Fetis in a prize essay in 1828. The most reliable authorities give the date of his birth as 1450, in the province of Hainault, probably at Condé. In early life he was a choir boy in St. Quentin, and as a young man the chapelmaster there. He studied at Tours with Ockeghem, the most noted contrapuntal master of that day, and soon became possessed of all his master's wonderful learning.

Later on, we find him at Rome, attached to the papal court of Sixtus IV, and regarded as the most noted musician of the day, maintaining that title undisputed for over sixty years. At various times in his life he held appointments at the respective courts of Hercules of Ferrara, Lorenzo of Florence, Louis XII of France, and the Emperor Maximilian I. His last years were solaced by the enjoyment of church preferment at Condé, where he died in 1521. His epitaph is to be found in the choir of the church there. He was the first composer who endeavored to make contrapuntal ingenuity a means and not an end, and can in consequence be said to have inaugurated a new era in music. As a striking example of the curious musical exercises of the time, he is said to have twice set to music the genealogy of Christ. He is credited with the invention of many scientific refinements, which were at once adopted by all composers and perfected by Palestrina and others, and was the first who wrote regularly in more than two parts.

No. 2. MARTIN LUTHER

The sturdy form and features of the great German reformer, Martin Luther (1483–1546), appear in his doctor's robes in Picture No. 2. The massive jaw and deep double chin are specially noticeable. Although his name is chiefly associated with the great religious movements of the sixteenth century, his services to music were not few or insignificant. It is of keen interest to us to know that the great man was an ardent lover of music, had a fine, deep, singing voice, and performed well on the flute and lute. He greatly improved the church service of his day by shortening and simplifying the music of the mass, and employing the vulgar tongue more frequently. But the greatest of his musical achievements is his establishment and encouragement of congregational singing. He edited and adapted numerous hymns, and though it is now denied that he actually wrote the tunes credited to him, he did much to make them known to the common people. In the first Protestant Hymn Book, issued in 1524, four of its eight hymns were his. These Protestant hymns were immensely popular, and helped greatly to spread the Reformation. The grand chorales, with their noble words set to stately music, severely simple, still survive to our day, and have lost none of their grandeur and impressiveness. We are told by his friend, Johann Walker, that Luther set to music several Gospels and Epistles, inventing the tunes on his flute. A very human touch is given to his character by his habit after supper of singing motets and hymns with his children and friends. He wrote a short tract in praise of music and a musical poem entitled *Frau Musika*. His greatest hymn, *Ein feste Burg* (*A Mighty Fortress is Our God*), was sung over his grave, and is still in use all over the world.

No. 3. GIOVANNI PALESTRINA

No name in the early history of music stands higher than that of Palestrina, who is called the greatest composer of the Catholic church. He was born at Palestrina, near Rome, in 1514 or 1515, and died at Rome in 1594. Of humble parentage, his early days are obscure, but it is generally believed that he was a pupil, when young, at Claude Gondimel's school in Rome. He began his professional career in 1544, and in 1551 he was made "master of the boys" at the Capella Guilia, at the Vatican. In 1554 his first book of masses was issued. He was afterward, for a time, the musical director at the Lateran, and from 1561 to 1571 held the same post at the Santa Maria Mag-

giore. In 1571 he took charge of the music at St. Peter's, where he stayed till his death. His name has been famed in history as the saviour of church music, but the romantic legend about the Council of Trent and Palestrina's *Mass of Pope Marcellus* has been proved to be without foundation. He enriched every part of the Roman Ritual with music, his works including ninety-five masses. The most widely known of his compositions are the *Stabat Mater* and the *Improperia*. His style is characterized by grace, sweetness, and devotional exaltation. In the picture we note the long, slender nose and the high forehead. The uniform or coat which he wears is handsomely decorated with lace. This is a French engraving.

No. 4. Hans Gerle

Hans Gerle's name is unknown to the present age, but he was famous in 1523 as a maker of violins and lutes, and for his proficiency as a player of the latter instrument. He also published several works of great historic interest and value, including a *Guide to Violin Playing*. He died in 1570, at a ripe old age. The portrait shown was taken in 1532, at Nuremberg. It presents a very precise and proper looking individual, with a roll of music in his hand.

No. 5. Cristofero Morales

The name of this gentleman with the curly hair and beard is Morales, a Spanish composer of the sixteenth century, born in Seville, and a member of the papal choir of Paul III in 1540. He was esteemed most able of the Spanish musicians at Rome in the period immediately before Palestrina. His music bears evidence of his training in the Netherland school of counterpoint, and is said in addition to show a native Spanish fire and spirituality of its own. He was a very devout churchly composer, despising all worldly music, looking with anger on those who in his eyes applied their God-given musical powers to frivolous and objectionable uses. His compositions for the papal chapel, including masses, magnificats, motets, have been sung for over three hundred and fifty years in the Roman church, and are still performed at the present day.

No. 6. Claude Goudimel

One of Goudimel's greatest claims to fame is the fact that he was the teacher of Palestrina at Rome about 1535. His birthplace was Besançon, about 1505, and a curious circumstance in his career is that he was at one time a music publisher in Paris, in partnership with a book and music printer there named Du Chemin (about 1555). This was only for a short time, however. No composer seems to have attained prosperity as a publisher, the artistic temperament not lending itself happily to the successful conduct of business. A sad interest attaches to his death, as he was killed at Lyons at the time of the great massacre of St. Bartholomew's Day, Aug. 24, 1572. A controversy has arisen as to whether he was a Protestant or Catholic, and the question has never been decisively settled, many believing that he was murdered through the plotting of jealous rivals. His compositions were nearly all for the church, — masses, motets, etc., — and possess an individual charm and grace of style. They are written in imitative style and with extraordinary correctness. His reputation as a teacher has obscured his merits as a composer, few instructors having ever inspired so many great pupils. There is some doubt as to the authenticity of this portrait, but some good authorities maintain that it is his. It is not beautiful; the gaunt features and dishevelled locks, with small chin whisker, give the composer an anxious and not over good-natured expression.

No. 7. Orlando di Lasso (or Lassus)

There are no less than three portraits of this noted composer, described as "the last of the great Netherland composers, and next to Palestrina the most eminent master of music in the sixteenth century." He was born at Mons, about 1520, and died at Munich in 1594. Tradition has it that he had such an exquisite voice as a boy that while he was a chorister in the Church of St. Nicholas he was kidnaped on this account several times. In 1541 we find him the successor of Rubino as director of the choir at the Lateran, Rome, where he stayed for eight years. After travels in England and France, he made Antwerp his home, and the last years of his life he was director of the court chapel at Munich, under the patronage of the Duke of Bavaria. His closing days were clouded by profound melancholy, the result of overwork and prolonged mental strain. He has been called the most prolific composer of any age, his works exceeding two thousand in number, and the most noted of them being his setting of the Penitential Psalms. In music of all kinds, sacred and secular, he reveals equal clearness of harmony, melodic invention, and fluency of progression, which are the wonder and admiration of scholars to the present day. His contemporaries well dubbed him "The Prince of Music." Picture No. 7, taken when he was sixty-seven, makes him look the prosperous courtier and gentleman.

Nos. 8 and 9

Two other portraits of Orlando de Lasso, evidently reproduced from the same original, with slight variations. The huge frilled collars of the period are much in evidence in these pictures.

No. 10. Melchior Neusiedler

This gentleman with the shaggy beard, the large frame, and general appearance of a lusty soldier rather than a refined musician, distinguished himself in his day as a lutеist, or lute player and composer. He did much to improve the lute, a favorite instrument of that time (the sixteenth century), and issued two books of music for it in Venice in 1866. Most of his life was spent at Augsburg, but he died in 1590 at Nuremburg, where he is said to have been born early in the sixteenth century. The border of the portrait claims attention as a specimen of the illustrator's art. The four corners reveal an infant child, a figure of death with grinning skull in the act of hurling a javelin, and two female figures with musical instruments.

No. 11. Philippe de Monte

An old-fashioned helmet-like cap, giving him a military aspect, surmounts the head of this celebrated contrapuntist, who was born at Mons (Belgium) in 1521, and died at Vienna in 1603. He was capellmeister to the Emperor Maximilian at Vienna in 1568, and later to his successor, Rudolf II. His compositions include madrigals, songs, and sacred music, which were highly esteemed in his time. He was treasurer and canon of the cathedral at Cambrai, and is supposed to have been a friend of Orlando di Lasso. The Latin sentence beneath proclaims in fitting terms his name and titles.

No. 12. Siculus Baptista

Nothing is known of this musician except that he was a well-known player of the lute. This portrait is described in Gerber's *Lexicon der Ton-Kunstler*, published in 1790, which gives, however, no particulars about his career. He seems to be playing an instrument like the zither.

No. 13. William Heyther

The first Englishman included in this collection. Born in Middlesex about 1563 and died in 1627, being buried in Westminster Abbey. A chorister and afterward lay vicar at Westminster Abbey, and in 1615 made a gentleman of the chapel royal. He founded the musical lectureship at Oxford in 1626, and was made doctor of law music by the university. He appears to have been a generous patron of music and donated some of his musical instruments and other treasures to the Oxford Music School. This portrait represents him in his doctor's robes, and is taken from the original in the music school at Oxford.

No. 14. Guillaume Costeley

A Scotch musician, born in 1531, and after settled in France, where he was organist to Henry II and Charles IX. His home was at Evreux, where he died in 1606. He composed songs and other pieces and a treatise on music, and was a prominent figure in the musical life of his day, entertaining musicians at his own home. The stern and bluff profile is not a characteristic artistic type. Note the elaborate ornamentation of the border, with violins, harps, etc.

No. 15. Sethus Calvisius (or Kallwitz)

This gentleman with the large ruff and the long, pointed beard had a romantic and varied career, being at various times musician, astronomer, and chronologer. He was born in Thuringia in 1556, and was the son of a laborer. So great was his poverty that he had to sing in the streets for money, but through pluck and perseverance he contrived to get a musical and general education. He attended the universities of Helmstedt and Leipsic, in 1580 became music director of a church in Leipsic, and later director of the Thomas Schule there. He was an able theorist, and his works are still authorities as to conditions of musical instruction in his time. He died in Leipsic in 1615. In his portrait we notice he holds a book on chronology, with antique metal clasps, and observe the costly fur cloak. The Latin motto round the oval mentions his occupations, — astronomer, chronologer, musician, poet.

No. 16. Adam Gumpeltzhaimer

A very formidable name for a musician, who seems to have been a very accomplished scholar and to have led a peaceful life. A church composer and pupil of the monk Jodocus Enzmuller, he was born in Bavaria in 1559 and died at Augsburg in 1625. For six years (1575–1581) he was employed by the Duke of Wurtemberg, and was after cantor in Augsburg. He was also a writer on theory, revising, editing, and writing many learned works. In his grasp is a four-part composition, with the old-style clefs of that epoch.

No. 17. Hans Leonhard van Hasler

An interesting circumstance about this composer (born at Nuremberg in 1564) is the fact that he was the first composer of German birth who obtained his musical education in Italy, as before his time, for close upon two centuries, the Netherlands, the great musical training school, had supplied all the European countries with musicians. He was the eldest of three sons of his father, the town musician of Nuremberg. He studied at Venice for some years under Andreas Gabrieli, as fellow pupil of the famous musician, Giovanni Gabrieli, whom he is said to resemble in the style of his compositions. For many years he was connected with the court of Emperor Rudolf II, and was made a nobleman there. Later was appointed to the elector of Saxony's court, and died of phthisis on a journey. He ranks as one of the founders of German music. His compositions are numerous and comprise many styles. This engraving pictures him as standing in a church building. In the background we descry a medieval organ with old keyboard and pipes.

No. 18. Georg Hager

A meistersinger and shoemaker in Nuremberg in 1646. The inscription under the portrait indicates that he was a disciple of Hans Sachs, who lived from 1494 to 1576, but he was not born early enough to have been taught by him. In his own time he was a useful and practical leader in musical affairs, being active as a song writer and in arranging melodies, besides originating many

proverbs and sayings. He published a number of song collections, and the portrait shown herewith formed the frontispiece to several of them. The latest portrait appeared in 1770, showing him at the age of eighty-two. The beard is parted in the middle, after an old fashion. The two clasped books and a quaint ink bottle with quill pen are typical specimens of the furniture of the time.

For the sake of economy of space, we have not reproduced a group of photographs from No. 19 to No. 32, but these happen to be largely obscure musicians, and it is deemed best to deal mainly with those who have greater claims to our attention.

No. 33. Jean Baptiste Lully

Born in Florence in 1633, died in Paris in 1687. Taught to play the violin and guitar by a monk. He was poor, and took a position in the household of Mlle. de Montfrensier, a cousin of Louis XIV, in Paris. The story goes that he was playing the violin to the servants in the kitchen one day when a count overheard him, and he was made a member of the private band of the grand demoiselle. But he was shortly dismissed, having had the temerity to write a humorous satire on his mistress. He later joined the king's private orchestra, and though penniless and obscure, made himself known through his songs and dances. He speedily gained in royal favor, showing unusual ability as dancer, stage manager, and originator of ballets and operas. His influence on French grand opera extended for over a century. He excelled more as a dramatist and theatrical manager than as a musician, though he had a considerable gift of melody. His operas are formal and artificial. In character he was energetic, haughty, irritable, and overbearing. His death was the result of an abscess caused by striking his foot with his baton in excitement when conducting. This engraving is a beautiful specimen of the art, and the fine old flowing wig and rich robes of the composer are strikingly brought out.

No. 34. Lully (as an older man)

No. 35. Lully (a smaller copy of No. 34)

No. 36. Giovanni Antonio Manara

This stout, jolly-looking gentleman, seated so comfortably in his chair and so evidently enjoying the music he is making, was a Dominican monk attached to a convent in Bologna. He was undoubtedly a very ardent musician, as we learn that he was one of the earliest members to join the leading musical organization in Bologna, called the Academie des Philharmoniques, and received the honorable title of prince of that society in 1668. His birthplace was Venice, in the year 1638.

No. 37. Johann Daniel Rosen and Nicolaus Rosen

This picture, showing two musicians playing on their instruments, is unique and interesting as showing the style of the instruments of that day. It is to be regretted that nothing can be learned about them except from the inscription which gives their names, as above, and states that the first was a crown violinist in 1679 and the second a crown player of the fagott, born in Lapland, who came to Nuremberg in 1679. It is surmised that they were traveling musicians, who were attached to the court of some ruler, and were visiting Nuremberg at that time. The fagott is a German name for the bassoon. The players appear to be father and son. The father's instrument is of gigantic size. Both have the peculiar dress of the period.

No. 38. John Blow

A prolific English composer, mostly of services and anthems for the church, born in 1648, probably in London, and died there in 1708. At twelve a chorister at the Chapel Royal, and later studied with Dr. Christopher Gibbons. Was chosen organist of Westminster Abbey in 1609; was superseded by Purcell in 1680, and was reappointed in 1695.

No. 39. Nicholas Cosimi

This is the picture of a noted Italian violin player born in Rome late in the seventeenth century, and thought to be a pupil of Corelli's. He lived in England for some years after 1702, and while there issued some solos for the violin, which he dedicated to the Duke of Bedford. He returned to Italy and died there. This portrait is a rarely fine large engraving, one of the largest in the collection. The face and figure stand out with unusual clearness and brilliancy. The violinist is shown in a standing position, with his beloved violin and bow in his hands. It is a dignified and graceful pose. It adds greatly to its interest that the picture was painted by the famous Sir Godfrey Kneller, the greatest portrait painter of his time, who painted so many court beauties and no less than nine reigning sovereigns. The engraving is by I. Smith, and the date 1706. The violin shown must have been a very choice one, perhaps a Stradivarius, as it brought a very high figure in England after his death.

No. 40. Jean François Lalouette

A pupil of Lully's and a very distinguished violinist in his day. Born in Paris in 1751 and died there in 1728. He was a violinist in the operatic orchestra which Lulli* conducted in Paris, and later became its leader himself, remaining there till 1684. He also occupied church positions at Rouen and in Paris. He wrote many motets for full choir, and also some pleasing ballets, etc. His picture bears a strong resemblance to a divine, with the clerical looking bands in front of the gown. The student is impressed by the mobile and intelligent features. He has some kind of a scroll in his hand, and might be about to deliver a sermon.

No. 41. Arcangelo Corelli

Corelli is called one of the first real virtuosi on the violin and a classical composer for this instrument. He was born in 1653 at Fusignano, Italy, and died at Rome in 1713. After traveling in Germany and living in Munich, he lived in Rome, where he was under the patronage of Cardinal Ottoboni, with whom he made his home. He had a charming personality and was greatly admired by the most select Roman society, his concerts being the most notable musical affairs of the day. He also gained great fame as a teacher, pupils coming to him from all quarters. A melancholy interest attaches to the last years of his life. He did not succeed in pleasing the taste of the King of Naples, who wished him to enter his service, and he returned to Rome, smarting keenly with mortification. A new violinist, Valentini, had seemingly superseded him in popular favor during his absence, and Corelli, under the erroneous impression that he was neglected, became so disheartened that he went into a decline and died soon after. He laid the foundations of good violin technique, and systematized the science of bowing, while his compositions for the instrument are still classics. The elaborate Latin inscription sets forth in sonorous phrases his virtues.

No. 42. Another Picture of Arcangelo Corelli

Is a good specimen of engraving, being the work of a noted engraver, I. Smith, and painted by H. Howard. Note the beautifully shaped tapering hands and the unusually small wrists.

No. 43. Agostino Steffani

A well-known composer, esteemed especially for his chamber duets, which mark a notable stage in musical history. Born in 1655 at Castelfrano, Italy. Died at Frankfort in 1730. Was a soprano singer at St. Mark's, Venice; studied and settled in Munich, serving as court musician to the elector there, and becoming court organist in 1675. He was ordained a priest (Abbate of Lepsing) in 1680, and after this became more of a diplomat and courtier than a musician, in which capacities he made a brilliant success, receiving many rewards and honors. Handel succeeded him as court musical director. He brought out in his time twelve operas and, besides other compositions, a theoretical work on the principles of music. The portrait shows his elaborately embroidered coat, and behind him the abbot's cap or mitre, the insignia of his office.

* Often written Lully.

No. 44. Gabriel Deslondes

This personage has quite a monkish appearance, and the reader will not be surprised to learn that he was a brother of the Dominican order of the Roman Catholic Church in Paris. He was born in 1654, and wrote music for the church. The high esteem in which he was held by his brethren is revealed by the quaint inscription under his picture, which has been translated as follows: —

Desrochers has been able to engrave the face of Deslondes,
But who can reproduce his great virtues.
Thomas for our altars made the office divine,
But Gabriel has engraved its note on brass.

No. 45. Henry Purcell

Purcell is generally hailed as England's greatest composer. Born in London in 1658; died there in 1695. His life was spent in London, where he engaged in many musical activities. He composed with great acceptance over thirty works for the stage till 1680, and is credited with the establishment of the present form of English opera. He also wrote many songs and odes of great beauty. His stage music is as dramatic and more melodious than that of his model, Lully, and his sacred works found an eager student in Handel. He was organist of Westminster Abbey for a number of years, and was buried in the north aisle there. His tablet shows his reputation among his fellows: "Here lyes Henry Purcell, Esq., who left this life, and is gone to that blessed place where only his harmony can be exceeded." His church compositions are of a very high order and reveal him as an original melodist and a master of form, harmony, and all contrapuntal devices. Sir George Grove says: "He is the most original and extraordinary musical genius that our country has ever produced." His chamber works surpassed those of his predecessors and contemporaries. His death, after a lingering illness, at the early age of thirty-seven, is thought to have been due to consumption. This portrait was engraved by T. Holloway from an original picture by the celebrated portrait painter, Godfrey Kneller, which was originally in the possession of Dr. Charles Burney, the famous author of the *General History of Music*, in four quarto volumes.

No. 46. Henry Purcell

Another portrait is taken from an old English periodical called *The Universal Magazine*, for which it was engraved. It bears the curious old imprint, "Printed for J. Hinton at the King's Arms in Paternoster Row."

No. 47. Sebastien de Brossard

This benevolent-looking old man, with the mild, genial countenance, bespeaking a peaceful and loving character, was a priest and was master of Strassburg Cathedral from 1689 to 1698. In 1700 he was made grand chaplain and musical director of the cathedral at Meaux. He was a pioneer among musical editors, having compiled the first musical dictionary issued in the French language and the earliest dictionary of the kind in any language, with possibly two exceptions. This was about 1702. His musical library, an exceptionally large and valuable one, was left by him to Louis XIV. He was born in 1660 and died in 1730.

No. 48. André Campra

The most distinguished French operatic composer between Lully and Rameau. Born in 1660 at Aix, France. Died in 1744 at Versailles. Served as musical director at several French cathedrals, and finally settled in Paris, where he became master of music at Notre Dame. He gave up this post to devote himself to operatic composition, bringing out eighteen brilliantly successful works, and finally gaining the leadership of the Royal Orchestra

in 1722. He wrote ballets and light music for the Versailles court. The face bears an impenetrable expression. One wonders what manner of man he really was.

No. 49. Joseph Meyer

This worthy was a professor of music and later of law and history at Gottingen in 1695. He was born at Perleberg, Prussia, in 1661, and died at Gottingen in 1686. The type suggested by his face is that of the rigid formal and scholastic professor, very prim and particular, and a great stickler for forms. It is not perhaps surprising to learn therefore that he attacked the church cantatas coming into vogue in his time, and carried on a vigorous controversy on the subject with his contemporary, Mattheson. This engraving was done in Zurich in 1756. The design under the picture is delicate and artistic, the border around the inscription including a violin and organ, a harpsichord, musical manuscripts, etc.

No. 50. Gottfried Reiche

A celebrated trumpet player, born in Weissenfels, Germany, in 1667, and a resident of Leipsic. He composed twenty-four pieces for the cornet and three trombones, called *Quartricinia*. The picture is a striking one. The performer, with his cloak carelessly thrown round him, stands with his beloved trumpet in hand ready to give a blast at any moment. In his left hand is a piece of music. The loose collar at the neck gives him rather a Byronic appearance, which is, however, offset by the practical shrewdness of the old man's face.

No. 51. John Christopher Pepusch

Born in Berlin in 1667, a poor Protestant clergyman's son, he was self-taught in music. He afterwards was an official of the Prussian court and studied theory there. He found his way to England after being in Holland, in 1700, and was engaged at Drury Lane Theatre, first as violinist and later as accompanist and composer. He brought several Italian operas with English words. He founded the Academy of Ancient Music, and was organist and composer to the Duke of Chandos, a famous patron of Handel's. In 1713 he was made doctor of music by Oxford University. For many years he directed the music at Lincoln's Inn Fields Theatre. He married a singer, Margarita de L'Epine, whose fortune of $50,000 was instrumental in freeing him from financial difficulties. He composed dance pieces and other light compositions and several theoretical works. He was buried in the chapel of the Charter House, where he was organist from 1737 till his death. His features have rather a hard, uninteresting expression.

No. 52. François Couperin (called "Le Grand")

Pianists will be specially interested in this picture, as will appear later. Born in Paris in 1688, died there, 1733. A very able organist in his day. He was organist of a famous Paris church, St. Gervais, in 1696 and 1701. Louis XIV made him his chamber musician and chapel organist. His two daughters were excellent performers on the organ. He wrote much for the harpsichord, including a method for it. A complete edition of his piano works, edited by Dr. Chrysander, has been published by Augener of London. Dr. Chrysander says, "Couperin is the first great composer for the harpsichord, and he stands, therefore, at the commencement of the modern period, and must be regarded as clearing the way for a new art. He had Scarlatti, Handel, and Bach for pupils. His works are notable for their treatment of musical form, and Bach follows him in his treatment of dance forms. This picture is a fine, clear-cut profile, quite a little gem in its way and cameo-like in its effect.

No. 53. François Couperin

A half-length, full-face portrait shows the composer sitting at a table with music under his hand. His dress is handsome, the coat being notable for its style and the beautiful lace at the wrist. We say on looking at him, "This is a resolute, determined man, master of himself and of the occasion."

No. 54. Gabriel Vincent Thevenard

A famous opera singer, born in Orleans, 1669, died in Paris, 1741. Little is known of his life. His picture is probably in the costume of some operatic character, with the picturesque black cap with its great white feather. We can imagine his mouth slightly open, as if about to break forth into some soul-stirring operatic melody.

No. 55. Richard Leveridge

Another theatrical singer, famous for his deep and powerful bass voice, born 1670, died 1758, lived in London all his life, sang in numerous operas at Drury Lane and other theatres. For nearly thirty years he sang at masques and pantomimes. At the age of sixty his voice was still in such good preservation that he offered to sing against any man in England for a wager of one hundred guineas. He composed some operatic music and several songs. In his old age (he lived to eighty-eight) he was maintained by the generosity of his friends. History records that he was of a convivial disposition and kept a coffee house in Covent Garden, though in the picture of him painted by Fryer, and engraved by Pether, he looks as sober as a judge. He is doubtless beating time with his right hand, with a song in his left. His closely buttoned coat contrasts strongly with the flowing robes of most of the other notabilities we have been reviewing.

No. 56. Louis Marchand

An organist and composer, born at Lyons, 1669, died at Paris, 1732. He was organist in several noted churches, and at the French Court in Versailles, but incurred the displeasure of the king and was exiled from France. In Dresden he was pitted against Johann Sebastian Bach in a musical competition and, as might have been expected, was defeated by the great master. Returning to Paris, he gained great vogue as a fashionable teacher, receiving remarkably good prices for that period; but with the improvidence of his class his money was all squandered, and he died in the most needy circumstances. His publications comprise three books of piano pieces and a book of organ compositions. Those for the piano possess real merit. It is a good-humored, kindly face, and the owner evidently is proud of the star which decorates his breast.

No. 57. Domenico Scarlatti

Born in Naples, 1683, died there, 1757. A severe and solemn countenance this, worthy of a New England divine, with its snowy white hair and atmosphere of dignity and decorum. He was noted as a harpsichord player, and a most engaging story is told of his meeting Handel at Rome and competing there with him in a musical duel at the piano and organ. Scarlatti, in the judges' verdict, was the equal of Handel as a harpsichord performer, though Handel was superior to him on the organ. He brought out a number of his own operas, which were well received. The year 1715 finds him in Rome as the director of music at the great St. Peters. He was of a wandering disposition, living in London, in Lisbon, in Madrid, and at Naples at various times. His sonatas are especially commended, and he is regarded as the originator of the modern technique of piano playing.

No. 58. Jean Philippe Rameau

Born in Dijon, 1683, died in Paris, 1764. A name of high repute in the musical world as the founder of the real science of harmony, and also a distinguished organist and composer; played the clavecin at seven, traveled in Italy with an operatic troupe, was organist in Paris, Lille, and Auvergne. Most of his life was spent in Paris, and he was successful there as an operatic composer, his works being popular for more than thirty years. His magnum opus, *Castor et Pollux*, was produced in 1737. The king favored him highly, and gave him the post of Court composer of Chamber Music, and a title of nobility. His great fame now rests on his theoretical works, of which he published a number. These contained novel theories, and he was soon recognized as the leading theorist of the time, his instructions being eagerly sought for. This half-length picture shows us a man who looks as if he had gone through many sufferings and trials, and had endured many privations and hardships. There is a strange effect of light and shade on the countenance which may be symbolical of the composer's own experience. It was painted by G. Gregory.

No. 59. The Triumph of Rameau
